Employment Insurance Coverage Survey, 2003
Public Use Microdata File

Variable Name: **TYPE** *Position:* 14 *Length:* 1

Survey type as determined for the EICS

		FREQ	WTD
1	Unemployed during LFS reference week	2,570	1,223,929
2	Employed less than 30 usual hours during reference week	4,456	2,621,296
3	Not in the labour force during reference week	4,004	2,045,689
4	Working full-time during ref. wk. with an interruption - last 3 months	679	401,637
5	Mothers of infants working in reference week	199	41,650
		=====	=====
		11,908	6,334,200

Coverage: All respondents

Note: In a few cases a person could fall into more than one group. The priority sequence is TYPE 5 then TYPE 2 and TYPE 4. Mothers of infants can have TYPE=1, 3 or 5. Mothers absent from work in reference week will have TYPE=3 even though they have a job. They were treated the same way as other type 3's for the purposes of survey operations because they consider themselves "not working and not looking for work" when responding to questions in the interview. TYPE=4 is composed of full-time workers who have experienced an interruption of work in the 3 months prior to the reference period.

Coverage: Respondents who were not working during the reference week and last worked as a paid employee within the reference year

Note: Based primarily on EICS questions Q08, Q09, Q10, Q10A. These questions deal with hours worked for an 'average' week in the reference period. When this information was missing, the usual hours worked at the main job was used as a proxy. This variable provides an estimate of insurable hours worked in the reference year. It was derived for the sole purpose of determining eligibility for Employment Insurance when no other information was available to assess it.

		=====	=====
		11,908	6,334,200

Coverage: Respondents who did not receive benefits for the reference week, or at all since birth or adoption for mothers
Note: Based on EICS questions QC41, QC5, QC7 or QN40, QN5, QN7 (refer to derived variable EI_D15) and Q04. Generally, this variable reflects the answers provided by the respondents as the reason for not receiving or claiming benefits. People who have not worked in 2 years or more were coded to 11 unless they provided a different reason for not receiving or claiming benefits. This category is also composed of respondents who have recent work experience according to other information collected from them but still believed that they were not eligible for benefits because they had not worked recently. Other survey variables were also used when the reason provided was vague. This increased the usefulness of the variable by reducing the number of observations in the categories "Other" and "Not stated". People who were self-employed or did not pay Employment Insurance premiums in their previous job were coded to category 02, unless they provided a different reason for not receiving benefits. Similarly, people working in the reference week in a paid job were coded to category 01.

		=====	=====
		11,908	6,334,200

Coverage: Respondents who were not working during the reference week and worked in the past two years or were looking for work

Note: Based on EICS derived variables BENEFIT, RNBENRW, RSWORK, and HOURS. Persons who received benefits are assigned a value of 1, 2, 3 or 4 as appropriate. Then, people who have not worked in the past year are assigned a value of 11 or 12. Respondents who were self-employed in the past year or in a job where Employment Insurance premiums were not deducted from their pay are assigned a value of 10. Respondents who left their job to return to school or for other reasons not deemed valid for the Employment Insurance Act are then assigned a value of 8 or 9. Lastly, when no other information was available to determine eligibility, an estimate of hours worked in the reference week was used to determine eligibility (700 hours guarantees eligibility for most paid employees contributing to the program). In COVERAGE, those who did not receive EI benefits despite likely being eligible are all included in a single category. In COV (only available from the master file), a distinction is made between those who made a claim and those who didn't.

		11,908	6,334,200

Coverage: Mothers whose spouse does not intend to claim parental benefits

Note: Before 2004, the survey did not provide full coverage of the reasons why fathers do not claim parental benefits. The main data gap is when neither spouses claimed benefits. The questions asked in the survey in these cases do not distinguish between the reasons why mothers did not ask for benefits from reasons why their spouse didn't. This explains the large number of cases with "Not stated".
Due to the new design and application this variable is not comparable to the years 2004 onward.
