INTRODUCTION

This public-use microdata tape is the latest available using Canadian Family Food Expenditure Survey data. The survey was carried out throughout 1992.

The Family Food Expenditure Survey of 1992 is the first since 1990. The 1992 survey was designed to provide information for persons living in private households in the 10 provinces of Canada as well as Whitehorse and Yellowknife. In contrast, the coverage of the 1990 survey only included the 17 metropolitan areas in Canada. For confidentiality reasons, data from Charlottetown and Summerside were excluded from the 1990 file. Users should note that data on full budget expenditure for 1992 were collected in a separate survey. The Food Survey had the same coverage as the Survey of Family Expenditure of 1992. A public-use tape has also been produced from the Survey of Family Expenditure. Records from Whitehorse and Yellowknife were excluded from both the 1992 files.

This documentation of the tape is intended to help users interpret food expenditure data correctly. Following the introduction is the section on the public-use microdata summary file which is split into three sub-sections. The first sub-section is the technical characteristics of the summary file which provides a physical description of the file. This is followed by the record layout. The record layout gives the basic content of the summary file with the names of the items, their field number and position on the file. The summary file contains the household description, income, and summary expenditure information. There is one record for each weekly diary reported (a maximum of two per household). The section called "Variable Descriptions of the Summary File" gives the components of each item, the area in the questionnaire or diary from which the variable was derived, and clarifying notes if needed.

Following the information on the summary file is information on the detailed item file. This data set records the items purchased (expenditures and quantities). The technical characteristics and the record layout of this file are followed by the "Variable Descriptions of the Detailed Item File". The total of the purchases of an item by a household in a week in a type of store constitute one record. If a household made no purchases of an item no record will be present for that item.

Appendix A shows summary family food expenditure information by household income, region and province, and size of area of residence. These tables show information before and after the reweighting and changes to some variables, which were done to safeguard the identity of respondents. Also, to illustrate the effect of the complex sample design, the standard errors for average expenditures are shown based on a technique which allows for the sample design.

Appendix B shows the 1992 Detailed Food Codes which were used in the detail item file and the units of measure for the items. Also in this table are the average expenditures and quantities calculated after reweighting.

Copies of the questionnaires used to collect the expenditure data are included with the package. The questionnaire or schedule (FE2) was used to list all members of the household along with some of their characteristics and to collect selected socio-economic characteristics (including income) of the household, as well as purchasing habits and food expenditures while away from home last month. The diary (FE3) was used to collect detailed quantity and expenditure information on the day-to-day purchases of food by the household.

It is recommended that, as well as reading this documentation, users read the copy of "Family Food Expenditure in Canada, Catalogue 62-554" which contains further information on the survey as well as tabulated results. This publication will be available in the winter of 1993.

VARIABLE DESCRIPTIONS OF THE SUMMARY FILE**LOCATION****IDENTIFICATION NUMBER:**

This variable is a unique five-digit number which identifies each household on the file. The numbers begin at 00001 and end at 10,848. Duplicate record numbers will be on the file for all records with two completed diaries. The file is sorted by geographic code (field 5) and income before taxes (field 42) (i.e. income within geographic code). The geographic code was made equal to zero for 128 extreme records. These records will be numbered 00001 to 00128. The lowest income in the Atlantic provinces will have number 00129 and the highest income in British Columbia will have the largest identification number.

FOOD SURVEY WEIGHT:

In order to provide estimates applicable to the population in the 10 provinces, it is necessary to weight each record by a weighting factor. This weighting factor reflects the variation in sampling and response rates between geographic areas and household types. As compared with previously released results, records have been reweighted to mask location within geographic areas. The reweighting process has attempted to minimize the differences between the averages and aggregates before and after reweighting. The revised weights were formed where necessary by averaging the weights between records within geographical areas. As was noted in the description of the identification number the geographic code of 128 records was masked. The weights of these records were also adjusted. Tabulations of average income and expenditure by various classifying variables before and after the reweighting of records are presented in Appendix A. The differences in the values are attributable to the reweighting of records.

GEOGRAPHIC CODE (PROVINCE):

SIZE OF AREA OF RESIDENCE:

| Code | Classification |
|------|---|
| 0 | Masked Records |
| 1 | Urban Areas with Population of 100,000 or More |
| 2 | Urban Areas with Population of 30,000 - 99,999 |
| 3 | Urban Areas with Population Less than 30,000(1) |
| 4 | Rural Farm |
| 5 | Rural Non-farm |

Size of Area of Residence

Households are located in specific areas of residence at the time of the survey.(2) These areas are of three basic kinds. The first kind are those represented by a sample of its own population, which in the Labour Force (LFS) frame are called Self-representating Units (SRU's). The second kind form part of a wider grouping of rural or smaller urban areas outside the SR areas, in which specific areas would not necessarily be represented by its own population. These are called Non-self-representing Units (NSRU's). The third kind are called Special Areas and comprise hospitals, military establishments, institutions and remote areas. SRU's, with a few exceptions, have the 1981 Census boundary of either a census metropolitan area (CMA), a census agglomeration (CA), or a single municipality (which is not part of a CMA or CA). SRU's have for family expenditure data users been delineated to size of area of residence classification according to the 1986 population (1986 boundary) of the CMA, CA or single municipality which they wholly or partly form.(3) Special Areas were classified in the appropriate size of area of residence category.

NOTE:

In four cases where urban centres are unique in a given area for their province, they have been placed in another category. Corner Brook (Newfoundland), Sydney-Sydney Mines (Nova Scotia), Moncton (New Brunswick) and Brandon (Manitoba) were moved down one category.

The size of area of residence "Rural Farm" and "Rural Non-farm" for Newfoundland, New Brunswick, Nova Scotia and British Columbia was recoded to "Rural Non-farm".

The size of area of residence was recoded to 0 (masked records) for the province of Prince Edward Island because of the small sample size.

(1) Some areas in this category are defined by Census as rural.

(2) During part or all of the survey reference year some households could have been located in a different area.

(3) Specific assignments for the 100,000 or more, and the 30,000 to 99,999 groups are shown in the appended chart.

Wages and salaries
Income from self-employment
Investment income
Government transfer payments
Income from other sources

SOURCE:

FE2 (schedule) Section E. Personal Income in the Past 12 Months, questions 2 to 18.

NOTE:

- includes incomes of all members of the household;
- this does not refer to calendar year 1992 income: The income from the Food Survey refers to varying income periods ranging approximately from the previous calendar year for the January sample to the 1992 calendar year for the December sample. The inability of some respondents to provide good estimates of income from some of the sources over a non-standard period appears to further bias the results.
- there are some differences between the Survey of Consumer Finances (SCF) and this survey (FOOD):
 - In both surveys respondents report gross income from roomers and boarders. In SCF only one third is included in net receipts while FOOD includes all of the gross receipts;
 - In the treatment of interest income FOOD explicitly requires interest received, whereas for SCF the requirement is not explicit;
 - SCF excludes households whose major source of income is military pay and allowances whereas for FOOD only military personnel living in barracks are excluded;
- wages and salaries includes employment income including military pay and allowances and salary paid to owner of incorporated business. Income from self-employment includes net profit to proprietor or partner of unincorporated business or farm and gross income from roomers and boarders. Investment income includes interest and dividends, net rents on owned property, trust and estate income. Government transfer income includes family allowances, unemployment insurance, old age security, guaranteed income supplement, Canada or Quebec Pension Plan, social assistance and child tax credits. Income from other sources includes pensions arising out of previous employment, individually purchased annuities and other money income.
- this field may be negative.
