

**Canadian Community Health Survey (CCHS)
Annual component (2011-2012 and 2012)**

Public Use Microdata File

November 2013

The Canadian Community Health Survey (CCHS) collects information on the health of the Canadian population aged 12 and older and related socio-economic data. The survey is designed to provide reliable cross-sectional estimates at provincial, territorial and health region levels.

These Public Use Microdata Files (PUMFs) contain data collected during the reference period of 2011-2012. Data are based on a sample of approximately 125,000 respondents for the two year file (2011-2012) and 62,000 respondents for the one year file (2012).

The CD-ROM contains the following directories and files:
