Help text:

Tag: Perceived health

*Perceived health is an indicator of overall health status. It can reflect aspects of health not captured in other measures, such as: incipient disease, disease severity, aspects of positive health status, physiological and psychological reserves and social and mental function. Perceived health refers to the perception of a person's health in general, either by the person himself or herself, or, in the case of proxy response, by the person responding. Health means not only the absence of disease or injury but also physical, mental and social well being.*

INTERVIEWER: If the respondent has already specified the Aboriginal group(s), select the group(s) from the list below; if not, ask:

**(^ARE\_C ^YOU1 First Nations, Métis or Inuk (Inuit)?)**

INTERVIEWER: Mark all that apply.

First Nations (North American Indian) includes Status and Non-Status Indians.

The terms "First Nations" and "North American Indian" can be interchanged. Some respondents may prefer one term over the other.

"Inuit" is the plural form of "Inuk".

Mark all that apply.

1 First Nations (North  
American Indian)

2 Métis

3 Inuk (Inuit)

INTERVIEWER: Read categories to respondent and mark up to 4 responses that apply.

If respondent answers "mixed" or "bi-racial", or multi-racial", etc probe for specific groups and mark each one separately (e.g. White, Black, Chinese). Aboriginal people or First Nations are not included in the list of response categories because the Employment Equity Act defines visible minorities as "persons, other than Aboriginal persons, who are non-Caucasian in race or non-white in "colour". Guidelines state that "Due to their status as First Nation people, Aboriginal peoples are specifically excluded from the definition".

Under the Employment Equity Act, Aboriginal Peoples are considered to be a separate designated group.
