Dwelling and Household Record Variables (16 DVs)

1) Dwelling Type

Variable name: DHHnDDWE

Based on: DHHn_DW1, DHHn_DW2 (not on the file)

Product: Master Data File

Description: This variable indicates the type of dwelling the respondent lives in, according to the answer given either on the phone (DHHn_DW1 for an Area Frame case, or DHHn_DWT for a Telephone Frame case) or face-

to-face (DHHn_DW2).

Value of DHHnDDWE	Condition(s)	Description
99 (NS)	$(DHHn_DW1 = DK, R, NS)$ or	At least one required question was
	$(DHHn_DW2 = DK, R, NS)$ or	not answered (don't know, refusal,
	$(DHHn_DWT = DK, R, NS)$	not stated)
1	$(DHHn_DW1 = 1)$ or	Single detached
	$(DHHn_DW2 = 1)$ or	
	(DHHn_DWT = 1)	
2	$(DHHn_DW1 = 2)$ or	Double
	$(DHHn_DW2 = 2)$ or	
	$(DHHn_DWT = 2)$	
3	$(DHHn_DW1 = 3)$ or	Row or terrace
	$(DHHn_DW2 = 3)$ or	
	(DHHn_DWT = 3)	
4	$(DHHn_DW1 = 4)$ or	Duplex
	$(DHHn_DW2 = 4)$ or	
	(DHHn_DWT = 4)	
5	$(DHHn_DW1 = 5)$ or	Low-rise apartment (< 5 stories) or
	$(DHHn_DW2 = 5)$ or	flat
	(DHHn_DWT = 5)	
6	$(DHHn_DW1 = 6)$ or	High-rise apartment (5 stories or
	$(DHHn_DW2 = 6)$ or	more)
	(DHHn_DWT = 6)	
8	$(DHHn_DW1 = 8)$ or	Hotel/rooming house/camp
	$(DHHn_DW2 = 8)$ or	
	(DHHn_DWT = 8)	
9	$(DHHn_DW1 = 9)$ or	Mobile home
	$(DHHn_DW2 = 9)$ or	
	(DHHn_DWT = 9)	
10	$(DHHn_DW1 = 10) or$	Other
	$(DHHn_DW2 = 10) or$	
	(DHHn_DWT = 10)	

2) Age - Grouped

Variable name: DHHEGAGE Based on: DHHE_AGE

Product: Public Use Microdata File (PUMF)

Description: This variable indicates the age of the selected respondent.

Value of DHHEGAGE	Condition(s)	Description
1	12 <= DHHE_AGE <= 14	Age between 12 and 14
2	15 <= DHHE_AGE <= 17	Age between 15 and 17
3	18 <= DHHE_AGE <= 19	Age between 18 and 19
4	20 <= DHHE_AGE <= 24	Age between 20 and 24
5	25 <= DHHE_AGE <= 29	Age between 25 and 29
6	30 <= DHHE_AGE <= 34	Age between 30 and 34
7	35 <= DHHE_AGE <= 39	Age between 35 and 39
8	40 <= DHHE_AGE <= 44	Age between 40 and 44
9	45 <= DHHE_AGE <= 49	Age between 45 and 49
10	50 <= DHHE_AGE <= 54	Age between 50 and 54
11	55 <= DHHE_AGE <= 59	Age between 55 and 59
12	60 <= DHHE_AGE <= 64	Age between 60 and 64
13	65 <= DHHE_AGE <= 69	Age between 65 and 69
14	70 <= DHHE_AGE <= 74	Age between 70 and 74
15	75 <= DHHE_AGE <= 79	Age between 75 and 79
16	DHHE_AGE >= 80	Age 80 and older

3) Marital status - Grouped

Variable name: DHHEGMS Based on: DHHE_MS

Product: Public Use Microdata File (PUMF)

Description: This variable indicates the marital status for the selected respondent.

Value of DHHEGMS	Condition(s)	Description
9 (NS)	DHHE_MS = (DK, R, NS)	Required question was not answered (don't' know, refusal, not stated)
1	DHHE_MS = 1	Married
2	DHHE_MS = 2	Common-law
3	$DHHE_MS = 3, 4, 5$	Widowed/Divorced/Separated
4	DHHE_MS = 6	Single

4) Household Size

Variable name: DHHnDHSZ

Based on: Based on household roster, SAMPLEID, PERSONID

Product: Master Data File

Description: This variable indicates the number of people living within a household.

Note: This variable is derived by sorting the household roster dataset by SAMPLEID and PERSONID and by

counting the number of PERSONID's within each SAMPLEID.

Value of DHHnDHSZ	Condition(s)	Description
Total number of PERSONID's with each SAMPLEID	Sort the file (Member file) by SAMPLEID and PERSONID	Number of persons in a household
(values: 1-40)		

5) Household size - Grouped

Variable name: DHHEGHSZ Based on: SAMPLEID, PERSONID

Product: Public Use Microdata File (PUMF)

Description: This variable indicates the number of people living within a household.

Note: This variable is derived by sorting the household roster dataset by SAMPLEID and PERSONID and by counting the number of PERSONIDs within each SAMPLEID. This produces the variable DHHEDHSZ (not included in the Public Use Microdata File) with values ranging from 1 to 40.

Value of DHHEGHSZ	Condition(s)	Explanation
1	DHHEDHSZ = 1	Exact number of persons living in
2	DHHEDHSZ = 2	household
3	DHHEDHSZ = 3	
4	DHHEDHSZ = 4	
5	DHHEDHSZ >= 5	Grouped – 5 or more persons live in the household

6) Number of Persons in Household With Less Than 6 Years of Age

Variable name: DHHnDLE5

Based on: SAMPLEID, PERSONID, DHHn_AGE

Product: Master Data File

Description: This variable indicates the number of people living within a household whose age is less than 6

years old.

Note: This variable is derived by sorting the household roster dataset by SAMPLEID and PERSONID and by counting the number of PERSONID's that have a DHHn_AGE value less than 6 within each SAMPLEID.

Value of DHHnDLE5	Condition(s)	Description
Total number of PERSONID's with each SAMPLEID	DHHn_AGE <= 5	Number of persons under 6 in a
(values: 0-40)	(Member file)	household

7) Number of Persons in Household With Less Than 6 Years of Age- Grouped

Variable name: DHHEGLE5

Based on: PERSONID, DHHE_AGE

Product: Public Use Microdata File (PUMF)

Description: This variable indicates the number of people living within the household whose age is less than 6

years old.

Value of DHHEGLE5	Condition(s)	Explanation
0	DHHEDLE5 = 0	No persons under 6 in the household
1	DHHEDLE5 >= 1	One or more persons under 6 in the household

Note: The variable DHHEDLE5 is derived by sorting the household roster dataset by SAMPLEID and PERSONID and by counting the number of PERSONIDs that have a DHHE_AGE value of 5 and under within each SAMPLEID. The variable is not included in the Public Use Microdata File. The value is calculated as:

Value of DHHEDLE5	Condition(s)	Description
Total number of PERSONIDs within	DHHE_AGE <= 5	Number of persons under 6 in a
each SAMPLEID	(Member file)	household
(values: 0-40)		

8) Number of Persons in Household between 6 to 11 Years of Age

Variable name: DHHnD611

Based on: SAMPLEID, PERSONID, DHHn AGE

Product: Master Data File

Description: This variable indicates the number of people living within a household whose age is between 6 and

11 years old.

Note: This variable is derived by sorting the household roster dataset by SAMPLEID and PERSONID and by

counting the number of PERSONID's that have a DHHn_AGE value from 6 to 11 within each SAMPLEID.

Value of DHCnD611	Condition(s)	Description
Total number of PERSONID's with each SAMPLEID	(6 <= DHHn_AGE <= 11)	Number of persons aged 6 to 11 in a
(values: 0-40)	(Member file)	household

9) Number of Persons in Household between 6 to 11 Years of Age – Grouped

Variable name: DHHEG611 Based on: PERSONID, DHHE_AGE

Product: Public Use Microdata File (PUMF)

Description: This variable indicates the number of people living within the household who are aged 6 to 11

years old.

Value of DHHEG611	Condition(s)	Explanation
0	DHHED611 = 0	No persons aged 6 to 11 in the
		household

1	DHHED611 => 1	One or more persons aged 6 to
		11 in the household

Note: The variable DHHED611 is derived by sorting the household roster dataset by SAMPLEID and PERSONID and by counting the number of PERSONIDs that have a DHHE_AGE value from 6 to 11 within each SAMPLEID. The variable is not included in the Public Use Microdata File. The value is calculated as:

Value of DHHED611	Condition(s)	Description
Total number of PERSONIDs within	(6 <= DHHE_AGE <= 11)	Number of persons aged 6 to 11
each SAMPLEID	(Member file)	in a household
(values: 0-40)		

10) Number of Persons in Household With Less Than 12 Years of Age

Variable name: DHHnDL12

Based on: SAMPLEID, PERSONID, DHHn_AGE

Product: Master Data File

Description: This variable indicates the number of people living within a household whose age is less than 12

ears old.

Note: This variable is derived by sorting the household roster dataset by SAMPLEID and PERSONID and by

counting the number of PERSONID's that have a DHHn_AGE value less than 12 within each SAMPLEID.

Value of DHHnDL12	Condition(s)	Description
Total number of PERSONID's with each SAMPLEID	DHHn_AGE < 12	Number of persons under 12 in a
(values: 0-40)	(Member file)	household

11) Number of Persons in Household With Less Than 12 Years of Age - Grouped

Variable name: DHHEGL12 Based on: PERSONID, DHHE_AGE

Product: Public Use Microdata File (PUMF)

Description: This variable indicates the number of people living within the household whose age is less than 12

years old.

Value of DHHEGL12	Condition(s)	Explanation
0	DHHEDL12 = 0	No persons under 12 in the
		household
1	DHHEDL12 >= 1	One or more persons under 12 in
		the household

Note: The variable DHHEDL12 is derived by sorting the household roster dataset by SAMPLEID and PERSONID and by counting the number of PERSONIDs that have a DHHE_AGE value less than 12 within each SAMPLEID. The variable is not included in the Public Use Microdata File. The value is calculated as:

Value of DHHEDL12	Condition(s)	Description
Total number of PERSONIDs within	DHHE_AGE < 12	Number of persons under 12 in a
each SAMPLEID	(MEMBER file)	household
(values: 0-40)		

12) Number of Persons in Household With Less Than 16 Years of Age

Variable name: DHHnDYKD

Based on: PERSONID, DHHn_AGE, RELATIONSHIP

Product: Master Data File

Description: This variable indicates the number of people living within a household whose age is less than 16

years old.

Note: This variable is derived by sorting the household roster dataset by SAMPLEID and PERSONID and by counting the number of PERSONID's that have a DHHn_AGE value of less than 16 within each SAMPLEID.

Value of DHHnDLE5	Condition(s)	Description
Total number of PERSONID's with	DHHn_AGE <= 15	Number of persons under 16 in a
each SAMPLEID		household.
	(Member file)	
(values: 0-40)		

13) Number of Persons in Household With 16 or 17 Years of Age

Variable name: DHHnDOKD

Based on: PERSONID, DHHn_AGE, RELATIONSHIP

Product: Master Data File

Description: This variable indicates the number of people living within a household whose age is 16 or 17 years old and whose relationship to at least one adult living within the household is child, grandchild, child-in-law or, piece or people.

Note: This variable is derived by sorting the household roster dataset by SAMPLEID and PERSONID and by counting the number of PERSONID's that have a DHHn_AGE value of 16 or 17 and whose RELATIONSHIP value of (51, 52, 53, 80, 100, 112 or 123) within each SAMPLEID.

Value of DHHnDLE5	Condition(s)	Description
Total number of PERSONID's with	DHHn_AGE = 16, 17	Number of persons aged 16 or 17
each SAMPLEID	(Member file) AND RELATIONSHIP	in a household whose relationship
	= 51, 52, 53, 80, 100, 112, 123	with at least one adult of the
(values: 0-40)	(Relation files)	household is child, grandchild,
		child-in-law or, niece or nephew

14) Economic Family Status (Household Type)

Variable name: DHHnDECF

Based on: DHHn_REL for all PERSONID in SAMPLEID, DHHn_AGE, DHHn_SEX, DHHnDHSZ

Product: Master Data File

Description: This variable identifies the family relationships within the household.

Note: The necessary data is collected using a set of relationship codes that define a link between each person in a household. All relationships within each sample (relationship of each person in a household to each other person within that household) are used in creating this variable. The variable was based on the ages and reported relationships of each person to all others in the household. The matrix of relationship codes is not placed on the master file.

15) Living/Family Arrangement of Selected Respondent

Variable name: DHHnDLVG

Based on: DHHn_REL of selected respondent, DHHnDHSZ

Product: Master Data File

Description: This variable identifies the family relationships between the selected respondent and the rest of the

household.

Note: The necessary data is collected using a set of relationship codes that define a link between each person in a household. All relationships with the selected respondent within each sample (relationship of selected

respondent to each other person within the household) are used in creating this variable.

Geography Variables (15 DVs)

1) Postal Code

Variable name: GEOnDPC

Based on: Respondent address information

Product: Master Data File

Description: The Canadian postal code offers a unique reference system which provides a means of identifying a mail delivery location. It is composed of six alpha-numeric characters, in the form of "ANA NAN", where "A" represents a letter of the alphabet and "N" a number. The first character of a postal code (allocated in alphabetic sequence from east to west across Canada) represents a province or territory, or a major sector entirely within a province. GEOnDPC is derived from the respondents available address information

2) 2001 Dissemination Area (DA)

Variable name: GEOnDDA Based on: GEOnDPC Product: Master Data File

Description: The dissemination area (DA) is a small, relatively stable geographic unit composed of one or more blocks. Dissemination areas cover all of the territory of Canada and replace the enumeration area (that is still used for census collection only) as the smallest standard census geographic area for which census profile data are disseminated. Using GEOnDPC, GEOnDDA is derived using the Postal Code Conversion File (PCCF), which provides a correspondence between the six character postal code and Statistics Canada's standard geographical areas for which census data and other statistics are produced. It is composed of the two digit province/territory code, the two digit census division code and the four digit dissemination area code. When the postal code corresponds to more than one DA, the case is assigned using the "most probable DA approach".

3) Health Region

Variable name: GEOnDHR4
Based on: GEOnDPC
Product: Master Data File

Description: This variable is a 4 digit number that identifies the health region. It is derived using the information

available on the survey frame at the time of sampling and the geographic information provided by the

respondent.

4) Health region – Grouped

Variable name: GEOEDPMF Based on: GEOEDHR4

Product: Public Use Microdata File (PUMF)

Description: This variable is a 5-digit number that identifies the sub-provincial health areas. It is based on the 4-digit health regions specified by the Provincial Ministries of Health. This reconstruction is as follows:

- positions 1-2 (first two positions of GEOEDHR4);
- position 3 (value of "9");
- positions 4-5 (3rd, 4th position of GEOEDHR4)

Note: The variable GEOEDHR4 is the health region based on GEOEDPC (postal code) and is derived using the information available on the survey frame at the time of sampling and the geographic information provided by the respondent. GEOEDHR4 and GEOEDPC are not included in the Public Use Microdata File.

In order to ensure regions meet the minimum population size of about 70,000, the following regions have been collapsed:

5) Sub-Health Region

Variable name: GEOnDSHR Based on: GEOnDPC Product: Master Data File

Description: This variable is a 6 digit number that identifies the sub-health region within 3 health regions (2401, 2406 and 2413) for whom additional sample was added on a cost-recovery basis. It is equal to 999996 (for not applicable) anywhere else. It is derived using the information available on the survey frame at the time of sampling and the geographic information provided by the respondent.

6) Sub-Health Regions - Grouped

Variable name: GEOEGSHR Based on: GEOEDSHR, GEOEDHR4 Product: Public Use Microdata File (PUMF)

Description: This variable is a two-digit number grouping of the sub-health regions in the Québec health regions

of Laurentides, Québec and Outaouais.

Note: The variable GEOEDSHR identifies the sub-health region within 3 health regions (2403, 2407 and 2415) for whom additional sample was added on a cost-recovery basis. It is derived using the information available on the survey frame at the time of sampling and the geographic information provided by the respondent. GEOEDSHR is not included in the Public Use Microdata File.

The variable GEOEDCSD identifies the Census Subdivision which is the general term applied to municipalities (as determined by provincial legislation) or their equivalent, e.g., Indian reserves, Indian settlements and unorganized territories. In Newfoundland, Nova Scotia and British Columbia, the term also describes geographic areas that have been created by Statistics Canada in co-operation with the provinces as equivalents for municipalities. GEOEDCSD is derived from the Postal Code Conversion File (PCCF). The variable is not included in the Public Use Microdata File.

7) Ontario Local Health Integration Network

Variable name: GEOnDLHN Based on: GEOnPRV, GEOnDPC Product: Master Data File

Description: This variable is a 4 digit number that identifies the sub-provincial health areas of Ontario. It is equal to 9996 everywhere outside Ontario. Data in Ontario are provided for two levels of geography: Public Health Units (PHU) and the Local Health Integration Networks (LHIN). Because health units were the principal areas of interest at the time the Cycle 3.1 sample was designed, data are weighted to match PHU population totals rather than LHIN totals. As a result, analysis involving calculation of totals by LHIN may be misleading. For Cycle 3.1, Statistics Canada recommends that analysis of data by LIHN be restricted to the calculation of ratios.

8) Peer Group

Variable name: GEOnDPRG Based on: GEOnDHR4 Product: Master Data File

Description: The 122 health regions have been classified into like clusters or "peer groups", for the purposes of meaningful analysis in comparing like regions across the country. A more detailed discussion on the rationale and methods involved in the development of peer groups is available in the following publications: Health Region (2000) Peer Groups Working Paper (PDF) and Health Region (2003) Peer Groups Working Paper (PDF)" these can be viewed in the "Health regions" section of the online publication "Health Indicators", Statistics Canada

catalogue number 82-221-XIE.

Group B	3530, 3536, 3551, 3553, 3565, 3566, 3568, 3570, 4822, 4825, 5922, 5923, 5931, 5933	population density Low percentage of government transfer income Rapid population growth from 1996 to 2001
3 = Health Region Peer Group C	GEOnDHR4= 1011, 1102, 1201, 1202, 1203, 1204, 1301, 1302, 1303, 1304, 2401, 2402, 2404, 2405, 2408, 3526, 3547, 3561, 3562, 3563, 4709, 5912, 5914, 5943	 Sparsely populated urban-rural mix from coast to coast Average percentage of Aboriginal population Negative population growth
4 = Health Region Peer Group D	GEOnDHR4= 1104, 4640, 4645, 4660, 4701, 4702, 4703, 4705, 4707, 4708	 Rural regions mainly in the central Prairies Moderate Aboriginal population Moderately high percentage of government transfer income Almost equal numbers of men and women Negative population growth
5 = Health Region Peer Group E	GEOnDHR4= 2412, 2414, 2415, 3531, 3533, 3534, 3535, 3539, 3543, 3552, 3554, 3557, 3558, 3560, 4620, 4625, 4630, 4820, 4821, 4823, 4824, 4826, 4827, 5911	 Mainly rural regions in Quebec, Ontario and the Prairies High proportion of people recently moved to or within these regions since 1996 Average percentage of Aboriginal population Moderate population growth
6 = Health Region Peer Group F	GEOnDHR4= 2417, 2418, 4685, 4714,6201	 Northern and remote regions Very high Aboriginal population Moderately high percentage of government transfer income Slightly higher male population Moderate population growth
7 = Health Region Peer Group G	GEOnDHR4= 2406, 3595, 5932	 Largest metro centres with an average population density of 3,934 people per square kilometre Low Aboriginal population Moderate percentage of government transfer income High female population
8 = Health Region Peer Group H	GEOnDHR4= 1014, 2409, 2410, 3549, 3556, 4670, 4710, 4828, 5951, 5952,	Rural northern regionsHigh Aboriginal populationHigh male population

	5953,6001,6101	Negative population growth
9 = Health Region Peer Group I	GEOnDHR4= 1012, 1013, 1101, 1205, 1305, 1306, 1307, 2411	 Mainly rural Eastern regions Very high percentage of government transfer income Negative population growth Low percentage of people having moved to or within these regions since 1996

9) Federal Electoral District (FED)

Variable name: GEOnDFED Based on: GEOnDDA Product: Master Data File

Description: A federal electoral district refers to any place or territorial area entitled to elect a representative member to serve in the House of Commons (Source: Canada Elections Act, 1990). There are 301 FEDs in Canada, and the FEDs used for the 2001 Census are based on the 1996 Representation Order. The first two digits identify

the province or territory (PR).

10) 2001 Census Division (CD)

Variable name: GEOnDCD Based on: GEOnDDA Product: Master Data File

Description: The Census Division refers to geographic areas established by provincial law, which are intermediate geographic areas between the census subdivision and the province (e.g., divisions, counties, regional districts, regional municipalities and seven other types of geographic areas made up of groups of census subdivisions). In Newfoundland and Labrador, Manitoba, Saskatchewan and Alberta, provincial law does not provide for these administrative geographic areas. Therefore, census divisions have been created by Statistics Canada in co-operation with these provinces. GEOnDCD is derived from GEOnDDA using the Postal Code Conversion File (PCCF).

11) 2001 Census Subdivision (CSD)

Variable name: GEOnDCSD Based on: GEOnDDA Product: Master Data File

Description: The Census Subdivision is the general term applied to municipalities (as determined by provincial legislation) or their equivalent, e.g., Indian reserves, Indian settlements and unorganized territories. In Newfoundland and Labrador, Nova Scotia and British Columbia, the term also describes geographic areas that have been created by Statistics Canada in co-operation with the provinces as equivalents for municipalities.

GEOnDCSD is derived from GEOnDDA using the Postal Code Conversion File (PCCF).

12) 2001 Census Metropolitan Area (CMA)

Variable name: GEOnDCMA

Based on: GEOn_PC **Product:** Master Data File

Description: The general concept of a census metropolitan area (CMA) is one of a very large urban area, together with adjacent urban and rural areas which have a high degree of economic and social integration with that urban area. A CMA is delineated around an urban area (called the urbanized core and having a population of at least 100,000, based on the previous census). There are 27 CMAs according to the 2001 Census definition. When a postal code is not in a CMA, this variable is equal to 000.

Value of	СМА
GEOnDCMA	
000	No CMA assigned
001	St. John's
205	Halifax
310	Saint John
408	Saguenay
421	Québec
433	Sherbrooke
442	Trois-Rivières
462	Montréal
505	Ottawa-Gatineau
521	Kingston
532	Oshawa

932	Abbotsford
933	Vancouver
935	Victoria

13) Statistical Area Classification (SAT)

Variable name: GEOnDSAT Based on: GEOnDCSD Product: Master Data File

Description: The Statistical Area Classification Type (SAT) identifies the type of statistical area classification in which the census subdivision is located, according to whether the CSD is a component of a census metropolitan area (CMA), a census agglomeration (CA), a census metropolitan area and census agglomeration influenced zone (strong MIZ, moderate MIZ, weak MIZ or no MIZ), or the territories (Yukon Territory, Northwest Territories and Nunavut).

14) Urban-Rural Classification

Variable name: GEOnDUR7 Based on: GEOnDPC Product: Master Data File

Description: This variable identifies whether the respondent lives in an urban or rural area. Urban areas are those continuously built-up areas having a population concentration of 1,000 or more and a population density of 400 or more per square kilometre based on current census population counts. The value of this variable is missing for about 1% of the postal codes in Canada.

Value of GEOnDUR7	Explanation
0	Missing
1	Urban core
2	Urban fringe
3	Rural fringe inside CMAs and CAs
4	Urban area outside CMAs and CAs
5	Rural fringe outside CMAs and CAs
6	Secondary urban core

15) Urban-Rural Classification - Grouped

Variable name: GEOnDUR2
Based on: GEOnDUR7
Product: Master Data File

Description: This variable is a grouping of GEOnDUR7 into 2 categories.

Value of GEOnDUR2	Condition(s)	Explanation
1	GEOnDUR7= 1,2,4 or 6	Urban
2	GEOnDUR7= 0,3 or 5	Rural

Education Variables (4 DVs)

1) Highest Level of Education – Respondent, 10 Levels

Variable name: EDUnDR10

Based on: EDUn_1, EDUn_2, EDUn_3, EDUn_4

Product: Master Data File

Description: This variable indicates the highest level of education acquired by the respondent.

Value of EDUnDR10	Condition(s)	Description
1	EDUn_1 = 1 and EDUn_3 = 2	Grade 8 or lower (Québec: Secondary II or lower)
2	EDUn_1 = 2 and EDUn_3 = 2	Grade 9-10 (Québec: Secondary III or IV; Newfoundland & Labrador: 1st year of secondary)
3	EDUn_1 = 3 and EDUn_2 = 2 and EDUn_3 = 2	Grade 11-13 (Québec: Secondary V; Newfoundland & Labrador: 2nd to 4th year of secondary)
4	EDUn_2 = 1 and EDUn_3 = 2	Secondary school graduate, no post- secondary education
5	EDUn_4 = 1	Some post secondary education
6	EDUn_4 = 2	Trade certificate or diploma from a vocational school or apprenticeship training
7	EDUn_4 = 3	Non-university certificate or diploma from a community college, CEGEP, school of nursing, etc.
8	EDUn_4 = 4	University certificate below bachelor's level
9	$EDUn_4 = 5$	Bachelor's degree
10	EDUn_4 = 6	University degree or certificate above bachelor's degree
99 (NS)	[(EDUn_1 = DK, R, NS) and EDUn_2 = 2] or (EDUn_2 = DK, R, NS) or (EDUn_3 = DK, R, NS) or (EDUn_4 = DK, R, NS)	At least one required question was not answered (don't know, refusal, not stated)

2) Highest Level of Education - Respondent, 4 Levels

Variable name: EDUEDR04

Based on: EDUE_1, EDUE_2, EDUE_3, EDUE_4

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable indicates the highest level of education acquired by the respondent.

Value of EDUEDR04	Condition(s)	Description
1	[(EDUE_1 = 1, 2) or EDUE_2 = 2] and EDUE_3 = 2	Less than secondary school graduation
2	EDUE_2 = 1 and EDUE_3 = 2	Secondary school graduation, no post-secondary education
3	EDUE_4 = 1	Some post-secondary education
4	(2 <= EDUE_4 <= 6)	Post-secondary degree/diploma
9 (NS)	(EDUE_2 = DK, R, NS) or (EDUE_3 = DK, R, NS) or (EDUE_4 = DK, R, NS)	At least one required question was not answered (don't know, refusal, not stated)

3) Highest Level of Education – Household, 10 Levels

Variable name: EDUnDH10

Based on: EDUnDR10 for each member of the household

Product: Master Data File

Note: This variable indicates the highest level of education acquired by any member of the household. **Note:** This variable is derived by temporarily creating EDUnDR10 for each member of the household (all PERSONID within SAMPLEID), then by comparing these values of EDUnDR10 within the household and by returning the highest value. If any PERSONID has EDUnDR10 of NS (not stated) then NS is returned. If all of EDUnDR10 are NA (not applicable) then NA is returned.

4) Highest Level of Education – Household, 4 Levels

Variable name: EDUEDH04

Based on: EDUEDR04 for each member of the household **Product:** Master Data File and Public Use Microdata File (PUMF)

Description: This variable indicates the highest level of education acquired by any member of the household. **Note:** This variable is derived by temporarily creating EDUEDR04 for each member of the household (all PERSONID within SAMPLEID), then by comparing these values of EDUEDR04 within the household and by returning the highest value. If any PERSONID has EDUEDR04 of NS (not stated) then NS is returned. If all of

EDUEDR04 are NA (not applicable) then NA is returned.

Sample Variables (2 DVs)

1) Permission to Share Data

Variable name: SAMnDSHR

Based on: ADM_Q04 (Share question from health questionnaire [not on file]), PS_Q01 (Share question from Exit

questionnaire [not on file]). **Product:** Master Data File

Description: This variable indicates whether or not the respondent agreed to share the information collected during the first recall dietary interview with the provincial ministries of health, Health Canada, and the "Institut de la Statistique du Québec" for Quebec respondents, as stated in ADM_Q04 and PS_Q01. The variable SAMCDSHR is calculated from the responses to the Share questions in the main questionnaire (ADM_Q04) and to the Exit questionnaire (PS_Q01).

Value of SAMnDSHR	Condition(s)	Description
1	(ADM_Q04 = 1 and PS_Q01 <> 2) or (ADM_Q04 <> 2 and PS_Q01 = 1)	Respondent agreed to share information
9 (NS)	$ADM_Q04 = NS $ and $PS_Q01 = NS$	Respondent was not asked to share information
2	Else	Respondent did not agree to share information

2) Permission to Link

Variable name: SAMnDLNK

Based on: ADM_Q01B (Link question from health questionnaire [not on file])

Product: Master Data File

Description: This variable indicates whether or not the respondent agreed that the information collected during the first dietary recall interview be linked with administrative records of their past and current use of health services.

Value of SAMnDLNK	Condition(s)	Description
1	ADM_Q01B = 1	Respondent agreed to link information
9 (NS)	ADM_Q01B = NS	Respondent was not asked the link question
2	Else	Respondent did not agree to link information

General Health (2 DVs)

1) Self-Rated Health (Formerly Health Description Index)

Variable name: GENEDHDI

Based on: GENE_01

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable indicates the respondent's health status based on his/her own judgement. Higher

scores indicate positive self-reported health status.

Value of GENEDHDI	Condition(s)	Description
9 (NS)	(GENE_01 = DK, R, NS)	Required question was not answered (don't know, refusal, not stated)
0	GENE_01 = 5	Poor
1	$GENE_01 = 4$	Fair
2	GENE_01 = 3	Good
3	GENE_01 = 2	Very good
4	GENE_01 = 1	Excellent

2) Self-Rated Mental Health

Variable name: GENEDMHI Based on: GENE_02B

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable indicates the respondent's mental health status based on his/her own judgement. Higher

scores indicate positive self-reported mental health status.

Value of GENEDMHI	Condition(s)	Description
9 (NS)	$ADME_PRX = 1$	Module not asked - proxy interview
9 (NS)	$(GENE_02B = DK, R, NS)$	Required question was not
		answered (don't know, refusal, not
		stated)
0	$GENE_02B = 5$	Poor
1	$GENE_02B = 4$	Fair
2	$GENE_02B = 3$	Good
3	GENE_02B = 2	Very good
4	GENE 02B = 1	Excellent

Oral Health (2 DVs)

1) Social Limitation Due to Oral Health Status

Variable name: OH2EFLIM Based on: OH2E_23, OH2E_24

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable indicates whether the respondent's oral health status impacts on social functioning as

measured by avoiding conversation or contact with others, or by avoiding laughing or smiling.

Value of OH2EFLIM	Condition(s)	Description
6(NA)	OH2Efopt = 2	Module not selected
9 (NS)	$ADME_PRX = 1$	Module not asked – proxy interview
2	$(OH2E_23 = 3, 4)$ and	No social limitation due to oral
	$(OH2E_24 = 3, 4)$	condition
1	$(OH2E_23 = 1, 2) \text{ or }$	Social limitation experienced due to
	$(OH2E_24 = 1, 2)$	oral condition
9 (NS)	$(OH2E_23 = DK, R, NS) or$	At least one required question was
	$(OH2E_24 = DK, R, NS)$	not answered
		(don't know, refusal, not stated)

2) Oral and Facial Pain and Discomfort

Variable name: OH2EFOFP

Based on: OH2E_25A, OH2E_25B, OH2E_25C, OH2E_25D, OH2E_25E, OH2E_25F, OH2E_25G

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable indicates the presence of oral and facial pain in the past month.

Value of OH2EFOFP	Condition(s)	Description
6(NA)	OH2EFOPT = 2	Module not selected
9 (NS)	$ADME_PRX = 1$	Module not asked - proxy interview

Self-Reported Height and Weight (9 DVs)

1) Height (Metres) - Self-Reported

Variable name: HWTnDHTM

Based on: HWTn_2, HWTn_2C, HWTn_2D, HWTn_2E, HWTn_2F

Product: Master Data File

Description: This variable indicates the respondent's self-reported height in metres.

Note: For example, an individual who reported being 5 feet and 8 inches will have a height of 1.727 metres. The 1.727 is the midpoint of the range (1.715-1.739) around the height 5 feet and 8 inches. The range values were calculated as follows for an individual who is 5'8": LOWER LIMIT: Take the exact value in metres for a person who is 5'7" and average it with the value for 5'8". UPPER LIMIT: Take the exact value in metres for a person who is 5'9" and average it with the value for 5'8" then subtract 0.001 from it.

2) Height (Metres) - Self-Reported - Grouped

Variable name: HWTEGHTM

Based on: HWTE_2, HWTE_2C, HWTE_2D, HWTE_2E, HWTE_2F

Previous usage: See Appendix A

Product: Public Use Microdata File (PUMF)

Description: This variable indicates the height of the respondent in metres.

Note: For example, an individual who is 5 feet and 8 inches will have a height of 1.727 metres. The 1.727 is the midpoint of the range (1.715-1.739) around the height 5 feet and 8 inches. The range values were calculated as follows for an individual who is 5'8": LOWER LIMIT: Take the exact value in metres for a person who is 5'7" and average it with the value for 5'8". UPPER LIMIT: Take the exact value in metres for a person who is 5'9" and average it with the value for 5'8" then subtract 0.001 from it.

Note: In order to ensure certain individuals were not identifiable, some records have been collapsed as indicated in the table entitled "Collapsed extreme values of HWTEGHTM" below.

4) Weight (Kilograms) - Self-Reported - Grouped

Variable name: HWTEGWTK
Based on: HWTE_3, HWTE_N4
Previous usage: See Appendix A
Product: Public Use Microdata File (PUMF)

Description: This variable indicates the weight of the respondent in kilograms.

Note: In order to ensure certain individuals were not identifiable, some records have been collapsed as indicated

in the table entitled "Collapsed extreme values of HWTEGWTK" below.

5) Body Mass Index (self-reported)

Variable name: HWTnDBMI

Based on: HWTnDHTM, HWTnDWTK

Product: Master Data File

Description: Body Mass Index (BMI) is a comparison of "weight" relative to the "height" of respondents. BMI is

calculated by dividing weight in kilograms by height in metres squared.

(BMI = WEIGHT (KG) / HEIGHT (METRES) SQUARED)

Note (1): BMI is not calculated for pregnant women. Although calculation of BMI is not recommended for lactating women, the index provided here is calculated for women who report that they are breastfeeding $(MEXn_05 = 1)$ to permit comparability with previous cycles of CCHS and NPHS.

Note (2): For Cycle 1.1 of CCHS, BMI was calculated only for respondents aged 20-64. Beginning with Cycle 2.1, BMI is calculated for respondents aged 18 and over. With the introduction of a new classification system for people under 18 in Cycle 3.1, BMI is now calculated for persons less than 18.

Note (3): This BMI classification is created using "self-reported height" and "self-reported weight" variables.

Value of HWTnDBMI	Condition(s)	Description
999.96 (NA)	$MAMn_037 = 1$	Population exclusion – Pregnant
999.99 (NS)	HWTnDHTM = NS or HWTnDWTK = NS	Respondents for whom a valid measured height and weight was not obtained
999.99 (NS)	DHHn_SEX = 2 and (MAMn_037 = DK, R, NS)	Females who did not answer the pregnancy question (don't know, refusal, not stated)
HWTnDWTK / (HWTnDHTM × HWTnDHTM) (Rounded to two decimal places)	HWTnDHTM < NA and HWTnDWTK < NA	BMI calculated from both measured height and measured weight values

6) Body Mass Index - Grouped

Variable name: HWTEGBMI

Based on: HWTEDHTM, HWTEDWTK **Previous usage**: See Appendix A

Product: Public Use Microdata File (PUMF)

Description: Body Mass Index (BMI) is a comparison of "self reported weight" relative to the "self reported

height" of respondents. BMI is calculated by dividing weight in kilograms by height in metres squared.

(BMI = WEIGHT (KG) / HEIGHT (METRES) SQUARED)

Note (1): BMI is not calculated for pregnant women. Although calculation of BMI is not recommended for lactating women, the index provided here is calculated for women who report that they are breastfeeding $(MEXn_05 = 1)$ to permit comparability with previous CCHS cycles.

Note (2): For Cycles 1.1 and 1.2 of CCHS, BMI was calculated only for respondents aged 20-64. For Cycle 2.1, BMI was calculated for respondents aged 18 and over. With the introduction of a new classification system for people under 18 in Cycle 2.2 and Cycle 3.1, BMI is now calculated for persons less than 18.

Note (3): This BMI classification is created using "self reported height" and "self reported weight" variables.

Value of HWTEGBMI	Condition(s)	Description
999.96 (NA)	MAME_037 = 1	Population exclusion – pregnancy
999.99 (NS)	HWTEDHTM = NS or HWTEDWTK = NS	Respondents for whom a valid measured height and weight was not obtained

HWTEDWTK / (HWTEDHTM × HWTEDHTM) (Rounded to two decimal places) (Min.: 12 Max.: 58)	HWTEDHTM < NA and HWTEDWTK < NA	BMI calculated from both measured height and measured weight values. Collapsed for values below 12 and over 58

7) BMI classification for adults aged 18 and over (self-reported) - international standard

Variable name: HWTnDISW Based on: HWTnDBMI, DDHn_AGE

Product: Master Data File

Description: This variable assigns adult respondents aged 18 and over (except pregnant women) to one of the following categories, according to their Body Mass Index (BMI): underweight; acceptable weight; overweight; obese class I; obese class II; and, obese class III. Here, the BMI categories are adopted from a body weight classification system recommended by Health Canada and the World Health Organization (WHO) which has been widely used internationally.

According to Health Canada, this BMI classification system can be used as a screening tool to identify weight-related health risks at the population and individual levels. The following health risks are associated with each of the BMI categories for adults aged 18 and over:

normal weight = least health risk;

- underweight and overweight = increased health risk;
- obese class I = high health risk;
- obese class II = very high health risk;
- obese class III = extremely high health risk

At the population level, the BMI classification system can be used to compare body weight patterns and related health risks *within* and *between* populations and to establish population trends in body weight patterns. The classification should be used with caution at the individual level because the health risk associated with each BMI category varies considerably between individuals. Particular caution should be used when classifying: adults who are naturally very lean, very muscular adults, some ethnic and racial groups, and seniors.

For more detailed information see *Canadian Guidelines for Body Weight Classification in Adults,* Health Canada, 2003 (available online at:

http://www.hc-sc.gc.ca/hpfb-dgpsa/onpp-bppn/weight_book_e.pdf).

Note: This variable excludes female respondents aged 18 to 49 who were pregnant or did not answer the pregnancy question (i.e. MAMn_037 = don't know, refusal, not stated).

8) BMI classification for adults aged 18 and over (self reported) - international standard - Grouped

Variable name: HWTEGISW
Based on: HWTEDBMI, DDHE_AGE
Product: Public Use Microdata File (PUMF)

Description: This variable assigns adult respondents aged 18 and over (except pregnant women) to one of the following categories, according to their Body Mass Index (BMI): underweight; acceptable weight; overweight; obese class I; obese class II; and, obese class III. Here, the BMI categories are adopted from a body weight classification system recommended by Health Canada and the World Health Organization (WHO) which has been widely used internationally.

According to Health Canada, this BMI classification system can be used as a screening tool to identify weight-related health risks at the population and individual levels. The following health risks are associated with each of the BMI categories for adults aged 18 and over:

- normal weight = least health risk;
- underweight and overweight = increased health risk;
- obese class I = high health risk;

- obese class II = very high health risk;
- obese class III = extremely high health risk

At the population level, the BMI classification system can be used to compare body weight patterns and related health risks *within* and *between* populations and to establish population trends in body weight patterns. The classification should be used with caution at the individual level because the health risk associated with each BMI category varies considerably between individuals. Particular caution should be used when classifying: adults who are naturally very lean, very muscular adults, some ethnic and racial groups, and seniors.

For more detailed information see *Canadian Guidelines for Body Weight Classification in Adults,* Health Canada, 2003 (available online at:

http://www.hc-sc.gc.ca/hpfb-dgpsa/onpp-bppn/weight_book_e.pdf).

Note: This variable excludes female respondents aged 18 to 49 who were pregnant or did not answer the pregnancy question (i.e. MAME_037 = don't know, refusal, not stated).

9) BMI classification for children aged 12 to 17 (self-reported) - Cole classification system

Variable name: HWTEDCOL

Based on: HWTEDBMI, DHHE_SEX, DHHEYOB, DHHEMOB, DHHEDOB, ADME_YOI, ADME_MOI, ADME_DOI

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable classifies children aged 12 to 17 (except female respondents aged 15 to 17 who were pregnant or did not answer the pregnancy question) as "obese", "overweight" or "neither obese or overweight" according to the age-and-sex-specific BMI cut-off points as defined by Cole et al. The Cole cut-off points are based on pooled international data (Brazil, Great Britain, Hong Kong, Netherlands, Singapore, and United States) for BMI and linked to the widely internationally accepted adult BMI cut-off points of 25 (overweight) and 30 (obese). For more information about the Cole BMI classification system, see *Establishing a Standard Definition for Child Overweight and Obesity Worldwide - International survey,* by Tim J Cole, Mary C Bellizzi, Katherine M. Flegal, William H Dietz, published in <u>British Medical Journal</u>, Volume: 320, May 2000.

Note (1): Respondents who do not fall within the categories of "Obese" or "Overweight" (as defined by Cole et al.) have been classified by CCHS as "neither obese nor overweight".

Note (2): This variable excludes respondents who are 216 months in age, i.e. those who were 18 years old or over.

Measured Height and Weight (9 DVs)

1) Height (Metres) - Measured

Variable name: MHWnDHTM

Based on: MHWn_N6 **Product:** Master Data File

Description: This variable indicates the respondent's height in metres as measured by an interviewer. **Note:** For Cycle 3.1, height and weight measured by interviewers were collected as part of a sub-sample of 4,735 respondents aged 12 and over, proportionally distributed over the 10 provinces according to their

population size. Measured height and weight was not collected in the territories.

5) Body Mass Index (BMI) (Measured)

Variable name: MHWnDBMI

Based on: MHWnDHTM, MHWnDWTK

Product: Master Data File

Description: Body Mass Index (BMI) is a comparison of "weight" relative to the "height" of respondents. BMI is

calculated by dividing weight in kilograms by height in metres squared.

(BMI = WEIGHT (KG) / HEIGHT (METRES) SQUARED)

Note (1): BMI is not calculated for pregnant women. Although calculation of BMI is not recommended for lactating women, the index provided here is calculated for women who report that they are breastfeeding $(MEXn_05 = 1)$ to permit comparability with previous CCHS cycles.

Note (2): For Cycle 1.1 of CCHS, BMI was calculated only for respondents aged 20-64. Beginning with Cycle 2.1, BMI is calculated for respondents aged 18 and over. With the introduction of a new classification system for people under 18 in Cycle 3.1, BMI is now calculated for persons less than 18.

Note (3): This BMI classification is created using "measured height" and "measured weight" variables.

Value of MHWnDBMI	Condition(s)	Description
999.96 (NA)	(GEOn_PRV = 60, 61, 62) or MAMn_037 = 1	Population exclusions
999.99 (NS)	MHWnDHTM = NS or MHWnDWTK = NS	Respondents for whom a valid measured height and weight was not obtained
999.99 (NS)	DHHn_SEX = 2 and (MAMn_037 = DK, R or NS)	Females who did not answer the pregnancy question (don't know, refusal, not stated)
MHWnDWTK / (MHWnDHTM × MHWnDHTM) (Rounded to two decimal places)	MHWnDHTM < NA and MHWnDWTK < NA	BMI calculated from both measured height and measured weight values

6) Body Mass Index (BMI) - Measured - Grouped

Variable name: MHWEGBMI

Based on: MHWEDHTM, MHWEDWTK **Product:** Public Use Microdata File (PUMF)

Description: Body Mass Index (BMI) is a comparison of "weight" relative to the "height" of respondents. BMI is

calculated by dividing weight in kilograms by height in metres squared.

7) BMI Classification for Adults Aged 18 and Over (Measured) - International Standard

Variable name: MHWnDISW Based on: MHWnDBMI, DHHn_AGE

Product: Master Data File

Description: This variable assigns adult respondents aged 18 and over (except pregnant women) to one of the following categories, according to their Body Mass Index (BMI): underweight; acceptable weight; overweight; obese class I; obese class II; and, obese class III. Here, the BMI categories are adopted from a body weight classification system recommended by Health Canada and the World Health Organization (WHO) which has been widely used internationally.

According to Health Canada, this BMI classification system can be used as a screening tool to identify weight-related health risks at the population and individual levels. The following health risks are associated with each of the BMI categories for adults aged 18 and over:

- normal weight = least health risk;
- underweight and overweight = increased health risk;
- obese class I = high health risk;
- obese class II = very high health risk;
- obese class III = extremely high health risk

At the population level, the BMI classification system can be used to compare body weight patterns and related health risks *within* and *between* populations and to establish population trends in body weight patterns. The classification should be used with caution at the individual level because the health risk associated with each BMI category varies considerably between individuals. Particular caution should be used when classifying: adults who are naturally very lean, very muscular adults, some ethnic and racial groups, and seniors.

For more detailed information see *Canadian Guidelines for Body Weight Classification in Adults,* Health Canada, 2003 (available online at:

http://www.hc-sc.gc.ca/hpfb-dgpsa/onpp-bppn/weight_book_e.pdf).

Note: This variable excludes female respondents aged 18 to 49 who were pregnant or did not answer the pregnancy question (i.e. MAMn_037 = don't know, refusal, not stated).

Value of MHWnDISW	Condition(s)	Description

9) BMI Classification for Children Aged 12 to 17 (Measured) - Cole Classification System

Variable name: MHWEDCOL

Based on: MHWEDBMI, DHHE_SEX, DHHEYOB, DHHEMOB, DHHEDOB, ADME_YOI, ADME_MOI, ADME_DOI

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable classifies children aged 12 to 17 as "obese" or "overweight" according to the age-and-sex-specific BMI cut-off points as defined by Cole et al. The Cole cut-off points are based on pooled international data (Brazil, Great Britain, Hong Kong, Netherlands, Singapore, and United States) for BMI and linked to the internationally accepted adult BMI cut-off points of 25 (overweight) and 30 kg/m² (obese). For more information about the Cole BMI classification system, see *Establishing a Standard Definition for Child Overweight and Obesity Worldwide - International survey,* by Tim J. Cole, Mary C. Bellizzi, Katherine M. Flegal, William H. Dietz, published in British Medical Journal, Volume: 320, May 2000.

Note (1): Respondents who do not fall within the categories of "Obese" or "Overweight" (as defined by Cole et al.) have been classified by CCHS as "neither obese nor overweight".

Note (2): This variable excludes female respondents aged 15 to 17 who were pregnant or did not answer the pregnancy question (i.e. MAME_037 = don't know, refusal, not stated).

Note (3): This variable excludes respondents who are 216 months in age, i.e. 18 years old or older.

3) Home Care Provided by Neighbour/Family Member/Volunteer - Grouped

Variable name: HMCEG12C

Based on: HMCE_12C, HMCE_12D, HMCE_12E **Product:** Public Use Microdata File (PUMF)

Description: This variable indicates whether the respondent received home care which was provided by a

neighbour, family member or volunteer

Value of HMCEG12C	Conditions(s)	Explanation
6 (NA)	DHHE_AGE < 18	Population exclusions
6 (NA)	HMCE_11 = 2	Respondent did not receive home care services with the cost not covered by the government.
1	HMCE_12C = 1 or HMCE_12D = 1 or HMCE_12E = 1	Respondent received home care from a neighbour, family member or volunteer
2	HMCE_12C = 2 and HMCE_12D = 2 and HMCE_12E = 2	Respondent did not receive home care from a neighbour, family member or volunteer
9 (NS)	(HMCE_12C = DK, R, NS) or (HMCE_12D = DK, R, NS) or (HMCE_12E = DK, R, NS)	At least one required question was not answered (don't know, refusal, not stated)

4) Type of Home Care Recieved by Nurse/Homemaker/Physiotherapist From Private Agency – Nursing Care - Grouped

Variable name: HMCEG3AA

Based on: HMCE_3AA, HMCE_3BA, HMCE_3GA **Product:** Public Use Microdata File (PUMF)

Description: This variable indicates whether the respondent received nursing care which was provided by a

nurse or homemaker from a private agency.

Value of HMCEG3AA	Conditions(s)	Explanation
6 (NA)	DHHE_AGE < 18 or HMCE_11 = 2	Population exclusions
6 (NA)	HMCEG12A = 2	Respondent did not receive care from a nurse, homemaker,or physiotherapist from a private agency
1	HMCE_3AA = 1 or HMCE_3BA = 1 or HMCE_3GA = 1	Respondent received nursing care from a nurse, homemaker, or physiotherapist from a private agency
2	HMCE_3AA = 2 and HMCE_3BA = 2 and HMCE_3GA = 2	Respondent did not receive nursing care from a nurse, homemaker, or physiotherapist from a private agency
9 (NS)	(HMCE_3AA = DK, R, NS) or (HMCE_3BA = DK, R, NS) or (HMCE_3GA = DK, R, NS)	At least one required question was not answered (don't know, refusal, not stated)

5) Type of Home Care Recieved by Nurse/Homemaker/Physiotherapist From Private Agency – Other Health Care Services - Grouped

Variable name: HMCEG3AB

Based on: HMCE_3AB, HMCE_3BB, HMCE_3GB **Product:** Public Use Microdata File (PUMF)

Description: This variable indicates whether the respondent received other health care which was provided by a

nurse or homemaker from a private agency.

Value of HMCEG3AB	Conditions(s)	Explanation
6 (NA)	DHHE_AGE < 18 or HMCE_11 = 2	Population exclusions
6 (NA)	HMCEG12A = 2	Respondent did not receive care from a nurse, homemaker, or physiotherapist from a private agency
1	HMCE_3AB = 1 or HMCE_3BB = 1 or HMCE_3GB = 1	Respondent received other health care services from a nurse, homemaker, or physiotherapist from a private agency
2	HMCE_3AB = 2 and HMCE_3BB = 2 and HMCE_3GB = 2	Respondent did not receive other health care services from a nurse, homemaker, or physiotherapist from a private agency
9 (NS)	(HMCE_3AB = DK, R, NS) or (HMCE_3BB = DK, R, NS) or (HMCE_3GB = DK, R, NS)	At least one required question was not answered (don't know, refusal, not stated)

6) Type of Home Care Recieved by Nurse/Homemaker/Physiotherapist From Private Agency – Personal Care - Grouped

Variable name: HMCEG3AC

Based on: HMCE_3AC, HMCE_3BC, HMCE_3GC **Product:** Public Use Microdata File (PUMF)

Description: This variable indicates whether the respondent received personal care which was provided by a

nurse or homemaker from a private agency.

Value of HMCEG3AC	Conditions(s)	Explanation
6 (NA)	DHHE_AGE < 18 or	Population exclusions

	(HMCE_3EI = DK, R, NS)	not stated)

Restriction of Activities (5 DVs)

1) Impact of Health Problems

Variable name: RACEDIMP

Based on: RACE_2A, RACE_2B1, RACE_2B2, RACE_2C

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable is a crude measure of the impact of long-term physical conditions, mental conditions

and health problems on the principal domains of life of: home, work, school, and other activities.

Note: This variable should not be used to describe the rate of disability or activity limitation in the population. The questions used to derived this variable, plus RACE_1, were asked in the 2001 Census of Population to identify a sample for the 2001 post-censal Participation and Activity Limitation Survey (PALS). Also, because of differences in question wording between the CCHS and National Population Health Survey (NPHS questions are 1991 Census questions), RACEDIMP should NOT be compared to the NPHS variables RES_FLG and RACEF1.

Value of RACEDIMP	Condition(s)	Description
9 (NS)	$(RACE_2A = DK, R, NS)$ or	At least one required question was
	$(RACE_2B1 = DK, R, NS)$ or	not answered (don't know, refusal,

99 (NS)	$(RACE_5 = DK, R, NS)$	At least one required question was
		not answered (don't know, refusal,
		not stated

3) Participation and Activity Limitation

Variable name: RACEDPAL

Based on: RACE_1, RACE_2A, RACE_2B1, RACE_2B2, RACE_2C **Product:** Master Data File and Public Use Microdata File (PUMF)

Description: This variable classifies respondents according to the frequency with which they experience activity limitations imposed on them by a condition(s) or by long-term physical and/or mental health problems that has lasted or is expected to last 6 months or more.

Note: This variable is the same as RACEDIMP with the exception that RACE_1 is used in the calculation. This variable is a modification of the Participation and Activity Limitation Survey (PALS) derived variables. Whereas PALS treats item non-response (DK, R) as a negative response (set to "Never"), CCHS treats them as non-response and the derived variable is set to not-stated.

Value of RACEDPAL	Condition(s)	Description
9 (NS)	$(RACE_2A = DK, R, NS)$ or	At least one required question was
	$(RACE_2B1 = DK, R, NS)$ or	not answered (don't know, refusal,
	$(RACE_2B2 = DK, R, NS)$ or	not stated)
	$(RACE_2C = DK, R, NS)$ or	
	$(RACE_1 = DK, R, NS)$	
2	$RACE_2A = 2 \text{ or}$	Often
	$RACE_2B1 = 2 \text{ or}$	
	$RACE_2B2 = 2 \text{ or}$	
	$RACE_2C = 2 \text{ or}$	
	$RACE_1 = 2$	
1	$RACE_2A = 1 \text{ or}$	Sometimes
	$RACE_2B1 = 1 \text{ or}$	
	$RACE_2B2 = 1 \text{ or}$	
	$RACE_2C = 1 \text{ or}$	
	RACE_1 = 1	
3	$RACE_2A = 3$ and	Never
	$(RACE_2B1 = 3, 4) \text{ and }$	
	$(RACE_2B2 = 3, 4)$ and	
	$RACE_2C = 3$ and	
	$RACE_1 = 3$	

4) Need for Help in Series of Tasks

Variable name: RACEF6R

Based on: RACE_6A, RACE_6B1, RACE_6C, RACE_6D, RACE_6E, RACE_6F, RACE_6G

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable classifies respondents according to their need for help (for health reasons) with instrumental activities of daily living such as preparing meals, shopping for groceries or other necessities, doing everyday housework, doing heavy household chores (washing walls, yard work), and personal care (washing, dressing or eating), moving about inside the house or paying bills.

Note: RACEF6R is modified from RACAF6 (CCHS Cycle 1.1) by adding RACE_6G. The series of tasks included was revised based on the Participation and Activity Limitation Survey. Hence, this derived variable has been modified to take into account the revised set of tasks making the DV not strictly comparable to RACAF6.

Value of RACEF6R	Condition(s)	Description
1	$RACE_6A = 1 \text{ or}$	Needs help with at least one task
	$RACE_6B1 = 1 \text{ or}$	
	$RACE_6C = 1 \text{ or}$	
	$RACE_6D = 1 \text{ or}$	
	$RACE_6E = 1 \text{ or}$	
	$RACE_6F = 1 \text{ or}$	
	$RACE_6G = 1$	
2	$RACE_6A = 2$ and	Does not need help
	$RACE_6B1 = 2$ and	
	$RACE_6C = 2$ and	
	$RACE_6D = 2$ and	
	$RACE_6E = 2$ and	
	$RACE_6F = 2$ and	
	$RACE_6G = 2$	
9 (NS)	$(RACE_6A = DK, R, NS)$ or	At least one required question was
	$(RACE_6B1 = DK, R, NS)$ or	not answered (don't know, refusal,
	$(RACE_6C = DK, R, NS)$ or	not stated)
	$(RACE_6D = DK, R, NS)$ or	
	$(RACE_6E = DK, R, NS)$ or	
	$(RACE_6F = DK, R, NS)$ or	
	$(RACE_6G = DK, R, NS)$	

5) Difficulty With Social Situations

Variable name: RACEF7

Based on: RACE_7A, RACE_7B, RACE_7C

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable indicates whether the respondent has difficulty (for health reasons) with situations like making and maintaining friends, dealing with people they don't know well and starting or maintaining

conversations.

Value of RACEF7	Condition(s)	Description
1	$RACE_7A = 1 \text{ or}$	Has difficulty with at least one
	$RACE_7B = 1 \text{ or}$	social situation
	$RACE_7C = 1$	
2	$RACE_7A = 2$ and	Does not have difficulty with social
	$RACE_7B = 2$ and	situation
	$RACE_7C = 2$	
9 (NS)	$(RACE_7A = DK, R, NS)$ or	At least one required question was
	$(RACE_7B = DK, R, NS)$ or	not answered (don't know, refusal,
	$(RACE_7C = DK, R, NS)$	not stated)

Two-Week Disability (3 DVs)

Temporary Reformats

Reformat	Description
If TWDE_2 = NA then TWDET2 = 0	Reset NA values of TWDE_2 to 0
If TWDE_4 = NA then TWDET4 = 0	Reset NA values of TWDE_4 to 0
If TWDE_2B = NA then TWDET2B = 0	Reset NA values of TWDE_2B to 0
If $TWDE_4B = NA$ then $TWDET4B = 0$	Reset NA values of TWDE_4B to 0

1) Total Number of Disability Days

Variable name: TWDEDDDY Based on: TWDE_2, TWDE_4

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable indicates the number of days in the past two weeks when the respondent stayed in

bed or cut down in activities because of illness or injury.

Value of TWDEDDDY	Condition(s)	Description
99 (NS)	(TWDET2 = DK, R, NS) or	At least one required question was
	(TWDET4 = DK, R, NS)	not answered (don't know, refusal,

TWDET2 + TWDET4	TWDET2 < 15 and	Total number of bed-days & cut-
(min: 0; max: 14)	TWDET4 < 15	down days in the last two weeks

2) Number of Disability Days – Emotional or Mental Health or Use of Alcohol or Drugs

Variable name: TWDEDDDM Based on: TWDE_2B, TWDE_4B

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable indicates the number of days in the past two weeks when the respondent stayed in

bed or cut down in activities because of emotional or mental health or use of alcohol or drugs.

Value of TWDEDDDM	Condition(s)	Description
99 (NS)	(TWDET2B = DK, R, NS) or (TWDET4B = DK, R, NS)	At least one required question was not answered (don't know, refusal, not stated)
TWDET2B + TWDET4B	TWDET2B < 15 and TWDET4B < 15	Total number of bed-days & cut- down days in the last two weeks
(min: 0; max: 14)		because of emotional or mental health or use of alcohol or drugs

3) Number of Disability Days - Physical Illness or Injuries

Variable name: TWDEDDDP

Based on: TWDEDDDY, TWDEDDDM

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable indicates the number of days in the past two weeks when the respondent stayed in bed or cut down in activities because of illness or injury, excluding emotional and mental health and use of

alcohol and drugs.

Value of TWDEDDDP	Condition(s)	Description
99 (NS)	TWDEDDDY = NS or	At least one required question was
	TWDEDDDM = NS	not answered (don't know, refusal,
		not stated)
TWDEDDDY – TWDEDDDM	TWDEDDDY < 15 and	Total number of bed-days & cut-
	TWDEDDDM < 15	down days in the last two weeks
(min: 0; max: 14)		excluding emotional and mental
		health and use of alcohol and drugs

Food Choices (3 DVs)

1) Chooses or Avoids Certain Foods Because of Certain Health Concerns

Variable name: FDCEFCAH

Based on: FDCE_1A, FDCE_1B, FDCE_1C, FDCE_1D

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable indicates whether the respondent chooses or avoids certain types of foods because of

one or more of the following health concerns: body weight, heart disease, cancer, and osteoporosis.

Value of FDCEFCAH	Condition(s)	Description
6 (NA)	FDCEFOPT = 2	Module not selected

	$(FDCE_1C = DK, R, NS)$ or	not stated)
	$(FDCE_1D = DK, R, NS)$	

2) Chooses Certain Foods for Certain Content Reasons

Variable name: FDCEFCHO

Based on: FDCE_2A, FDCE_2B, FDCE_2C

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable indicates whether the respondent chooses certain foods because of concerns about

fat, fibre, or calcium content.

Value of FDCEFCHO	Condition(s)	Description
6 (NA)	FDCEFOPT = 2	Module not selected
9 (NS)	$ADME_PRX = 1$	Module not asked – proxy interview

Fruit and Vegetable Consumption (8 DVs)

1) Daily Consumption - Fruit Juice

Variable name: FVCEDJUI

Based on: FVCE_1A, FVCE_1B, FVCE_1C, FVCE_1D, FVCE_1E **Product:** Master Data File and Public Use Microdata File (PUMF)

Description: This variable indicates the usual number of times per day the respondent drinks fruit juice.

Note: The CCHS measures the <u>number of times</u> (frequency), <u>not</u> the amount consumed.

Value of FVCEDJUI	Condition(s)	Description
999.6 (NA)	FVCEFDO = 2	Module not selected

2) Daily Consumption - Other Fruit

Variable name: FVCEDFRU

Based on: FVCE_2A, FVCE_2B, FVCE_2C, FVCE_2D, FVCE_2E **Product:** Master Data File and Public Use Microdata File (PUMF)

Description: This variable indicates the usual number of times per day the respondent consumes fruit, excluding

fruit juices.

Note: The CCHS measures the <u>number of times</u> (frequency), <u>**not**</u> the amount consumed.

Value of FVCEDFRU	Condition(s)	Description

0	$FVCE_3A = 5$	Never eats green salad

4) Daily Consumption - Potatoes

Variable name: FVCEDPOT

Based on: FVCE_4A, FVCE_4B, FVCE_4C, FVCE_4D, FVCE_4E **Product:** Master Data File and Public Use Microdata File (PUMF)

Description: This variable indicates the usual number of times per day the respondent consumes potatoes,

excluding French fries, fried potatoes, or potato chips.

Note: The CCHS measures the <u>number of times</u> (frequency), <u>**not**</u> the amount consumed.

Value of FVCEDPOT	Condition(s)	Description

0	$FVCE_4A = 5$	Never eats potatoes

5) Daily Consumption - Carrots

Variable name: FVCEDCAR

Based on: FVCE_5A, FVCE_5B, FVCE_5C, FVCE_5D, FVCE_5E **Product:** Master Data File and Public Use Microdata File (PUMF)

Description: This variable indicates the usual number of times per day the respondent consumes carrots.

Note: The CCHS measures the <u>number of times</u> (frequency), <u>**not**</u> the amount consumed.

Value of FVCEDCAR	Condition(s)	Description
999.6 (NA)	FVCEFDO = 2	Module not selected

0	$FVCE_5A = 5$	Never eats carrots

6) Daily Consumption - Other Vegetables

Variable name: FVCEDVEG

Based on: FVCE_6A, FVCE_6B, FVCE_6C, FVCE_6D, FVCE_6E **Product:** Master Data File and Public Use Microdata File (PUMF)

Description: This variable indicates the respondent's usual daily consumption of other vegetables, excluding carrots, potatoes, or salad. Respondents are asked to report in 'servings' rather than 'times' so that all different fruits or vegetables eaten at the same meal are counted. Servings should not be interpreted as referring to a specific quantity.

Note: The CCHS measures the <u>number of times</u> (frequency), <u>**not**</u> the amount consumed.

Value of FVCEDVEG	Condition(s)	Description
999.6 (NA)	FVCEFDO = 2	Module not selected
999.9 (NS)	$ADME_PRX = 1$	Module not asked -proxy interview

(rounded to one decimal place)		(reported "servings per year")
0	$FVCE_6A = 5$	Never eats other vegetables

7) Daily Consumption - Total Fruit and Vegetable

Variable name: FVCEDTOT

Based on: FVCEDJUI, FVCEDFRU, FVCEDSAL, FVCEDPOT, FVCEDCAR, FVCEDVEG

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable indicates the total number of times per day the respondent eats fruits and vegetables.

Note: The CCHS measures the <u>number of times</u> (frequency), <u>**not**</u> the amount consumed.

Value of FVCEDTOT	Condition(s)	Description
999.6 (NA)	FVCEFDO = 2	Module not selected

8) Grouping of Daily Consumption - Total Fruit and Vegetable

Variable name: FVCEGTOT Based on: FVCEDTOT

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable classifies the respondent based on the total number of times per day he/she eats

fruits and vegetables.

Note: The CCHS measures the number of times (frequency), not the amount consumed.

Value of FVCEGTOT	Condition(s)	Description
999.6 (NA)	FVCEFDO = 2	Module not selected
9 (NS)	$ADME_PRX = 1$	Module not asked - proxy interview
9 (NS)	FVCEDTOT = NS	At least one required question was not answered (don't know, refusal, not stated) or module not asked (proxy interview)

1	FVCEDTOT < 5	Eats fruits and vegetables less than
		5 times per day.
2	(5 <= FVCEDTOT <= 10)	Eats fruits and vegetables between
		5 and 10 times per day
3	FVCEDTOT > 10	Eats fruits and vegetables more
		than 10 times per day

Physical Activities (6 DVs)

1) Daily Energy Expenditure

Variable name: PACEDEE

Based on: PACE_1V, PACE_2A, PACE_2B, PACE_2C, PACE_2D, PACE_2E, PACE_2F, PACE_2G, PACE_2H, PACE_2I, PACE_2J, PACE_2K, PACE_2L, PACE_2M, PACE_2N, PACE_2O, PACE_2P, PACE_2Q, PACE_2R, PACE_2S, PACE_2T, PACE_2U, PACE_2W, PACE_2X, PACE_3Z, PACE_3A, PACE_3B, PACE_3C, PACE_3D, PACE_3E, PACE_3F, PACE_3G, PACE_3H, PACE_3I, PACE_3J, PACE_3K, PACE_3L, PACE_3M, PACE_3N, PACE_3O, PACE_3P, PACE_3Q, PACE_3R, PA

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable is a measure of the average daily energy expended during leisure time activities by the respondent in the past three months.

Note: Energy Expenditure is calculated using the frequency and duration per session of the physical activity as well as the MET value of the activity. The MET is a value of metabolic energy cost expressed as a multiple of the resting metabolic rate. For example, an activity of 4 METS requires four times the amount of energy as compared to when the body is at rest.

EE (Energy Expenditure for each activity) = (N X D X METvalue) / 365

Where:

N = the number of times a respondent engaged in an activity over a 12 month period

D = the average duration in hours of the activity

MET value = the energy cost of the activity expressed as kilocalories expended per kilogram of body weight per hour of activity (kcal/kg per hour)/365 (to convert yearly data into daily data)

MET values tend to be expressed in three intensity levels (i.e. low, medium, high). The CCHS questions did not ask the respondent to specify the intensity level of their activities. Therefore the MET values adopted correspond to the low intensity value of each activity. This approach is adopted from the Canadian Fitness and Lifestyle Research Institute because individuals tend to overestimate the intensity, frequency and duration of their activities.

Internet site: Canadian Fitness and Lifestyle Research Institute: www.cflri.ca

The MET values for the CCHS questions are:

^{*} Jogging (MET value 7) and running (MET value 12) fall under one category. Therefore, the MET value for the combined activity is the average of their MET values (9.5). Since it is difficult to assign a MET value to the category "Other **Activities**", the MET value used is the average of the listed activities except for the average value of jogging and running. Here, the average value of jogging and running is replaced by the value for jogging only. Some activities have MET values lower than the average, however, this approach is consistent with other studies, such as the Campbell's Survey and the Ontario Health Survey (OHS).

^{*} Times were assigned an average duration value for the calculation, as with NPHS:

(13 minutes or .2167 hour, 23 minutes or .3833 hour, 45 minutes or .75 hour, 60 minutes or 1 hour)

Beginning in CCHS cycle 2.1, the list of activities (PACE_1n) changed slightly from previous CCHS cycles: The activity "Soccer" was asked explicitly in Cycle 2.1. For Cycle 1.1, this activity was part of the "Other" activities.

For NPHS, the list of activities has changed slightly since Cycle 1: "Skating" was changed to "Ice-skating" starting in Cycle 2. "In-line skating or roller-blading" was added starting in Cycle 3. "Yoga or tai-chi" was dropped after Cycle 1 and "Basketball" was added. "Cross-country skiing" was on the list for Cycles 1 and 2 only. "Soccer" is not asked on NPHS.

2) Participant In Leisure Physical Activity

Variable name: PACEFLEI Based on: PACE_1V

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable indicates whether the respondent participated in any leisure physical activities in the

three months prior to the interview. **Source:** Ontario Health Survey

Internet site: www.chass.utoronto.ca/datalib/codebooks/utm/ohs/ohs90.htm

Value of PACEFLEI	Condition(s)	Description

Variable name: PACEDFM

Based on: PACE_1V, PACE_2A, PACE_2B, PACE_2C, PACE_2D, PACE_2E, PACE_2F, PACE_2G, PACE_2H, PACE_2I, PACE_2J, PACE_2K, PACE_2L, PACE_2M, PACE_2N, PACE_2O, PACE_2P, PACE_2Q, PACE_2R, PACE_2S, PACE_2T, PACE_2Z, PACE_2U, PACE_2W, PACE_2X, PACE_3A, PACE_3B, PACE_3C, PACE_3D, PACE_3E, PACE_3F, PACE_3G, PACE_3H, PACE_3I, PACE_3J, PACE_3K, PACE_3L, PACE_3M, PACE_3N, PACE_3O, PACE_3P, PACE_3Q, PACE_3R, PACE_3R, PACE_3T, PACE_3Z, PACE_3U, PACE_3W, PACE_3X

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable measures the total <u>number of times per month</u> that respondents took part in a physical activity(ies) lasting more than 15 minutes.

Note 2: The survey questions refer to "the past three months". This variable calculates a one-month average by dividing the total reported frequency by three.

4) Frequency of All Physical Activity Lasting Over 15 Minutes

Variable name: PACEDFR Based on: PACEDFM

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable classifies respondents according to their pattern, or regularity of physical activity

lasting more than 15 minutes.

Note: This variable uses values for the derived variable Monthly Frequency of Physical Activity (PACEDFM). The

values for PACEDFM reflect a one-month average based on data reported for a three-month period.

Value of PACEDFR	Condition(s)	Description

5) Participant In Daily Physical Activity Lasting Over 15 Minutes

Variable name: PACEFD Based on: PACEDFM

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable indicates whether the respondent participated daily in physical activity lasting over 15

minutes.

Note: This variable is based on values for Monthly Frequency of Physical Activity (PACEDFM). Values for

PACEDFM reflect a one-month average based on data reported for a three-month period.

Value of PACEFD	Condition(s)	Description

6) Physical Activity Index

Variable name: PACEDPAI Based on: PACEDEE

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable categorizes respondents as being "active", "moderate", or "inactive" based on the

total daily Energy Expenditure values (kcal/kg/day) calculated for PACEDEE.

Note: The Physical Activity Index follows the same criteria used to categorize individuals in the Ontario Health

Survey (OHS) and in the Campbell's Survey on Well Being.

1) Total Number of Hours Per Week Spent In Sedentary Activities

Variable name: SACEDTOT

Based on: SACE_1, SACE_2, SACE_3, SACE_4

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable estimates the total number of hours the respondent spent in a typical week in past 3 months doing the following sedentary activities: computer, computer games and Internet, video games, television or videos and reading. For all activities, time spent at school or work is excluded.

Use of Protective Equipment (3 DVs)

1) Wears Protective Equipment when In-Line Skating

Variable name: UPEEFILS

Based on: UPEE_02A, UPEE_02B, UPEE_02C, PACE_1I

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable indicates whether the respondent wears a helmet, wrist guards and elbow pads

always or most of the time when in-line skating.

Note: Respondents that does not in-line skate were excluded from the population.

3) Wears Protective Equipment when Skateboarding

Variable name: UPEEFSKB

Based on: UPEE_06A, UPEE_06B, UPEE_06C

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable indicates whether respondents aged 12 to 19 years old wear a helmet, wrist guards

and elbow pads always or most of the time when skateboarding.

Note: Respondents less than 12 years old or more than 19 years old and respondents that have not

skateboarded in the past 12 months were excluded from the population.

Injuries (13 DVs)

1) Type of Injury by Body Site

Variable name: INJnDTBS

Based on: INJn_05, INJn_06, INJn_07

Product: Master Data File

Description: This variable categorizes injury type by body site.

Note (1): This variable was derived by creating a matrix between all possible answers in question INJn_05 (type of injury) with all possible answers in questions INJn_06 and INJn_07 (body part injured). Each combination in the matrix was given a unique code, except for those combinations that are deemed impossible (e.g. dislocation of the eyes)

Note (2): Note that the answer category « hand-wrist » is, since Cycle 2.1, divided in two separate categories (INJn_06=7 and INJn_07=8). These ones have to be merged in order to compare the cycle 2.1 results with the preceding cycles.

Note (3): Respondents who did not suffer injuries in the past 12 months before the interview have been excluded from the population.

2) Most Serious Injury - Type of Injury - Grouped

Variable name: INJEG05 Based on: INJE_05

Product: Public Use Microdata File (PUMF)

Description: This variable groups the most serious injury by type of injury.

Value of INJEG05	Conditions(s)	Explanation
96 (NA)	INJE_01 = 2	Respondent did not suffer an injury
1	$INJE_05 = 1$	Multiple injuries
2	$INJE_05 = 2$	Broken or fractured bones
3	$INJE_05 = 3$	Burn/Scald/Chemical burn
4	$INJE_05 = 4$	Dislocation
5	$INJE_05 = 5$	Sprain or strain
6	$INJE_05 = 6$	Cut/puncture/animal or human bite
		(open wound)
7	INJE_05 = 7	Scrape/bruise/blister
8	$(INJE_05 = 8, 10)$	Concussion or other brain
		injury/injury to internal organs
9	$(INJE_05 = 9, 11)$	Other, includes poisoning
99 (NS)	$(INJE_05 = DK, R, NS)$	Required question was not
		answered (don't know, refusal, not
		stated)

3) Most Serious Injury – body part affected - Grouped

Variable name: INJEG06 Based on: INJE_06

Product: Public Use Microdata File (PUMF)

Description: This variable groups the most serious injury by body part affected.

Value of INJEGO6	Conditions(s)	Explanation
96 (NA)	$INJE_01 = 2$	Respondent did not suffer an injury

96 (NA)	$(INJE_05 = 8, 9, 10)$	Respondent suffered an injury to internal organs, brain, or poisoning
1	INJE_06 = 1	Multiple sites
2	$(INJE_06 = 2, 3, 4)$	Eyes/head/neck
3	INJE_06 = 5	Shoulder/upper arm
4	INJE_06 = 6	Elbow/lower arm
5	$(INJE_06 = 7, 8)$	Wrist or hand
6	$(INJE_06 = 9, 10)$	Hip/thigh
7	INJE_06 = 11	Knee/lower leg
8	INJE_06 = 12	Ankle/foot
9	(INJE_06 = 13, 14)	Upper or lower back/upper or lower spine
10	(INJE_06 = 15, 16)	Chest/abdomen/pelvis (excluding back and spine)
99 (NS)	(INJE_06 = DK, R, NS)	Required question was not answered (don't know, refusal, not stated)

4) Cause of Injury

Variable name: INJnDCAU Based on: INJn_10, INJn_12 Product: Master Data File

Description: This variable categorizes the respondent's cause of injury.

Note: Respondents who did not suffer any injuries in the past 12 months before the interview have been

excluded from the population.

Value of INJnDCAU	Condition(s)	Description
96 (NA)	INJn_01= 2	Population exclusion

	INJE_12 = 10	- extreme weather or natural
		disaster physical assault

6) Cause of Injury by Place of Occurrence

Variable name: INJnDCBP Based on: INJn 08, INJnDCAU **Product:** Master Data File

Description: This variable categorizes cause of injury by its place of occurrence.

ones have been merged to compare Cycle 2.1 results with the preceding cycles.

Note (1): This variable was derived by creating a matrix between all possible answers in the derived variable INJnDCAU (cause of injury) with all possible answers in question INJn_08 (place of occurrence). The 'Other cause of injury' category can include such accidents as those caused by electrical current, firearms, and ski-lifts. Note (2): Note that since Cycle 2.1, two changes have been made to the answer categories on place of occurrence of the injury (INJn_08). The categories « Sports or athletics area » and « Other-Specify » each have been divided in two separate categories (respectively INJn_08=4 and INJn_08=11 and INJn_08=12). These

Note (3): Respondents who did not suffer any injuries in the past 12 months before the interview have been

excluded from the population.

7) Most Serious Injury - Place of occurrence - Grouped

Variable name: INJEG08 Based on: INJE_08

Product: Public Use Microdata File (PUMF)

Description: This variable groups the responses of most serious injury by place of occurrence.

Value of INJEG08	Conditions(s)	Explanation
96 (NA)	$INJE_01 = 2$	Respondent did not suffer an injury
1	INJE_08 = 1	In a home or its surrounding area
2	$(INJE_08 = 2, 3, 6)$	Residential institution/school,
		college, university/other institution
3	$INJE_08 = 4$	Sports or athletic area in school,
		college, university
4	$INJE_08 = 5$	Other sports or athletic area
		(excluding school sports area)
5	INJE_08 = 7	Street, highway, sidewalk
6	INJE_08 = 8	Commercial area (e.g. store,
		restaurant, office building,
		transport)
7	$(INJE_08 = 9, 10)$	Industrial or construction area or
		farm (excluding farmhouse and its
		surrounding area)
8	(INJE_08 = 11, 12)	Other, includes countryside, forest,
		lake, ocean, mountains, prairie, etc.
99 (NS)	$(INJE_08 = DK, R, NS)$	Required question was not
		answered (don't know, refusal, not
		stated)

8) Most Serious Injury - Activity when injured - Grouped

Variable name: INJEG09 Based on: INJE_09

Product: Public Use Microdata File (PUMF)

Description: This variable groups the responses of most serious injury by activity when injured.

Value of INJEG09	Conditions(s)	Explanation
96 (NA)	INJE_01 = 2	Respondent did not suffer an injury
1	INJE_09 = 1	Sport or physical exercise
2	INJE_09 = 2	Leisure or hobby
3	INJE_09 = 3	Work at a job or business
4	INJE_09 = 4	Travel to or from work
5	INJE_09 = 5	Household chores, other unpaid work or education
6	(INJE_09 = 6, 7)	Other, including sleeping, eating, personal care
99 (NS)	(INJE_09 = DK, R, NS)	Required question was not answered (don't know, refusal, not stated)

9) Most Serious Injury - How fell - Grouped

Variable name: INJEG11 Based on: INJE_11

Product: Public Use Microdata File (PUMF)

Description: This variable groups the responses of most serious injury by how the respondent fell.

Value of INJEG11	Conditions(s)	Explanation
6 (NA)	INJE_01 = 2	Respondent did not suffer an injury
6 (NA)	INJE_10 = 2	Respondent did not suffer an injury
		as a result of a fall
1	INJE_11 = 1	While skating, skiing,
		snowboarding, in-line skating or
		skateboarding
2	$(INJE_11 = 2, 5, 6)$	Going up or down stairs/steps/from
		furniture/from elevated position
3	INJE_11 = 3	Slip, trip, stumble on ice or snow
4	$INJE_11 = 4$	Slip, trip, stumble on any other
		surface
5	INJE_11 = 7	Other
9 (NS)	$(INJE_11 = DK, R, NS)$	Required question was not
		answered (don't know, refusal, not
		stated)

10) Most Serious Injury – Treated in clinic - Grouped

Variable name: INJEG14C

Based on: INJE_14C, INJE_14D, INJE_14E, INJE_14F

Product: Public Use Microdata File (PUMF)

Description: This variable groups the responses according to whether the most serious injury was treated in a

clinic.

Value of INJEG14C	Conditions(s)	Explanation
6 (NA)	INJE_14C = NA	Respondent did not suffer an injury or did not receive medical attention within 48 hours.
1	INJE_14C = 1 or INJE_14D = 1 or INJE_14E = 1 or INJE_14F = 1	Most serious injury treated in: a hospital outpatient clinic, walk-in clinic, appointment clinic, community health centre, or CLSC.
2	INJE_14C = 2 and INJE_14D = 2 and INJE_14E = 2 and INJE_14F = 2	Most serious injury not treated in: a hospital outpatient clinic, walk-in clinic, appointment clinic, community health centre, or CLSC.
9 (NS)	(INJE_14C = DK, R, NS) or (INJE_14D = DK, R, NS) or (INJE_14E = DK, R, NS) or (INJE_14F = DK, R, NS)	At least one required question was not answered (don't know, refusal, not stated)

11) Most Serious Injury - Treated at work/school/home - Grouped

Variable name: INJEG14G

Based on: INJE_14G, INJE_14H, INJE_14I **Product:** Public Use Microdata File (PUMF)

Description: This variable groups the responses according to whether the most serious injury was treated at

work, school or home.

Value of INJEG14G	Conditions(s)	Explanation
6 (NA)	INJE_14G = NA	Respondent did not suffer an injury or did not receive medical attention within 48 hours
1	INJE_14G = 1 or INJE_14H = 1 or INJE_14I = 1	Most serious injury treated at work/school/home
2	INJE_14G = 2 and INJE_14H = 2 and INJE_14I = 2	Most serious injury not treated at work/school/home
9 (NS)	(INJE_14G = DK, R, NS) or (INJE_14H = DK, R, NS) or (INJE_14I = DK, R, NS)	At least one required question was not answered (don't know, refusal, not stated)

12) Most Serious Injury - Other method of treatment - Grouped

Variable name: INJEG14J Based on: INJE_14J, INJE_14K

Product: Public Use Microdata File (PUMF)

Description: This variable groups the responses according to whether the most serious injury was treated with a

telephone consultation or in some other place.

Value of INJEG14J	Conditions(s)	Explanation
6 (NA)	INJE_14J = NA	Respondent did not suffer an injury or did not receive medical attention within 48 hours
1	INJE_14J = 1 or INJE_14K = 1	Most serious injury treated with a telephone consultation or in some other place
2	INJE_14J = 2 and INJE_14K = 2	Most serious injury not treated with a telephone consultation or in some other place
9 (NS)	(INJE_14J = DK, R, NS) or (INJE_14K = DK, R, NS)	At least one required question was not answered (don't know, refusal, not stated)

13) Injury Status

Variable name: INJEDSTT Based on: INJE_01, INJE_16

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable indicates the injury status of the respondent.

Value of INJEDSTT	Condition(s)	Description
9 (NS)	$(INJE_01=DK, R, NS)$ or	At least one required question was
	(INJE_16=DK, R, NS)	not answered (don't know, refusal,
		not stated)
0	INJE_01=2 and	No injuries
	INJE_16=2	
1	INJE_01=1 and	Activity-limiting injury only
	INJE_16=2	
2	INJE_01=2 and	Treated (non-activity limiting)
	INJE_16=1	injury only
3	INJE_01=1 and	Both activity-limiting and treated

14) Health Utility Index

Variable name: HUIEDHSI

Based on: HUIEDVIS, HUIEDHER, HUIEDSPE, HUIEDMOB, HUIEDDEX, HUIEDEMO, HUINDCOG, HUIEDPAD

Product: Master Data File and Public Use Microdata File (PUMF)

Description: The Health Status Index or Health Utility INDEX (HUI) is a generic health status index that is able to synthesize both quantitative and qualitative aspects of health. The index, developed at McMaster University's Centre for Health Economics and Policy Analysis, is based on the Comprehensive Health Status Measurement System (CHSMS). It provides a description of an individual's overall functional health, based on eight attributes: vision, hearing, speech, mobility (ability to get around), dexterity (use of hands and fingers), cognition (memory and thinking), emotion (feelings), and pain and discomfort.

In addition to describing functional health status levels, the CHSMS is the basis for HUI3. The HUI3 is a single numerical value for any possible combination of levels of these eight self-reported health attributes. The HUI3 maps any one of the vectors of eight health attribute levels into a summary health value between –0.360 and 1. For instance, an individual who is near-sighted, yet fully healthy on the other seven attributes, receives a score of 0.973. On that scale, the most preferred health level (perfect health) is rated 1.000 and death is rated 0.000, while negative scores reflect health states considered worse than death.

The scores of the HUI embody the views of society concerning health status. These views are termed societal preferences, since preferences about various health states are elicited from a representative sample of individuals.

The HUI3 (Mark 3) was developed by McMaster University's Centre for Health Economics and Policy Analysis, and is derived using societal preferences from a random sample of 500 people within the boundaries of the City of Hamilton-Wentworth, Ontario, Canada.

The algorithm mapping the questions to the CHSMS itself is the property of Health Utilities Inc. and is protected by copyright. Statistics Canada is authorized, when requested, to share this algorithm with users who wish to replicate results or analyses conducted by Statistics Canada. The use of the algorithm for other purposes, or the sharing of it with others, is prohibited.

Higher scale indicates better health index Range: -0.360 to 1 in increments of 0.001

Work Stress (7 DVs)

The work stress items are sub-divided into six dimensions. As is the case for the overall index, answers to the items indicate the respondent's perceptions about various dimensions of his/her work. The name of each subscale reflects the dimension which is measured. Respondents between the age of 15 and 75 who worked at a job or business at anytime in the past 12 months were asked to evaluate their main job in the past 12 months. The 12-item index, based on a larger pool of items from Karasek and Theorell (1990), reflects a respondent's perceptions of various dimensions of his/her work including job security, social support, monotony, physical effort required, and extent of participation in decision-making. Higher scores indicate greater work stress.

1) Derived Work Stress Scale - Decision Latitude: Skill Discretion

Variable name: WSTEDSKI

Based on: WSTE_401, WSTE_402, WSTE_404

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable indicates the respondent's task variety at main work in the past 12 months. Questions are asked about whether the respondent was required to keep learning new things, whether his/her job required a high level of skill and whether the job required that the respondent do things over and over.

Note (1): Respondents less than 15 years old or more than 75 years old and respondents who have not worked

at a job or business at any time in the past 12 months were excluded from the population.

Note (2): Higher scores indicate greater work stress.

Value of WSTEDSKI	Condition(s)	Description
96 (NA)	WSTEFOPT = 2	Module not selected
96 (NA)	WSTET401 = NA	Population exclusions
99 (NS)	$ADME_PRX = 1$	Module not asked – proxy interview
99 (NS)	(WSTET401 = DK, R, NS) or	At least one required question was
	(WSTET402 = DK, R, NS) or	not answered (don't know, refusal,
	(WSTET404 = DK, R, NS)	not stated)
WSTET401 + WSTET402 +	$(0 \le WSTET401 \le 4)$ and	Score obtained on the skill
WSTET404	$(0 \le WSTET402 \le 4)$ and	discretion scale
(min: 0; max: 12)	$(0 \le WSTET404 \le 4)$	

2) Derived Work Stress Scale - Decision Latitude: Decision Authority

Variable name: WSTEDAUT

Based on: WSTE_401, WSTE_403, WSTE_409

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable indicates whether the respondent's main job in the past 12 months allows them

freedom on how to do their job and if they have a lot of say of what happens on their job.

Note (1): Respondents less than 15 years old or more than 75 years old and respondents who have not worked

at a job or business at any time in the past 12 months were excluded from the population.

Note (2): Higher scores indicate greater work stress.

Value of WSTEDAUT	Condition(s)	Description
96 (NA)	WSTEFOPT = 2	Module not selected
96 (NA)	WSTET401 = NA	Population exclusions
99 (NS)	$ADME_PRX = 1$	Module not asked – proxy interview

3) Derived Work Stress Scale - Psychological Demands

Variable name: WSTEDPSY

Based on: WSTE_401, WSTE_405, WSTE_406

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable indicates if the respondent is free from conflicting demands that others make and if their main job in the past 12 months is very hectic.

Note (1): Respondents less than 15 years old or more than 75 years old and respondents who have not worked at a job or business at any time in the past 12 months were excluded from the population.

Note (2): Higher scores indicate greater work stress.

Value of WSTEDPSY	Condition(s)	Description
96 (NA)	WSTEFOPT = 2	Module not selected
96 (NA)	WSTET401 = NA	Population exclusions
99 (NS)	$ADME_PRX = 1$	Module not asked – proxy interview

4) Derived Work Stress Scale - Job Insecurity

Variable name: WSTEDJIN Based on: WSTE_401, WSTE_407

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable indicates if the respondent feels that their main job security is good.

Note (1): Respondents less than 15 years old or more than 75 years old and respondents who have not worked

at a job or business at any time in the past 12 months were excluded from the population.

Note (2): Higher scores indicate greater work stress.

5) Derived Work Stress Scale - Physical Exertion

Variable name: WSTEDPHY Based on: WSTE 401, WSTE 408

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable indicates whether the main job in the past 12 months requires a lot of physical effort. **Note (1):** Respondents less than 15 years old or more than 75 years old and respondents who have not worked

at a job or business at any time in the past 12 months were excluded from the population.

Note (2): Higher scores indicate greater work stress.

Value of WSTEDPHY	Condition(s)	Description

Based on: SFEE_501, SFEE_502, SFEE_503, SFEE_504, SFEE_505, SFEE_506

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable assesses the amount of positive feelings an individual holds about his/herself.

Note (1): Scores on the index are based on a subset of items from the self-esteem Rosenberg scale (1969). The six items have been factored into one dimension in the factor analysis done by Pearlin and Schooler (1978).

Note (2): Higher scores indicate greater self-esteem.

Variable name: SMKEDYCS

Based on: SMKE_202, SMKE_203, DHHE_AGE

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable indicates the number of years the respondent has smoked daily.

Note (1): The NPHS variables include non-smokers and occasional smokers who previously smoked daily.

Note (2): Respondents who are not daily smokers have been excluded from the population.

Smoking – Stages of Change (1 DV)

The stage of change model defines five stages of change in the process of smoking cessation:

- 1) Precontemplation The person has no intention of changing behaviour in the foreseeable future (for example, quitting smoking).
- 2) Contemplation The person is aware of the problem and is seriously thinking about changing the behaviour but has not vet made a commitment to take action or is not confident of being able to sustain the behavioural change (that is, seriously thinking of quitting in the next 30 days but did not try to quit for at least 24 hours in the past 12 months, or seriously thinking of quitting smoking in the next 6 months but not in the next 30 days).
- 3) Preparation The person is seriously planning to take action in the next month and is confident of success (that is, seriously thinking of quitting smoking in the next 30 days and has already stopped smoking at least once during the past 12 months).
- 4) Action The person has successfully modified the behaviour within the past 6 months (that is, has quit smoking less than 6 months ago).
- 5) Maintenance The person has maintained the behaviour change for at least six months (that is, has quit smoking at least six months ago).

Nicotine Dependence (1 DV)

The items and scoring used to derive the Fagerström Tolerance Test are based on the work of Fagerström, Heatherton and Kozlowski. The test allows physicians to classify smokers according to a level of nicotine dependency and to identify those most likely to need nicotine replacement therapy. The measure combines an index of cigarette consumption and difficulty tolerating reduced nicotine levels.

Variable name: NDEEDFTT

Modules used: Smoking (SMK), Nicotine Dependence (NDE)

Based on: SMKE_202, SMKE_204, NDEE_1, NDEE_2, NDEE_3, NDEE_4, NDEE_5

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable classifies current daily smokers into categories, according to level of nicotine dependency. The measure combines an index of consumption (cigarettes per day) with difficulty tolerating reduced nicotine levels.

Note: Occasional smokers and non-smokers are excluded from the population.

Smoking Cessation Aids (1 DV)

1) Attempted / Successful Quitting

Variable name: SCAEDQUI

Modules used: Smoking (SMK), Stages of Change (SCH), Smoking Cessation Aids (SCA)

Based on: SMKEDSTY, SMKE_01A, SMKE_202, SMKE_06A, SMKE_09A, SMKE_10, SMKE_10A, SCAE_50, SCHE_3

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable classifies respondents into 3 categories: (a) former smokers who have successfully quit smoking, (b) current daily or occasional smokers who have attempted to quit in the past 12 months, and (c) current daily or occasional smokers who have <u>not</u> attempted to quit in the past 12 months.

Note: Current non-smokers and respondents who smoked less than 100 cigarettes in their lifetime were excluded from the population.

Alcohol Use (3 DVs)

These variables examine frequency, regularity and amount of alcohol consumption.

1) Type of Drinker

Variable name: ALCEDTYP Based on: ALCE_2, ALCE_5B

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable indicates the type of drinker the respondent is based on his/her drinking habits.

Value of ALCEDTYP	Condition(s)	Description
9 (NS)	(ALCE_2 = DK, R, NS) or (ALCE_5B = DK, R, NS)	At least one required question was not answered (don't know, refusal, not stated)

2	ALCE_2 = 1	Occasional drinker
3	$ALCE_5B = 1$	Former Drinker
4	$ALCE_5B = 2$	Never Drank

2) Weekly Consumption

Variable name: ALCEDWKY

Based on: ALCE_5A1, ALCE_5A2, ALCE_5A3, ALCE_5A4, ALCE_5A5, ALCE_5A6, ALCE_5A7

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable indicates the total number of drinks consumed in the week prior to the interview. **Note:** Respondents who did not have at least one drink in the past 12 months were excluded from the

population.

Value of ALCEDWKY	Condition(s)	Description
996 (NA)	ALCE_1 = 2	Population exclusions

3) Average Daily Alcohol Consumption

Variable name: ALCEDDLY Based on: ALCEDWKY

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable indicates the average number of drinks the respondent consumed per day in the

week prior to the interview.

Note: Respondents who had not at least one drink in the last 12 months were excluded from the population.

Value of ALCEDDLY	Condition(s)	Description

996 (NA)	ALCEDWKY = NA	Population exclusions
ALCEDWKY / 7 (Rounded to integer) (min: 0; max: 99)	ALCEDWKY < 694	Average daily alcohol consumption

Illicit Drugs (16 DVs)

This module assesses use of various illicit drugs and drug interference. The questions for drug use are based on Canada's Alcohol and Other Drugs Survey (1994). Interference in daily activities and responsibilities is assessed.

1) Cannabis Drug Use - Lifetime (Including "One Time Only" Use)

Variable name: IDGEFLCA

Based on: IDGE_01

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable indicates whether respondents have ever used marijuana, cannabis or hashish.

Source: Canada's Alcohol and Other Drugs Survey (1994)

Value of IDGEFLCA	Condition(s)	Description
6 (NA)	IDGEFOPT = 2	Module not selected
9 (NS)	$ADME_PRX = 1$	Module not asked – proxy interview

9 (NS)	(IDGE_01 = DK, R, NS)	At least one required question was not answered (don't know, refusal, not stated)

2) Cannabis Drug Use - Lifetime (Excluding "One Time Only" Use)

Variable name: IDGEFLCM

Based on: IDGE_01

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable indicates whether respondents have used marijuana, cannabis or hashish more than

just once.

Source: Canada's Alcohol and Other Drugs Survey (1994)

Value of IDGEFLCM	Condition(s)	Description
6 (NA)	IDGEFOPT = 2	Module not selected

3) Cannabis Drug Use - 12 month (Excluding "One Time Only" Use)

Variable name: IDGEFYCM Based on: IDGE_01, IDGE_02

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable indicates whether respondents have used marijuana, cannabis or hashish in the past year, excluding one time use in lifetime.

Source: Canada's Alcohol and Other Drugs Survey (1994)

Value of IDGEFYCM	Condition(s)	Description
6 (NA)	IDGEFOPT = 2	Module not selected

7) Hallucinogens, PCP or LSD Drug Use - Lifetime

Variable name: IDGnFLHA Based on: IDGn_13 Product: Master Data File

Description: This variable indicates whether respondents have ever used hallucinogens, PCP, or LSD (acid).

Source: Canada's Alcohol and Other Drugs Survey (1994)

Value of IDGnFLHA	Condition(s)	Description
6 (NA)	IDGnFOPT = 2	Module not selected

Problem Gambling (6 DVs)

This module assesses gambling activity and problems with gambling. The questionnaire and derived variables are based on the Canadian Problem Gambling Index (CPGI) but a number of modifications made both to the questionnaire and the calculation of the derived variables (described below) means that the results are not directly comparable to the CPGI.

1) Gambling Activity – Gambler vs. Non-gambler

Variable name: CPGEFGAM

Based on: CPGE_01A, CPGE_01B, CPGE_01C, CPGE_01D, CPGE_01E, CPGE_01F, CPGE_01G, CPGE_01H,

CPGE_01I, CPGE_01J, CPGE_01K, CPGE_01L,CPGE_01M

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable categorizes respondents as gamblers or non-gamblers. A non-gambler is defined as someone who has not engaged at all in the past year in any type of the gambling activities listed. A gambler is defined as someone who has engaged in at least one type of gambling activity in the past year.

2) Problem Gambling Severity Index (PGSI) – Modified Version

Variable name: CPGEDSEV

Based on: CPGE_02, CPGE_03, CPGE_04, CPGE_05, CPGE_06, CPGE_07, CPGE_08, CPGE_09, CPGE_10,

CPGE_13, CPGEFGAM

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable indicates the level of gambling problems of respondents using a 9 item scale.

Note (1): A modification from the CPGI is that if respondents volunteered in CPGB_02 that "I am not a gambler", they were not asked the severity questions despite having reported gambling activity in the past 12 months. These respondents are assigned a code of 95 for this variable. In addition, respondents who reported participating in each gambling activity from CPGB_01B to CPGB_01M at most 1 to 5 times each during the past year were not asked questions on problem gambling. Finally, gambling activities were regrouped in the questionnaire into fewer categories than used in the original CPGI. Modifications made to the original instrument were approved by Dr. Wynne. For more information on modifications to the questionnaire, see the User Guide.

Note (2): Non-gamblers have been excluded from the population.

Note (3): Higher scores indicate more problems associated with gambling.

Variable name: CPGEFINT

Based on: CPGE_19A, CPGE_9B1, CPGE_9B2, CPGE_19C, CPGE_19D **Product:** Master Data File and Public Use Microdata File (PUMF)

Description: This variable indicates the interference that gambling had on daily activities and responsibilities in the past 12 months. This is a threshold that indicates whether gambling interferes significantly with the person's normal routine, occupational (academic) functioning, or social activities or relationships.

Note: Respondents who did not gamble enough or did not indicate problems with gambling were excluded from the population.

1) Length of exclusive breastfeeding

Variable name: MEXEDEBF

Based on: MEXE_03, MEXE_06, MEXE_07

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable provides the length of time that the respondent exclusively breastfed her last baby. **Note:** Respondents who had not given birth in the past 5 years or who were less than 15 years old or more than 55 years old are excluded from the population. Since the variable is used to measure only the final duration of exclusive breastfeeding, mothers who still breastfeed and who have not yet added any other liquid or solid foods to the baby's feeds are also excluded.

2) Exclusively breastfeed for at least 4 months

Variable name: MEXEFEB4

Based on: MEXE_03, MEXE_06, MEXE_07

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable indicates whether the respondent exclusively breastfed her last baby for at least 4

months.

Note: Respondents who had not given birth in the past 5 years or who were less than 15 years old or more than 55 years old are excluded from the population. Waiting Times (9 DVs)

1) Number of Waiting Days to See a Medical Specialist – Seen Specialist

Variable name: WTMEDSO

Based on: WTME_07A, WTME_07B

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable indicates the number of waiting days that passed between the moment the respondent and his or her doctor decided that the respondent should see a medical specialist and when the actual visit with the specialist took place.

Note: For this variable, the number of waiting days has only been considered for respondent 15 years and older

who consulted a medical specialist due to a new health related problem during the past 12 months.

Value of WTMEDSO	Condition(s)	Description
9996 (NA)	WTMEFDO = 2	Module not selected

2) Number of Waiting Days to See a Medical Specialist – Not Seen Specialist

Variable name: WTMEDSN
Based on: WTME_08A, WTME_08B

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable indicates the number of days that passed between the moment the respondent and

his or her doctor decided the respondent should see a specialist and when the interview took place.

Note: For this variable, the number of waiting days has only been considered for respondents 15 years and older who were referred to a specialist due to a new health related problem during the past 12 months, but who did not see the specialist with whom they had an appointment.

Value of WTMEDSN	Condition(s)	Description
9996 (NA)	WTMEFDO= 2	Module not selected

3) Number of Acceptable Waiting Days to See a Medical Specialist

Variable name: WTMEDSA

Based on: WTME_07A, WTME_08A, WTME_10, WTME_11A, WTME_11B, WTMEDSO, WTMEDSN

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable indicates the number of waiting days, in the respondent's view, he or she can wait to

see a medical specialist and still find it acceptable.

Note: The number of acceptable waiting days has only been considered for respondents 15 years and older who were referred to a medical specialist due to a new health related problem during the past 12 months, whether they saw or not the specialist at the moment of the interview.

4) Number of Waiting Days to Receive Non-Urgent Surgery – Surgery Done

Variable name: WTMEDCO
Based on: WTME_21A, WTME_21B

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable indicates the number of waiting days that passed between the moment the respondent and his or her doctor decided the respondent should receive non emergency surgery and when the surgery actually took place.

Note: For this variable, the number of waiting days was only considered for respondents 15 years and older who received non emergency surgery during the past 12 months.

Value of WTMEDCO	Condition(s)	Description
9996 (NA)	WTMEFDO= 2	Module not selected
9996 (NA)	DHHn_AGE < 15 or ACCE_20 = 2 or WTME_17 = 2	Population exclusions

5) Number of Waiting Days to Receive Non-Urgent Surgery – Surgery Not Done

Variable name: WTMEDCN

Based on: WTME_23A, WTME_23B

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable indicates the number of waiting days that passed between the moment the

respondent and his or her doctor decided the respondent should receive non emergency surgery and when the

interview took place.

Note: For this variable, the number of waiting days was only considered for respondents 15 years and older who were referred for non emergency surgery during the past 12 months, but who did not receive the needed surgery

7) Number of Waiting Days for Diagnostic Test – Test Done

Variable name: WTMEDTO
Based on: WTME_38A, WTME_38B

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable indicates the number of waiting days that passed between the moment the respondent and his or her doctor decided the respondent should receive a magnetic resonance imaging test (MRI), a Computed Tomography exam (CT-SCAN) or a non emergency angiography (heart test) and when the test was actually received.

Note: For this variable, the number of waiting days was only considered for respondents of 15 years and older who received a MRI or a CT-SCAN exam, or a non emergency heart test during the past 12 months.

Value of WTMEDTO	Condition(s)	Description
9996 (NA)	WTMEFDO= 2	Module not selected

8) Number of Waiting Days for Diagnostic Test - Test Not Done

Variable name: WTMEDTN
Based on: WTME_39A, WTME_39B

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable indicates the number of waiting days that passed between the moment the respondent and his or her doctor decided the respondent should receive a magnetic resonance imaging test (MRI), a Computed Tomography exam (CT-SCAN) or a non emergency angiography (heart test) and when the interview took place.

Note: For this variable, the number of waiting days was only considered for respondents 15 years and older who were referred to receive a MRI or a CT-SCAN exam, or a non emergency heart test during the past 12 months, but who had not received the test at the moment of the interview.

Value of WTMEDTN	Condition(s)	Description

Variable name: WTMEDTA

Based on: WTME_38A, WTME_39A, WTME_40, WTME_41A, WTME_41B, WTMEDTO, WTMEDTN

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable indicates the number of waiting days, in the respondent's view, he or she can wait to receive a magnetic resonance imaging test (MRI), a Computed Tomography exam (CT-SCAN) or a non

emergency angiography (heart test) and still find it acceptable.

Note: The number of acceptable waiting days was only considered for respondents 15 years and older who were referred to pass a MRI or a CT-SCAN exam, or a non emergency heart test during the past 12 months, whether the respondent passed the test or not at the moment of the interview.

Social Support (4 DVs)

The Medical Outcomes Study (MOS) Social Support Survey provides indicators of four categories of Social Support. An initial pool of 50 items was reduced to 19 functional support items that were hypothesized to cover five dimensions:

- Emotional support –the expression of positive affect, empathetic understanding, and the encouragement of expressions of feelings.
- Informational support –the offering of advice, information, guidance or feedback.
- Tangible support –the provision of material aid or behavioural assistance.
- Positive social interaction –the availability of other persons to do fun things with you.
- Affection –involving expressions of love and affection.

Empirical analyses indicated that emotional and informational support items should be scored together, so 4 subscales are derived:

- Tangible social support (questions 2, 5, 12, 15)
- Affection (questions 6, 10, 20)
- Positive social interaction (questions 7, 11, 14, 18)
- Emotional or informational support (question 3, 4, 8, 9, 13, 16, 17, 19)

1) Tangible Social Support - MOS Subscale

Variable name: SSAEDTNG

Based on: SSAE_02, SSAE_05, SSAE_12, SSAE_15

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable measures the level of tangible support that is available to the respondent. Questions about whether or not the respondent had someone to help if confined to bed, someone to take him/her to the

doctor, someone to prepare meals or someone to do daily chores are included.

Note: Higher scores indicate higher level of tangible support.

2) Affection - MOS Subscale

Variable name: SSAEDAFF

Based on: SSA 06, SSA 10, SSA 20

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable measures the level of affection the respondent received. Questions about whether or not the respondent has someone that shows him/her love, someone to hug or someone to love and someone to make him/her feel wanted are included.

Note: Higher scores indicate higher level of affection support.

Variable name: SSAEDSOC

Based on: SSAE_07, SSAE_11, SSAE_14, SSAE_18

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable measures the level of positive social interaction the respondent is involved. Questions about whether the respondent has someone to have a good time with, get together with for relaxation, do things

with to get his/her mind off things, or someone to do something enjoyable with are included.

Note: Higher scores indicate higher level of positive social interaction.

Variable name: SSAEDEMO

Based on: SSAE_03, SSAE_04, SSAE_08, SSAE_09, SSAE_13, SSAE_16, SSAE_17, SSAE_19

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable measures the level of emotional or informational support received by the respondent.

Questions about whether the respondent has someone to listen and to advise in a crisis, someone to give

information and confide in and talk to, or someone to understand problems are included.

 $\textbf{Note:} \ \ \textbf{Higher values indicate more emotional or informational support}.$

Distress (3 DVs)

The items and scoring used to derive the distress score are based on the work of Kessler and Mroczek (from Michigan University). The index is based on a subset of items from the Composite International Diagnostic Interview (CIDI). The CIDI is a structured diagnostic instrument that was designed to produce diagnoses according to the definitions and criteria of both DSM-III-R and the Diagnostic Criteria for Research of the ICD-10. Higher scores indicate more distress.

DSM refers to the Diagnostic and Statistical Manual of Mental Disorders used by the American Psychiatric Association. It is an internationally recognized classification of mental disorders with several versions.

Mental disorders or problems found in the CCHS 1.2 are operationalized to partially meet the DSM-IV or DSM-IIIR definitions/classification.

Variable name: DISEDK6

Based on: DISE_10B, DISE_10D, DISE_10E, DISE_10H, DISE_10I, DISE_10J

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable determines the respondent's level of distress using six questions.

Note (1): DISEDK6 is identical to the distress scale of the earlier CCHS 1.1 and NPHS surveys. It was renamed

here to distinguish it from the K10.

Note (2): Higher scores indicate more distress.

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable determines the respondent's level of distress using ten questions.

Note (1): DISEDDSX is similar to the distress scale of CCHS 1.1 and previous NPHS surveys. This variable is

based on 10 items and is known as the K10. **Note (2):** Higher scores indicate more distress.

3) Chronicity of Distress and Impairment Scale

Variable name: DISEDCHR

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable classifies respondents according to the frequency of their distress feelings in the last

month compared with usual.

Note: This variable has exactly the same operationalization as CCHS1.1's DISADCH. However, because the reference feelings now refer to 10 variables rather than 6 variables used in CCHS 1.1 and previous NPHS, it has

been renamed.

1) Derived Depression Scale – Short Form Score

Variable name: DPSEDSF

Based on: DPSE_02, DPSE_05, DPSE_06, DPSE_08A, DPSE_08B, DPSE_10, DPSE_11, DPSE_12, DPSE_13, DPSE_16, DPSE_17, DPSE_18, DPSE_19, DPSE_21A, DPSE_21B, DPSE_23, DPSE_24, DPSE_25, DPSE_26

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable assesses the depression level for respondents that felt depressed or lost interest in things for 2 weeks or more last year. These include normal periods of sadness (for example, after the death of a loved one), as well as "serious" depression.

Note (1): The items used to measure depression are based on the work of Kessler and Mroczek (from University of Michigan). They selected a subset of items from the Composite International Diagnostic Interview (CIDI) that measure major depressive episode (MDE). The CIDI is a structure diagnostic instrument that was designed to produce diagnoses according to the definitions and the criteria of both DSM-III-R and the Diagnostic Criteria for the Research of the ICD-10. The short-form of MDE used in the CCHS was developed to operationalize Criteria A through C of the DSM-III-R diagnosis of MDE. The diagnostic hierarchy rules defined in the Criterion D (not

superimposed on schizophrenia, schizophrenia form disorder, delusional disorders, or psychotic disorders NOS) were ignored.

Note (2): Higher scores indicate higher level of depression.

Note (3): The depression module used in CCHS Cycle 3.1 (as well as in Cycles 1.1 and 2.1 and in the NPHS) is based on a long form of the Composite International Diagnostic Interview (CIDI) scale, which was developed in the late 1980s/early 1990s. This scale was never fully validated by the CIDI research team and its psychometric properties are therefore not well understood. Statistics Canada is currently exploring strategies to complete such a validation. At this time, Statistics Canada recommends that analysis of data from this module be restricted to examination of depression as a correlate of other health behaviours and characteristics. For now, use of the data as an indicator for the probability of depression or to calculate simple population prevalence is discouraged.

Variable name: DPSEDPP Based on: DPSEDSF

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable calculates the probability (expressed as a proportion) that the respondent would have been diagnosed as having experienced a major depressive episode in the past 12 months, if they had completed the Long-Form Composite International Diagnostic Interview (CIDI).

Note: A probability of caseness of 0 was assigned to respondents who denied the stem questions.

Health Status SF-36 (10 DVs)

The 36-item short form (SF-36) of the Medical Outcomes Study questionnaire was designed as a generic indicator of health status for use in population surveys and evaluative studies of health policy. The SF-36 was developed by John E. Ware Jr., Institute for the Improvement of Medical Care and Health, New England Medical Center Hospitals. The items in the SF-36 were drawn from the original 245-item Medical Outcomes Study (MOS). The SF-36 includes multi-item scales to measure the following three major health attributes and eight health concepts:

- Functional Status
 - Physical Functioning
 - Social Functioning
 - Role Limitations attributed to Physical Problems
 - Role Limitations attributed to Emotional Problems
- Well-Being
 - Mental Health
 - Energy (vitality)
 - Bodily Pain
- Overall Evaluation of Health.
 - General Health Perception

A scale is calculated for each of the eight health concepts. All scales are scored so that a high score is consistent with a positive health status. For example, a "functioning" scale is scored so that a higher score reflects increased function.

In order to facilitate comparisons across the SF-36 scales, the raw scores for each scale are linearly transformed to a 0-to-100 scale using the formula:

Transformed scale = [(Actual score - Lowest possible score) / Possible score range] X 100

The transformed score reflects a relative position of the respondent on a continuum of lowest to highest possible scale scores.

Two summary measures of physical and mental health are also constructed from the eight scales.

Variable name: SFREDGHP

Based on: SFRE_01, SFRE_33, SFRE_34, SFRE_35, SFRE_36 **Product:** Master Data File and Public Use Microdata File (PUMF)

Description: This variable indicates the general health perceptions of the respondent relative to the general

population.

Note: A high score is consistent with a positive perception of one's general health status.

Socio-Demographic Characteristics (13 DVs)

1) Country of birth code

Variable name: SDCnCCB Based on: SDCn_1, SDCn_1S Product: Master Data File

Description: This variable gives the respondent's country of birth.

Note: Coded automatically from SDCn_1 and SDCn_1S ("other specify" write-in answer) using Reference file

from the census.

2) Country of birth - Grouped

Variable name: SDCnGCB Based on: SDCnCCB Product: Master Data File

Description: This variable classifies the respondent based on his/her country of birth in specific groups.

Value of SDCnGCB	Condition(s)	Description
99 (NS)	(SDCnCCB = 000, 995, DK, R, NS, Missing)	Required question was not answered (don't know, refusal, not stated)

6) Length of time in Canada since immigration

Variable name: SDCnDRES Based on: SDCn_3, ADMn_YOI Product: Master Data File

Description: This variable indicates the length of time the respondent has been in Canada since his/her

immigration.

Note: Non-immigrants were excluded from the population.

Value of SDCnDRES	Condition(s)	Description
996 (NA)	$SDCn_3 = NA$	Population exclusion

7) Length of time in Canada since immigration - Grouped

Variable name: SDCEGRES Based on: SDCE_3, ADME_YOI

Product: Public Use Microdata File (PUMF)

Description: This variable indicates the length of time the respondent's been in Canada since his/her

immigration.

Note: Non immigrants were excluded from the population. **Note:** ADME_MOI = Month of Interview (unpublished)

Value of SDCEGRES	Conditions(s)	Description

10) Aboriginal flag

Variable name: SDCnFABT Based on: SDCn_41, SDCn_7L Product: Master Data File

Description: This is a new derived variable which indicates whether the respondent reported being an aboriginal

person or having aboriginal origins.

Note: From January to May 2005, information needed to derive this variable was collected using SDCn_7L. Respondents were asked to report their cultural or racial background and "Aboriginal (North American Indian, Métis, Inuit)" was one of a list of mark-all answer categories provided.

Beginning in June 2005, the approach used to collect this information was changed to make CCHS more consistent with the Census of Population and with the Labour Force Survey (LFS). SDCn_7L was replaced by SDCn_41 and respondents were asked directly "Are you an Aboriginal person, that is, North American Indian, Métis or Inuit?"

Prior to June 2005, respondents were able to report aboriginal background in combination with other cultural or racial backgrounds. All aboriginal respondents are assigned a value of 1 for this variable regardless of whether

they reported aboriginal background singly or in combination with non-aboriginal background. Beginning in June 2005, respondents identifying themselves as Aboriginal were not asked SDCn_43A to SDCn_43M, which collect information on other backgrounds.

SDCn_43J, SDCn_43K, SDCn_43L, SDCn_43M

Product: Master Data File

Description: This variable indicates the cultural or racial background of the respondent. It excludes all respondents who identify as aboriginal. (The exclusion of aboriginals from this variable is new to cycle 3.1). This is a new variable and should be used with prudence when comparing to previous cycles of CCHS (SDCnRAC in CCHS 2.1, CCHS 1.2, CCHS 1.1) and NPHS (SDC0DRAC, SDC8DRAC, SDC6DRAC, NSDC4DRAC (*formerly DVRACE94*)).

Note: From January to May 2005, information needed to derive this variable was collected using SDCn_7A to SDCn_7M. Beginning in June 2005, these questions were replaced by SDCn_43A to SDCn_43M as a result of changes to make CCHS more comparable to the Census of Population and with the Labour Force Survey (LFS).

In previous cycles, the derived variable included the categories "multiple cultural or racial origins" and "aboriginal only". Respondents who reported Aboriginal origin in combination with any other origin were classified as "multiple cultural or racial origins" and respondents who reported Aboriginal origin but no other origin were classified as "Aboriginal only" for the derived variable. Beginning in June 2005, respondents who identified themselves as aboriginal (SDCn_41=1) were not asked about their cultural or racial background.

Variable name: SDCEGCGT

Based on: SDCE_7A, SDCE_7B, SDCE7C, SDCE_7D, SDCE_7E, SDCE_7F, SDCE_7G, SDCE_7H, SDCE_7I, SDCE_7J, SDCE_7K, SDCE_7L, SDCE_7M, SDCE_41, SDCE_43A, SDCE_43B, SDCE_43C, SDCE_43D, SDCE_43E, SDCE_43F, SDCE_43G, SDCE_43H, SDCE_43I, SDCE_43J, SDCE_43K

Product: Public Use Microdata File (PUMF)

Description: This variable indicates the cultural or racial origin of the respondent. It excludes all respondents who identify as aboriginal. (The exclusion of aboriginals from this variable is new to cycle 3.1). This is a new variable and should be used with prudence when comparing to previous cycles of CCHS (SDCnRAC in CCHS 2.1, CCHS 1.2, CCHS 1.1) and NPHS (SDC0DRAC, SDC8DRAC, SDC6DRAC, NSDC4DRAC (*formerly DVRACE94*)).

Note: From January to May 2005, information needed to derive this variable was collected using SDCn_7A to SDCn_7M. Beginning in June 2005, these questions were replaced by SDCn_43A to SDCn_43M as a result of changes to make CCHS more comparable to the Census of Population and with the Labour Force Survey (LFS).

In previous cycles, the derived variable included the categories "multiple cultural or racial origins" and "aboriginal only". Respondents who reported Aboriginal origin in combination with any other origin were classified as "multiple cultural or racial origins" and respondents who reported Aboriginal origin but no other origin were classified as "Aboriginal only" for the derived variable. Beginning in June 2005, respondents who identified themselves as aboriginal (SDCn 41=1) were not asked about their cultural or racial background.

		their occupation was uncodable

3) Working status last week (short form)

Variable name: LBSEDWSS Based on: LBSE_01, LBSE_02

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable classifies the respondent based on his/her working status in the week prior to the

interview.

Note: Respondents aged less than 15 or more than 75 years old have been excluded from the population.

Value of LBSEDWSS	Condition(s)	Description
6 (NA)	DHHE_AGE < 15 or DHHE_AGE > 75	Population exclusion
1	LBSE_01 = 1	Worked at a job or business
2	LBSE_02 = 1	Had a job but did not work (absent)
3	LBSE_02 = 2	Did not have a job

9 (NS)	(LBSE_02 = DK, R, NS)	Required question was not answered (don't know, refusal, not stated)

4) Working status last week (long form)

Variable name: LBFnDWSL

Based on: LBFn_01, LBFn_11, LBFn_41

Product: Master Data File

Description: This variable classifies the respondent based on his/her working status in the week prior to the

interview and also includes grouping for reasons of not working.

Note: Respondents aged less than 15 or more than 75 years old have been excluded from the population.

Value of LBFnDWSL	Condition(s)	Description
96 (NA)	DHHn_AGE < 15 or DHHn_AGE > 75	Population exclusion
1	LBFn_01 = 1	Worked at a job or business

5) Main reason for not working last week

Variable name: LBFnDRNW

Based on: LBFn_01, LBFn_11, LBFn_13, LBFn_41

Product: Master Data File

Description: This variable indicates the main reason why the respondent did not work in the week prior to the

interview.

Note: Respondents aged less than 15 or more than 75 years old or who did not work the week preceding the

interview have been excluded from the population.

Value of LBFnDRNW	Condition(s)	Description

7) Multiple job status

Variable name: LBFEDMJS

Based on: LBFE_03, LBFE_21, LBFE_23, LBFE_51

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable classifies respondents based on whether or not they had multiple jobs in the past

year and if they still do.

Note: Respondents aged less than 15 or more than 75 years old have been excluded from the population.

Value of LBFEDMJS	Condition(s)	Description
6 (NA)	DHHE_AGE < 15 or DHHE_AGE > 75	Population exclusion
1	LBFE_51 = 52	Currently has multiple jobs – had them all past year

2	LBFE_03 = 1 and LBFE_51 < 52	Currently has multiple jobs – did not have them all past year
3	LBFE_03 = 2	Currently has only one job

8) Total usual hours worked per week

Variable name: LBFEDHPW Based on: LBFE_42, LBFE_53

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable indicates the total number of hours the respondent worked per week.

Note: Respondents aged less than 15 or more than 75 years old or who did not work in the year preceding the

interview have been excluded from the population.

Value of LBFEDHPW	Condition(s)	Description
996 (NA)	DHHE_AGE < 15 or DHHE_AGE > 75 or LBFC_42 = NA	Population exclusion
999 (NS)	(LBFE_42 = DK, R, NS) or (LBFE_53 = DK, R, NS)	At least one required question was not answered (don't know, refusal, not stated)
LBFE_42	LBFE_42 < NA and LBFE_53 = NA	Number of hours usually worked for respondents with one job
LBFE_42 + LBFE_53	LBFE_42 < NA and LBFE_53 < NA	Number of total hours usually worked for respondents with more than one job

9) Full-time/ part-time working status (for total usual hours)

Variable name: LBFEDPFT Based on: LBFEDHPW

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This variable indicates if the respondent works full-time or part-time.

Note: Respondents aged less than 15 or more than 75 years old or who did not work in the year preceding the

interview have been excluded from the population.

Value of LBFEDPFT	Condition(s)	Description
6 (NA)	LBFEDHPW = NA	Population exclusion
9 (NS)	LBFEDHPW = NS	At least one required question was not answered (don't know, refusal, not stated)
1	LBFEDHPW >= 30	Full-time
2	LBFEDHPW < 30	Part-time

10) Job status over past year

Variable name: LBFnDJST

Based on: LBFn_11, LBFn_22, LBFn_61, LBFn_71

Product: Master Data File

Description: This variable indicates the respondent's job status over the past year.

Note: Respondents aged less than 15 or more than 75 years old have been excluded from the population.

Value of LBFnDJST	Condition(s)	Description
96 (NA)	LBFn_01 = NA	Population exclusion

4) Personal Income - All Sources

Variable name: INCnDPER

Based on: INCn_4A, INCn_4C, INCn_4D, INCn_4F, INCn_4G

Product: Master Data File

Description: This variable indicates the respondent's personal income from all sources. A range category was previously assigned by the application to respondents who provided an exact amount in question INCn_4.

Note: Respondents less than 15 years old were excluded from the population.

Value of INCnDPER	Condition(s)	Description

6) Household income ratio

Variable name: TEMP_RATIO

Based on: INCn_3, INCnDHH, GEOn_PRV, DHHnDHSZ, GEOnDPSZ

Product: Master Data File

Description: This derived variable is not disseminated in the microdata files. It is used in the creation of

adjusted ratios that are disseminated in the master and share files.

This derived variable is a ratio between the total income of the respondent's household and the low income cutoff corresponding to the number of persons in the household and the size of the community. The low income cutoff is the threshold at which a family would typically spend a larger portion of its income than the average family on the necessities of food, shelter and clothing.

This derived variable is used in the calculation of adjusted ratios (INCnDADR). It is produced in three separate steps. A summary of those steps is provided below.

Step 1: Low income cut-offs for each family and community size were obtained for the 2004 reference year from the Survey of Labour and Income Dynamics (SLID). In the case of the CCHS Cycle 3.1, the income questions refer to the past 12 months. Given that most of the collection took place between January 2005 and December 2005, the reference period for the income module includes the years 2004 and 2005. Since data on 2005 income will not be available on time for the dissemination of the CCHS data, and the impact of using either years on the final derived variables was determined to be minimal, it was decided to use the low income cut-offs for 2004.

A low income cut-off was linked to all respondents (TEMP_LICO). This cut-off corresponded to the size of the respondent's household (DHCnDHSZ) and the size of the community in which the respondent lives (GEOnDPSZ). Therefore, respondents were assigned one of the 35 possible combinations that exist (7 household size groups time 5 community size groups). For instance, the TEMP_LICO variable of a respondent living in a household size of 3 people and in an urban community with a population of 47,000 people would be 26,639.

Low income cut-offs for 2004

	Number of persons in community (GEOnDPSZ)

Source: Adapted from *Low income cut-offs for 2004 and low income measures for 2002*, published in 2005 by the Income Statistics Division, Statistics Canada.

Step 2a: Household income is obtained using INC n_3 questions for a specific amount and INC n_3 H (INC n_3 H (INC n_3 H) for an amount in an interval.

If a specific amount is obtained at question INC*n*_3, that amount is used as household income. If only one interval is reported for INC*n*_3A to INC*n*_3G, a random value within each interval is derived from INCnDHH for household income for all intervals <u>but the highest one</u> (see next step).

Step 2b: For the highest household income interval (\$100 000 or more), for each province, the **median** value from the Survey of Labour and Income Dynamics (SLID) for the same interval will be used as the household income. However, because the SLID findings for the 2004 reference year were not available on time for the dissemination of the CCHS - Cycle 3.1, the data must be projected to estimate the "\$100 000 or more" interval for the 2004 reference year. To that end, the growth in total provincial personal income between 2002 and 2004 was used.

Total provincial personal income (in millions of dollars) and % change ¹			
	2002	2004	%
Newfoundland and Labrador	11,895	12,851	8.0
Prince Edward Island	3,255	3,465	6.5
Nova Scotia	23,766	25,237	6.2
New Brunswick	18,259	19,354	6.0
Quebec	199,402	215,424	8.0
Ontario	370,599	396,757	7.1
Manitoba	29,940	31,995	6.9
Saskatchewan	24,101	26,875	11.5
Alberta	100,748	112,190	11.4
British Columbia	113,350	121,747	7.4

Source: Data obtained from the Income and Expenditure Accounts Division

On the basis of the projection of median provincial household income in 2002 from the SLID for the "100 000 \$ or more" category, the estimation for 2004 to be used for Cycle 3.1 is indicated in the table below.

Median household income in 2002 from the SLID and projected for 2004, by province or territory				
	2002	2004p		
Newfoundland and				
Labrador	120 215	129 877		
Prince Edward Island 120 254 128 012				
Nova Scotia	126 278	134 094		
New Brunswick	118 909	126 040		

¹ Estimations of provincial personal income are never final and definitive because once produced they are revised over the following three years. When household income is projected, the level of provincial personal income and the fact that its estimations are revised are of little consequence; it is the rate of growth between the two desired years that is essential.

Step 3: Individual ratios of household income to the low income cut-off are calculated for each household within each household and community size using the DHC*n*DHSZ household size variable and the GEOnDPSZ community size variable. Ratios are calculated by dividing household income (TEMP_INC) by the corresponding low income cut-off (TEMP_LICO).

Value of TEMP_RATIO (9 decimals)	Condition(s)	Description
99.99999999	TEMP_INC = 999999	The ratio cannot be calculated because the household income was not stated.
99.99999996	TEMP_INC = 999996	Residents of Territories excluded
0 – 40	TEMP_INC / TEMP_LICO	Individual ratio of household income to the low income cut-off corresponding to the size of the household and the size of the community. The maximum ratio is based on the maximum household income accepted, which is \$500,000.

7) Adjusted household income ratio - National level

Variable name: INC/DADR Based on: TEMP_RATIO Product: Master Data File

Description: Adjusted ratios of household income to the low income cut-off are obtained by dividing the original ratios by a factor used to convert them into ratios lower than or equal to 1. The factor used corresponds to the highest ratio for all survey respondents, with the exception of those residing in the Territories who are excluded from the calculation of this variable.

Value of INCnDADR (9 decimals)	Condition(s)	Description
9.99999999	TEMP_RATIO = 99,999999999	The ratio cannot be calculated because the household income was not stated.
9.99999996	TEMP_RATIO = 99,999999996	Residents of Territories excluded
0 – 1	(TEMP_RATIO / Max for all respondents)	Ratio between 0 and 1 corresponding to the household income and the corresponding low income cut-off divided by the highest ratio for all respondents.

8) Distribution of household income - National level

Variable name: INCEDRCA Based on: INCEDADR

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This derived variable is a distribution of Canadians in deciles (ten categories including approximately the same percentage of residents for each province) based on their value for INCEDADR, ie. the adjusted ratio of their total household income to the low income cut-off corresponding to their household and community size. It provides, for each respondent, a relative measure of their household income to the household incomes of all other respondents.

Deciles are generated using <u>weighted</u> data. Adjusted ratios are presented in increasing order, from smallest to largest, for all 10 provinces irrespective of household and community size. Derived variables are calculated only for valid responses (not stated, refused, etc. are excluded). Boundaries are determined in order to derive deciles from the total weighted number of cases for which derived variables are calculated.

9) Distribution of household income - Provincial level

Variable name: INCEDRPR Based on: INCEDADR, GEOn_PRV

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This derived variable is a distribution of residents of each province in deciles (ten categories including approximately the same percentage of residents for each province) based on their value for INCEDADR, ie. the adjusted ratio of their total household income to the low income cut-off corresponding to their household and community size. It provides, for each respondent, a relative measure of their household income to the household incomes of all other respondents in the same province.

Deciles are generated using <u>weighted</u> data. Adjusted ratios are presented in increasing order, from smallest to largest, for each of the 10 provinces irrespective of household and community size. Derived variables are calculated only for valid responses (not stated, refused, etc. are excluded). Boundaries are determined in order to derive deciles from the total weighted number of cases for which derived variables are calculated.

10) Distribution of household income - Health region level

Variable name: INCEDRRS

Based on: INCEDADR, GEOn_DHR4

Product: Master Data File and Public Use Microdata File (PUMF)

Description: This derived variable is a distribution of residents of each health region in deciles (ten categories including approximately the same percentage of residents for each province) based on their value for INCEDADR, ie. the adjusted ratio of their total household income to the low income cut-off corresponding to their household and community size. It provides, for each respondent, a relative measure of their household income to the household incomes of all other respondents in the same health region.

Deciles are generated using <u>weighted</u> data. Adjusted ratios are presented in increasing order, from smallest to largest, for each of the 10 provinces irrespective of household and community size. Derived variables are calculated only for valid responses (not stated, refused, etc. are excluded). Boundaries are determined in order to derive deciles from the total weighted number of cases for which derived variables are calculated.

The INCEDRRS values are based on a distribution of adjusted ratios for the residents of each of the 122 health regions. This variable should therefore be used in conjunction with the variable for the health region province of residence (GEO*n_DHR4*).
