Blended family

Note: A blended family refers to a couple census family (married or common-law couples) with two or more children, one of whom does not share the same natural and/or adoptive parents as the other child(ren). This would indicate that the child has half and/or step siblings living in the household. (Foster children are not included in the census family). In the derivation of blended, intact, step and type of step family derived variables (ADMCD14, 15, 16 & 17) if a child is the biological child of one parent and the adoptive child of the other parent then this child is treated like the step child of the adoptive parent. However, if a child is the adoptive child of both parents, then this child is treated the same as a biological child of both parents.

(ie. a value of 1 ('yes') was recoded to 0, and 2 was recoded to 1). This was done in order to associate a value of zero for the
lowest score. The values were reversed for ADPPQ12F, ADDPQ12H and ADDPQ12J.

The total score varies between 0 and 36, a high score indicating the presence of depression symptoms.

The Cronbach Alpha value for this factor score is 0.82.

Note: This factor score was derived using the unweighted items (AFNHQ01A to Q01L). In order to calculate the scores, we reduced the item values by 1 (ie. a value of 1 ('strongly agree') was recoded to 0, 2 was recoded to 1, 3 to 2, and 4 to 3). This was done in order to associate a value of zero for the lowest score. The values were reversed for AFNHQ01A, AFNHQ01C, AFNHQ01E, AFNHQ01G, AFNHQ01I and AFNHQ01K.

The total score varies between 0 and 36, a high score indicating family dysfunction.
