					======	========
					22,831	4,751,437

Nota: A blended family refers to a couple census family (married or common-law couples) with two or more child(ren). This would indicate that the same natural and/or adoptive par ents as the other child(ren). This would indicate that the child has half and /or step sib lings living in the household. (Foster children are not included in the census family). ~ In the derivation of blended, intact, step and type of step family derived variables (ADMC D14, 15, 16 and 17) if a child is the biological child of one pa rent and the adoptive child of the other parent then this child is treated like the step child of the adoptive pare nt. However, if a child is the adoptive child of both parents, then this child is treated the same as a biological child of both parents.

Nota: This factor score was derived using the unweighted items. In order to calculate the scores, we reduced the item values by 1 (ie. a value of 1 ('yes') was recoded to 0, and 2 was recoded to 1). This was done in order to associate a value of zero for the lowest score. The values were reversed for ADPPQ12F, ADDPQ12H and ADDPQ12J. ~The total score varies between 0 and 36, a high score indicating the presence of depression symptoms. ~The C ronbach Alpha value for this factor score is 0.82.

Nota: This factor score was derived using the unweighted items (ASPHQO1A to Q10F). In o rder to calculate the scores, we reduced the item values by 1 (ie. a value of 1 ('strongly agree') was recoded to 0, and 2 was recoded to letc.). This was done in order to associate a value of zero for the lowest score. The values were reversed for ASPHQO1A, ASPHQO1D and ASPHQO1E. ~The total score varies between 0 and 18, a high score indicating the presence of social support. ~The Cronbach Alpha value for this factor score is 0.82.

Variable: TITLE Position: Length: 0

Behaviour - scores for the various factors in the behaviour scale

In order to calculate the scores, we reduced the item values by 1 (ie. a value of 1 ('never or not true') was recoded to 0, 2 was recoded to 1, and 3 was recoded to 2). This was done in order to associate a value of zero for the lowest score.

Factor Scores for Parenting Scale

Nota: In order to calculate the scores, we reduced the item values by 1 (ie. a value of 1 ('often') was recoded to 0, 2 was recoded to 1, 3 was recoded to 2, and 4 was recoded to 3). This was done in order to associate a value of zero for the lowest score.

Nota: This factor score was derived using the following weighted items: APRCQ10, APRCQ11, APRCQ12, APRCQ16 and APRCQ17. \sim The values for APRCQ12, APRCQ16 and APRCQ17 were revers ed for the calculation of this score. \sim Some imputation was done for APRCQ17. Imputation flags have been stored in the file .NLSCA.SECONDRY.TXT the flag which corresponds to an item has the same name as the item except that the Q (question indicator) is replaced by I (imputation indicator) APRCInn. \sim The total score varies between 0 and 20, a high score indicating consistent parenting behaviour.

HEALTH STATUS

Variable: AHLCN6 Position: . Length:

The next set of questions ask about his/her's day to day health. The questions are not a bout illnesses like colds that affect people for short periods of time. They are concerned with his/her^* abilities relative to other children the same age. You may f eel that some of these questions do not apply to him/her^* , but it is important that we ask the same q uestions of everyone.

Nota: The Health Utility Index (HUI) is a generic health status index that is able to synthesize both quantitative and qualitative aspects of health. The system developed at McMa ster University's Centre for Health Economics and Policy Analysis, the Compre hensive Health Status Measurement System(CHSMS), provides a description of an individual's overall functional health, based on eight attributes: vision, hearing, speech, mobility(ability to get around), dexterity(use of hands and fingers), cognition(memory and thinking), emotion(feelings), and pain and discomfort. The values range from 0-1 with 1 representing high over all function.

The next series of questions asks about the number of hours of instruction this student r eceives. In order to better understand the amount of instruction which is delivered, it is first necessary to collect information regarding the length of the school's instructional cycle and the length of the school year. By instructional cycle we mean the number of days which make up one complete rotation through all regularly taught topics. For example, s ome schools run on a four day instructional cycle. Overall, how long is one cycle of instruction in this student's home room class?(Specify the number of days)

Nota: Range 0-46 This factor was derived using the following: AEPCQ15A, AEPCQ15B, AEPCQ15 5C, AEPCQ15D, AEPCQ15E, AEPCQ15F, AEPCQ15G, AEPCQ15H, AEPCQ15I, AEPCQ15J, AEPCQ15K and A EPCQ15L. No imputation was done for this score. The scores vary between 0 and 46, a high score indicating the presence of disciplinary problems in the school. The reliabilty and v alidity of this score was not tested.
