Note: The age of the youth determines, in most cases, the questions that will be asked about him or her. Instead of using the youth's actual age, the NLSCY uses a calculated age called effective age. This is done to ensure the child stays in the age group to which he/she is assigned regardless of whether collection takes place before or after the youth's birthday. For Cycle 6, the effective age is calculated as 2004 minus year of birth. For example a child born in 1994 would have an effective age of 10 years old (2004-1994). Note that the actual age of the youth at the time of the interview is sometimes different from the effective age.

		=====	=====
		4,695	2,313,459

Note: The 128 records with FLWTCD = 2 represent children from whom data could not be collected. This includes children who have died or who no longer reside in Canada. These records have a longitudinal weight to represent other children in the target population who have died or moved outside of Canada, but have the 'Not stated' code assigned for all survey variables regardless of the child's age or other characteristics.

<i>Variable Name:</i>	PSTRATL	<i>Position:</i>	856	<i>Length:</i>	7
-----------------------	----------------	------------------	-----	----------------	---

Longitudinal post-stratification variable

Note: This code identifies the child's longitudinal post-stratification group. The first three characters are the cycle (always "c1_"), the fourth and fifth digit are the age, the sixth character is the sex ("M" or "F") and the last digit is the province. The sum of the longitudinal weights (FWTCW01L) or funnel weights (FWTCWD1L) within each post-stratification group will match the population estimates based on the 2001 Census for January 1995.
