Nota: Parents of the child are not included in this count. For example if the child has a 15 year old parent, the 15 year old would not be included in this count.

Variable: BDMCD13 Position: 80 Length: 2.

Number of adults (aged 18 and over) living in the household who are not a parent of the child. This includes siblings who are aged 18 and over.

Nota: A blended family refers to a couple census family (married or common-law couples) with two or more children, one of whom does not share the same natural and/or adoptive parents as the other child(ren). This would indicate that the child has half and f or step sib lings living in the household. (Foster children are not included in the census family). In the derivation of blended, intact, step and type of step family derived variables (BDMCD1 4, 15, 16 and 17) if a child is the biological child of one pare nt and the adoptive child of the other parent then this child is treated like the step child of the adoptive parent . However, if a child is the adoptive child of both parents, then this child is treated th

Nota: This factor score was derived using unweighted items. In order to calculate the scores, we reduced the item values by 1 (ie. a value of 1 (-yes-) was recoded to 0, and 2 w as recoded to 1). This was done in order to associate a value of zero for the lowest score. The values were reversed for ADPPQ12F, ADDPQ12H and ADDPQ12J. The total score varies between 0 and 36, a high score indicating the presence of depression symptoms.

HEALTH STATUS

Nota: The next set of questions ask about his/her-s day to day health. The questions ar e not about illnesses like colds that affect people for short periods of time. They are concerned with \his/her\hat8 abilities relative to other children the same age. Yo u may feel t hat some of these questions do not apply to \hat\him/her\hat8, but it is important that we ask the same questions of everyone.

Nota: The Health Utility Index (HUI) is a generic health status index that is able to synthesize both quantitative and qualitative aspects of health. The system developed at McMa ster University-s Centre for Health Economics and Policy Analysis, the Compre hensive Health Status Measurement System(CHSMS), provides a description of an individual-s overall functional health, based on eight attributes: visi speech, mobility(ability to get around), dexterity(use of hands and fingers), cognition(memory and thinkin g), emotion(feelings), and pain and discomfort. The values range from 0-1 with 1 representing high overall function

Nota: This score is an equal interval score derived from the raw score for each combinat ion of grade and test level. Scores on this variable increase as the child-s grade level a nd ability increase. For this reason, it is highly recommended that the scale scores be u sed in all analyses involving growth over time.

Nota: This score was derived using the following items. BPACQ1, BPACQ2, BPACQ3, BPACQ4, BPACQ5, and BPACQ9. The score ranges from 0 to 24, where 0 means the absence of a problem and 24 the highest possible score with respect to problems. Before calculating the score, the order of values was reversed for items BPACQ1, BPACQ2, BPACQ3, BPACQ4, and BPACQ5 (i. e., 5 was recoded to 1, 4 was recoded to 2, etc.). Then all values were rescaled to 0-4 by subtracting one from the value for all 6 items. Finally the sum of these transformed values was taken across the 6 items.

Behaviour - scores for the various factors in the behaviour scale $% \left(\frac{1}{2}\right) =\frac{1}{2}\left(\frac{1}{2}\right)$

Nota: In order to calculate the scores, we reduced the item values by 1 (ie. a value of 1 (-never or not true-) was recoded to 0, 2 was recoded to 1, and 3 was recoded to 2). This was done in order to associate a value of zero for the lowest score.

Factor Scores for Parenting Scale

Nota: In order to calculate the scores, we reduced the item values by 1 (ie. a value of 1 (-often-) was recoded to 0, 2 was recoded to 1, 3 was recoded to 2, and 4 was recoded to 3). This was done in order to associate a value of zero for the lowest sco re.

Nota: Range 0-28. This factor was derived using the following weighted items: BPRCB29C, BPRCB29G, BPRCB29J, BPRCB29K, BPRCB29M, BPRCB29P and BPRCB29Q. Imputation was done for all items. Imputed values were not retained in the release variables. The total score ranges from 0 and 28, a high score indicating a high degree of parental rejection received by the child. The Cronbach Alpha value for this factor is 0.578

Variable: TITLE82 Position: Length: 0.

CHILD CARE
