		=====	=====
		12,916	2,030,325

*Coverage:* Answered by all respondents

*Note:* A blended family refers to a couple census family (married or common-law couples) with two or more children, one of whom does not share the same natural and/or adoptive parents as the other child(ren). This would indicate that the child has half and/or step siblings living in the household. (Foster children are not included in the census family). In the derivation of blended, intact, step and type of step family derived variables (EDMCD14, 15, 16 & 17) if a child is the biological child of one parent and the adoptive child of the other parent then this child is treated like the step child of the adoptive parent. However, if a child is the adoptive child of both parents, then this child is treated the same as a biological child of both parents.

*Coverage:* Children aged 4-5 years old

*Note:* The Health Utility Index (HUI) is a generic health status index that is able to synthesize both quantitative and qualitative aspects of health. The system developed at McMaster University's Centre for Health Economics and Policy Analysis, the Comprehensive Health Status Measurement System(CHSMS), provides a description of an individual's overall functional health, based on eight attributes: vision, hearing, speech, mobility(ability to get around), dexterity (use of hands and fingers), cognition(memory and thinking), emotion(feelings), and pain and discomfort. The maximum value is 1 representing high overall function and negative values are possible, but rare. The questions used to create this index are: EHLCQ06 (HLTQ6A) to EHLCQ24 (HLTQ24), EHLCQ27 (HLTQ27) to EHLCQ34 (HLTQ34) and EHLCQ36 (HLTQ36).

**Section:** **Ages and Stages** Position: 1028 to 1195

Includes items **EAGCDQ1** to **EAGCD385**.

The Ages and Stages Questionnaires (ASQ) are used to identify infants and young children who show potential developmental problems. The questionnaires cover four domains of development: Communication: e.g., babbling, vocalizing, listening, and understanding.

Fine Motor: hand and finger movements.

Problem Solving: learning and playing with toys.

Personal-Social: solitary, social play and play with others and toys.

A score is calculated for each domain (see EAGCdS01, EAGCdS02, EAGCdS03, EAGCdS04).

The items are not reproduced here for copyright reasons. For more information about the Ages and Stages Questionnaires, please contact:

*Coverage:* All children aged 4-5 years old

*Note:* This variable represents the age equivalent for the child regarding the Number Knowledge direct measure. This assessment measures the child's intuitive knowledge of numbers by assessing their understanding of the system of whole numbers. Level 1 represents the proportion of correct responses for the predimensional level. There are 5 items in this level. To reach the age equivalent of this level the child has to get a proportion of at least 0.6 (i.e get at least 3 out of 5 correct responses). Level 2 represents the proportion of correct responses for the unidimensional level. There are 7 items in this level. To reach the age equivalent of this level the child has to get a proportion of a least 0.6 (i.e get 4 out of 7 correct responses). Level 3 represents the proportion of correct responses for the bidimensional level. There are 8 items in this level. To reach the age equivalent of this level the child has to get a proportion of a least 0.6 (i.e. get 5 out of 8 correct responses).

There are 12916 records that are cross-sectionally in scope (i.e., the child resides in the 10 provinces). These have EWTCW01C > 0 and ELWTCD = "Y" and are the source data for this codebook. There are 3 records that are out of scope cross-sectionally (the child's residence was outside the 10 provinces), yet data was collected and retained. These have EWTCW01C = 0, EWTCW01L > 0 and ELWTCD = "Y". Lastly, there are 94 records that are out of scope cross-sectionally (e.g., child is dead or lives outside the 10 provinces) and no data was collected. These have EWTCW01C = 0, EWTCW01L > 0 and ELWTCD = "N". Further, the 94 records in the last group have the "Not stated" code assigned for all survey variables regardless of the child's age or other characteristics.
