*Note:* The Health Utility Index (HUI) is a generic health status index that is able to synthesize both quantitative and qualitative aspects of health. The system developed at McMaster University's Centre for Health Economics and Policy Analysis, the Comprehensive Health Status Measurement System(CHSMS), provides a description of an individual's overall functional health, based on eight attributes: vision, hearing, speech, mobility(ability to get around), dexterity (use of hands and fingers), cognition(memory and thinking), emotion(feelings), and pain and discomfort. The values range from 0-1 with 1 representing high overall function.

Scores on this variable increase as the child's grade level and ability increase. The score is not only based on the "raw score" but is also a function of the level of difficulty of the items that the child answered correctly. The method used to derive the scores are described in this documentation. For this reason, it is highly recommended that the scale scores be used in all analyses involving growth over time.
