		=====	=====
		7,896	3,907,332

*Coverage:* All respondents

*Note:* The age of the youth determines, in most cases, the questions that will be asked about him or her. Instead of using the youth's actual age, the NLSCY uses a calculated age called effective age. This is done to ensure the youth stays in the age group to which he/she is assigned regardless of whether collection takes place before or after the youth's birthday. For Cycle 8, the effective age is calculated as 2008 minus year of birth. For example a child born in 1990 would have an effective age of 18 years old (2008-1990). Note that the actual age of the youth at the time of the interview is sometimes different from the effective age.

*Collection Name:*        **POSTSTRA**

Longitudinal post-stratification group

*Note:*            This code identifies the youth's longitudinal post-stratification group. The first three characters are the cycle (always "c1\_"), the fourth and fifth digits are the age, the sixth character is the sex ("M" or "F") and the last digit is the province. The sum of the longitudinal weights (HWTCW01L) or funnel weights (HWTCWD1L) within each post-stratification group will match the population estimates based on the 2001 Census for January 1995.
