Note: The age of the child determines, in most cases, the questions that will be asked about him or her. Instead of using the child's actual age, the NLSCY uses a calculated age called effective age. This is done to ensure the child stays in the age group to which he/she is assigned regardless of whether collection takes place before or after the child's birthday. For Cycle 8, the effective age is calculated as 2008 minus year of birth. For example, a child born in 1994 would have an effective age of 14 years old (2008-1994). Note that the actual age of the child at the time of the interview is sometimes different from the effective age.

<i>Collection Name:</i>	POSTSTRAL				

Longitudinal post-stratification group

Note: This code identifies the child's longitudinal post-stratification group. The first three characters are the cycle (always "c1_"), the fourth and fifth digits are the age, the sixth character is the sex ("M" or "F") and the last digit is the province. The sum of the longitudinal weights (HWTCW01L) or funnel weights (HWTCWD1L) within each post-stratification group will match the population estimates based on the 2001 Census counts for January 1995.

Funnel post-stratification group

Note: This code uniquely identifies the child's funnel post-stratification group. The first three characters are the cycle (always c1_) the fourth and fifth digits are the age, the sixth character is sex ("M" or "F") and the last digit is the province. Records that are not funnel have PSTRATF = 9999999. The sum of funnel weights (HWTCWD1L) within each post-stratification group will match the population estimates based on the 2001 Census counts for January 1995.

		FREQ	WTD
1	Yes	4,271	1,508,651
2	No	143	33,600
		=====	=====
		4,414	1,542,251

Note: The # records with HLWTCD = 2 represent children from whom data could not be collected. For example, children who have died have a longitudinal weight to represent other children in the target population who have died. Records with HLWTCD = 2 have the 'Not stated' code assigned for all survey variables regardless of the child's characteristics.
