Note: The age of the child determines, in most cases, the questions that will be asked about him or her. Instead of using the child's actual age, the NLSCY uses a calculated age called effective age. This is done to ensure the child stays in the age group to which he/she is assigned regardless of whether collection takes place before or after the child's birthday. For Cycle 6, the effective age is calculated as 2004 minus year of birth. For example a child born in 1994 would have an effective age of 10 years old (2004-1994). Note that the actual age of the child at the time of the interview is sometimes different from the effective age.

Coverage: All respondents except 16 or 17 year olds living independently
Note: A blended family refers to a couple census family (married or common-law couple with 2 or or more children, one of whom does not share the same natural and/or adoptive parents as the other child(ren). This would indicate that the child has half and/or step siblings living in the household. (Foster children are not included in the census family). In the derivation of blended, intact, step and type of step family derived variables (FDMCD14, 15, 16 and FDMCfD17) if a child is the biological child of one parent and the adoptive child of the other parent then this child is treated like the step child of the adoptive parent. However, if a child is the adoptive child of both parents, then this child is treated the same as a biological child of both parents.

Coverage: Children aged 10 to 15 years old
Note: This score is a scaled score derived using item response theory (IRT) from the pattern of correct answers for each combination of grade and test level. Scores on this variable increase as the child's grade level and ability increase. The score is not simply based on the 'raw score'. It is a function of the psychometric properties on the items on the test. In particular, the score is based on the level of difficulty of the items that the child answered correctly, and the correlation of these items to the measured ability. The method used to derive the scores are described in this documentation. This score differs from the other scaled scores reported for the math test as it provides a greater precision in the estimates of test performance. Unlike the other reported scaled score, this score is not referenced to an external population of expected performance but is instead measured against the expected performance of the current population as estimated by all test subjects. Rank test analysis performed using both methods of scoring showed no significant difference between the two measurements. It is highly recommended that either scale scores be used for analyses involving growth over time.

Coverage: Children aged 10 or 11 years
Note: This inconsistency flag is based on FHLCQ04A and data from previous cycle EHLCQ04A.

Section:　　　　**Child Care Flag**

Variable Name: **FCRCfZ01**　　　*Position:* 1409　　*Length:* 1
Collection Name: CARFIX

Flag indicating that the values for child care were recovered

		FREQ	WTD
0	Values not recovered	2,751	717,327
1	Values recovered	74	16,236
6	Valid skip	5,371	2,306,797

		======	=========
		8,399	3,104,645

Note: An error in the computerized questionnaire led to an underreporting of use of child care. There are 74 cases where the data incorrectly showed that a child was not using any form of child care. We have been able to correct the data for some variables (use of child care, types of child care and hours spent in child care). However, we are not able to provide information about the main type of child care for these cases.

Variable Name: **FLWTCD**   *Position:*   1490   *Length:*   1
Collection Name: C6DATA

Flag indicating if data was collected

		FREQ	WTD
1	Yes	8,196	3,040,360
2	No	203	64,285
		======	=========
		8,399	3,104,645

Note: The 203 records with FLWTCD = 2 represent children from whom data could not be collected. This includes children who have died or who no longer reside in Canada. These records have a longitudinal weight to represent other children in the target population who have died or moved outside of Canada, but have the 'Not stated' code assigned for all survey variables regardless of the child's age or other characteristics.

Variable Name: **PSTRATL**   *Position:*   1491   *Length:*   7

Longitudinal post-stratification variable

Note: This code identifies the child's longitudinal post-stratification group. The first three characters are the cycle (always "c1_"), the fourth and fifth digit are the age, the sixth character is the sex ("M" or "F") and the last digit is the province. The sum of the longitudinal weights (FWTCW01L) or funnel weights (FWTCWD1L) within each post-stratification group will match the population estimates based on the 2001 Census for January 1995.
