Note: Based on postal code. The physical address can differ from the mailing address. The method used to assign a given child to its area of residence has been slightly modified from the previous cycle to make it better fit the geographical concepts used when determining the low income cut-offs (variable GINH03A). GGEHgD04 has been set to valid skip for longitudinal respondents living outside of Canada.

Note: The age of the youth determines, in most cases, the questions that will be asked about him or her. Instead of using the youth's actual age, the NLSCY uses a calculated age called effective age. This is done to ensure the youth stays in the age group to which he/she is assigned regardless of whether collection takes place before or after the youth's birthday. For Cycle 7, the effective age is calculated as 2006 minus year of birth. For example a child born in 1988 would have an effective age of 18 years old (2006-1988). Note that the actual age of the youth at the time of the interview is sometimes different from the effective age.

The first three characters are the cycle (always "c1_"), the fourth and fifth digit are the age, the sixth character is the sex ("M" or "F") and the last digit is the province. The sum of the longitudinal weights (GWTCW01L) or funnel weights (GWTCWd1L) within each post-stratification group will match the population estimates based on the 2006 Census.
