Note: The age of the child determines, in most cases, the questions that will be asked about him or her. Instead of using the child's actual age, the NLSCY uses a calculated age called effective age. This is done to ensure the child stays in the age group to which he/she is assigned regardless of whether collection takes place before or after the child's birthday. For Cycle 7, the effective age is calculated as 2006 minus year of birth. For example a child born in 2000 would have an effective age of 6 years old (2006-2000). Note that the actual age of the child at the time of the interview is sometimes different from the effective age.

Note: The Health Utility Index (HUI) is a generic health status index that is able to synthesize both quantitative and qualitative aspects of health. The system was developed at McMaster University Centre for Health Economics and Policy Analysis. The Comprehensive Health Status Measurement System (CHSMS) provides a description of an individual's overall functional health based on eight attributes: vision, hearing, speech, mobility (ability to get around), dexterity (use of hands and fingers), cognition (memory and thinking), emotion (feelings), and pain and discomfort. Each person's preferences are represented as a numerical value (typically between 0 and 1) with 1 representing high overall function. (The questions used to create this index are: GHLCQ06 to GHLCQ24, GHLCQ27 to GHLCQ34 and GHLCQ36.)

Section: Ages and stages

Variable Name: **AGESTAGE** *Position:* 1756 *Length:* 167

Includes items GAGCdQ1 to GAGCd416.

The Ages and Stages Questionnaires (ASQ) are used to identify infants and young children who show potential developmental problems. The questionnaires cover four domains of development:
Communication: e.g., babbling, vocalizing, listening and understanding.
Fine motor: hand and finger movements.
Problem solving skills: learning and playing with toys, drawing.

**National Longitudinal Survey of Children and Youth, Cycle 7, 2006 Master file
(Early Childhood Development)**

Personal-Social skills: solitary, social play and play with others and toys, to dress and feed oneself.

A score is calculated for each domain (see GAGCdS01, GAGCdS02, GAGCdS03, GAGCdS04).

The items are not reproduced here for copyright reasons. For more information about the Ages and Stages Questionnaires, please contact:

Note: This variable represents the age equivalent for the child regarding the Number Knowledge direct measure. This assessment measures the child's intuitive knowledge of numbers by assessing their understanding of the system of whole numbers. Level 1 represents the proportion of correct responses for the predimensional level. There are 5 items in this level. To reach the age equivalent of this level the child has to get a proportion of at least 0.6 (i.e., get at least 3 out of 5 correct responses). Level 2 represents the proportion of correct responses for the unidimensional level. There are 8 items in this level. To reach the age equivalent of this level the child has to get a proportion of at least 0.6 (i.e., get 5 out of 8 correct responses). Level 3 represents the proportion of correct responses for the bidimensional level. There are 9 items in this level. To reach the age equivalent of this level the child has to get a proportion of at least 0.6 (i.e., get 6 out of 9 correct responses).

		20,470	3,444,906

Coverage: Children in grades 2 to 10

Note: This score is an equal interval score derived from the raw score for each combination of grade and test level. Scores on this variable increase as the child's grade level and ability increase. For this reason, it is highly recommended that the scale scores be used in all analyses involving growth over time.

Cross-sectional post-stratification variable

Note: This code uniquely identifies the child's post-stratification group. The first two digits are the age, the third character is sex ("M" or "F") and the last digit is province. Records that are cross-sectionally out of scope have PSTRATC = missing, rather than a special code. The cross-sectional weights match population estimates based on the 2006 Census for January 2005.

<i>Collection Name:</i>	POSTSTRAL				

Cross-sectional post-stratification variable

Note: This code uniquely identifies the child's longitudinal post-stratification group. The first three characters are the cycle (e.g., 'c4_') the fourth and fifth digit are the age, the sixth character is sex ("M" or "F") and the last digit is province. Records that are longitudinally out of scope have PSTRATL = missing, rather than a special code. The longitudinal weights of the 2 and 3 year olds match population estimates based on the 2006 Census for January 2003, and the longitudinal weights of the 4 and 5 year olds match population estimates based on the 2006 Census for January 2001.

Note: There are two types of records on the Early Childhood Development file. There are records that are cross-sectionally in scope (i.e., the child resides in the 10 provinces) and data have been collected for them. These have GWTCW01C > 0 and GLWTCD = '1' and are the source data for this codebook. There are also records that are out of scope cross-sectionally (e.g., child has died or lives outside the 10 provinces and no data were collected). These have GWTCW01C = 0, GWTCW01L > 0 and GLWTCD = '2'. Further, the records in the second group have the 'Not stated' code assigned for all survey variables regardless of the child's age or other characteristics.
