

ERRATA for NPHS, Health Institutions, 1994

The value labels for several variables in this survey have been coded incorrectly (either codes were excluded or codes were added where they were not suppose to be). This sheet indicates where I have made the changes in order for the SPSS syntax to be correct.

NOTE:

For whatever reason, when the SPSS file was originally done, the above codes were either added to the file or removed. When comparing with the french and the english codebooks, it was apparent that the coding of the variables was incorrect. These are the changes and the NEW SPSS reflects these changes.
