

## APPENDIX C

### VARIABLE AND FILE NAMES TO USE WITH THE BOOTVAR PROGRAM (APRIL 2005)

The following tables contain the information required in section 1 of the Bootvar program. Note that the weight variable (fwgt) corresponds to the weight included on the bootstrap weights file. Also, many data files and bootstrap weights files have the same name. However, these files are different and the folder where they are located identifies to which sampling weight they are associated.
