## 1. Introduction and summary

This package is designed to enable interested users to access and manipulate the microdata file for the twentieth cycle of the General Social Survey (GSS), conducted from June through October 2006. It contains information on the objectives, methodology and estimation procedures as well as guidelines for releasing estimates based on the survey. It also gives a description of how to correctly use the microdata files.

The main sample of GSS-20 was distributed over the ten provinces.

Appendix A contains the Approximate Variance Tables and examples of their use. Appendix B includes the questionnaire. Appendix C contains a document comparing Cycle 20 and Cycle 15 content. Appendix D contains the data dictionary and Appendix E contains the record layout. Appendix F contains a list of variables and associated labels. Appendix H a flow chart outlining work history and finally Appendix H provides tips for using GSS mean bootstrap weights in some commercial analytic software.

### 1.1 General Social Survey Cycle 20 – Concepts, methodology and data quality summary

The information in this section should be used to ensure a clear understanding of the basic concepts that define the data provided in the GSS Cycle 20 Public Use Microdata file, of the underlying methodology of the survey and of key aspects of data quality. This information will provide you with a better understanding of the strengths and limitations of the data, and how they can be effectively used and analyzed. The information may be of particular importance to you when making comparisons with data from other surveys or sources of information and in drawing conclusions regarding change over time, or differences between sub-groups of the target population. Further detail can be found in the following sections of this document.

#### 1.1.1 Data sources and methodology

The General Social Survey (GSS) program gathers data on social subjects in order to monitor changes in the living conditions and well being of Canadians over time and to provide immediate information on specific social policy issues of current or emerging interest. Cycle 20 of the GSS is the fourth cycle dedicated to the topic of the family – previous cycles were carried out in General Social Survey 1990 - Cycle 05, General Social Survey 1995 - Cycle 10, General Social Survey 2001 - Cycle 15.

##### 1.1.1.i General methodology

The target population for Cycle 20 of the GSS was all persons 15 years of age and older in Canada, excluding:

1. residents of the Yukon, Northwest Territories, and Nunavut;
2. full-time residents of institutions.

Computer assisted telephone interviewing (CATI) was used to collect data for GSS-20. For sampling, the target population was divided into geographic strata. Households were selected using a Random Digit Dialing method that gave each telephone number in a stratum an equal chance of being selected. One person aged 15 or older was randomly selected from each selected household to participate in the survey. Respondents were interviewed in the official language of their choice and interviews by proxy were not allowed.

##### 1.1.1.ii Reference period

Data for Cycle 20 of the GSS were collected in 4 waves from June to October 2006.

### 1.1.1.iii Estimation

The estimation weights were adjusted using a raking ratio calibration (post-stratification) technique to match Canada's Census based population estimates for strata and for provincial age-sex groups.

### 1.1.2 Concepts and variables measured

The survey collected a large number of data items for each selected respondent as well as some information about each member of the respondent's household. The Public Use Microdata File documentation includes an annotated list of all data items included in the file as well as the entire questionnaire used. Section 3 of this documentation gives a detailed summary of the questionnaire content. Here is a brief outline:

#### Control Form

Section 1: Parent's history

Section 2: Leaving the household

Section 3: Marriages of respondent

Section 4: Common-law unions of respondent

Section 5: Marriage and Common-law intentions

Section 6: Respondent's children

Section 7: Fertility intentions

Section 8: Birth and Adoption of child in the past 5 years

Section 9: Legal child custody

Section 10: Financial support agreement or arrangement for child(ren) and ex-spouse or ex-partner

Section 11: Social networks

Section 12: Work – Family balance and family functioning

Section 13: Work history, maternity and paternity leave

Section 14: Main activity and education of respondent

Section 15: Main activity and education of spouse or partner

Section 16: Well being

Section 17: Housing characteristics of respondent

Section 18: Other characteristics

### 1.1.3 Data accuracy

The methodology of this survey was designed to control errors and to reduce their potential effects. However, the results of the survey remain subject to error due to both sampling error (error due to the fact that a sample is observed and is not the whole population) and non-sampling error (the difference between the estimates and the true values not due to sampling).

#### 1.1.3.i Sampling error

As the data are based on a sample of persons they are subject to sampling error. That is, estimates based on a sample will vary from sample to sample, and typically they will be different from the results that would have been obtained from a complete census. The potential range of this difference has been estimated for key data and used to produce tables that can be used to estimate the sampling variability of many estimates. These tables and instructions for and examples of their use are found in Appendix A and **Section 8** of the Public Use Microdata File Documentation and User's Guide.

As an alternative to the use of the Approximate Variance Tables, a set of "bootstrap" weights and associated programs are being supplied to users so that they will be able to calculate more precise individual variances to assess the quality of estimates. Again, see Section 8 for more details.

### 1.1.3.ii Non-sampling error

Even a census of the population of interest produces estimates subject to error. While these are called non-sampling errors, estimates from samples still contain errors of this type. Common sources of these errors are imperfect coverage, non-response, response errors, and processing errors.

Coverage of the GSS-20 targeted population by the RDD frame is estimated to be more than 93% complete. These rates are high for virtually all socio-demographic groups, but are lowest among those households with the lowest incomes. As a result persons living in such households are slightly under-represented in the GSS-20 sample. In addition, while every effort was made to avoid non-response, the non-response rate for GSS-20 was 33%. Little or nothing is known about the non-responding cases, and so the results may be biased to the extent that the non-responding cases differ from those that provided responses.

## 2. Objectives of the General Social Survey

The GSS program, established in 1985, conducts telephone surveys across the 10 provinces. The GSS is recognized for its regular collection of cross-sectional data that allows for trend analysis, and its capacity to test and develop new concepts that address emerging issues.

The two primary objectives of the General Social Survey (GSS) are:

- a) to gather data on social trends in order to monitor changes in the living conditions and well-being of Canadians over time; and
- b) to provide immediate information on specific social policy issues of current or emerging interest.

To meet the stated objectives, the data collected by the GSS are made up of two components: classification and core content. Classification content consists of variables which provide the means of delineating population groups for use in the analysis of core data. Examples of classification variables are age, sex, education, and income. Core content is designed to measure changes in society related to living conditions and well-being and to supply data to inform specific policy issues. Cycle 20 was the fourth cycle to address the issues relating to the family.

## 3. Content and special features of the GSS Cycle 20

The content of the questionnaire is outlined below.

### Control Form

This survey used the Random Digit Dialing approach to selecting households. The Control Form gathered information about the household composition, including age, sex, and marital status of members. A respondent was randomly selected from among the eligible persons (people 15 years of age or older) in the household. The relationship of all household members to one another was determined and the main questionnaire completed for the respondent. Proxy interviews were not accepted. Also included in this section was a series of telephone questions used for weighting that asked respondents about the number of telephone numbers in their home and the number that were used for business, computer or fax use only.

**Section 1: Parents' history**

This section examines the family origins of the respondent with a focus on characteristics of the respondent's parents. It identifies who raised the respondent and delineates the union history of these parents. Other demographic information collected about the parents includes birthplace and education level. Education of parents is useful as an indicator of the respondent's socio-economic status while growing up. This section can also shed light on the relationship between family of origin and current family functioning, such as union stability or earnings.

**Section 2: Leaving household**

This section is focused on the launching of young adults from the family of origin. It takes a detailed look at the dates and reasons for home leaving as well as the circumstances under which some adults return to the parental home. This data have provided important information on new trends in family life produced by delayed home leaving among particular cohorts during times of economic recession.

**Section 3: Marriages of respondent**

This section gathers core demographic information about Canadian society with respect to marriage, separation and divorce. It determines the current legal marital status of the respondent and then collects a detailed marital history, including dates which determine the duration of marriages, separations and divorces, and the age at which these events occurred in the life of respondents. This section covers up to four previous marriages of the respondent. Some questions are also asked about the respondent's spouse, such as their marital status prior to the union. This section also establishes whether or not children were born into each union. These data allow for rich historical analyses which are not possible using other sources, such as the Canadian Census of Population.

**Section 4: Common-law unions of respondent**

In recent years, there has been an increase in the number of common-law partnerships. This section allows us to track this phenomenon. As in the marriage section, an in-depth history of the respondent's common-law unions is taken, with details on up to four previous common-law unions. Through the recording of dates, the age at which unions were formed and dissolved by the respondent are noted as well as the duration of each union. Questions pertaining to the partner and to children born from the union are also asked. In conjunction with the section on children, these data also allow us to track the increasing number of children raised in the context of common-law unions.

**Section 5: Marriage or common-law intentions**

This section captures the intentions of persons who are not currently in a union with respect to having a relationship in the future, either by marriage or common-law. This section also identifies persons who are in a couple relationship with someone who lives in a separate household.

**Section 6: Respondent's children**

This section involves another core demographic area, identifying all children of the respondent: natural or biological children, step-children, adopted children, and grandchildren. This survey is in fact a primary and unique source of information on blended families in Canada. We are interested in children who are presently living both inside and outside the household or who are deceased. Detailed information is collected on each child, including the child's living arrangements, time spent with each parent and, where applicable, when the child left home. Information is not collected on foster children or children who were stillborn. Again, these data provide rich data on the structuring of family life across households that is not possible with Census data.

**Section 7: Fertility intentions**

This section examines people's intentions to give birth to or father children, or more children, if they are less than 50 years of age. Male respondents are also interviewed for this section if their spouse or partner is aged 15 to 49 years. Reasons for having or not having children are examined. With the trend towards lower population growth, we are interested in the factors people consider when thinking about having children or determining the number of children they hope to raise.

**Section 8: Birth or adoption of child in the past 5 years**

This section introduces new content to more closely examine the transition to parenthood and the supports people use when having or adopting a child. Detailed questions covering the period between 2001 to 2006 include the topics of leaving and returning to work, such as the use of maternity, paternity and parental leave and the stresses involved when re-entering the work force. Other questions include the services new parents use to assist with the pregnancy, birth or adoption, the phenomenon of post-partum depression and an in-depth look at child-care arrangements. This section has high relevance for public policy and program development, particularly for parental leave programs and child care strategies.

**Section 9: Child custody**

New child-centered family justice strategies have provided the impetus for this detailed look at the arrangements parents make for their children in the wake of separation or divorce. Like Section 8, this section also covers the period between 2001 to 2006. For break-ups of marriages and common-law relationships occurring during that time frame, questions determine whether arrangements were in place with respect to time spent with children, financial supports and major decision-making for children. This is followed by more in-depth questions on time spent with children by each parent.

**Section 10: Financial support agreement or arrangement for child(ren) and ex-spouse or ex-partner**

As a sequel to section 9, this section continues to look at the re-organization of family life for Canadians following couple dissolution. It includes in-depth questions about financial arrangements for children as well as for former spouses and common-law partners. The amount and frequency of payments made and received are detailed as well as compliance and satisfaction with arrangements. Agreements around major decision-making for children are more deeply explored here also. Finally, detailed questions explore the use of services in navigating couple dissolution, providing useful input for program development in family justice.

**Section 11: Social networks**

This section measures the amount of contact Canadians have with their relatives and friends outside of their immediate household and the type of informal, unpaid help they give and receive in these social networks. This is one of several sections which seeks to understand how well Canadian families are functioning, in this case by identifying the amount and type of resources or "social capital" available to families in day-to-day life.

**Section 12: Work-family balance and family functioning**

This section is aimed at measuring work-family balance from a few different perspectives. It measures the amount of time stress (or "time crunch") the respondent is experiencing, using a standardized set of questions. It also looks at the "sandwich generation" issue of caring for aging parents or other adult relatives. In particular, questions here examine the impact of care-giving on work-life, family time and other areas of respondent functioning and well-being. This section also measures the use of compassionate care leave by Canadian care-givers.

### **Section 13: Work history, maternity and paternity leave**

We ask detailed questions about the respondent's work history in order to assess how labour market participation and interruptions are related to family events such as marriage, birth of children, divorce and other family transitions. Examples of work events captured in this section include joining the labour force, working full-time or part-time, being absent for periods of time, self-employment, retirement, etc. A module tracking maternity and paternity leave is also included since it is directly linked to family life. Collecting work history information is intrinsic to analysis of family life from a life-course perspective which is a government priority for family research.

### **Section 14: Main activity and education of respondent**

Information on the respondent's main paid or unpaid activity in the past 12 months is collected as well as information related to their education. Work data include hours of work or study, shifts, type of worker, work at home, self-employment, holding multiple jobs and work flexibility. Education data include level of attainment, age at completion of studies, student debts, and future educational plans. Recent studies have shown that educational attainment is a strong determinant of several family life course events, such as union formation and dissolution.

### **Section 15: Main activity and education of spouse or partner**

This section covers the main activity and education of respondent's spouse or partner. This provides information on how couples share the workload based on their employment and education level.

### **Section 16: Well being**

This section covers the respondent's health and activity limitations as well as the health status of other household members. In addition, various measures of life satisfaction are included. All are important factors to assess the well-being of Canadian families.

### **Section 17: Housing characteristics of respondent**

This section covers the respondent's housing characteristics, with more in-depth questions for persons who moved or bought a home between 2001 and 2006. New content places a special focus on home ownership: its importance to Canadians, factors influencing the purchase of a dwelling, and potential trade-offs made in order to buy. This data will help us to understand home ownership and residential moves in relation to family transitions such as getting married, having a child, or separation and divorce. They will also help us to examine family factors related to recent booms in Canadian housing markets, such as the current expansion in Alberta.

### **Section 18: Other characteristics**

This section provides a variety of socio-demographic measures of respondents and their spouses or partners in order to support the analysis of the Canadian family. Many of the questions are repeated each year in the General Social Survey and include place of birth, ethnic ancestry, aboriginal identity, visible minority status, language, religion and income.

## **4. Survey and sample design**

Data for Cycle 20 of the GSS were collected from June 2006 to October 2006 inclusively. The sample was selected using the Elimination of Non-Working Banks technique and evenly distributed over 4 waves to counterbalance as much as possible the seasonal variation in the information gathered. A description of this method is provided in Section 4.3. The target population is discussed in Section 4.1 and the stratification used in the survey design is outlined in Section 4.2.

## 4.1 Target population

The target population for the GSS was all persons 15 years of age and over in Canada, excluding:

1. residents of the Yukon, Northwest Territories and Nunavut;
2. full-time residents of institutions.

The survey employed Random Digit Dialing (RDD), a telephone sampling method. Households without telephones were therefore excluded. There is evidence, however, that persons living in such households represent less than 2% of the target population (Residential Telephone Services Survey (RTSS), December 2006). Interviews were not conducted by cellular telephone so persons with only cellular telephone service were also excluded; again, this group makes up a very small but growing proportion of the population, less than 5.04% (RTSS, December 2006).

Survey estimates were adjusted (weighted) to represent all persons in the target population, including those without telephones. The tacit assumption was that, given the small number of people without telephones, their characteristics were not different enough from those of the rest of the target population to have had an impact on the estimates. Since no one without a telephone was in the sample, this assumption cannot be verified using GSS data. The characteristics of the population without telephones were examined using data from the 2005 Survey of Household Spending. Telephone ownership was high among virtually all socio-economic groups, but was lowest among the households with the lowest household income (less than \$10,000). The telephone ownership rate was 88% for this population, while it was over 96% for all other income groups.

## 4.2 Stratification

In order to carry out sampling, each of the ten provinces was divided into strata; i.e., geographic areas.

Many of the Census Metropolitan Areas (CMAs) were each considered separate strata. This was the case for St. John's, Halifax, Saint John, Montreal, Quebec City, Toronto, Ottawa, Hamilton, Winnipeg, Regina, Saskatoon, Calgary, Edmonton and Vancouver. CMAs not on this list are located in Quebec, Ontario and British Columbia. Three more strata were formed by grouping the remaining CMAs in each of these three provinces. Finally, the non-CMA areas of each of the ten provinces were also grouped to form ten more strata. This resulted in 27 strata in all.

The size of the sample for Cycle 20 was 35,045. For each province, minimum sample sizes were determined that would ensure that certain estimates would have acceptably low sampling variability at the stratum level. Once these stratum sample size targets had been met, the remaining sample was allocated to the strata in a way that balanced the need for precision of both national-level and stratum-level estimates.

## 4.3 Elimination of non-working banks RDD design

The Elimination of Non-Working Banks (ENWB) sampling technique is a method of Random Digit Dialing in which an attempt is made to identify all working banks<sup>1</sup> for an area (i.e., to identify all banks containing at least one number that belongs to a household). Thus, all telephone numbers within non-working banks are eliminated from the sampling frame.

For each province, lists of telephone numbers in use were purchased from the telephone companies and lists of working banks were extracted. Each bank was assigned to a stratum within its province.

---

1. A bank of telephone numbers is a set of 100 numbers with the same first eight digits (i.e. the same Area Code-Prefix-Bank ID). Thus 613-951-9180 and 613-951-9192 are in the same bank, but 613-951-9280 is in a different bank.

In each stratum, a simple random sample without replacement of telephone numbers was selected by choosing a simple random sample with replacement of banks from the frame, and then randomly generating the last two digits for each bank to obtain the telephone number. The entire sample of telephone numbers was produced before the first day of interviewing for each wave of collection. Therefore, a prediction of the percentage of numbers dialled that would reach a household had to be made (this is known as the "hit rate").

For Cycle 20 of the GSS, 56.8% of the numbers dialled reached households. An attempt was made to conduct a GSS interview with one randomly selected person from each household.

## **5. Collection**

Computer assisted telephone interviewing (CATI) was used to collect data for the GSS, using Random Digit Dialing methods. Respondents were interviewed in the official language of their choice. Interviews by proxy were not allowed. Data collection began in June 2006 and continued through to October 2006. The sample was evenly distributed over the four waves to counterbalance as much as possible the seasonal variation in the information gathered. The overall response rate during collection for Cycle 20 was 67.4%.

All interviewing took place using centralized telephone facilities in four of Statistics Canada's regional offices, with calls being made from approximately 09:00 until 21:00, Monday to Saturday inclusive. The four regional offices were: Sherbrooke, Halifax, Edmonton and Winnipeg. Interviewers were trained by Statistics Canada staff in telephone interviewing techniques using CATI, survey concepts and procedures. The majority of interviewers had previous experience interviewing for the GSS.

It would be too lengthy to include all the survey manuals as part of this documentation package. However, more information can be obtained from Statistics Canada (see Section 9).

## **6. Processing**

### **6.1 Data capture**

Using CATI, responses to survey questions were entered directly into computers as the interview progressed. The CATI data capture program allowed a valid range of codes for each question and built-in edits, and automatically followed the flow of the questionnaire. The information output by the CATI system was transmitted electronically to Ottawa.

### **6.2 Coding**

Several questions allowing write-in responses had this information coded into either new unique categories or to a listed category if the write-in information duplicated a listed category. Where possible (e.g., occupation, industry, language, education, country of birth, religion), the coding followed the standard classification systems as used in the Census of Population.

### **6.3 Edit and imputation**

All survey records were subjected to computer edits throughout the course of the interview. The CATI system principally edited flow of the questionnaire and identified out of range values. As a result, such problems could be immediately resolved with the respondent. If the interviewer was unable to correctly resolve the detected errors, it was possible for the interviewer to bypass the edit and forward the data to head office for resolution. All interviewer comments were reviewed and taken into account in head office editing.

Head office edits performed the same checks as the CATI system as well as more detailed edits. Due to the nature of the survey, imputation was not appropriate for most items. Records with missing or incorrect information were, in a small number of cases, corrected or obtained deterministically from other information on the questionnaire.

The flow editing carried out by head office followed a 'top down' strategy, in that whether or not a given question was considered "on path" was based on the response codes to the previous questions. If the response codes to the previous questions indicated that the current question was "on path", the responses, if any, to the current question were retained, though "don't know" was recoded as 9 (99 or 999, etc.) and refusals were recoded as "Not Stated", i.e. 8 (98 or 998, etc.); if, however, a response was missing to the current question, it was coded as "Not Stated", i.e. 8 (98 or 998, etc.). If the response codes to the previous questions indicated that the current question was "off path" because the respondent was clearly identified as belonging to a sub-population for which the current question was inappropriate or not of interest, the current question was coded as "Not Applicable", i.e. 7 (97 or 997, etc.).

Non-response was not permitted for those items required for weighting. Values were imputed in the rare cases where either of the following was missing: sex or number of residential telephone lines. The imputation was based on a detailed examination of the data and the consideration of any useful data such as the ages and sexes of other household members, and the interviewer's comments. The number of residential telephone lines was assumed to be one (1) when the respondent failed to provide the information.

#### **6.4 Creation of combined and derived variables**

A number of variables on the file were derived from information collected on the questionnaires. In some cases, the derived variables are straightforward and involve collapsing of categories. In other cases, two or more variables were combined to create a new variable. The data dictionary identifies which variables are derived and the nature of their derivation.

#### **6.5 Amount of detail on microdata file**

In order to guard against disclosure, the amount of detail included on this file is less than is available on the master file retained by Statistics Canada. Variables with extreme values have been capped and information for some variables has been aggregated into broader classes (e.g., occupation, religion). In rare cases, certain variables have been modified in order to protect the confidentiality of respondents.

### **7. Estimation**

When a probability sample is used, as is the case for the GSS, the principle behind estimation is that each person selected in the sample represents (in addition to himself or herself) several other persons not in the sample. For example, in a simple random sample of 2% of the population, each person in the sample represents 50 persons in the population. The number of persons represented by a given person in the sample is usually known as the weight or weighting factor of the sampled person.

GSS Cycle 20 estimates can be made from the microdata file. This file contains questionnaire responses and associated information from 23,608 respondents.

Two weighting factors were placed on the File and are listed and explained below:

**WGHT\_PER:** This is the basic weighting factor for analysis at the person level, i.e. to calculate estimates of the number of persons (non-institutionalized and aged 15 or over) having one or several given characteristics. WGHT\_PER should be used for all person-level estimates. For example, to estimate the number of persons who say their health is excellent, the value of WGHT\_PER should be summed over all records with this characteristic.

WGHT\_HSD: This weighting factor can be used to estimate the number of households with a given characteristic. For example, to estimate the number of households that are in low-rise apartments, WGHT\_HSD should be summed over all records with this characteristic.

### 7.1 Weighting of persons

We view each cycle of the General Social Survey as being composed of a number of independent surveys - one per wave of collection. Wherever possible, therefore, we weight each survey independently so that the data collected for each wave contributes to the estimates in proportion to the Canadian population at that time. When the sample size for a particular wave is not large enough, the records for two or more months are grouped together at certain stages of the weighting process.

A self-weighting sample design is one for which the weights of each unit in the sample are the same. The GSS sample for Cycle 20 was selected using the Elimination of Non-Working Banks (ENWB) sampling technique, which has such a design, with each telephone number within a stratum having an equal probability of selection.

This probability is equal to:

$$\frac{\text{Number of telephone numbers sampled within the stratum}}{\text{Total number of possible telephone numbers within the stratum}}$$

(The total number of possible telephone numbers for a stratum is equal to the number of working banks for a stratum times 100).

#### 1) Basic weight calculation

Each working (in service) telephone number (responding and non-responding) in the RDD sample was assigned a weight equal to the inverse of its probability of selection. This weight was calculated independently for each stratum-wave group as follows:

$$\frac{\text{Number of possible telephone numbers in each stratum-wave group}}{\text{Number of sampled telephone numbers in each stratum-wave group}}$$

#### 2) Two-stage adjustment

Weights for responding telephone numbers were adjusted to represent non-responding telephone numbers. This was done independently within each stratum-wave group.

Non-responding telephone numbers were grouped into two types; those with some auxiliary information available (in particular, a complete roster of household members) and those with no auxiliary information.

This non-response adjustment was done in two stages. In the first stage, adjustment was made for complete non-response (i.e., households for which no auxiliary information was available). In the second stage, adjustment was made for partial non-response. These households had some auxiliary information which was used to model propensity to respond. The combination of these two adjustments is referred to as Factor 1.

Non-responding telephone numbers were then dropped.

### 3) Household weight calculation

The weight from Step 2 was used as an initial household weight. For households with more than one residential telephone number (i.e. not used for business, fax or computer purposes only), this weight was adjusted downwards to account for the fact that such households had a higher probability of being selected. The weight for each household was divided by the number of residential telephone numbers that serviced the household.

$$\text{Factor 2} = \frac{1}{\text{Number of non-business telephone numbers}}$$

This produces a household weight = Basic Weight x Factor 1 x Factor 2.

### 4) Person weight calculation

A person weight was then calculated for the respondent by multiplying the household weight by the number of persons in the household who were eligible to be selected for the survey (i.e. the number of persons 15 years of age or older).

This produces a person weight = Basic Weight x Factor 1 x Factor 2 x Number of eligible household members.

### 5) Adjustment of person weight to external totals

The person weights were adjusted several times using a raking ratio procedure. This procedure ensures that, based on the survey's total sample, estimates produced that should match certain external reference totals do indeed match them. Two sets of external references were used for this survey, both of them population totals: for stratum by wave, and for age-sex groups by province.

It should be noted that persons living in households without telephone service are included in the external references even though such persons were not sampled.

#### 5a) Regional office (RO) - Stratum - Wave Adjustment

An adjustment was made to the person weights on records within each stratum per wave in order to make population estimates consistent with projected population counts. This was done by multiplying the person weight for each record within the stratum by the following ratio:

$$\frac{\text{Projected population count for the RO-stratum-wave}}{\text{Sum of the person weights for the RO-stratum-wave}}$$

When sample sizes were small (< 15), adjacent wave's data for the same stratum were combined before this adjustment was made.

## 5b) Province - age - sex adjustment

The next weighting step was to ratio adjust the weights to agree with projected province-age-sex population distributions. Projected population counts were obtained for males and females within the following sixteen age groups:

15-19,	20-24,	25-29,	30-34,
35-39,	40-44,	45-49,	50-54,
55-59,	60-64,	65-69,	70-74,
75-79,	80-84,	85-89,	90 +

For each of the resulting classifications the person weights for records within the classification were adjusted by multiplying by the following ratio:

$$\frac{\text{Projected population count for the province-age-sex group}}{\text{Sum of the person weights of records for the province-age-sex group}}$$

where,

$$\text{Projected population count} = \frac{\sum \text{Projected population count for province-age-sex group}^1}{4}$$

1. June - October 2006

When sample sizes were small, adjacent age group data for the same province and sex were combined before this adjustment was made.

## 5c) Raking ratio adjustments

The weights of each respondent were adjusted several times using a raking ratio procedure. This procedure ensured that estimates produced for RO-Stratum-Wave and Province-Age-Sex totals would agree with the projections. This adjustment was made by repeating steps 5a) and 5b) of the weighting procedures until each repetition of the step made a minimal adjustment to the weights.

## 6) Final person weight

The weight produced at the end of 5) is the final person weight WGHT\_PER placed on the Main File.

## 7) Household weight:

The person is considered the basic unit of analysis and many steps have been taken to ensure that the person weight is consistent with external references, as can be seen above in its derivation. Sometimes, however, estimates of the number of households will be required, so an approximation of a household weight has been included on the Main File. It is simply the person weight divided by the number of household members eligible for selection in the survey, i.e. those aged 15 or over. The latter variable is called DVELLIG:

$$\text{WGHT\_HSD} = \text{WGHT\_PER} / \text{DVELLIG}$$

Note that the adjustments performed on the person weight such as the raking ratio make WGHT\_HSD preferable to the preliminary household weight mentioned in 3) above.

## 7.2 Weighting policy

Users are cautioned against releasing unweighted tables or performing any analysis based on unweighted survey results. As was discussed in Section 7.1, there were several weight adjustments performed that depended on the province, stratum, age and sex of the respondent. Sampling rates as well as non-response rates varied significantly from province to province, and non-response rates varied with demographic characteristics. For example, non-respondents are often more likely to be males and more likely to be younger. In the responding sample, 2.9% were males between the ages of 15 and 19, while in the overall population, approximately 3.4% were males between 15 and 19. Therefore, it is clear that unweighted sample counts cannot be considered to be representative of the survey target population.

Contact was made or attempted with 35,045 households during the survey. From these households, 23,608 usable responses were obtained, for a response rate of 67.4% (when it is assumed that all of the households for which there was no response were "in scope", i.e., had at least one eligible member). The distribution of types of non-response and response is shown in the table below:

#	Source	Count	%
	Total sample of households	35,045	100.0
1	Households not reached	1,836	5.3
2	Household refusal	4,452	12.7
3	Other household non-response	1,517	4.3
4	Selected person refusal	1,347	3.8
5	Other person level non-response	2,285	6.5
6	Responses	23,608	67.4

Lines 1, 2, and 3 above represent non-response that occurred at the household level; in total there were 7,805 household non-responses, 22.3% of the sample of households. Line 1 indicates the number of households that could not be reached during the entire survey period ("ring-no-answer" households). As contract was never established with these 1836 households, some of them may in reality be out of scope. Lines 4 and 5 represent non-response that occurred after the respondent for the household had been selected. In total there were 3,632 of these person level non-responses, 10.4% of the sample of households. The 'other non-response' categories include cases where a response could not be obtained due to language difficulties or other problems.

## 7.3 Types of estimates

Two types of 'simple' estimates are possible from the results of the General Social Survey. These are qualitative estimates (estimates of counts or proportions of people possessing certain qualities or characteristics) and quantitative estimates involving quantities or averages. More complex estimation and analyses are covered in Section 7.4.

### 7.3.1 Qualitative estimates:

It should be kept in mind that the target population for the GSS was non-institutionalized persons 15 years of age or over, living in the ten provinces. Qualitative estimates are estimates of the number or proportion of this target population possessing certain characteristics. The number of people (6,299,348) who describe their state of health as excellent (HAL\_Q110 = 1) is an example of this kind of estimate. These estimates are readily obtained by summing the person weights (WGHT\_PER) of the records possessing the characteristic of interest. This estimate does not, however, adjust for non-response to the question in any way. If we make the assumption that those who either refused to answer the question or who responded 'don't know' have the same distribution as those who responded, then an adjusted estimate can be made. To do this, the proportion of the target population with this characteristic is estimated by ignoring the respondents with a 'Not stated' or 'Don't know' answer to question HAL\_Q110 and calculating the ratio of the total of the weights of those

respondents who answered that their state of health was 'excellent' (HAL\_Q110=1) to that of all respondents who answered the question (HAL\_Q110=1, 2, 3, 4, or 5). This proportion is then multiplied by the size of the target population to produce the final estimate (it should be noted that this adjustment does not have to be done, but it can be if needed):

$$6,408,672 = 26,551,748 \times \frac{6,299,348}{26,098,807}$$

When the proportion of responses that are 'don't know' or 'refused' is high the differences between the two estimates will be large.

### 7.3.2 Quantitative estimates

Some variables on the General Social Survey microdata files are quantitative in nature (e.g. age, number of paid vacation days taken in the past 12 months). From these variables, it is possible to obtain such estimates as the average number of weeks worked in the past 12 months. These quantitative estimates are of the following ratio form:

$$\text{Estimate (average)} = X / Y$$

The numerator (X) is a quantitative estimate of the total of the variable of interest (for example, the number of weeks worked in the past 12 months) for a given sub-population (for example, males in who worked in the past 12 months). In this example, X would be calculated by multiplying the person weight (WGHT\_PER) by the variable of interest (WKWE) when it is known,  $1 \leq WKWE \leq 52$ , (i.e. not equal to '96', '97' or '99'), and summing this product over all records for males who worked i.e. SEX=1 and  $(1 \leq WKWE \leq 52)$ , which yields 463,974,387.

The denominator (Y) is the qualitative estimate of the number of persons within that sub-population (males who worked in the past 12 months). In this example, Y would be calculated by summing the person weight (WGHT\_PER) over all male respondents with  $1 \leq WKWE \leq 52$ , yielding 10,173,612

The two estimates X and Y are derived independently and then divided to provide the quantitative estimate. The average number of weeks is then calculated to be:

$$\frac{463,974,387}{10,173,612} = 45.6$$

### 7.4 Guidelines for analysis

As is detailed in Section 4 of this document, the respondents from the GSS do not form a simple random sample of the target population. Instead, the survey had a complex design, with stratification and multiple stages of selection, and unequal probabilities of selection of respondents. Using data from such complex surveys presents problems to analysts because the survey design and the selection probabilities affect the estimation and variance calculation procedures that should be used.

The GSS used a stratified design, with significant differences in sampling fractions between strata. Thus, some areas are over-represented in the sample (relative to their populations) while some other areas are relatively under-represented; this means that the unweighted sample is not representative of the target population, even if there were no non-response. Non-response rates may vary by demographic group, making the unweighted sample even less representative.

The survey weights must be used when producing estimates or performing analyses in order to account as much as possible for the geographic over- and under-representation and for the under- or over- representation of age-sex groups or months of the year in the unweighted file. While many analysis procedures found in statistical packages allow weights to be used, the meaning or definition of the weight in these procedures often differs from that which is appropriate in a sample survey

framework, with the result that while in many cases the estimates produced by the packages are correct, the variances that are calculated are almost meaningless.

For many analysis techniques (for example linear regression, logistic regression, estimation of rates and proportions, and analysis of variance), a method exists which can make the variances calculated by the standard packages more meaningful. If the weights on the data, or on the subset of the data that is of interest, are rescaled so that the average weight is one (1), then the variances produced by the standard packages will be more reasonable; they still will not take into account the stratification and clustering of the sample's design, but they will take into account the unequal probabilities of selection. This rescaling can be accomplished by dividing each weight by the overall average weight before the analysis is conducted.

Section 8 describes sampling variability and data reliability in more detail and Appendix A gives a series of tables that can be used to estimate the sampling variability of many qualitative estimates of totals and proportions.

## 7.5 Methods of estimation and interpretation of estimates

### 7.5.1 Estimating numbers of persons by using WGHT\_PER on the main file

As previously mentioned, a basic person weight has been assigned to each sampled individual and, as described in section 7.1, these weights have been adjusted to reflect the age and sex composition of the various provincial populations as estimated by Statistics Canada for each month covered by Cycle 20.

$$23,608 \sum_{i=1} \text{WGHT\_PER} = 26,551,748^1$$

1. An estimate of the number of persons 15 years of age and older in the population.

In general, when an estimate is based on the unit of observation being the person, the Main File and WGHT\_PER should be used. Examples of this are the average number of weeks worked by persons aged 25-29, the percentage of persons who plan to slow down in the coming year, and the number of people aged between 25 and 44 who have done a favour for a neighbour in the past month.

The last example would be calculated as follows: WGHT\_PER would be summed up for all records on the main file with  $3 \leq \text{AGEGR10} \leq 4$  and  $\text{DOR\_Q628} = 1$  to find that 6,433,051 people aged 25-44 have done their neighbour a favour in the month prior to the survey.

### 7.5.2 Estimating numbers of households by using WGHT\_HSD on the main file

The weighting factor WGHT\_HSD should be used when estimating the number of households. For example, when estimating the number of households in Newfoundland, WGHT\_HSD would be summed over all records with  $\text{PRV}=10$ , yielding an estimate of 204,534 households.

## 8. Release guidelines and data reliability

It is important for users to become familiar with the contents of this section before publishing or otherwise releasing any estimates derived from the General Social Survey microdata files.

This section of the documentation provides guidelines to be followed by users. With the aid of these guidelines, users of the microdata files should be able to produce figures consistent with those produced by Statistics Canada and in conformance with the established guidelines for rounding and release. The guidelines can be broken into four broad sections: Minimum Sample Sizes for Estimates; Sampling Variability Policy; Sampling Variability Estimation; and Rounding Policy.

### **8.1 Minimum sample size for estimates**

Users should determine the number of records on the particular microdata file which contribute to the calculation of a given estimate. This number should be at least 15 in the case of persons. When the number of contributors to the weighted estimate is less than this, the weighted estimate should generally not be released regardless of the value of the Approximate Coefficient of Variation. If it is, it should be with great caution and the insufficient number of contributors associated with the estimate should be prominently noted.

### **8.2 Sampling variability guidelines**

The estimates derived from this survey are based on a sample of persons. Somewhat different figures might have been obtained if a complete census had been taken using the same questionnaire, interviewers, supervisors, processing methods, etc. as those actually used. The difference between the estimates obtained from the sample and the results from a complete count taken under similar conditions is called the sampling error of the estimate.

Errors which are not related to sampling may occur at almost every phase of a survey operation. Interviewers may misunderstand instructions, respondents may make errors in answering questions, the answers may be incorrectly entered into the CATI system, and errors may be introduced in the processing and tabulation of the data. These are all examples of non-sampling errors.

Over a large number of observations, randomly occurring errors will have little effect on estimates derived from the survey. However, errors occurring systematically will contribute to biases in the survey estimates. Considerable time and effort was made to reduce non-sampling errors in the survey. Quality assurance measures were used at each step of the data collection and processing cycle to monitor the quality of the data. These measures included the use of highly skilled interviewers, extensive training of interviewers with respect to the survey procedures and questionnaire, observation of interviewers to detect problems of questionnaire design or misunderstanding of instructions, and coding and edit quality checks to verify the processing logic.

#### **8.2.1 Non-sampling errors**

A major source of non-sampling errors in surveys is the effect of non-response on the survey results. The extent of non-response varies from partial non-response (failure to answer just one or a few questions) to total non-response. Total non-response occurred because either the interviewer was unable to contact the respondent, no member of the household was able to provide the information (perhaps due to a language problem), or the respondent refused to participate in the survey. Total non-response was handled by adjusting the weight of households who responded to the survey to compensate for those who did not respond.

In most cases, partial non-response to the survey occurred when the respondent did not understand or misinterpreted a question, refused to answer a question, or could not recall the requested information.

### 8.2.2 Sampling errors

Since it is an unavoidable fact that estimates from a sample survey are subject to sampling error, sound statistical practice calls for researchers to provide users with some indication of the magnitude of this sampling error.

Although the exact sampling error of the estimate, as defined above, cannot be measured from sample results alone, it is possible to estimate a statistical measure of sampling error, the standard error, from the sample data. Using the standard error, confidence intervals for estimates (ignoring the effects of non-sampling error) may be obtained under the assumption that the estimates are normally distributed about the true population value. The chances are about 68 out of 100 that the difference between a sample estimate and the true population value would be less than one standard error, about 95 out of 100 that the difference would be less than two standard errors, and virtually with certainty that the differences would be less than three standard errors.

Since the absolute size of the sampling error of an estimate is often less important than its relative size (relative to the estimate itself) the standard error is not always the best measure of sampling error. For example, a standard error of 10 for an estimate of 20 would generally be taken as indicating that the estimate is a poor one, while the same standard error for an estimate of 1,000 would generally indicate a good estimate. For this reason the size of the sampling error is often expressed relative to the size of the estimate, as the coefficient of variation (c.v.). The coefficient of variation of an estimate is obtained by dividing the standard error of the estimate by the estimate itself, and the resulting fraction is usually expressed as a percentage. In the above example, the first estimate has a c.v. of 50% (10/20), while the second has a c.v. of 1% (10/1,000).

In order to provide a means of assessing the quality of many estimates, Statistics Canada has produced a set of Approximate Sampling Variability Tables for the GSS. These tables can be used to obtain approximate coefficients of variation for categorical-type estimates and proportions. More precise estimates of the sampling variability of estimates can be produced with the bootstrap method using bootstrap weights that have been created for this survey. See Section 8.3 for more details.

### 8.2.3 Guidelines for release of estimates

When considering releasing *and* or *or* publishing an estimate from the microdata file, users should consult the table below and follow the guideline that matches the coefficient of variation of the estimate.

Type of estimate	Coefficient of variation	Policy statement
1. With moderate sampling variability	0.0% to 16.5%	Estimates can be considered for general unrestricted release. No special notation is required.
2. With high sampling variability	16.6% to 33.3%	Estimates can be considered for general unrestricted release but should be accompanied by a warning cautioning users of the high sampling variability associated with the estimates.
3. With very high sampling variability	33.4% or over	Estimates should generally not be released, but when they are it should be with great caution and the very high sampling variability associated with the estimate should be prominently noted.

Note: The sampling variability guidelines should be applied to rounded estimates.

### 8.3 Estimates of variance

Variance estimation is described separately for qualitative and quantitative estimates.

#### 8.3.1 Sampling variability for qualitative estimates

Derivation of the sampling variability of each of the qualitative estimates which could be generated from the survey would be an extremely costly procedure, and for most users, an unnecessary one. Consequently, approximate measures of sampling variability, in the form of tables, have been developed for use and are included in APPENDIX A ("Approximate Variance Tables"). These tables were produced using the coefficient of variation formula based on a simple random sample. Since the design of Cycle 20 of the General Social Survey was not a simple random sample, a factor called the Design Effect has been introduced into the variance formula.

The Design Effect for an estimate is the actual variance for the estimate (taking into account the design that was used) divided by the variance that would have resulted if the estimate had been derived from a simple random sample. The Design Effect used to produce the Approximate Variance Tables has been determined by first calculating Design Effects for a wide range of characteristics and then choosing among these a conservative value which will not give a false impression of high precision. These Design Effects are specified in the Table 1 below.

**Table 1: Design effects**

<b>Geographic Area</b>	<b>Person Design Effect</b>
Canada	1.43
Newfoundland and Labrador	1.25
Prince Edward Island	1.16
Nova Scotia	1.23
New Brunswick	1.35
Quebec	1.24
Ontario	1.30
Manitoba	1.26
Saskatchewan	1.19
Alberta	1.23
British Columbia	1.30
Atlantic Region	1.42
Prairie Region	1.38

Approximate variance tables for estimates using WGHT\_PER are provided at the Canada and provincial levels as well as for the Atlantic and Prairie Regions.

It should be noted that all coefficients of variation in these tables are approximate and therefore unofficial. However, more precise estimates of the sampling coefficients of variation for specific variables may be obtained using "bootstrap" weights and associated programs. The types of estimates supported include 'aggregates' or 'totals', proportions, ratios, differences between 'aggregates' or 'totals', as well as more sophisticated types of analyses such as estimates of coefficients from linear regressions and logistic regressions, among others.

The use of variable-specific variance calculation instead of the table-based approximations may allow users to feel more certain of the quality of their estimates, especially those with coefficients of variation estimated from the tables in the "Very High Sampling Variability" range (see the guidelines regarding the release of the survey estimates on preceding pages).

### 8.3.2 Sampling variability for quantitative estimates

Approximate variances for quantitative variables cannot be as conveniently summarized. As a general rule, however, the coefficient of variation of a quantitative total will be larger than the coefficient of variation of the corresponding qualitative estimate (e.g., the number of persons contributing to the quantitative estimate). If the corresponding qualitative estimate has high sampling variability, then the quantitative total will in general have high sampling variability as well.

### 8.3.3 Bootstrap method for variance estimation

In order to determine the quality of the estimate and to calculate the CV, the standard deviation must be calculated. Confidence intervals also require the standard deviation of the estimate. The GSS uses a multi-stage survey design and calibration, which means that there is no simple formula that can be used to calculate variance estimates. Therefore, an approximate method was needed. The bootstrap method is used because the sample design and calibration needs to be taken into account when calculating variance estimates. The bootstrap method does this, and with the use of the Bootvar program, discussed in the next subsection, is a method that is fairly easy for users.

The GSS uses the mean bootstrap method described by W. Yung (Variance estimation for public use microdata files; Symposium 97, *New Directions in Surveys and Censuses: Proceedings*, p. 91-95. Statistics Canada (1997)).

Independently, in each stratum, a simple random sample of  $(n-1)$  of the  $n$  units in the sample is selected with replacement. Note that since the selection is with replacement, a unit may be chosen more than once. This step is repeated  $R$  times to form  $R$  bootstrap samples. An average initial bootstrap weight based on the  $R$  samples is calculated for each sample unit in the stratum. The entire process (selecting simple random samples, recalculating weights for each stratum) is repeated  $B$  times, where  $B$  is large, yielding  $B$  different initial bootstrap weights. The GSS typically uses  $R=25$  and  $B=500$ , to produce 500 bootstrap weights.

These weights are then adjusted according to the same weighting process as the regular weights: non response adjustment, calibration and so on. The end result is 500 final bootstrap weights for each unit in the sample. The variation among the 500 possible estimates based on the 500 bootstrap weights is related to the variance of the estimator based on the regular weights and can be used to estimate it.

There are a number of reasons why a user may need to calculate the coefficient of variation of estimates with the bootstrap method. A few are given below.

First, if a user desires estimates at a geographic level smaller than the province (for example, at the urban or rural level), then the Approximate Variance tables provided are not adequate. Coefficients of variation of these estimates may be obtained using "domain" estimation techniques through the Bootstrap variance program. Second, should a user require more sophisticated analyses such as estimates of coefficients from linear regressions or logistic regressions, the Approximate Variance tables will not provide correct associated coefficients of variation. Although some standard statistical packages allow sampling weights to be incorporated in the analyses, the variances that are produced often do not take into account the design properly *and* *or* calibration of the weights, whereas the Bootstrap variance program does so. Third, for estimates of quantitative variables, separate tables are required to determine their sampling error. Since most of the variables for the General Social Survey are categorical in nature, this has not been done. Thus, users wishing to obtain coefficients of variation for quantitative variables must do so through the Bootstrap variance program.

### 8.3.4 Bootvar program for variance estimation

Statistics Canada has developed a program that can perform Bootstrap variance estimation: the Bootvar program.

The Bootvar program is available in SAS format. It is made up of macros that compute variances for totals, ratios, differences between ratios and for linear and logistic regression.

The Bootvar program is provided with bootstrap weights and a document explaining how to modify and use the program to suit user's needs.

**The Bootvar program can be downloaded from the Statistics Canada Research Data Centres (RDC) internet site. You have to accept the license agreement to get access to the files.** [http://www.statcan.ca/english/rdc/bootvar\\_sas.htm](http://www.statcan.ca/english/rdc/bootvar_sas.htm)

## 8.4 Rounding

In order that estimates produced from the General Social Survey microdata files correspond to those produced by Statistics Canada, users are urged to adhere to the following guidelines regarding the rounding of such estimates. It may be misleading to release unrounded estimates, as they imply greater precision than actually exists.

### 8.4.1 Rounding guidelines

- 1) Estimates of totals in the main body of a statistical table should be rounded to the nearest thousand using the normal rounding technique (see definition in Section 8.4.2).
- 2) Marginal sub-totals and totals in statistical tables are to be derived from their corresponding unrounded components and then are to be rounded themselves to the nearest thousand units using normal rounding.
- 3) Averages, proportions, rates and percentages are to be computed from unrounded components and then are to be rounded themselves to one decimal using normal rounding.
- 4) Sums and differences of aggregates and ratios are to be derived from corresponding unrounded components and then rounded to the nearest thousand units or the nearest one decimal using normal rounding.
- 5) In instances where, due to technical or other limitations, a different rounding technique is used, resulting in estimates different from Statistics Canada estimates, users are encouraged to note the reason for such differences in the released document.

### 8.4.2 Normal rounding

In normal rounding, if the first or only digit to be dropped is 0 to 4, the last digit to be retained is not changed. If the first or only digit to be dropped is 5 to 9, the last digit to be retained is raised by one. For example, the number 8499 rounded to thousands would be 8000 and the number 8500 rounded to thousands would be 9000.

## 9. Additional information

Additional information about this survey can be obtained from the individuals listed below. Data from the survey is available through published reports, special request tabulations, and this micro data file. The microdata file is available from the Social and Aboriginal Statistics Division of Statistics Canada at a cost of \$2,140.00. Tabulations can be obtained at a cost that will reflect the resources required to produce the tabulation.

## Appendix A

### Approximate variance tables

## Approximate variance tables

By using the Approximate variance tables and the following rules, users should be able to determine approximate coefficients of variation (CV) for qualitative\* estimates or combinations of such estimates such as percentages, ratios, differences between totals and differences between ratios. Note that these tables are not appropriate for determining variances for quantitative\* estimates.

There are tables for each geographic area.

These tables are for the general adult population (aged 15 years and over) and any subpopulation thereof.

As noted in 8.2, estimates having Coefficient of variation's (CV) of more than 33.3% are not releasable. In addition, as mentioned in 8.1, each estimate should be derived from at least 15 respondents in order to be released, regardless of the approximate coefficient of variation.

The approximate variance tables include Canada, provincial and regional level tables for estimates of numbers of persons calculated using WGHT\_PER.

Users must ensure that they have chosen the appropriate table for their particular estimate.

## Rules for obtaining approximate variances

The following rules should enable the user to determine the approximate coefficients of variation from the approximate variance tables for estimates of the number, proportion or percentage of the surveyed population possessing a certain characteristic and for ratios and differences between estimates.

As noted in Section 8.1, each estimate should be derived from at least 15 respondents in order to be released, regardless of the approximate CV.

### **Rule 1:** Estimates of numbers possessing a characteristic (aggregates)

The coefficient of variation (CV) depends only on the size of the estimated aggregate itself. On the Approximate Variance Table, locate the estimated aggregate in the left-most column of the table (headed "Numerator of Percentage") and follow the asterisks across to the first figure encountered. This figure is the estimated CV.

---

\* With the term 'qualitative estimates', we are referring to estimated population counts of persons possessing a characteristic measured by the survey. These estimated population counts are the estimated totals for an implicit indicator variable for the quality or characteristic of interest. For each person, this implicit variable is either 1 (when the person has the characteristic) or 0 (when the person does not have the characteristic). When the variable associated with the estimate can take on values other than 0 or 1 for each person, i.e. there is a count or quantity for each person; we refer to the estimate as "quantitative", e.g. average personal income or average size of household (number of members).

**Example 1:**

A user estimates that in Canada 436,481 females aged 15 years and over describe their state of health as poor compared to other people their age (question HAL\_Q110=5). How does the user determine the approximate CV for this estimate?

Refer to the approximate variance table for Canada level estimates (page A-9). The estimated aggregate does not appear in the left-most column (the 'Numerator of Percentage' column), so it is necessary to use the closest figure, namely 450,000. The CV for an estimated aggregate is found by referring to the first non-asterisk entry for that row, in this case 5.9%. This CV falls within the range of CV's for 'Unqualified' estimates (i.e. 0.0% - 16.5%) allowing the estimate to be released without restriction.

**Rule 2:** Estimates of percentages or proportions possessing a characteristic

The CV of an estimated percentage or proportion depends on both the size of the percentage or proportion and the size of the total upon which the percentage is based. Estimated percentages or proportions are relatively more reliable than the corresponding estimates of the numerators of the percentages, particularly if the percentages are 50 percent or more. (Note that in the tables the CV's decline in value reading from left to right).

When the percentage or proportion is based upon the total population of the geographic area covered by the table, the CV of the percentage or proportion is the same as the CV of the numerator of the percentage. In this case, Rule 1 can be used.

When the percentage or proportion is based upon a subset of the total population (e.g., those in a particular age-sex group), reference should be made to the percentage (across the top of the table) and to the numerator of the percentage or proportion (down the left side of the table). The intersection of the appropriate row and column gives the coefficient of variation.

**Example 2:**

A user estimates that in Canada 3.24% of females aged 15 years and over describe their state of health as poor compared to others their age (HAL\_Q110=5). This is the expression of the estimate obtained in Example 1 as a percentage of all females aged 15 years and over in Canada. How does the user determine the approximate CV for this estimate?

Refer to the approximate variance table for Canada level estimates. Because the estimate is a percentage which is based on a subset of the population covered by the table, it is necessary to use both the percentage (3.24%) and the numerator portion of the percentage (436,481) to determine the approximate coefficient of variation. Since the numerator does not appear in the left-most column (the 'Numerator of Percentage' column), it is necessary to use the figure closest to it, namely 450,000. Similarly, the percentage estimate does not appear among the column headings, so it is necessary to use the figure closest to it, namely 2.0%. The figure at the intersection of the row and column selected, namely 5.9%, is the coefficient of variation. This CV falls within

the range of CV's for 'Unqualified' estimates (i.e. 0.0% - 16.5%, pg. A-9) allowing the estimate to be released without restriction.

### Rule 3: Ratios

In the case where the numerator is a subset of the denominator, the ratio should be converted to a percentage and Rule 2 applied. This would apply, for example, to the case where the denominator is the number of males and the numerator is the number of males who read a newspaper during the past week.

In the case where the numerator is not a subset of the denominator, the CV of the ratio of two estimates is approximately equal to the square root of the sum of squares of each CV considered separately. That is, the standard deviation of a ratio

$$R = X / Y \quad \text{is} \quad \text{sd}(R) = R * (\text{cv}(X)^2 + \text{cv}(Y)^2)^{1/2}$$

The CV of R is approximately:

$$\begin{aligned} \text{cv}(R) &= \text{sd}(R) / R \\ &= (\text{cv}(X)^2 + \text{cv}(Y)^2)^{1/2} \end{aligned}$$

This formula will tend to overstate the error if X and Y are positively correlated and understate the error if X and Y are negatively correlated.

### Example 3:

A user estimates that in Canada among females aged 15 years and over, 436,481 describe their state of health as poor compared to other people their age (question HAL\_Q110=5) and 3,049,623 describe their state of health as excellent as compared to others their age (question HAL\_Q110=1). The user is interested in the ratio of females describing their health as excellent versus those describing their health as poor. How does the user determine the approximate CV for this ratio estimate?

The numerator of the ratio estimate is 3,049,623 (X). Using Rule 1 (refer to Example 1), the CV for this estimate is determined to be 2.1% (CV (X)). The denominator of the ratio estimate is 436,481 (Y). Again using Rule 1, the CV is determined to be 5.9% CV (Y). Using Rule 3, the CV of the ratio estimate is

$$\begin{aligned} \text{CV} &= (0.021^2 + 0.059^2)^{1/2} \\ &= 0.0626 \end{aligned}$$

Therefore at the Canada level, the ratio of females who describe their health as excellent versus females who describe their health as poor is 3,049,623 / 436,481 or 7 to 1. The CV of this estimate is 6.26%, and so the estimate can be released without restriction.

**Rule 4:** Differences between totals or percentages

The standard deviation of a difference between two estimates is approximately equal to the square root of the sum of squares of each standard deviation considered separately. That is, the standard deviation of a difference:

$$d = X - Y$$

is

$$sd(d) = ( (X * CV(X))^2 + (Y * CV(Y))^2 )^{1/2}$$

The CV of d is approximately:

$$CV(d) = sd(d) / d$$

This formula is accurate for the difference between separate and uncorrelated characteristics but is only approximate otherwise.

**Example 4:**

A user estimates that in Canada, among those 15 years and over, 3.24% (X) of females describe their state of health as poor compared to others their age and 2.8% (Y) - an estimated 366,070 of males describe their state of health as poor compared to other people their age. The user is interested in the difference between these two estimates. How does the user determine the approximate CV for the estimate of the difference?

From Example 2, the CV for the female estimate is 5.9%. The CV for the male estimate is 6.7%.

The difference between the estimates is 0.44% Using Rule 4, standard deviation of the difference between the estimates is;

$$\begin{aligned} sd &= ((0.0324 \times 0.059)^2 + (0.028 \times 0.067)^2)^{1/2} \\ &= 0.0027 \end{aligned}$$

and the CV is

$$\begin{aligned} CV &= \frac{0.0027}{0.0044} \\ &= 0.61 \end{aligned}$$

Therefore the coefficient of the difference between the estimates is 61% and the estimate should not be released.

**Rule 5:** Difference of ratios

In this case, Rules 3 and 4 are combined. The CV's of the two ratios are first determined using Rule 3, and the CV of their difference is found using Rule 4.

## Confidence Limits

Although coefficients of variation are widely used, a more intuitively meaningful measure of sampling error is the confidence interval of an estimate. A confidence interval constitutes a statement on the level of confidence that the true value for the population lies within a specified range of values. For example a 95% confidence interval can be described as follows:

If sampling of the population is repeated indefinitely, each sample leading to a new confidence interval for an estimate, then in 95% of the samples the interval will cover the true population value.

Using the standard error of an estimate, confidence intervals for estimates may be obtained under the assumption that under repeated sampling of the population, the various estimates obtained for a population characteristic are normally distributed about the true population value. Under this assumption, the chances are about 68 out of 100 that the difference between a sample estimate and the true population value would be less than one standard error, about 95 out of 100 that the difference would be less than two standard errors, and about 99 out of 100 that the differences would be less than three standard errors. These different degrees of confidence are referred to as the confidence levels.

Confidence intervals for an estimate, are generally expressed as two numbers, one below the estimate and one above the estimate, as  $(-k, +k)$  where  $k$  is determined depending upon the level of confidence desired and the sampling error of the estimate.

Confidence intervals for an estimate can be calculated directly from the Sampling variability tables by first determining from the appropriate table the CV of the estimate, and then using the following formula to convert to a confidence interval CI:

$$CI_x = \hat{X} - (t)(\hat{X})(\alpha \hat{X}), \hat{X} + (t)(\hat{X})(\alpha \hat{X})\},$$

where  $\alpha$  is the determined CV of

- $t = 1$  if a 68% confidence interval is desired;
- $t = 1.6$  if a 90% confidence interval is desired;
- $t = 2$  if a 95% confidence interval is desired;
- $t = 3$  if a 99% confidence interval is desired.

**Example 5(a):**

A user estimates that in Canada 436,481 females aged 15 years and over describe their state of health as poor compared to other people their age (question HAL\_Q110=5). This estimate has an approximate CV of 5.9%. The 95% confidence interval for this estimate is thus:

$$\begin{aligned} \text{CI} &= \{436,481 - (2) (436,481) (0.059), 436,481 + (2) (436,481) (0.059)\} \\ &= \{436,481 - 51,505, 436,481 + 51,505\} \\ &= \{384,976, 487,986\} \end{aligned}$$

**Example 5(b):**

An estimated 3.24% of females aged 15 years and over in Canada described their state of health as poor when compared to other people their age or 0.0324 expressed as a proportion. From Example 2 this estimate has an approximate CV of 5.9%. A 95% confidence interval for this estimate (expressed as a proportion) is

$$\begin{aligned} \text{CI} &= \{0.0324 - (2) (0.0324) (0.059), 0.0324 + (2) (0.0324) (0.059)\} \\ &= \{0.0286, 0.0362\} \end{aligned}$$

With 95% confidence it can be said that between 2.86% and 3.62% of females aged 15 years and over in Canada, describe their state of health as poor, compared to other people their age.

**Note:** Release guidelines which apply to the estimate also apply to the confidence interval. For example, if the estimate is not releasable, then the confidence interval is not releasable either.

**T-test**

Standard errors may also be used to perform hypothesis testing, a procedure for distinguishing between population parameters using sample estimates. The sample estimates can be numbers, averages, percentages, ratios, etc. Tests may be performed at various levels of significance, where a level of significance is the probability of concluding that the characteristics are different when, in fact, they are identical.

Let  $X_1$  and  $X_2$  be sample estimates for 2 characteristics of interest. Let the standard error of the difference  $x_1 - x_2$  be  $\sigma$ .

$$\text{If } t = (x_1 - x_2) / \sigma$$

is between -2 and 2, then no conclusion about the difference between the characteristics is justified at the 5% level of significance. If however, this ratio is smaller than -2 or larger than +2, the observed difference is significant at the 5% level.

**Example 6:**

A user wishes to test at the 5% level of significance the hypothesis that at the Canada level there is no difference between percentage estimates of males and females who describe their state of health as poor, as compared to other people their age. From Example 4, the estimate of the standard deviation of the difference between the estimates is 0.0027.

$$\begin{aligned} \text{Hence } t &= \frac{0.0324 - 0.028}{0.0027} \\ &= 1.6 \end{aligned}$$

Since  $t = 1.6$ , there is no evidence to reject the hypothesis at the 5% significance level.

GENERAL SOCIAL SURVEY Cycle 20

APPROXIMATE VARIANCE TABLES FOR

## Appendix B

### GSS Cycle 20 comparisons with Cycle 15

CYCLE 20				CYCLE 15	
SECTION 1 : Parents' history				SECTION 1 : Parents (family origins)	
Q#	Added	Drop	Subject of the question or (change made)	Q#	Subject of the Question
GU_R110			Same introduction	GU_QINT	[Change in flow pattern]
GU_Q110			Same question, except brackets added and instruction on distinction biological/adoptive becomes an instruction for the interviewer	GU_Q110	Questions on the family with whom the respondent grew up
GU_Q120			Same question	GU_Q120	Lived with both parents at birth
GU_Q130			Same question	GU_Q130	Lived with both parents until the age of 15
GU_Q140			Same question	GU_Q140	Lived with biological mother at birth
		X		GU_Q141	Other woman than the mother
GU_Q145			Same question	WWR_Q110	Who was that woman
GU_Q150			Same question	GU_Q150	Raised by which woman
GU_Q160		X	Same question	GU_Q160	Lived with biological father at birth
				GU_Q161	Other man than father
GU_Q165			Same question	GU_Q161	Who was that man
GU_Q170			Same question	MWR_Q110	Raised by which man
GU_Q180			Same question	GU_Q170	If biological parents ever lived common law
GU_Q190			Same question	GU_Q180	Before or after respondent's birth
		X		GU_Q190	At birth, if the parents were married or common law
		X		GU_Q191	Other, specify
		X		GU_Q200M/Y	Start Date of parents' common law union
GU_Q210			Same question	GU_Q210	If parents were married (to each other)
		X		GU_Q220M/Y	Date of parents' marriage
		X		PA_Q110	If mother [biological] is still alive
<b>MODULE: Parents of respondent</b>					
		X		PA_Q120M/Y/A	[Month] and year of death of [biological] mother
		X		PA_Q130	If father [biological] is still alive
PA_Q210		X	Same question	PA_Q140M/Y/A	[Month] and year of death of [biological] father
		X		PA_Q210	If parents always lived together
		X		PA_Q220	If parents always lived together before their deaths
		X		PA_Q221	If parents always lived together before the father's death
		X		PA_Q222	If parents always lived together before the mother's death
PA_Q230			Same question	PA_Q230	[If parents ever separated]
PA_Q240			Year of parents' separation	PA_Q240M/Y	Date of [first] parents' separation
PA_Q241			Age of resp. at parents' separation	PA_Q240A	Age of resp. at [first] parents' separation
		X		PA_Q250	[If parents separated before their death(s)]

<b>Reasons for buying own dwelling/Moved in past 5 years</b>					
DOR_R251	X		Introduction on questions about purchase of own dwelling/moving		
DOR_Q251 to DOR_Q262	X		Reasons why respondent or spouse decided to buy/move in current dwelling [Note that these questions DOR_Q251 à DOR_Q262 look like questions R5 and R5SP of CYCLE 10]		
DOR_Q263	X		Distance between previous dwelling and current dwelling [Note that this question matches with question R4 of CYCLE 10]		
<b>Trade-offs to buy own dwelling</b>					
DOR_R301 to DOR_Q308	X		[New content - for more detail, refer to questionnaire]		
<b>Respondents who do not own this dwelling</b>					
DOR_Q450 to DOR_Q462	X		[New content - for more detail, refer to questionnaire]		
<b>Importance of dwelling ownership</b>					
DOR_Q520 to DOR_Q629 DOR_Q640	X		[New content - for more detail, refer to questionnaire] Same question	DW_Q40	Current postal code
<b>Module : Respondent selection process</b>					
RSP_R02	X		Introduction on questions about respondent selection		
RSP_Q02	X		If household's only telephone number, excluding cellular phones [Note that this question looks like question R9 of CYCLE 10]		
RSP_Q03	X		Number of telephone numbers, excluding cellular phones [Note that this question looks like question R12 of CYCLE 10]		
RSP_Q04	X		If any of these numbers for computer use, etc. [Note that this question looks like question R13 of CYCLE 10]		
RSP_Q05	X		Number of these numbers that are for computer use, etc. [Note that this question looks like question R14 of CYCLE 10]		

CYCLE 20				CYCLE 15	
SECTION 18 : Other characteristics				SECTION 11 : Autres caractéristiques	
Q#	Added	Drop	Subject of the question or (change made)	Q#	Subject of the Question
<b>Module : Birth place of respondent</b>

*Coverage:* All respondents.  
*Source:* General Social Survey, 2006.  
*Format:* F10.4  
*Note:* The person is considered the basic unit of analysis and many steps have been taken to ensure that the person weight is consistent with external references. Sometimes, however, estimates of the number of households will be required, so an approximation of a household weight has been included on the Main File. It is simply the person weight divided by the number of household members eligible for selection in the survey, i.e. those aged 15 or over. For more detail see : User's Guide, Section 7 "Estimation".

Variable Name: **FAMTYPE** Position: 46 Length: 1

Respondent's type of family structure.

		FREQ	WTD
1	Couple only	6,784	7,511,343
2	Intact family	6,759	10,517,211
3	Step-family with common child(ren)	308	459,492
4	Step-family without a common child(ren)	563	911,865
5	Lone parent family	2,281	2,471,538
7	No spouse/partner or child(ren) in household	6,913	4,680,300
		=====	=====
		23,608	26,551,748

Coverage: Respondents who are not living alone.  
Source: General Social Survey, 2006, household composition matrix.  
Format: I1  
Weight variable: WGHT\_PER

Note: This variable was derived using the children listed on the household composition matrix only. In cases of multigenerational households where the respondent lived with a spouse or partner as well as a child and a grandchild, FAMTYPE was set to 1. In cases where the respondent had no children in the household and lived with only one parent, FAMTYPE was set to 5. An intact family refers to a now-married or common-law couple where all children (listed in the household composition matrix) have both biological or adoptive parents in the household. A step family refers to a now-married or common-law couple in which at least one of the children (listed in the household composition matrix) is in a step relationship with one of the parents. The respondent might be a parent or a child aged 15 or older in the family.

Variable Name: **CHDINFTC** Position: 47 Length: 1

Number of respondent's children living in household full-time.

		FREQ	WTD

## Appendix E

### Main file – List of variables and labels

RECID	Record identification.
WGHT_PER	Person weight.
WGHT_HSD	Household weight.
AGEC	Age of respondent at time of the survey interview.
AGEGR5	Age group of the respondent.
AGEGR10	Age group of the respondent.
SEX	Sex of respondent.
MARSTAT	Marital status of the respondent.
AGEPRGRDIF	Age difference between respondent and spouse/partner.
SEXPR	Sex of the respondent's spouse/partner within the household.
PRYPEC	Type of partner the respondent has within the household.
CHRINHSDC	Number of respondent's child(ren) living in the household (any age or marital status).
CHRTIME6	Number of respondent's child(ren) living in the household.
PARHSDC	Type of parents the respondent has within the household.
LIVARR08	Living arrangement of respondent's household.
LIVARR12	Living arrangement of respondent's household.
HSDSIZEC	Household size of respondent.
FAMTYPE	Respondent's type of family structure.
CHDINFTC	Number of respondent's children living in household full-time.
CHDINPTC	Number of respondent's children living in household part-time.
CHDOUTC	Number of respondent's children living outside household.
CHDDECC	Number of respondent's children deceased.
TOTALCHDC	Total number of children raised by respondent.
MULTIGEN	Three generations or more family in respondent's household.
PRV	Province of residence of the respondent.
REGION	Region of residence of the respondent.
LUC_RSTC	Urban/Rural indicator (Quebec, Ontario, British Columbia only).
GU_Q110	When you were born or adopted at birth, were you living with both your birth or adoptive mother and your birth or adoptive father?
GU_Q120	Until you were 15, did you always live with both of your birth or adopted parents?
GU_Q130	When you were born, did you live with your birth mother?
GU_Q140	Was there a female who took the role of your mother?
M_ROLE	Status of mother of respondent.
GU_Q145	Who, if anyone, do you think of as the woman who mostly raised you when you were growing up?
GU_Q150	When you were born, did you live with your birth father?
GU_Q160	Was there a male who took the role of your father (when you were born)?
GU_Q165	Who, if anyone, do you think of as the man who mostly raised you when you were growing up?
F_ROLE	Status of father of respondent.
GU_Q170	Have your birth parents ever lived together in a common-law relationship?
GU_Q180	Was that before or after you were born?
GU_Q190	When you were born (or adopted at birth), were your parents married or living together in a common-law relationship?
GU_Q210	Were they ever married (to each other)?
BRTHMCAN	Country of birth of the respondent's mother.
BRTHMREGC	Country or region of birth of the respondent's mother.
EDUM5	Highest level of education obtained by the respondent's mother - 5 groups.
EDUM10	Highest level of education obtained by the respondent's mother - 10 groups.
BRTHFCAN	Country of birth of the respondent's father.
BRTHFREGC	Country or region of birth of the respondent's father.
EDUF5	Highest level of education obtained by the respondent's father - 5 groups.

EDUF10	Highest level of education obtained by the respondent's father - 10 groups.
DPP_Q30	Did your spouse's/partner's parents (or parental substitutes) ever separate or divorce?
DPP_Q40	How old was your spouse/partner when this occurred?
LHH_Q110	Have you always lived with at least one of your parents (or parent substitutes)?
AGE_RETHOML	Age of respondent when last came back home.
REA_RETHOML_C01	Main reason for LAST return to parental household... Job ended.
REA_RETHOML_C02	Main reason for LAST return to parental household... Relationship ended.
REA_RETHOML_C03	Main reason for LAST return to parental household... Financial reasons.
REA_RETHOML_C04	Main reason for LAST return to parental household... Obtained degree or left school.
REA_RETHOML_C05	Main reason for LAST return to parental household... End school term (year).
REA_RETHOML_C06	Main reason for LAST return to parental household... Other reasons.
REA_RETHOML_C07	Main reason for LAST return to parental household... To help parent(s)/family.
LHN_Q110	Have you left your parent's (or parental substitute's) home more than once to live on your own?
LHN_Q120	In total, how many times did you leave your parent's home to live on your own?
NO_LFTHOMC	Number of times the respondent left home to live on his own.
AGE_LFTHOMF	Age of respondent when first left home to live on own.
REA_LFTHOMF_C01	Main reason for FIRST move from parental household... to attend school.
REA_LFTHOMF_C02	Main reason for FIRST move from parental household... because of a job.
REA_LFTHOMF_C03	Main reason for FIRST move from parental household... to get married/to live with a partner.
REA_LFTHOMF_C04	Main reason for FIRST move from parental household... to be independent / move into own place.
REA_LFTHOMF_C05	Main reason for FIRST move from parental household... parent(s) died/hospitalized.
REA_LFTHOMF_C06	Main reason for FIRST move from parental household... immigrated to Canada.
REA_LFTHOMF_C07	Main reason for FIRST move from parental household... family problems/conflict.
REA_LFTHOMF_C08	Main reason for FIRST move from parental household... other reason.
AGE_RETHOMF	Age of respondent when first came back home.
REA_RETHOMF_C01	Main reason for FIRST return to parental household... Job ended.
REA_RETHOMF_C02	Main reason for FIRST return to parental household... Relationship ended.
REA_RETHOMF_C03	Main reason for FIRST return to parental household... Financial reasons.
REA_RETHOMF_C04	Main reason for FIRST return to parental household... Obtained degree or left school.
REA_RETHOMF_C05	Main reason for FIRST return to parental household... End of school term (year).
REA_RETHOMF_C06	Main reason for FIRST return to parental household... Other reason.
REA_RETHOMF_C07	Main reason for FIRST return to parental household... To help parent(s)/family.
AGE_LFTHOMLC	Age of respondent when last left home to live on his own.
REA_LFTHOML_C01	Main reason for LAST move from parental household... to attend school.
REA_LFTHOML_C02	Main reason for LAST move from parental household... to move because of a job.
REA_LFTHOML_C03	Main reason for LAST move from parental household... to get married or live with a partner.
REA_LFTHOML_C04	Main reason for LAST move from parental household... to be independent/move into own place.
REA_LFTHOML_C05	Main reason for LAST move from parental household... parent(s) died / hospitalized.
REA_LFTHOML_C06	Main reason for LAST move from parental household... immigrated to Canada.
REA_LFTHOML_C07	Main reason for LAST move from parental household... family problems / conflicts.
REA_LFTHOML_C08	Main reason for LAST move from parental household... other reason.
TOT_UNION	Total number of unions (marriage and common-law).
LEG_MARSTAT	Current legal marital status of the respondent.
EVER_CL	Respondent ever been in a common-law relationship.
EVER_LEGARR	Respondent ever legally married.
AGE_LIVCUAPPC	Age of respondent when started living apart from current marriage/common-law union.
AGE_SEP_MA0C	Age of respondent at time of separation from current marriage.
NO_MARREVER	Number of marriages the respondent has ever had.
NO_MARR_NOCL	Number of marriages not preceded by common-law union.

NO_CL_FOMARR	Number of common-law unions followed by a marriage.
MA0_RANK	Rank of current marriage of respondent between all the possible unions he/she had.
AGE_MA0C	Age of respondent at start of current marriage.
MA0_Q120	What was your spouse's marital status before entering into this marriage? Was it ...
AGEPR_MA0C	Age of respondent's spouse at start of current marriage.
AGEDIFGR_MA0	Age difference between respondent and spouse - current marriage.
NO_CHSPOC	Number of spouse's children the respondent did not raise.
NO_CHU19SPOC	Number of spouse's children 18 years of age or younger the respondent did not raise.
MA0_Q150	Did you and your spouse live common-law before entering into this marriage?
AGE_CL_MA0	Age of respondent at start of common-law before current marriage.
MA0_Q220	Is this your first marriage?
MA1_RANK	Rank of first marriage of respondent between all the possible unions he/she had.
AGE_MA1	Age of respondent at start of first marriage.
AGE_CL_MA1	Age of respondent at start of common-law before first marriage.
AGE_SEP_MA1	Age of respondent at time of separation from first marriage.
AGE_DIV_MA1	Age of respondent at time of divorce from first marriage.
AGE_DTH_MA1C	Age of respondent at death of spouse - first marriage.
MA2_RANK	Rank of second marriage of respondent between all the possible unions he/she had.
AGE_MA2C	Age of respondent at start of second marriage.
AGE_CL_MA2	Age of respondent at start of common-law before second marriage.
AGE_SEP_MA2	Age of respondent at time of separation from second marriage.
AGE_DIV_MA2	Age of respondent at time of divorce from second marriage.
AGE_DTH_MA2C	Age of respondent at death of spouse - second marriage.
MA3_RANK	Rank of third marriage of respondent between all the possible unions he/she had.
AGE_MA3	Age of respondent at start of third marriage.
AGE_CL_MA3	Age of respondent at start of common-law before third marriage.
AGE_SEP_MA3	Age of respondent at time of separation from third marriage.
AGE_DIV_MA3	Age of respondent at time of divorce from third marriage.
AGE_DTH_MA3C	Age of respondent at death of spouse - third marriage.
MA4_RANK	Rank of fourth marriage of respondent between all the possible unions he/she had.
AGE_MA4	Age of respondent at start of fourth marriage.
AGE_CL_MA4	Age of respondent at start of common-law before fourth marriage.
AGE_SEP_MA4	Age of respondent at time of separation from fourth marriage.
AGE_DIV_MA4	Age of respondent at time of divorce from fourth marriage.
AGE_DTH_MA4	Age of respondent at death of spouse - fourth marriage.
PR_CL	Respondent is currently living with a common-law partner.
CU0_Q107	Have you ever been a partner in a common-law relationship that was not followed by marriage?
AGE_CU0C	Age of respondent at start of current common-law.
CU0_Q120	What was your partner's marital status before entering into this union? Was it:
AGEPR_CU0C	Age of respondent's partner at start of current common-law.
AGEDIFGR_CU0	Age difference between respondent and partner - current common-law.
CU0_Q140	Did your partner live common-law with anyone else before entering into this union?
NO_CHCLPRC	Number of children of common-law partner that the respondent did not raise.
NO_CHU19CLPRC	Number of children younger than 19 years of age, of common-law partner that the respondent did not raise.
CU0_Q220	Have you had a previous common-law relationship that was not followed by marriage?
AGE_CU1	Age of respondent at start of first common-law.
AGE_SEP_CU1	Age of respondent at time of separation from first common-law.
AGE_DTH_CU1C	Age of respondent at death of partner - first common-law.
AGE_CU2	Age of respondent at start of second common-law.

AGE_SEP_CU2	Age of respondent at time of separation from second common-law.
AGE_DTH_CU2	Age of respondent at death of partner - second common-law.
AGE_CU3	Age of respondent at start of third common-law.
AGE_SEP_CU3	Age of respondent at time of separation from third common-law.
AGE_DTH_CU3	Age of respondent at death of partner - third common-law.
AGE_CU4	Age of respondent at start of fourth common-law.
AGE_SEP_CU4	Age of respondent at time of separation from fourth common-law.
AGE_DTH_CU4	Age of respondent at death of partner - fourth common-law.
NO_SEPDIV_LIFE	Number of separation/divorce that the respondent has had in his lifetime.
WEVER_MARR	Respondent expects to marry or remarry.
MAI_Q140	At what age would you like to get married/remarried?
NO_CL_NOMARRC	Number of common-law relationships the respondent has ever had that were not followed by marriage.
CUI_Q120	Are you in an intimate relationship with someone who lives in a separate household?
CUI_Q130	Do you think you will ever live in a common-law relationship?
CUI_Q140	At what age would you like to start a common-law relationship?
CUI_Q150	Do you think you could ever live in a common-law relationship?
CUI_Q160	At what age would you like to start a common-law relationship?
COR_Q010	Have you ever raised step-children? By step-children we mean children from a former union of a spouse or common-law partner.
NO_STEPCHDC	Number of step-children the respondent has ever raised.
COR_Q020	Have you ever adopted children? (Exclude any step-children mentioned in the previous question.)
NO_ADOPTCHDC	Number of children the respondent has ever adopted.
COR_Q031	Have you ever fathered a child?
COR_Q041	Have you ever given birth to a child?
NO_BRTCHDC	Number of children the respondent have given birth or fathered.
COR_Q070	Do you have any grandchildren?
NO_GRNDCHDC	Number of grandchildren the respondent has.
RCI_Q110_01	Is/Was ^RCI_Q100_01 a male or a female?
AGECHDC_1	Age of child_1.
AGE_CHDBORN_1	Age of respondent at birth of child_1.
RCI_Q130_01	Is/Was ^RCI_Q100_01 a birth, step- or adopted child?
AGE_CHDJOIN_HOM_1	Age of respondent when child_1 joined home.
HHLDC_1	Child_1 is a member of the household.
HHLSTAT_1	Household status of the respondent's child_1.
RCI_Q165_01	Why does ^RCI_Q100_01 live in your household only part of the time?
RCI_Q170_01	Who does ^RCI_Q100_01 live with the rest of the time?
RCI_Q175_01	Does ^RCI_Q100_01 's birth (adopted) mother live in your household?
RCI_Q176_01	Does ^RCI_Q100_01 's birth (adopted) father live in your household?
OTHERHLDPARENT_1	Birth or adoptive other parent of child_1 lives in the household.
DAYS_CHDOPAR_LM_1	Days child_1 spent with other parent (last month).
DAYS_CHDOPAR_L12M_1	Days child_1 spent with other parent (last 12 months).
AGE_CHDDIEDC_1	Age of respondent when child_1 died.
AGE_HHC_LHOM_1	Age of respondent when household child_1 last left home.
AGE_NHHC_LHOM_1	Age of respondent when non-household child_1 last left home.
AGE_DCGE15_LHOM_1	Age of respondent when deceased child_1, aged of 15 or more, last left home.
REA_NHH_LHOM_C01_1	Reason non-household child_1 left household - to get married.
REA_HH_LHOM_C01_1	Reason child_1 left household - to get married.
REA_DC_LHOM_C01_1	Reason (deceased) child_1 left household - to get married.
REA_NHH_LHOM_C02_1	Reason non-household child_1 left household - job related reasons.

REA_HH_LHOM_C02_1	Reason child left_1 household - job related reasons.
REA_DC_LHOM_C02_1	Reason (deceased) child_1 left household - job related reasons.
REA_NHH_LHOM_C03_1	Reason non-household child_1 left household - to live alone.
REA_HH_LHOM_C03_1	Reason child_1 left household - to live alone.
REA_DC_LHOM_C03_1	Reason (deceased) child_1 left household - to live alone.
REA_NHH_LHOM_C04_1	Reason non-household child_1 left household - to live with other parent.
REA_HH_LHOM_C04_1	Reason child_1 left household - to live with other parent.
REA_DC_LHOM_C04_1	Reason (deceased) child_1 left household - to live with other parent.
REA_NHH_LHOM_C05_1	Reason non-household child_1 left household - to live with friends.
REA_HH_LHOM_C05_1	Reason child_1 left household - to live with friends.
REA_DC_LHOM_C05_1	Reason (deceased) child_1 left household - to live with friends.
REA_NHH_LHOM_C06_1	Reason non-household child_1 left household - child placed in institution or foster home.
REA_HH_LHOM_C06_1	Reason child_1 left household - child placed in institution or foster home.
REA_DC_LHOM_C06_1	Reason (deceased) child_1 left household - child placed
REA_NHH_LHOM_C07_1	Reason non-household child_1 left household - school related reasons.
REA_HH_LHOM_C07_1	Reason child_1 left household - school related reasons.
REA_DC_LHOM_C07_1	Reason (deceased) child_1 left household - school related reasons.
REA_NHH_LHOM_C08_1	Reason non-household child_1 left household - was asked to leave.
REA_HH_LHOM_C08_1	Reason child_1 left household - was asked to leave.
REA_DC_LHOM_C08_1	Reason (deceased) child_1 left household - was asked to leave.
REA_NHH_LHOM_C09_1	Reason non-household child_1 left household - other.
REA_HH_LHOM_C09_1	Reason child_1 left household - other.
REA_DC_LHOM_C09_1	Reason (deceased) child_1 left household - other.
REA_NHH_LHOM_C10_1	Reason non-household child_1 left household - Other family reasons (Break-up, departure of parents, or parent-child conflict).
REA_HH_LHOM_C10_1	Reason child_1 left household - Other family reasons (Break-up, departure of parents, or parent-child conflict).
REA_DC_LHOM_C10_1	Reason (deceased) child_1 left household - Other family reasons (Break-up, departure of parents, or parent-child conflict).
DUR_CHDAWAY_1	Time child away from household/duration in days.
RCI_Q110_02	Is/Was ^RCI_Q100_02 a male or a female?
AGECHDC_2	Age of child_2.
AGE_CHDBORN_2	Age of respondent at birth of child_2.
RCI_Q130_02	Is/Was ^RCI_Q100_02 a birth, step- or adopted child?
AGE_CHDJOIN_HOM_2	Age of respondent when child_2 joined home.
HHLDCHD_2	Child_2 is a member of the household.
HHLSTAT_2	Household status of the respondent's child_2.
RCI_Q165_02	Why does ^RCI_Q100_02 live in your household only part of the time?
RCI_Q170_02	Who does ^RCI_Q100_02 live with the rest of the time?
RCI_Q175_02	Does ^RCI_Q100_02 's birth (adopted) mother live in your household?
RCI_Q176_02	Does ^RCI_Q100_02 's birth (adopted) father live in your household?
OTHERHHLDPARENT_2	Birth or adoptive other parent of child_2 lives in the household.
DAYS_CHDOPAR_LM_2	Days child_2 spent with other parent (last month).
DAYS_CHDOPAR_L12M_2	Days child_2 spent with other parent (last 12 months).
AGE_CHDDIEDC_2	Age of respondent when child_2 died.
AGE_HHC_LHOM_2	Age of respondent when household child_2 last left home.

AGE_CHDBORN_8	Age of respondent at birth of child_8.
RCI_Q130_08	Is/Was ^RCI_Q100_08 a birth, step- or adopted child?
AGE_CHDJOIN_HOM_8	Age of respondent when child_8 joined home.
HHLDCHD_8	Child_8 is a member of the household.
HHLSTAT_8	Household status of the respondent's child_8.
RCI_Q165_08	Why does ^RCI_Q100_08 live in your household only part of the time?

RCI_Q170_08	Who does ^RCI_Q100_08 live with the rest of the time?
RCI_Q175_08	Does ^RCI_Q100_08 's birth (adopted) mother live in your household?
RCI_Q176_08	Does ^RCI_Q100_08 's birth (adopted) father live in your household?
OTHERHHLDPARENT_8	Birth or adoptive other parent of child_8 lives in the household.
DAYS_CHDOPAR_LM_8	Days child_8 spent with other parent (last month).
DAYS_CHDOPAR_L12M_8	Days child_8 spent with other parent (last 12 months).
AGE_CHDDIEDC_8	Age of respondent when child_8 died.
AGE_HHC_LHOM_8	Age of respondent when household child_8 last left home.
AGE_NHHC_LHOM_8	Age of respondent when non-household child_8 last left home.
AGE_DCGE15_LHOM_8	Age of respondent when deceased child_8, aged of 15 or more, last left home.
REA_NHH_LHOM_C01_8	Reason non-household child_8 left household - to get married.
REA_HH_LHOM_C01_8	Reason child_8 left household - to get married.
REA_DC_LHOM_C01_8	Reason (deceased) child_8 left household - to get married.
REA_NHH_LHOM_C02_8	Reason non-household child_8 left household - job related reasons.
REA_HH_LHOM_C02_8	Reason child left_8 household - job related reasons.
REA_DC_LHOM_C02_8	Reason (deceased) child_8 left household - job related reasons.
REA_NHH_LHOM_C03_8	Reason non-household child_8 left household - to live alone.
REA_HH_LHOM_C03_8	Reason child_8 left household - to live alone.
REA_DC_LHOM_C03_8	Reason (deceased) child_8 left household - to live alone.
REA_NHH_LHOM_C04_8	Reason non-household child_8 left household - to live with other parent.
REA_HH_LHOM_C04_8	Reason child_8 left household - to live with other parent.
REA_DC_LHOM_C04_8	Reason (deceased) child_8 left household - to live with other parent.
REA_NHH_LHOM_C05_8	Reason non-household child_8 left household - to live with friends.
REA_HH_LHOM_C05_8	Reason child_8 left household - to live with friends.
REA_DC_LHOM_C05_8	Reason (deceased) child_8 left household - to live with friends.
REA_NHH_LHOM_C06_8	Reason non-household child_8 left household - child placed in institution or foster home.
REA_HH_LHOM_C06_8	Reason child_8 left household - child placed in institution or foster home.
REA_DC_LHOM_C06_8	Reason (deceased) child_8 left household - child placed
REA_NHH_LHOM_C07_8	Reason non-household child_8 left household - school related reasons.
REA_HH_LHOM_C07_8	Reason child_8 left household - school related reasons.
REA_DC_LHOM_C07_8	Reason (deceased) child_8 left household - school related reasons.
REA_NHH_LHOM_C08_8	Reason non-household child_8 left household - was asked to leave.
REA_HH_LHOM_C08_8	Reason child_8 left household - was asked to leave.
REA_DC_LHOM_C08_8	Reason (deceased) child_8 left household - was asked to leave.
REA_NHH_LHOM_C09_8	Reason non-household child_8 left household - other.
REA_HH_LHOM_C09_8	Reason child_8 left household - other.
REA_DC_LHOM_C09_8	Reason (deceased) child_8 left household - other.
REA_NHH_LHOM_C10_8	Reason non-household child_8 left household - Other family reasons (Break-up, departure of parents, or parent-child conflict).
REA_HH_LHOM_C10_8	Reason child_8 left household - Other family reasons (Break-up, departure of parents, or parent-child conflict).
REA_DC_LHOM_C10_8	Reason (deceased) child_8 left household - Other family reasons (Break-up, departure of parents, or parent-child conflict).
DUR_CHDAWAY_8	Time child away from household/duration in days.
PR_PREG	Respondent or respondent's spouse/partner is currently pregnant.
FI_Q110	Do you intend to have a/another child sometime?
FI_Q116_C01	Why is it unlikely that you will have a child? Too old
FI_Q116_C02	Why is it unlikely that you will have a child? Infertility
FI_Q116_C03	Why is it unlikely that you will have a child? Other health reason
FI_Q116_C04	Why is it unlikely that you will have a child? Children would not fit with my lifestyle

FI_Q116_C05	Why is it unlikely that you will have a child? My spouse/partner already has children
FI_Q116_C06	Why is it unlikely that you will have a child? My spouse/partner does not want to have children
FI_Q116_C07	Why is it unlikely that you will have a child? No particular reason
FI_Q116_C08	Why is it unlikely that you will have a child? Other
FI_Q116_C09	Why is it unlikely that you will have a child? Has enough children
FI_Q116_C10	Why is it unlikely that you will have a child? Financial reasons
FI_Q120	What is the total number of children that you intend to have including those you have now and the child that you/your spouse/partner are currently expecting?
NO_CHRIC	Total number of children respondent intend to have including those he/she have now and the child that his/her spouse/partner are currently expecting.
FI_Q121	How important are the following factors in deciding to have a/another child? How important is: ...your age? Is it:
FI_Q122	How important are the following factors in deciding to have a/another child? How important is: ...your health? Is it:
FI_Q123	How important are the following factors in deciding to have a/another child? How important is: ... household finances? Is it:
FI_Q124	How important are the following factors in deciding to have a/another child? How important is: ... access to maternity/paternity benefits? Is it:
FI_Q125	How important are the following factors in deciding to have a/another child? How important is: ... work-family balance? Is it:
FI_Q126	Is there any other factor that is important to you in deciding to have a/another child?
FI_Q127_1	Is there any other factor that is important to you in deciding to have a/another child? Being married or having a stable relationship
F_CRT_D210	Respondents who had/adopted a child in last 5 years.
MPL_Q105	When you were pregnant/your spouse was pregnant/you were waiting to adopt your (youngest) child, was your main activity working at a paid job or business, looking for paid work, going to school, caring for children, household work, retired or something else?
MPL_Q107	Were you studying full-time or part-time?
MPL_Q108	Did you have a job or were you self-employed at any time before the birth of the child?
MPL_Q110	Before or after the birth/adoption of your (youngest) child, did you take time off, paid or unpaid, from this job?
MPL_Q130	What type of time off was this? Was it:
MPL_Q150	Were you eligible to receive maternity/paternity benefits?
AGE_MPL_Q211	Age of the respondent when he/she stopped working at paid job because of the birth/adoption of his/her (youngest) child.
MPL_Q310	Did your employer provide supplementary maternity/paternity benefits?
MPL_Q315	For how many weeks?
MPL_Q330	Did you go back to work after this maternity/paternity leave was over?
FHP_Q110	Thinking about your experience before and after the birth/adoption of your (youngest) child, did you contact or receive assistance from a health care professional or community-based service or support group concerning:...parenting skills (i.e. pre-natal courses, mother's support group, public health nurse, etc.)?
FHP_Q115	How helpful was this assistance to you? Was it:
FHP_Q120	(Thinking about your experience) before and after the birth/adoption of your (youngest) child, did you contact or receive assistance from a health care professional or community-based service or support group concerning:...nutrition information for the mother or the child?
FHP_Q125	How helpful was this assistance to you? Was it:
FHP_Q130	(Thinking about your experience) before and after the birth/adoption of your (youngest) child, did you contact or receive assistance from a health care professional or community-based service or support group concerning:...breastfeeding (e.g. La Leche League, lactation consultant, volunteer from a breastfeeding support group)?
FHP_Q135	How helpful was this assistance to you? Was it:

FHP_Q140	(Thinking about your experience) before and after the birth/adoption of your (youngest) child, did you contact or receive assistance from a health care professional or community-based service or support group concerning: ...home care such as preparing meals, doing laundry, cleaning the house or shopping?
FHP_Q145	How helpful was this assistance to you? Was it:
RNH_Q210	I'm going to read a list of reasons why some people choose not to use services or supports during pregnancy or after the birth/adoption of a child. Please tell me which ones apply to your experience. Was it because:... you did not know that such programs or services existed?
RNH_Q220	I'm going to read a list of reasons why some people choose not to use services or supports during pregnancy or after the birth/adoption of a child. Please tell me which ones apply to your experience. Was it because:... these programs or services were not available in your area?
RNH_Q230	I'm going to read a list of reasons why some people choose not to use services or supports during pregnancy or after the birth/adoption of a child. Please tell me which ones apply to your experience. Was it because:... you were turned down because you were not eligible?
RNH_Q240	I'm going to read a list of reasons why some people choose not to use services or supports during pregnancy or after the birth/adoption of a child. Please tell me which ones apply to your experience. Was it because:... they were too expensive for you?
RNH_Q250	I'm going to read a list of reasons why some people choose not to use services or supports during pregnancy or after the birth/adoption of a child. Please tell me which ones apply to your experience. Was it because:... the waiting period was too long?
RNH_Q260	I'm going to read a list of reasons why some people choose not to use services or supports during pregnancy or after the birth/adoption of a child. Please tell me which ones apply to your experience. Was it because:... the travel distance to access these programs or services was too long ?
RNH_Q265	I'm going to read a list of reasons why some people choose not to use services or supports during pregnancy or after the birth/adoption of a child. Please tell me which ones apply to your experience. Was it because:... you did not have transportation?
RNH_Q270	I'm going to read a list of reasons why some people choose not to use services or supports during pregnancy or after the birth/adoption of a child. Please tell me which ones apply to your experience. Was it because:... you did not need any help?
RNH_Q280	I'm going to read a list of reasons why some people choose not to use services or supports during pregnancy or after the birth/adoption of a child. Please tell me which ones apply to your experience. Was it because: ... for some other reason, not already mentioned ? Please specify ...
PPD_Q110	Thinking about your experiences during pregnancy and after the birth of your child, did your healthcare professional or community based service provider make you aware of what post-partum depression is?
PPD_Q120	(Thinking about your experiences) in the year after the birth of your (youngest) child, did you have feelings of depression, anxiety or emotional distress?
PPD_Q130	(Thinking about your experiences) after the birth of your (youngest) child, did you seek help concerning feelings of depression, anxiety or emotional distress?
PPD_Q140_C01	There may be reasons why some women do not seek formal help from a health care professional or community based service provider or support group concerning feelings of depression, anxiety or emotional distress after the birth of a child. Please tell me why you did not seek formal help. Was it because:...you felt embarrassed or ashamed, (felt you were a "bad mother")?
PPD_Q140_C02	There may be reasons why some women do not seek formal help from a health care professional or community based service provider or support group concerning feelings of depression, anxiety or emotional distress after the birth of a child. Please tell me why you did not seek formal help. Was it because:...you didn't know whom to contact?
PPD_Q140_C03	There may be reasons why some women do not seek formal help from a health care professional or community based service provider or support group concerning feelings of depression, anxiety or emotional distress after the birth of a child. Please tell me why you did not seek formal help. Was it because:...you thought and/or were told by friends and family that the feelings would go away?

PPD_Q140_C04	There may be reasons why some women do not seek formal help from a health care professional or community based service provider or support group concerning feelings of depression, anxiety or emotional distress after the birth of a child. Please tell me why you did not seek formal help. Was it because:...your feelings were resolved in a few days or weeks?
PPD_Q140_C05	There may be reasons why some women do not seek formal help from a health care professional or community based service provider or support group concerning feelings of depression, anxiety or emotional distress after the birth of a child. Please tell me why you did not seek formal help. Was it because:...for some other reason?
PPD_Q140_C06	There may be reasons why some women do not seek formal help from a health care professional or community based service provider or support group concerning feelings of depression, anxiety or emotional distress after the birth of a child. Please tell me why you did not seek formal help. Was it because:... you could cope by yourself or with family support?
PPD_Q150	Thinking about the year after your (youngest) child was born, were you ever diagnosed with postpartum depression?
PPD_Q160	Who diagnosed you with post-partum depression after the birth of your (youngest) child? Was it :
PPD_Q190	Were you ever told about or referred to a support group, peer support, individual therapy or other community service for help with post-partum depression?
AGECHD_BACK_TOWORK	Age of the respondent's youngest child when respondent went back to work (in months).
RTW_Q111	What motivated your return to work? Was it:... for financial reasons?
RTW_Q112	What motivated your return to work? Was it:... because your career is important to you or you wanted to go back to work?
RTW_Q113	What motivated your return to work? Was it:... because you felt isolated being at home?
RTW_Q114	What motivated your return to work? Was it:... because you did not want to lose your job?
RTW_Q118	What motivated your return to work? Was it:... for some other reason?
RTW_Q130	When you returned to work:... was it full-time or part-time?
RTW_Q140	When you returned to work:... did you modify your work hours or work flexible hours?
RTW_Q151	If you had the choice, would you have done it differently? Would you:... have worked part-time or fewer hours, if possible?
RTW_Q153	If you had the choice, would you have done it differently? Would you:... have modified your work hours or worked flexible hours, if possible?
WSL_Q111	Would you have stayed at home longer if:... maternity/paternity benefits were higher?
WSL_Q112	Would you have stayed at home longer if:... maternity/paternity benefits were offered for a longer period of time?
WSL_Q113	Would you have stayed at home longer if:... you had been eligible for maternity/paternity benefits?
WSL_Q114	Would you have stayed at home longer if:... you could have afforded to?
WSL_Q210	When you went back to work after the birth/adoption of your (youngest) child : ... did you have to return to a less desirable job assignment?
WSL_Q220	When you went back to work after the birth/adoption of your (youngest) child: ... did you miss a chance for a promotion you think you could have had, had you not been off on maternity/paternity leave?
WSL_Q230	When you went back to work after the birth/adoption of your (youngest) child: ... did you need to retrain or take courses because of changes while you were away from your job (i.e., new technology)?
WSL_Q250	How satisfied were you with your transition from maternity/parental leave to back to work? Were you:
WSL_Q255_1	What was the main reason why you were dissatisfied?
SRW_Q110	Thinking about the amount of stress involved when you went back to work, would you say that the transition was:
SRW_Q140	What was your main source of stress?
DRW_Q111	Some parents stay at home with their children while others return to work. Why didn't you return to work? Was it because:...it wasn't financially worth it, e.g. daycare was too expensive?
DRW_Q112	Some parents stay at home with their children while others return to work. Why didn't you return to work? Was it because:...no daycare was available?
DRW_Q113	Some parents stay at home with their children while others return to work. Why didn't you return to work? Was it because:...you wanted to raise your child yourself?

DRW_Q114	Some parents stay at home with their children while others return to work. Why didn't you return to work? Was it because:...you lost your job or your employer did not make a job available?
DRW_Q118	Some parents stay at home with their children while others return to work. Why didn't you return to work? Was it because:...of some other reason?
DRW_Q119_1	Some parents stay at home with their children while others return to work. Why didn't you return to work? Was it because:...you are still on maternity/paternity leave?
NLW_Q111	There can be many reasons why people do not take time off after the birth/adoption of a child. Why did you not take any time off? Was it because:...your working conditions did not allow for such leave?
NLW_Q112	There can be many reasons why people do not take leave after the birth/adoption of a child. Why did you not take any time off? Was it because:...your employer did not accept your request?
NLW_Q113	There can be many reasons why people do not take leave after the birth/adoption of a child. Why did you not take any time off? Was it because:...you had no vacation time available?
NLW_Q114	There can be many reasons why people do not take leave after the birth/adoption of a child. Why did you not take any time off? Was it because: ...of financial reasons?
NLW_Q115	There can be many reasons why people do not take leave after the birth/adoption of a child. Why did you not take any time off? Was it because:...you did not want to compromise your career?
NLW_Q118	There can be many reasons why people do not take leave after the birth/adoption of a child. Why did you not take any time off? Was it because:... of some other reason?
NLW_Q119_1	There can be many reasons why people do not take leave after the birth/adoption of a child. Why did you not take any time off? Was it because:... you did not need it (spouse/partner at home, work flexibility, etc.)?
CCA_Q130	Do you currently use regular child care such as daycare, family daycare provider, nursery school, care by a relative or other caregiver, a before and after school program or some other arrangement? Please include arrangements you have for when you are working, studying, volunteering or other reasons for at least half a day at a time.
CCA_Q140_C01	What type of child care help do you use on a regular basis? Was it : Care in someone else's home by a non-relative
CCA_Q140_C02	What type of child care help do you use on a regular basis? Was it : Care in someone else's home by a grandparent
CCA_Q140_C03	What type of child care help do you use on a regular basis? Was it : Care in someone else's home by other relative
CCA_Q140_C04	What type of child care help do you use on a regular basis? Was it : Care in child's home by a non-relative, including a nanny
CCA_Q140_C05	What type of child care help do you use on a regular basis? Was it : Care in child's home by a grandparent
CCA_Q140_C06	What type of child care help do you use on a regular basis? Was it : Care in child's home by child's brother or sister
CCA_Q140_C07	What type of child care help do you use on a regular basis? Was it : Care in child's home by other relative
CCA_Q140_C08	What type of child care help do you use on a regular basis? Was it : Daycare centre
CCA_Q140_C09	What type of child care help do you use on a regular basis? Was it : Before and after school program
CCA_Q140_C10	What type of child care help do you use on a regular basis? Was it : Nursery school/Preschool
CCA_Q140_C11	What type of child care help do you use on a regular basis? Was it : Organized play group, other child development program
CCA_Q140_C12	What type of child care help do you use on a regular basis? Was it : Child in own care (child taking care of him/herself)
CCA_Q140_C13	What type of child care help do you use on a regular basis? Was it : Other
CCA_Q150	The following questions will be about your main child care arrangement, that is, the one used for the most hours during the past month. Of those you have just mentioned, what type of arrangement do you consider your main one?
CCA_Q160	What is the main reason why you are receiving help with child care?
CCA_Q170	In the past month, how often have you used child care for looking after your child/children? Please include arrangements you have for when you are working, studying, volunteering or other reasons for at least half a day at a time.
CCA_Q171	For about how many hours per week is that?

CCA_Q180	Is the child care program or daycare centre operated on a profit or non-profit basis (include government sponsored care)?
CCA_Q190	Is the person providing this care licensed by the government or approved by a family daycare agency?
CHDCARE_MTH_COSTGRP	Total amount on child care (all children) spent (daily) in the past month.
CCA_Q196	Are you aware of child care subsidies?
CCA_Q200	Do you have a subsidy to help pay for this child care?
CCA_Q210	Do you qualify to receive subsidies for child care?
CCA_Q220	What is the main reason why you are not using the child care subsidy/a subsidized daycare for your child/children?
CCA_Q240	What is the main reason why you chose this type of child care for your child/children?
CCA_Q301	How satisfied are you with the information you receive from your child care provider about:...fee payment, refunds and subsidies? Are you:
CCA_Q302	How satisfied are you with the information you receive from your child care provider about:...meals and snacks? Are you:
CCA_Q303	How satisfied are you with the information you receive from your child care provider about:...learning activities (such as songs, stories, learning-based play) that your child participated in while at child care? Are you:
CCA_Q304	How satisfied are you with the information you receive from your child care provider about:...schedule changes? Are you:
CCA_Q305	How satisfied are you with the information you receive from your child care provider about:...your child while he/she has been at child care? Are you:
CCA_Q310	How satisfied are you with the type of child care you are currently using for your child/children, in terms of:... cost? Are you:
CCA_Q320	How satisfied are you with the type of child care you are currently using for your child/children, in terms of:... convenience, that is, hours that fit your needs/schedule? Are you:
CCA_Q360	How satisfied are you with the type of child care you are currently using for your child/children, in terms of:... child development, that is, what your child is learning? Are you:
CCA_Q370	How satisfied are you with the type of child care you are currently using for your child/children, in terms of:... program/schedule, that is, the kinds of activities that your child does? Are you:
CCA_Q380	How satisfied are you with the type of child care you are currently using for your child/children, in terms of:... the overall quality of the child care? Are you:
CCA_Q390	In the past month, while in child care, how often did your child participate in learning activities like singing songs, storytelling or learning based play? Was it:
CCA_Q400	Is there anything you would change with the child care program?
CCA_Q401_C01	What would you change with the child care program? Was it : More reading time
CCA_Q401_C02	What would you change with the child care program? Was it : More learning activities
CCA_Q401_C03	What would you change with the child care program? Was it : More outdoor time
CCA_Q401_C04	What would you change with the child care program? Was it : Healthier meals
CCA_Q401_C05	What would you change with the child care program? Was it : Other
CCA_Q401_C06	What would you change with the child care program? Was it : More structured and organized activities
CCA_Q403	Have you changed your child care arrangement during the past 12 months?
CCA_Q410	What was the main reason for changing?
CCA_Q500	If you could choose, would you prefer to use another type of child care for your child/children?
CCA_Q510	What type of child care would you prefer to use?
CCA_Q520	Setting aside cost, do you feel you have enough choices to find the best child care for your child/children?
AAT_Q120	Did you and your ex-spouse(s)/ex-common-law partner(s) have an arrangement or agreement for: ...support or maintenance payments for your child/children?
AAT_Q150	Did you and your ex-spouse(s)/ex-common-law partner(s) have an arrangement or agreement for: ...spousal financial support?
AAT_Q160	Are the agreements or arrangements for child(ren) and spousal financial support part of the same agreement?

AAT_Q170	Do you and your ex-spouse/ex-partner have an arrangement or agreement for: ...who makes major decisions about your child's health, religion and/or education?
AAT_Q190	You said you have an agreement or arrangement for: Is that correct?
TSC_Q116	Do you have the same arrangement or agreement for all the children?
TSC_Q120_C01	Thinking about the arrangement for the time the child(ren) spend(s) with each parent, what kind of arrangement or agreement(s) is it? A verbal arrangement.
TSC_Q120_C02	Thinking about the arrangement for the time the child(ren) spend(s) with each parent, what kind of arrangement or agreement(s) is it? A written arrangement you and your ex-spouse/ex-partner prepared on your own.
TSC_Q120_C03	Thinking about the arrangement for the time the child(ren) spend(s) with each parent, what kind of arrangement or agreement(s) is it? A written arrangement you and your ex-spouse/ex-partner did after talking/working with a lawyer.
TSC_Q120_C04	Thinking about the arrangement for the time the child(ren) spend(s) with each parent, what kind of arrangement or agreement(s) is it? A written arrangement with court service help but did not involve a judge (includes mediation, conciliation, alternative dispute resolution).
TSC_Q120_C05	Thinking about the arrangement for the time the child(ren) spend(s) with each parent, what kind of arrangement or agreement(s) is it? A judge ordered arrangement as the outcome of a hearing or trial.
TSC_Q120_C06	Thinking about the arrangement for the time the child(ren) spend(s) with each parent, what kind of arrangement or agreement(s) is it? Other
TSC_Q175	Has this agreement (about the arrangement for the time the child(ren) spend(s) with each parent), been formally registered in court?
TSC_Q210	Have you and your ex-spouse/ex-partner changed this arrangement since it was first made?
TSC_Q225	What is the main reason why it changed?
TSC_Q227	In the past 12 months, overall, would you say that this (these) arrangement(s) (for how much time your child spends with each parent) has (have) been followed:
TSC_Q230_C01	What is the primary residence of this child/these children? Respondent's home
TSC_Q230_C02	What is the primary residence of this child/these children? Ex-spouse/ex-common-law partner's home
TSC_Q230_C03	What is the primary residence of this child/these children? About the same amount of time at both parents' homes
TSC_Q230_C04	What is the primary residence of this child/these children? Somewhere else
TSC_Q232_C01	How far away does this child/do these children live from your residence? Is it: ... within 10 km (6 miles or 10 minutes by car)?
TSC_Q232_C02	How far away does this child/do these children live from your residence? Is it: ... within 50 km (30 miles or 30 minutes by car)?
TSC_Q232_C03	How far away does this child/do these children live from your residence? Is it: ... within 100 km (60 miles or 1 hour by car)?
TSC_Q232_C04	How far away does this child/do these children live from your residence? Is it: ... within 200 km (120 miles or 2 hours by car)?
TSC_Q232_C05	How far away does this child/do these children live from your residence? Is it: ... within 400 km (250 miles or 4 hours by car)?
TSC_Q232_C06	How far away does this child/do these children live from your residence? Is it: ... within 1000 km (625 miles or 10 hours by car)?

HGR_Q370	Who did you help? Were they:...a relative?
HGR_Q380	Who did you help? Were they:...a friend?
HGR_Q390	Who did you help? Were they:...a neighbour?
HGR_Q395	Who did you help? Were they:...another person?
HGR_Q396_1	Who did you help? Were they:... a co-worker?

PTI_Q010	Do you plan to slow down in the coming year?
PTI_Q020	Do you consider yourself a workaholic?
PTI_Q110	In the past 12 months :... when you needed more time, how often did you cut back on your sleep? Was it:
PTI_Q120	In the past 12 months how often:... did you feel you had not accomplished what you had set out to do during the day? Was it:
PTI_Q130	In the past months how often:... did you feel under stress trying to accomplish more than you can handle? Was it:
PTI_Q140	In the past 12 months how often:... did you feel trapped in a daily routine? Was it:
PTI_Q150	In the past 12 months how often:... did you feel you did not have time for fun? Was it:
PTI_Q160	In the past 12 months how often:... did you feel under stress because you did not have enough time? Was it:
PTI_Q165	In the past 12 months how often:... would you have liked to spend more time alone? Was it:
PTI_Q170	In the past 12 months how often:... have you come home from work too tired to do the chores that needed to be done? Was it:
PTI_Q175	In the past 12 months how often:... has it been difficult to fulfill family responsibilities because of the amount of time you spent on your job? (Please include responsibilities concerning your spouse and child(ren), if it applies, as well as your own parents, siblings and other related persons.) Was it:
PTI_Q180	In the past 12 months how often:... have you arrived at work too tired to function well because of the household work you had done? Was it:
PTI_Q190	In the past 12 months how often:... has it been difficult to concentrate or fulfill your work responsibilities because of your family responsibilities? (Please include responsibilities concerning your spouse and child(ren), if it applies, as well as your own parents, siblings and other related persons.) Was it:
PTI_Q210	In the past 12 months how often:... did you worry that you were not spending enough time with your spouse/partner? Was it:
PTI_Q220	In the past 12 months how often:... did you worry that you were not spending enough time with your child(ren)? Was it:
PTI_Q225	In the past 12 months how often:... did you feel that the time spent with your child(ren) was good quality time? Was it:
PTI_Q230	In the past 12 months how often:... did you worry that you were not spending enough time with your friends? Was it:
HCA_Q100	In the past 12 months, have you started to provide care to an adult relative for a period longer than 12 weeks?
HCA_Q111	In the past 12 months, did you help an adult relative:... by doing domestic work, home maintenance or outdoor work?
HCA_Q112	In the past 12 months, did you help an adult relative:... by providing transportation or running errands?
HCA_Q113	In the past 12 months, did you help an adult relative:... by helping with child care?
HCA_Q114	In the past 12 months, did you help an adult relative:... by teaching, coaching or giving practical advice?
HCA_Q115	In the past 12 months, did you help an adult relative:... by giving someone emotional support?
HCA_Q116	In the past 12 months, did you help an adult relative:... in some other way?
AGE_BEG_HELP_C	Age of the respondent when started providing help to an adult relative.
HCA_Q130	How often did you provide this help? Was it:
HCA_Q210	Did you share the responsibility for helping an adult relative?
HCA_Q211	Who did you share the responsibility with?
HCA_Q310	Did you take a « Compassionate Care Leave » to help or care for any of the people you helped in the past 12 months?
HCA_Q320	How much time did you take off from work using this program?
ADUCARE_DAY_TOOK	Time (in day) the respondent took off from work using the program << Compassionate care Leave >>.
HCA_Q410	Thinking about the time when you started helping out or caring for an adult relative in HCA_Q410, would you say this situation was:
IOC_Q111	At the time when you started providing help to an adult relative, has helping an adult relative caused you... to make changes in your social activities?

IOC_Q112	At the time when you started providing help to an adult relative, has helping an adult relative caused you... to change your holiday plans?
IOC_Q113	At the time when you started providing help to an adult relative, has helping an adult relative caused you... to postpone plans to enroll in an educational or training program?
IOC_Q114	At the time when you started providing help to an adult relative, has helping an adult relative caused you... to move in with someone you are assisting?
IOC_Q117	At the time when you started providing help to an adult relative, has helping an adult relative caused you... to change your sleep patterns?
IOC_Q118	At the time when you started providing help to an adult relative, has helping an adult relative caused you... to have extra expenses?
IOC_Q121	At the time when you started providing help to an adult relative, has helping an adult relative caused you... to quit a job?
IOC_Q122	At the time when you started providing help to an adult relative, has helping an adult relative caused you: ... to change your work patterns?
IOC_Q123	At the time when you started providing help to an adult relative, has helping an adult relative caused you... to suffer a reduction in income?
IOC_Q124	At the time when you started providing help to an adult relative, has helping an adult relative caused you... to spend less time than you would have liked with your children?
IOC_Q125	At the time when you started providing help to an adult relative, has helping an adult relative caused you... to spend less time with your spouse/partner?
IOC_Q135	At the time when you started providing help to an adult relative, has helping an adult relative... caused the person(s) you are assisting to move closer to you?
IOC_Q136	At the time when you started providing help to an adult relative, has helping an adult relative... caused you to turn down a job offer or a promotion?
IOC_Q139	At the time when you started providing help to an adult relative, has helping an adult relative... caused your health to be affected?
IOC_Q140	At the time when you started providing help to an adult relative, has helping an adult relative... caused you to reduce your hours of work?
WHI_Q10	Excluding work while you were going to school, have you ever worked at a job or business for a period of six months or longer?
AGE_WK1BEGC	Age of respondent at the beginning of first work period.
AGE_WK1ENDC	Age of respondent at the end of first work period.
WH1_Q120	Were you working 30 hours or more per week?
WH1_Q210	Were you mainly:
WH1_Q230	Since [WH1_Q110M & WH1_Q110Y or WH1_Q111], have you ever been away from work for more than 3 months because of a lack of work, sickness, maternity/paternity leave, retirement, or any other reasons?
WH1_Q240	Since [WH1_Q110M & WH1_Q110Y or WH1_Q111], did you ever work less than 30 hours per week?
WH1_Q250	Did your first absence from work happen before you started working less than 30 hours per week?
WH1_Q310	Were you mainly:
WH1_Q320	Why did you work less than 30 hours per week?
WH1_Q330	Since [WH1_Q110M & WH1_Q110Y or WH1_Q111], have you ever been away from work for more than 3 months because of a lack of work, sickness, maternity/paternity leave, retirement, or any other reason?
WH1_Q340	Since [WH1_Q110M & WH1_Q110Y or WH1_Q111 or WH1_Q260M & WH1_Q260Y or WH1_Q261], did you ever work for 30 hours or more per week?
WH1_Q350	Did your first absence from work happen before you started working 30 hours or more per week?
WH1_Q370_C01	What were the reasons for that absence from work? Was it: Seasonal worker
WH1_Q370_C02	What were the reasons for that absence from work? Was it: Temporary layoff/end of contract
WH1_Q370_C03	What were the reasons for that absence from work? Was it: Lack of work
WH1_Q370_C04	What were the reasons for that absence from work? Was it: Business or company closure

WH1_Q370_C05	What were the reasons for that absence from work? Was it: Moved or transferred
WH1_Q370_C06	What were the reasons for that absence from work? Was it: Changed jobs
WH1_Q370_C07	What were the reasons for that absence from work? Was it: Own illness, disability or accident
WH1_Q370_C08	What were the reasons for that absence from work? Was it: Immigration/emigration
WH1_Q370_C09	What were the reasons for that absence from work? Was it: Returned to school
WH1_Q370_C10	What were the reasons for that absence from work? Was it: Retired
WH1_Q370_C11	What were the reasons for that absence from work? Was it: Maternity/paternity leave
WH1_Q370_C12	What were the reasons for that absence from work? Was it: Child care
WH1_Q370_C13	What were the reasons for that absence from work? Was it: Eldercare

WH5_Q470	Did you start working after being a seasonal worker or self-employed?
NO_WKFULL	Number of full-time work periods.
NO_WKPART	Number of part-time work periods.
NO_WKPER	Total number of work periods.
AGE_RETIRED_C	Age of respondent when he/she retired.
WKSTATUS	Respondent's work status since beginning of career.
WKTYPE	Work type since beginning of career.
DUR_WKTOT	Length of respondent's total work period (in months), since the beginning of his/her professional life.
NO_INT	Total number of work interruptions the respondent has had.
AGE_INT1BEGC	Respondent's age at the beginning of the first work interruption.
AGE_INT1ENDC	Respondent's age at the end of the first work interruption.
RANK_INT1	Rank of respondent's first work interruption among all work periods.
AGE_INT2BEGC	Respondent's age at the beginning of the second work interruption.
AGE_INT2ENDC	Respondent's age at the end of the second work interruption.
RANK_INT2	Rank of respondent's second work interruption among all work periods.
AGE_INT3BEGC	Respondent's age at the beginning of the third work interruption.
AGE_INT3ENDC	Respondent's age at the end of the third work interruption.
RANK_INT3	Rank of respondent's third work interruption among all work periods.
AGE_INT4BEGC	Respondent's age at the beginning of the fourth work interruption.
AGE_INT4ENDC	Respondent's age at the end of the fourth work interruption.
RANK_INT4	Rank of respondent's fourth work interruption among all work periods.
AGE_INT5BEGC	Respondent's age at the beginning of the fifth work interruption.
AGE_INT5ENDC	Respondent's age at the end of the fifth work interruption.
RANK_INT5	Rank of respondent's fifth work interruption among all work periods.
NO_MAT_PAT	Number of maternity/paternity leaves taken by respondent.
AGE_MAT_PAT1BEG	Age of respondent at the beginning of her first maternity/paternity leave.
AGE_MAT_PAT1END	Age of respondent at the end of her first maternity/paternity leave.
DUR_MAT_PAT1	Length of respondent's first maternity/paternity leave (in months).
AGE_MAT_PAT2BEG	Age of respondent at the beginning of her second maternity/paternity leave.
AGE_MAT_PAT2END	Age of respondent at the end of her second maternity/paternity leave.
DUR_MAT_PAT2	Length of respondent's second maternity/paternity leave (in months).
AGE_MAT_PAT3BEG	Age of respondent at the beginning of her third maternity/paternity leave.

AGE_MAT_PAT3END	Age of respondent at the end of her third maternity/paternity leave.
DUR_MAT_PAT3	Length of respondent's third maternity/paternity leave (in months).
AGE_MAT_PAT4BEG	Age of respondent at the beginning of her fourth maternity/paternity leave.
AGE_MAT_PAT4END	Age of respondent at the end of her fourth maternity/paternity leave.
DUR_MAT_PAT4	Length of respondent's fourth maternity/paternity leave (in months).
ACMYRC	Main activity of the respondent in the last 12 months.
EDUSTAT	Full-time or part-time education status for the respondent.
MAR_Q133	Did you have a job or were you self-employed at any time last week?
MAR_Q134	In the last four weeks, did you look for a job?
MAR_Q135	Did you have a job or were you self-employed at any time during the past 12 months?
MAR_Q136	Have you ever worked at a job or business?
AGE_LSTPDWKC	Age of respondent when last did paid work.
WKWE	Number of weeks during the past 12 months the respondent was employed.
MAR_Q172	Were you mainly:
MAR_Q173	Did you have any paid employees?
MAR_Q174	How many employees did you have?
MAR_Q190	Some people do all or some of their paid work at home. Excluding overtime, do you usually work any of your scheduled hours at home?
WKWEHOHR_C	Number of paid hours per week the respondent usually works at home.
MAR_Q193	What is the main reason you do some of your work at home?
NAICS2002_C16	North American Industrial Classification System of the respondent - Last 12 months - 16 categories.
NOCS2001_C10	National Occupational Classification(2001) of the respondent - Last 12 months - 10 categories.
SOC91C10	Standard Occupational Classification (1991) of the respondent - 10 categories.
MAR_Q350	Which of the following best describes your terms of employment in this job? Are you a:
MAR_Q364	Are you a union member or covered by a union contract or collective agreement in this job?
MAR_Q367	How much education or schooling is usually required to get a job like yours?
MAR_Q370	Approximately, how many kilometres is it from your residence to your place of work?
MAR_Q381	Did you have more than one paid job last week?
MAR_Q382	How many hours a week do you usually work at your job?
MAR_Q383	How many hours a week do you usually work at your main job?
MAR_Q384	How many hours a week do you usually work at your other job?
WKWEHR_C	Number of hours usually worked at all jobs in a week.
MAR_Q385	What is the main reason why you worked at more than one job last week?
MAR_Q388_C01	Why do you usually work less than 30 hours a week? Own illness or disability
MAR_Q388_C02	Why do you usually work less than 30 hours a week? Child care responsibilities
MAR_Q388_C03	Why do you usually work less than 30 hours a week? Elder care responsibilities
MAR_Q388_C04	Why do you usually work less than 30 hours a week? Other personal or family responsibilities
MAR_Q388_C05	Why do you usually work less than 30 hours a week? Going to school
MAR_Q388_C06	Why do you usually work less than 30 hours a week? Could only find part-time work
MAR_Q388_C07	Why do you usually work less than 30 hours a week? Did not want full-time work
MAR_Q388_C08	Why do you usually work less than 30 hours a week? Full-time work under 30 hours per week
MAR_Q388_C09	Why do you usually work less than 30 hours a week? Other
MAR_Q388_C10	Why do you usually work less than 30 hours a week? Requirement of the work
MAR_Q390	How many days a week do you usually work at your main job?
MAR_Q395	How many days a week do you usually work at your other job(s)?
MAR_Q410	Which of the following best describes the hours you usually work at your main job? Is it:
MAR_Q413	What is the main reason why you work this schedule at your main job?
MAR_Q416	Considering your main job, given the choice, would you, at your current wage rate, prefer to work:
MAR_Q418_C01	Why would you prefer to work fewer hours? Was it: Family responsibilities

MAR_Q418_C02	Why would you prefer to work fewer hours? Was it: Work related stress
MAR_Q418_C03	Why would you prefer to work fewer hours? Was it: Other health reasons
MAR_Q418_C04	Why would you prefer to work fewer hours? Was it: More leisure time
MAR_Q418_C05	Why would you prefer to work fewer hours? Was it: Other
MAR_Q418_C06	Why would you prefer to work fewer hours? Was it: Age, close to retirement
MAR_Q418_C07	Why would you prefer to work fewer hours? Was it: Quality of life, work-life balance
MAR_Q420	Do you have a flexible schedule that allows you to choose the time you begin and end your work day?
MAR_Q421	In the past 12 months, did you take advantage of this flexible schedule by:... taking career development training, that is training that you took outside of your paid working hours, that was not directly related to your job?
MAR_Q422	In the past 12 months, did you take advantage of this flexible schedule by:... caring for your child(ren) when needed, without modifying the total number of hours you needed to work during the week (e.g. taking a few hours to go to the doctor, to meet teacher or day care provider, etc.)?
MAR_Q423	In the past 12 months, did you take advantage of this flexible schedule by:... working longer hours some days and shorter hours other days, (without modifying the total number of hours you needed to work during the week)?
MAR_Q424	In the past 12 months, did you take advantage of this flexible schedule by:... doing recreational activities, (without modifying the total number of hours you needed to work during the week (e.g. taking music lessons, cooking classes, doing sport activities, meeting with friends, etc.))?
MAR_Q432	Does your employer:... provide you with the option to work part-time?
MAR_Q433	Does your employer provide you with the ability:... to take leave, paid or unpaid, for care of your children?
MAR_Q434	Does your employer provide you with the ability:... to take leave, paid or unpaid, for care of your spouse or partner?
MAR_Q435	Does your employer provide you with the ability:... to take leave, paid or unpaid, for care of other family members?
MAR_Q436	Does your employer provide you with the ability:... to take extended leave without pay for personal reasons (e.g. being home with child(ren), caring for family member, doing personal projects)?
EDUYR	Number of years of elementary and high school education successfully completed by the respondent.
EOR_Q110	Have you graduated from high school?
EOR_Q150	Have you had any further schooling beyond elementary/high school?
EDU5	Highest level of education obtained by the respondent. (5 groups)
EDU10	Highest level of education obtained by the respondent. (10 groups)
AGE_COMPL_STUDIES_C	Age of respondent at completion of studies?
EOR_Q260	What do you expect to do when you complete your current program?
EOR_Q300	After graduation, did you have any debts related to your education?
EOR_Q400	Do you have plans to return to school in the next 5 years?
ACMPRYR	Spouse's/partner's main activity during the past 12 months.
EOR_Q410_C12	What would be the major field of study for that further education?
MAP_Q120	Was he/she studying full-time or part-time?
MAP_Q130	Did he/she have a job or was he/she self-employed at any time during the past 12 months?
MAP_Q131	How many weeks did he/she work during the past 12 months?
MAP_Q132	Was he/she mainly:
MAP_Q133	Was he/she working full-time or part-time?
MAP_Q135	How many hours a week did he/she work?
MAP_Q140	What is the main reason why your spouse/partner works part-time?
MAP_Q145	Is his/her job permanent?
MAP_Q150	Did he/she have more than one paid job last week?
MAP_Q155	What is the main reason he/she worked at more than one job last week?
MAP_Q170	Approximately, how many kilometres is it from your residence to his/her place of work?
MAP_Q190	During the past 12 months, was he/she ever without a job and looking for work?
EDUPR5	Highest level of education obtained by the respondent's spouse/partner - 5 groups.
EDUPR10	Highest level of education obtained by the respondent's spouse/partner - 10 groups.

HAL_Q110	In general, would you say your health is:
HAL_Q120	Do you have any difficulty hearing, seeing, communicating, walking, climbing stairs, bending, learning or doing any similar activities?
HAL_Q150	Does a physical condition or mental condition or health problem reduce the amount or the kind of activity you can do:... at home?
HAL_Q160	Does a physical condition or mental condition or health problem reduce the amount or the kind of activity you can do:... at work or at school?
HAL_Q170	Does a physical condition or mental condition or health problem reduce the amount or the kind of activity you can do:... in other activities, for example, transportation or leisure?
ACTLIMIT	Respondent is limited in the amount or kind of activity he/she can do at home, at work, at school or in other activities because of a physical condition or mental condition or health problem.
HAL_Q210	Do you regularly have trouble going to sleep or staying asleep?
ALH_Q120	Does any other member of your household have any difficulty hearing, seeing, communicating, walking, climbing stairs, bending, learning or doing any similar activities?
LS_Q110	Please rate your feelings about them, using a scale of 1 to 10 where 1 means "Very dissatisfied" and 10 means "Very satisfied". What about:... your health?
LS_Q120	Please rate your feelings about them, using a scale of 1 to 10 where 1 means "Very dissatisfied" and 10 means "Very satisfied". What about:... your job or main activity?
LS_Q130	Please rate your feelings about them, using a scale of 1 to 10 where 1 means "Very dissatisfied" and 10 means "Very satisfied". What about:... the way you spend your other time?
LS_Q140	Please rate your feelings about them, using a scale of 1 to 10 where 1 means "Very dissatisfied" and 10 means "Very satisfied". What about:... your finances?
LS_Q210	Using the same scale, how do you feel about your life as a whole right now?
LS_Q310	How would you describe your sense of belonging to your local community? Would you say it is:
LS_Q320	(What about your sense of belonging) to your province or your territory?
LS_Q330	(What about your sense of belonging) to Canada?
DWELC	Dwelling type of the respondent.
DOR_Q113C	How many rooms are there in this dwelling? (Include kitchen, bedrooms and finished rooms in the attic or basement. Exclude bathrooms, halls, vestibules and rooms used solely for business purposes.)
DOR_Q114C	How many bedrooms are there in this dwelling? (Include all rooms designated as bedrooms even though the use may be occasional, as in the case of "spare" bedrooms. Exclude rooms designated as dining rooms, living rooms, etc. which may be used as bedrooms at night.)
DOR_Q115	How satisfied are you with your current dwelling? Are you:
DOR_Q117	What is the main reason why you are dissatisfied with your dwelling?
DWELLOWN	Dwelling owned by a member of the household?
DOR_Q125	Do you own this dwelling?
DOR_Q126	Do you pay a rent to live in this dwelling?
DOR_Q130	Is this with a mortgage or is your mortgage paid off completely?
DOR_Q160	Are you the only owner of this dwelling?
DOR_Q170_C01	Who else owns/owns the dwelling? Was it: Current spouse
DOR_Q170_C02	Who else owns/owns the dwelling? Was it: Current common-law partner
DOR_Q170_C03	Who else owns/owns the dwelling? Was it: Ex-spouse/ex-partner
DOR_Q170_C04	Who else owns/owns the dwelling? Was it: Ex-common-law partner
DOR_Q170_C05	Who else owns/owns the dwelling? Was it: Parents or parents-in-law
DOR_Q170_C06	Who else owns/owns the dwelling? Was it: Other family member
DOR_Q170_C07	Who else owns/owns the dwelling? Was it: Landlord
DOR_Q170_C08	Who else owns/owns the dwelling? Was it: Other
DOR_Q200	Have you ever owned another/a dwelling?
DOR_Q205	How many (other) dwellings have you owned before?

LIVE_DWELLING	Length of time respondent has lived in current dwelling.
AGE_PUR_MOVEDC	Age when the respondent purchased/ moved to this dwelling.
DOR_Q251	Did you/you or your spouse decide to buy this dwelling/move because you:... needed or wanted a larger dwelling?
DOR_Q252	Did you/you or your spouse decide to buy this dwelling/move because you:... needed or wanted a less expensive dwelling?
DOR_Q253	Did you/you or your spouse decide to buy this dwelling/move because you:... wanted a better quality dwelling or neighbourhood?
DOR_Q254	Did you/you or your spouse decide to buy this dwelling/move because you:... wanted to be closer to facilities and services?
DOR_Q255	Did you/you or your spouse decide to buy this dwelling/move because you:... wanted to establish your own household (be independent)?
DOR_Q256A	Did you/you or your spouse decide to buy this dwelling/move because you:... wanted to change from renter to owner?
DOR_Q256B	Did you/you or your spouse decide to buy this dwelling/move because you:... wanted to change from owner to renter?
DOR_Q257	Did you/you or your spouse decide to buy this dwelling/move because you:...found a new job, lost a job, were transferred or changed career?
DOR_Q258	Did you/you or your spouse decide to buy this dwelling/move because you:...wanted to be closer to work or school?
DOR_Q259	Did you/you or your spouse decide to buy this dwelling/move:... for family reasons (e.g. birth, death, marriage, separation or break-up)?
DOR_Q260	Did you/you or your spouse decide to buy this dwelling/move because you:... thought it was a good investment?
DOR_Q261	Did you/you or your spouse decide to buy this dwelling/move:... for another reason?
DOR_Q262_1	Did you/you or your spouse decide to buy this dwelling/move because you :...wanted to downsize the dwelling?
DOR_Q262_2	Did you/you or your spouse decide to buy this dwelling/move because you :...have been re-located to another city/province/country?
DOR_Q263	How far away did you last live from your present address before moving? Was it ...
DOR_Q301	Did you make any trade-offs when you bought this dwelling such as:... buying a smaller dwelling than you would have liked or had expected?
DOR_Q302	Did you make any trade-offs when you bought this dwelling such as:... buying a dwelling in a less desirable neighbourhood than you would have liked or had expected?
DOR_Q303	Did you make any trade-offs when you bought this dwelling such as:... taking in a boarder or roommate to help pay the mortgage?
DOR_Q304	Did you make any trade-offs when you bought this dwelling such as:... working more hours or getting a second job to help pay for the dwelling (you or your spouse)?
DOR_Q305	Did you make any trade-offs when you bought this dwelling such as:... some other trade-off?
DOR_Q308_1	Did you make any trade-offs when you bought this dwelling such as:... moderating spending habits?
DOR_Q308_2	Did you make any trade-offs when you bought this dwelling such as:... buying older dwelling, dwelling in need of repair, or building dwelling yourself?
DOR_Q450	Would you like to own a dwelling?
DOR_Q461_C01	You stated earlier that you don't own your dwelling. What is/are the reason(s) you do not own your dwelling? Was it: The overall costs of homeownership would be too high.
DOR_Q461_C02	You stated earlier that you don't own your dwelling. What is/are the reason(s) you do not own your dwelling? Was it: Owning a dwelling requires too much maintenance.
DOR_Q461_C03	You stated earlier that you don't own your dwelling. What is/are the reason(s) you do not own your dwelling? Was it: Respondent can't find a house in a desired neighbourhood (close to family, school, friends).
DOR_Q461_C04	You stated earlier that you don't own your dwelling. What is/are the reason(s) you do not own your dwelling? Was it: Respondent lives rent-free.
DOR_Q461_C05	You stated earlier that you don't own your dwelling. What is/are the reason(s) you do not own your dwelling? Was it: Other.

DOR_Q461_C06	You stated earlier that you don't own your dwelling. What is/are the reason(s) you do not own your dwelling? Was it: Respondent is too young.
DOR_Q461_C07	You stated earlier that you don't own your dwelling. What is/are the reason(s) you do not own your dwelling? Was it: Respondent is in school or just finished.
DOR_Q520	How important is it to you to own your own dwelling? Is it:
LIVE_NEIGH	Length of time respondent has lived in current neighbourhood.
LIVE_LOCAL	Length of time respondent has lived in current city or local community.
DOR_Q618_C01	You stated that you have moved to your current residence in the last 5 years. What were the reasons for this move? To provide care support to a relative.
DOR_Q618_C02	You stated that you have moved to your current residence in the last 5 years. What were the reasons for this move? To receive care support from a relative.
DOR_Q618_C03	You stated that you have moved to your current residence in the last 5 years. What were the reasons for this move? Job change/ transfer or to be closer to work (for self or parent/household maintainer).
DOR_Q618_C04	You stated that you have moved to your current residence in the last 5 years. What were the reasons for this move? Retirement (of self, spouse/partner or parent/household maintainer).
DOR_Q618_C05	You stated that you have moved to your current residence in the last 5 years. What were the reasons for this move? Decline in health (of self, spouse/partner or parent/household maintainer).
DOR_Q618_C06	You stated that you have moved to your current residence in the last 5 years. What were the reasons for this move? Separation or divorce (of self or parent/household maintainer).
DOR_Q618_C07	You stated that you have moved to your current residence in the last 5 years. What were the reasons for this move? Death of spouse/partner or parent/household maintainer.
DOR_Q618_C08	You stated that you have moved to your current residence in the last 5 years. What were the reasons for this move? Financial reasons.
DOR_Q618_C09	You stated that you have moved to your current residence in the last 5 years. What were the reasons for this move? Previous home too big or too small.
DOR_Q618_C10	You stated that you have moved to your current residence in the last 5 years. What were the reasons for this move? Wanted more opportunities for recreation, leisure and physical activities.
DOR_Q618_C11	You stated that you have moved to your current residence in the last 5 years. What were the reasons for this move? Other.
DOR_Q618_C12	You stated that you have moved to your current residence in the last 5 years. What were the reasons for this move? To be a home owner.
DOR_Q618_C13	You stated that you have moved to your current residence in the last 5 years. What were the reasons for this move? Marriage or common-law union.
DOR_Q618_C14	You stated that you have moved to your current residence in the last 5 years. What were the reasons for this move? Better quality dwelling or neighbourhood.
DOR_Q618_C15	You stated that you have moved to your current residence in the last 5 years. What were the reasons for this move? Other family reasons.
DOR_Q618_C16	You stated that you have moved to your current residence in the last 5 years. What were the reasons for this move? To become independent.
DOR_Q622	Now I would like to ask you a few questions about your more immediate neighbourhood. Would you say that you know:
DOR_Q627	Would you say this neighbourhood is a place where neighbours help each other?
DOR_Q628	In the past month, have you done a favour for a neighbour? (Examples of favours are: picking up the mail, watering plants, shovelling, lending tools or garden equipment, carrying things upstairs, feeding pets when neighbours go on holiday, and shopping.)
DOR_Q629	In the past month, have any of your neighbours done a favour for you?
BRTHCAN	Country of birth of the respondent.
BRTHPRVC	Province of birth of respondent.
BRTHREGC	Country or region of birth of the respondent.

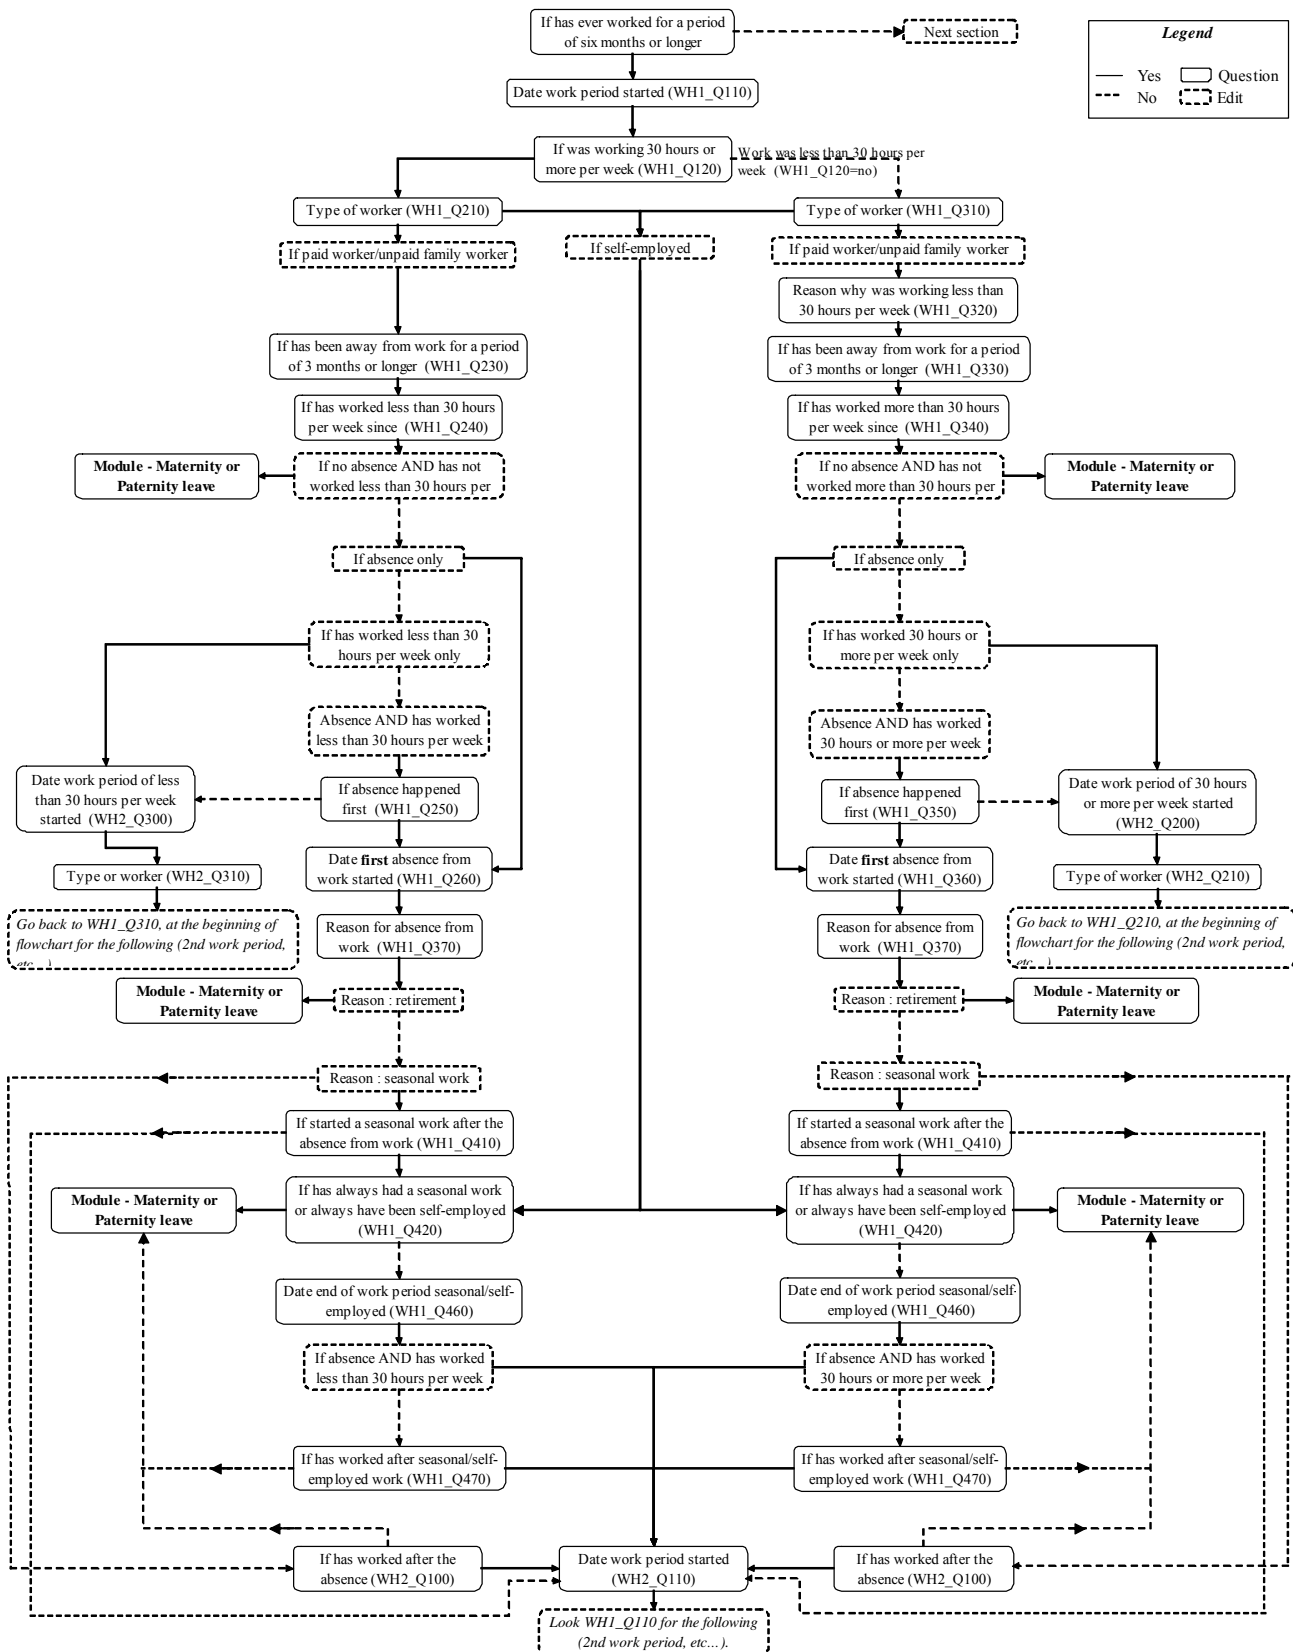

YRARRI	Range of years when the respondent came to live permanently in Canada.
AGEARRIGRC	Age groups of the respondent when came to live permanently in Canada.
ETHNIC7	Ethnic background of the respondent. (Seven categories)
AIR_Q110	Are you an Aboriginal person, that is, North American Indian, Métis or Inuit?
VISMIN	Visible minority status of the respondent
BRTHPREGC	Country or region of birth of the respondent's partner.
ETHNICPR7	Ethnic background of the respondent's partner. (Seven categories)
AIP_Q110	Is your spouse/partner an Aboriginal person, that is, North American Indian, Métis or Inuit?
VISMINPR	Visible minority status of respondent's spouse/partner
LANCH	First childhood language of the respondent.
LANCHSUE	Respondent still understands first childhood language - English.
LANCHSUF	Respondent still understands first childhood language - French.
LANCHSUO	Respondent still understands first childhood language - Other.
LANHSDC	Respondent's household language.
RLR_Q110	How important are your (religious or) spiritual beliefs to the way you live your life? Would you say they are:
RELIG6	Religion of respondent. In six categories.
RELIGATT	Religious attendance of the respondent.
INR_Q025	What was your main source of income during the past 12 months?
INCM	Annual personal income of the respondent.
INCMMEMC	Not including the respondent, number of household members receiving income from any source, during the past 12 months.
INCMHSD	Total household income.
WTBS_001	Bootstrap weight # 1 for personal weight.

## Appendix G

### Tips for using GSS mean bootstrap weights in some commercial analytic software

## Tips for using GSS mean bootstrap weights in some commercial analytic software

A survey weight variable with a corresponding set of 500 mean bootstrap weight variables are provided with many GSS data files in order that a full design-based approach may be taken for doing analysis with the data.

A design-based approach to analysis first involves using the survey weight variable for obtaining weighted estimates of the quantities of interest. Then, additional information about the survey design is used in order to make estimates of the variances<sup>1</sup> (and covariances) of these estimated quantities. In the case of many GSS PUMF's, this additional information is in the form of 500 mean survey bootstrap weight variables, where each mean bootstrap weight is derived from 25 independent survey bootstrap samples<sup>2</sup>. The design-based estimates and variance estimates can then be used for making the inferences required in the analysis.

The form of a mean bootstrap variance estimate can be described briefly as follows:

Let  $\hat{\beta}$  be the weighted estimate of quantity of interest,  $\beta$ , computed using the survey weight variable  $w$ , and let  $\hat{\beta}^{(b)}$  be an estimate obtained in exactly the same manner, except for substituting the  $b$  th mean bootstrap weight variable  $w^{(b)}$  for the survey weight variable  $w$ ,  $b=1,2,\dots,500$ . This yields (mean) bootstrap estimates  $\hat{\beta}^{(1)}, \dots, \hat{\beta}^{(500)}$  of  $\beta$ . Then the usual mean bootstrap estimate of the variance of  $\hat{\beta}$  is

$$\hat{V}_B(\hat{\beta}) = \frac{25}{500} \sum_{b=1}^{500} (\hat{\beta}^{(b)} - \hat{\beta})^2. \quad (1)$$

If  $\hat{\beta}$  is a vector instead of a single value, such as if  $\hat{\beta}$  is the set of coefficients of a model, then the matrix of estimates of the variances and covariances of the elements of  $\hat{\beta}$  is  $\hat{V}_B(\hat{\beta}) = \frac{25}{500} \sum_{b=1}^{500} (\hat{\beta}^{(b)} - \hat{\beta})(\hat{\beta}^{(b)} - \hat{\beta})'$ . (The value “25” in the formulae is due to the fact that each GSS mean bootstrap weight is created from 25 bootstrap samples. The value “500” in the formula is due to the fact that we have 500 different mean bootstrap weights. If either the number of bootstrap samples used to create each mean bootstrap weight variable or the number of mean bootstrap weight variables should change from 25 and 500 respectively, then the values in formula (1) would need to change.)

Survey bootstrapping is just one replication approach that may be used in order to obtain design-based variance estimates with survey data. While several commercial software packages for design-based analysis offer replication approaches for variance estimation, they usually do not specify mean bootstrapping as one of these approaches. However, due to the similarity in the form of the variance estimate for the mean bootstrap and for the particular replication method called BRR with a Fay adjustment, programs that can carry out variance estimation by this latter approach with user-supplied replication weights can be used to obtain mean bootstrap variance estimates<sup>3</sup>. In particular, in these software, the 500 mean bootstrap weights provided in the GSS PUMF need to be designated as 500 BRR weights and the Fay adjustment factor must be given the value of  $1 - \sqrt{1/25} = .8$ .

In the sections below, instructions will be given for implementing mean bootstrap variance estimation with GSS PUMF data, using 3 different commercial software packages that can carry out some design-based analysis for BRR with a Fay adjustment: Stata 9 or 10, SUDAAN and WesVar. In all GSS cycles where mean bootstrap weights are provided, the names given to these bootstrap variables in the user documentation are wtbs\_001 to wtbs\_500. The name of the survey weight variable is usually wght\_per.

1. The variance that is estimated in a design-based approach is the variability in an estimate due to resampling by exactly the same design from the same finite population.
2. More details about how these mean bootstrap weight variables are created can be obtained in the survey documentation.
3. For a more detailed description see Phillips (2004)

## Stata 9 or 10

Beginning with Version 9, the commercial software package Stata added some replication approaches for carrying out design-based variance estimation in its survey analysis commands. One replication approach offered is the BRR approach with a Fay adjustment, and it is this approach that would be specified when analyzing GSS data.

In order to specify this approach, the following is recommended:

1. Before using any of the survey analysis commands, use a “svyset” statement to declare the data to be survey data, to designate the variables that contain information about the survey design and to specify the method for variance estimation. Settings made by “svyset” are saved with a dataset when (or if) a dataset is saved. The form of the svyset statement to be used with a GSS analysis dataset would have the following form:

```
svyset [pweight=wght_per], vce(brr) fay(.8) brrweight(wtbs_001-wtbs_500) mse
```

Declaring **pweight=wght\_per** tells Stata that the survey weight (which is often called the probability weight) is the variable **wght\_per**.

The option **vce(brr)** states that the variance estimation approach to use is BRR.

The option **fay(.8)** states that the BRR variance estimation approach is to use a Fay’s adjustment of .8.

The option **brrweight(wtbs\_001-wtbs\_500)** states that the names of the BRR weight variables are **wtbs\_001**, **wtbs\_002**, ..., **wtbs\_500**. This option can also be designated as **brrweight(wtbs\_\*)** provided there are no variables other than the bootstrap weight variables whose names begin with “wtbs\_”.

Finally, the **mse** option tells Stata to calculate the variance using squared differences between bootstrap estimates and the full-sample estimate of the quantities of interest, as shown in equation (1). If this option is not included, Stata uses squared differences between each bootstrap estimate and the mean of all the bootstrap estimates. Both approaches should yield approximately the same result.

2. There is an extensive list of survey analysis commands in Stata, which take a design-based approach in their computations. These commands, described in the Stata documentation, are implemented through the use of the “svy” prefix along with the names of other estimators. For example, **svy: mean** is the command for estimating population and subpopulation means and estimates of variability taking a design-based approach. When the **svyset** statement precedes all survey commands, the survey commands do not have to contain any information about the design-based approach to be taken. It should be noted that, even though most of the commands that allow the “svy” prefix are also the names of commands for non-survey data, what is estimated, what options are available and what can be done through post-estimation change when the “svy” prefix is added.

## SUDAAN

SUDAAN is a commercial software package developed by the Research Triangle Institute specifically for analysis of data from complex sample surveys and other observational and experimental studies involving cluster-correlated data. The SAS-callable version of the software is particularly useful to people familiar with SAS. In Release 9.0 and later, all procedures in SUDAAN can take the BRR approach with a Fay adjustment to estimate variances and covariances.

Specification of the variance estimation approach to be used by SUDAAN is done in the procedure statement for a particular procedure. Additional sample design statements provide further information required by the program. In particular, to carry out mean bootstrapping with GSS data, the following is required:

- specify **DESIGN=BRR** in the procedure statement
- include the following WEIGHT statement to identify the survey weight variable:

**WEIGHT wght\_per;**

- include the REPWGT statement to indicate the names of the mean bootstrap variables on your data file and to give the number of bootstrap samples used to produce each mean bootstrap variable (which is used to calculate the Fay adjustment). In particular, for GSS PUMFs, this REPWGT statement would have the form:

**REPWGT wtbs\_001-wtbs\_500 / ADJFAY=25;**

## WesVar

WesVar is a software package produced by Westat which carries out various analyses of survey data using exclusively replication methods for variance estimation. One of the methods offered is BRR with a Fay adjustment. Quoting heavily from Phillips (2004), in WesVar, the variance estimation method is specified when creating a new WesVar data file. The resulting file is then used to define workbooks where table and regression requests are carried out. To define a WesVar data file with mean bootstrap weights:

- Move the replicate weight variables (i.e., wtbs-001 to wtbs\_500) to the **Replicates** box..
- Move the survey weight variable (i.e., wght\_per) to the **Full sample** box.
- For the mean bootstrap, specify the **Method** as Fay and specify Fay\_K=8.
- Move analysis variables to the **Variables** box, a unique identifier to the ID box (optional), and save the file.

Phillips (2004) illustrates these instructions with an example using data from GSS 14.
