Inquiries line	1-800-635-7943
Fax line	1-800-565-7757

## Accessing and ordering information

This product, Catalogue no. 12M0022X, is also available as a standard printed publication at a price of CAN \$75.00 per issue.

The following additional shipping charges apply for delivery outside Canada:

### Single issue

United States	CAN\$6.00
Other countries	CAN\$10.00

All prices exclude sales taxes.

The printed version of this publication can be ordered by:

- Telephone (Canada and United States) 1-800-267-6677
- Fax (Canada and United States) 1-877-287-4369
- E-mail [infostats@statcan.ca](mailto:infostats@statcan.ca)
- Mail

R.H. Coats Bldg., 6th Floor  
150 Tunney's Pasture Driveway  
Ottawa, Ontario K1A 0T6
- In person from authorized agents and bookstores.

When notifying us of a change in your address, please provide both old and new addresses.

## Standards of service to the public

Statistics Canada is committed to serving its clients in a prompt, reliable and courteous manner. To this end, the Agency has developed standards of service which its employees observe in serving its clients. To obtain a copy of these service standards, please contact Statistics Canada toll free at 1-800-263-1136. The service standards are also published on [www.statcan.ca](http://www.statcan.ca) under "About us" > "Providing services to Canadians."

### Note of appreciation

Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

## Symbols

The following standard symbols are used in Statistics Canada publications:

.	not available for any reference period
..	not available for a specific reference period
...	not applicable
0	true zero or a value rounded to zero
0 <sup>s</sup>	value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
P	preliminary
r	revised
x	suppressed to meet the confidentiality requirements of the <i>Statistics Act</i>
E	use with caution
F	too unreliable to be published

## Acknowledgement

This microdata file and guide were made possible thanks to the contributions of Isabelle Marchand, Chantal Poirier, Jeanne Sarault, Patrick St-Cyr and Kuawa Williams.

## **User Guide for Public Use Microdata File**

### **1. INTRODUCTION AND SUMMARY**

This package is designed to enable interested users to access and manipulate the microdata file for the twenty second cycle of the General Social Survey (GSS), conducted from February to November, 2008. It contains information on the objectives, methodology and estimation procedures as well as guidelines for releasing estimates based on the survey. It also describes how to correctly use the microdata file.

The total sample of GSS Cycle 22 was distributed over the ten provinces.

This package includes the GSS Cycle 22 questionnaire as well as a number of appendices. Appendix A contains the Approximate Variance Tables and examples of their use, and Appendix F provides tips for using GSS mean bootstrap weights in some commercial analytic software.

#### **1.1 General Social Survey, Cycle 22 – Concepts, Methodology and Data Quality Summary**

The information in this section should be used to ensure a clear understanding of the basic concepts that define the data provided in the GSS Cycle 22 microdata file, of the underlying methodology of the survey and of key aspects of data quality. This information will provide you with a better understanding of the strengths and limitations of the data, and how they can be effectively used and analyzed. The information may be of particular importance to you when making comparisons with data from other surveys or sources of information, and in drawing conclusions regarding change over time, or differences between sub-groups of the target population. Further detail can be found in the following sections of this document.

##### **1.1.1 Data Sources and Methodology**

The General Social Survey program gathers data on social subjects in order to monitor changes in the living conditions and well-being of Canadians over time and to provide immediate information on specific social policy issues of current or emerging interest. Cycle 22 is the second cycle of the GSS to collect data on social engagement and social networks. The first was Cycle 17 – Social Engagement in 2003.

###### **1.1.1. i General Methodology**

The target population for Cycle 22 of the GSS included all persons 15 years of age and older in Canada, excluding:

1. residents of the Yukon, Northwest Territories, and Nunavut;
2. full-time residents of institutions.

Computer assisted telephone interviewing (CATI) was used to collect data for GSS-22. For sampling the target population was divided into geographic strata. Households were selected using a Random Digit Dialing method (RDD), which randomly generates a list of phone numbers used to reach households. Once contact is made with the household, a survey respondent aged 15 or over is selected to participate in the survey. Respondents were interviewed in the official language of their choice and interviews by proxy were not permitted.

###### **1.1.1. ii Reference Period**

Data for Cycle 22 of the GSS were collected in 5 waves, from February to November 2008.

###### **1.1.1. iii Estimation**

The estimation weights were adjusted using a post-stratification technique to match Census based population estimates for strata and for provincial age-sex groups.

## 1.1.2 Concepts and Variables Measured

The survey collected a large amount of data for each selected respondent as well as some information about each member of the respondent's household. The documentation for the microdata file includes an annotated list of all variables included in the file as well as the entire questionnaire. Section 3 of this document gives a detailed summary of the questionnaire content. Here is a brief outline:

- Introduction: Control form
- Section 1: Social Networks
- Section 2: Civic Participation
- Section 3: Changes Experienced by the Respondent (during the past 12 months)
- Section 4: Randomly Selected Change other than the one with the Greatest Impact (during the past 12 months)
- Section 5: Main Activity of Respondent
- Section 6: Well-being
- Section 7: Housing Characteristics of Respondent
- Section 8: Other characteristics

## 1.1.3 Data Accuracy

The methodology of this survey was designed to control errors and to reduce their potential effects. However, the results of the survey remain subject to error due to both sampling error (error due to the fact that a sample is observed and is not the whole population) and non-sampling error (the difference between the estimates and the true values not due to sampling error).

### 1.1.3. i Sampling Error

As the data are based on a sample of persons they are subject to sampling error. That is, estimates based on a sample will vary from sample to sample, and typically they will be different from the results that would have been obtained from a complete census. The potential range of this difference has been estimated for key data and used to produce tables that can be used to estimate the sampling variability of many estimates. These tables and instructions for and examples of their use are found in Appendix A and Section 8 below.

As an alternative to the use of the Approximate Variance Tables, a set of "bootstrap" weights and associated programs are included on the microdata file so that users can calculate more precise individual variances to assess the quality of estimates. Again, see Section 8 and Appendix F for more details.

### 1.1.3. ii Non-Sampling Error

Even a census of the population of interest produces estimates subject to error. While these are called non-sampling errors, estimates from samples still contain errors of this type. Common sources of these errors are imperfect coverage, non-response, response errors, and processing errors.

Coverage of the GSS-22 targeted population by the RDD frame is estimated to be more than 92% complete. These rates are high for virtually all socio-demographic groups, but are lowest among those households with the lowest incomes. As a result persons living in such households are slightly under-represented in the GSS-22 sample. In addition, while every effort was made to avoid non-response, the overall non-response rate for GSS-22 was 42.7%. Little or nothing is known about the non-responding cases, and so the results may be biased to the extent that the non-responding cases differ from those that provided responses.

## **2. OBJECTIVES OF THE GENERAL SOCIAL SURVEY**

The GSS program, established in 1985, conducts telephone surveys across the 10 provinces. The GSS is recognized for its regular collection of cross-sectional data that allows for trend analysis, and its capacity to test and develop new concepts that address emerging issues.

The two primary objectives of the General Social Survey are:

- a) to gather data on social trends in order to monitor changes in the living conditions and well-being of Canadians over time; and
- b) to provide immediate information on specific social policy issues of current or emerging interest.

To meet the stated objectives, the data collected by the GSS are made up of two components: classification and core content. Classification content consists of variables which provide the means of delineating population groups for use in the analysis of core data. Examples of classification variables are age, sex, education, and income. Core content is designed to measure changes in society related to living conditions and well-being and to supply data to inform specific policy issues. Cycle 22 is the second cycle of the GSS to collect data on social engagement and social networks.

## **3. CONTENT AND SPECIAL FEATURES OF THE GSS CYCLE 22**

The content of the questionnaire is outlined below.

### **Introduction: Control form**

A preliminary section is administered for the purposes of introducing the survey and selecting a respondent. A Household Roster is created, which assembles key demographic information on each member of the household, including age, sex, marital status and relationships to other household members. In addition to the technical utility of this section for establishing the flow of subsequent questions, the data collected here are used to derive core family structure information for Canadian households.

### **Section 1: Social networks**

The first two modules in this section aim to shed light on the contacts the respondent has with his/her relatives and friends, excluding people in the household. Frequency of face-to-face, and telephone/electronic/letter contact is measured. The next two modules explore contacts with new people as well as the respondent's use of internet in the past month. The last module covers the people the respondent knows in certain kinds of work and whether they are male or female.

### **Section 2: Civic participation**

This section focuses on the respondent's participation in organizations. Specifically, we cover such topics as volunteering and charitable giving, the civic engagement of the respondent (membership and activity in groups or organizations), and political engagement of the respondent.

### **Section 3: Changes experienced by the respondent (During the past 12 months)**

The first module in this section collects information about the changes in the respondent's life and how they dealt with some of these changes. The following module covers the resources used and available for the change that had the greatest impact on the respondent's life. And the final two modules ask questions on unmet needs, as well as the outcomes of that change.

### **Section 4: Randomly selected change other than the one with the greatest impact (During the past 12 months)**

This section begins by asking respondents about a randomly selected change in their life other than the one with the greatest impact which was covered in the previous section. Then information is asked on the resources used and available for the change, unmet needs, and the outcomes of the change.

### **Section 5: Main activity of respondent**

The first module in this section collects information about the respondent's main activity during the past 12 months, his or her flexible work arrangements, as well as job satisfaction. The second module covers the respondent's unpaid work activities. The next module covers the main activity of the respondent's spouse/partner. The final four modules collect the level of education attained by the respondent, his/her spouse/partner, as well as that of his/her mother and father.

### **Section 6: Well-being**

This section covers the respondent's self-rated health and mental health, and activity limitations. In addition, modules covering various measures of life satisfaction, trust and reciprocity, as well as values are included. All are important factors in assessing the well-being of Canadians.

### **Section 7: Housing characteristics of respondent**

This section covers the respondent's housing characteristics with emphasis on the type of current dwelling, kind of ownership, length of time lived in the home, as well as characteristics of the neighbourhood and local community. Specific questions were asked to determine the respondent's sense of belonging to his/her local community, province and country.

### **Section 8: Other characteristics**

This section provides a variety of socio-demographic measures—many of which are repeated each year in the General Social Survey—concerning respondents and their spouses/partners in order to support the analysis of Canadian families and individuals. This cycle of the GSS includes place of birth, ethnic ancestry, aboriginal identity and visible minority status, religion, language, sexual orientation, and personal and household income.

## **4. SURVEY AND SAMPLE DESIGN**

The data for Cycle 22 of the General Social Survey (GSS) was collected from February to November 2008. The target population is described in section 4.1 and the stratification of the sampling plan in section 4.2, the sample size and allocation are described in section 4.3. Finally the frame and sampling strategy are described in section 4.4.

### **4.1 Target population**

The target population for Cycle 22 of the GSS included all persons 15 years of age and older in Canada, excluding:

1. residents of the Yukon, Northwest Territories, and Nunavut;
2. full-time residents of institutions.

### **4.2 Stratification**

In order to carry out sampling, each of the ten provinces was divided into strata; i.e., geographic areas. Many of the Census Metropolitan Areas (CMAs) were each considered separate strata. This was the case for St. John's, Halifax, Saint John, Montreal, Quebec City, Toronto, Ottawa, Hamilton, Winnipeg, Regina, Saskatoon, Calgary, Edmonton and Vancouver.

CMAs not on this list are located in Quebec, Ontario and British Columbia. Three more strata were formed by grouping the remaining CMAs in each of these three provinces. Finally, the non-CMA areas of each of the ten provinces were also grouped to form ten more strata, giving 27 strata in all.

### **4.3 Sample size and allocation**

The size of the sample for Cycle 22 was 20,401. For each province, minimum sample sizes were determined that would ensure that certain estimates would have acceptably low sampling variability at the stratum level. Once these stratum sample size targets had been met, the remaining sample was allocated to the strata in a way that balanced the need for precision of both national-level and stratum-level estimates.

### **4.4 Frame and sampling strategy**

The RDD frame comprises all possible 10-digit phone numbers based on the area codes and 3-digit prefixes currently in use in Canada, from which non-working banks are removed. A bank consists of the 100 telephone numbers defined by the area code, the 3-digit prefix, and the first two of the remaining four digits – for example (416) 922-1100 to (416) 922-1199.

The Elimination of Non-Working Banks is a method in which an attempt is made to identify all working banks for an area – i.e. to identify all banks containing at least one number that belongs to a household according to our directory lists. Then, all non-working banks are eliminated from the sampling frame.

For each province, lists of telephone numbers in use were purchased from the telephone companies and lists of working banks were extracted. Each bank was assigned to a stratum within its province. In each stratum, a simple random sample without replacement of telephone numbers was selected by choosing a simple random sample with replacement of banks from the frame, and then randomly generating the last two digits for each bank to obtain the telephone number. The entire sample of telephone numbers was produced before the first day of interviewing for each wave of collection. Therefore, a prediction of the percentage of numbers dialed that would reach an eligible household had to be made.

In the GSS, all respondents were interviewed by telephone. Households without telephones were therefore excluded. There is evidence, however, that persons living in such households represent less than 0.9% of the target population (Residential Telephone Services Survey (RTSS), December 2007). Interviews were not conducted by cellular telephone so persons with only cellular telephone service were also excluded; this group makes up 6.4% (RTSS, December 2007).

Survey estimates were adjusted (weighted) to represent all persons in the target population, including those without telephones. The tacit assumption was that, given the small number of people without telephones, their characteristics were not different enough from those of the rest of the target population to have had an impact on the estimates. Since no one without a telephone was in the sample, this assumption cannot be verified using GSS data. The characteristics of the population without telephones were examined using data from the 2007 Survey of Household Spending. Telephone ownership was high among virtually all socio-economic groups, but was lowest among the households with the lowest household income (less than \$10,000). The telephone ownership rate was 89% for this population, while it was over 96% for all other income groups.

For GSS-22, 55.7% of the numbers dialled reached eligible households. An attempt was made to conduct a GSS interview with one randomly selected person from each household.

## **5. COLLECTION**

Computer assisted telephone interviewing (CATI) was used to collect data for the GSS. Respondents were interviewed in the official language of their choice. Proxy interviews were not permitted.

All interviewing took place using centralized telephone facilities in four of Statistics Canada's regional offices, with calls being made from approximately 09:00 to 21:30 on Monday to Friday. Interviewing was also usually scheduled from 9:00 to 17:00 on Saturdays and on Sunday afternoons and evenings (13:30 to 21:00). The four regional offices were: Halifax, Sherbrooke, Winnipeg and Edmonton. Interviewers were trained by Statistics Canada staff in telephone interviewing techniques using CATI, survey concepts and procedures.

Collection of the sample was broken down into five non-overlapping two-month waves running from February to November, 2008 (with a new wave starting at the beginning of the month).

The majority of interviewers had previous experience interviewing for the GSS.

It would be too lengthy to include all the survey manuals as part of this documentation package. However, more information can be obtained from Statistics Canada.

## **6. PROCESSING**

### **6.1 Data capture**

Using CATI, responses to survey questions were entered directly into computers as the interview progressed. The CATI data capture program allowed a valid range of codes for each question and built-in edits, and automatically followed the flow of the questionnaire. The information output by the CATI system was transmitted electronically to Ottawa.

### **6.2 Coding**

Several questions allowed write-in responses. These responses were coded into either existing categories (where a match was possible) or new categories. Where possible (e.g., occupation, industry, language, education, country of birth, religion), the coding followed the standard classification systems as used in the Census of Population.

### **6.3 Edit and imputation**

All survey records were subjected to computer edits throughout the course of the interview. The CATI system identified out of range values as they were entered. As a result, the interviewer could immediately solve such problems with the respondent. If the interviewer was unable to correctly resolve the detected errors, it was possible for the interviewer to bypass the edit and forward the data to head office for resolution. All interviewer comments were reviewed and taken into account in head office editing.

Head office edits performed the same checks as the CATI system as well as more detailed edits. Due to the nature of the survey, imputation was not appropriate for most items. Records with missing or incorrect information were, in a small number of cases, completed or corrected deterministically from other information on the questionnaire. The flow editing carried out by head office followed a "top down" strategy, in that whether or not a given question was considered "on path" was based on the response codes to the previous questions. If the response codes to the previous questions indicated that the current question was "on path", the responses, if any, to the current question were retained, though "don't know" was recoded as 9 (99 or 999, etc.) and refusals were recoded as "Not Stated", i.e. 8 (98 or 998, etc.); if, however, a response was missing to the current question, it was coded as "Not Stated", i.e. 8 (98 or 998, etc.). If the response codes to the previous questions indicated that the current question was "off path" because the respondent was clearly identified as belonging to a sub-population for which the current question was inappropriate or not of interest, the current question was coded as "Not Asked", i.e. 7 (97 or 997, etc.).

Non-response was not permitted for those items required for weighting. Values were imputed in the rare cases where either of the following was missing: sex or number of residential telephone lines. The imputation was based on a detailed examination of the data and the consideration of any useful data such as the ages and sexes of other household members, and the interviewer's comments. The number of residential telephone lines was assumed to be one (1) when the respondent failed to provide the information.

### **6.4 Creation of combined and derived variables**

A number of variables on the file were derived from information collected on the questionnaires. In some cases, the derived variables are straightforward and involve collapsing of categories. In other cases, two or more variables were combined to create a new variable. The data dictionary identifies which variables are derived and the nature of their derivation.

### **6.5 Amount of detail on microdata file**

In order to guard against disclosure, the amount of detail included on this file is less than is available on the master file retained by Statistics Canada. Variables with extreme values have been capped and information for some variables has been aggregated into broader classes (e.g., occupation, religion). In rare cases, certain variables have been modified in order to protect the confidentiality of respondents.

## 7. ESTIMATION

When a probability sample is used, as is the case for the GSS, the principle behind estimation is that each person selected in the sample represents (in addition to himself or herself) several other persons not in the sample. For example, in a simple random sample of 2% of a population size of 1000, each person in the sample represents 50 persons in the population. The number of persons represented by a given person in the sample is usually known as the weight or weighting factor of the sampled person.

GSS Cycle 22 estimates can be made from the microdata file. This file contains questionnaire responses and associated information from 20,401 respondents.

Two weighting factors were placed on the File and are listed and explained below.

**WGHT\_PER:** This is the basic weighting factor for analysis at the person level, i.e. to calculate estimates of the number of persons (non-institutionalized and aged 15 or over) having one or several given characteristics. WGHT\_PER should be used for all person-level estimates. For example, to estimate the number of persons who say their health is excellent, the value of WGHT\_PER should be summed over all records with this characteristic.

**WGHT\_HSD:** This weighting factor can be used to estimate the number of households with a given characteristic. For example, to estimate the number of households that are in low-rise apartments, WGHT\_HSD should be summed over all records with this characteristic.

### 7.1 Weighting of persons

We view each cycle of the General Social Survey as being composed of a number of independent surveys - one per wave of collection. Wherever possible, therefore, we weight each survey independently so that the data collected for each wave contributes to the estimates in proportion to the Canadian population at that time. When the sample size for a particular wave is not large enough, the records for two or more months are grouped together at certain stages of the weighting process.

A self-weighting sample design is one for which the weights of each unit in the sample are the same. The GSS sample for Cycle 22 was selected using the Elimination of Non-Working Banks (ENWB) sampling technique, which has such a design, with each telephone number within a stratum having an equal probability of selection.

This probability is equal to:

$$\frac{\text{Number of telephone numbers sampled in the stratum}}{\text{Total possible number of telephone numbers in the stratum}}$$

(The total number of possible telephone numbers for a stratum is equal to the number of working banks for a stratum times 100 minus the number of business telephone numbers in those banks).

#### 1) Basic weight calculation

Each working (in service) telephone number (responding and non-responding) in the RDD sample was assigned a weight equal to the inverse of its probability of selection. This weight was calculated independently for each stratum-wave group as follows:

$$\frac{\text{Number of possible telephone numbers in each stratum-wave group}}{\text{Number of sampled telephone numbers in each stratum-wave group}}$$

## **2) Two-stage adjustment**

Weights for responding telephone numbers were adjusted to represent non-responding telephone numbers. This was done independently within each stratum-wave group.

Non-responding telephone numbers were grouped into two types; those with some auxiliary information available (in particular, a complete roster of household members) and those with no auxiliary information.

This non-response adjustment was done in two stages. In the first stage, adjustment was made for complete non-response (i.e., households for which no auxiliary information was available). In the second stage, adjustment was made for partial non-response. These households had some auxiliary information which was used to model propensity to respond. The combination of these two adjustments is referred to as Factor 1.

Non-responding telephone numbers were then dropped.

## **3) Household weight calculation**

The weight from Step 2) was used as an initial household weight. For households with more than one residential telephone number (i.e. not used for business, fax or computer purposes only), this weight was adjusted downwards to account for the fact that such households had a higher probability of being selected. The weight for each household was divided by the number of residential telephone numbers that serviced the household.

$$\text{Factor 2} = \frac{1}{\text{Number of non-business telephone numbers}}$$

This produces a household weight = Basic Weight x Factor 1 x Factor 2.

## **4) Person weight calculation**

A person weight was then calculated for the respondent by multiplying the household weight by the number of persons in the household who were eligible to be selected for the survey (i.e. the number of persons 15 years of age or older).

This produces a person weight = Basic Weight x Factor 1 x Factor 2 x Number of eligible household members.

## **5) Adjustment of person weights to external totals**

The person weights were adjusted several times using a raking ratio procedure. This procedure ensures that, based on the survey's total sample, estimates produced that should match certain external reference totals do indeed match them. Two sets of external references were used for this survey, both of them population totals: for stratum (geographic) by wave, and for age-sex groups by province.

It should be noted that persons living in households without telephone service are included in the external references even though such persons were not sampled.

### **5a) Regional office (RO) - Stratum - Wave Adjustment**

An adjustment was made to the person weights on records within each stratum (geographic) per wave in order to make population estimates consistent with the corresponding projected population counts. This was done by multiplying the person weight for each record within the stratum by the following ratio:

$$\frac{\text{Projected population count for the RO-stratum-wave}}{\text{Sum of the person weights for the RO-stratum-wave}}$$

When sample sizes were small (< 15), data for adjacent waves in the same stratum were combined before this adjustment was made.

**5b) Province - age - sex adjustment**

The next weighting step was to adjust the weights to agree with projected province-age-sex population distributions.

Projected population counts were obtained for males and females within the following sixteen age groups:

15-19	20-24	25-29	30-34
35-39	40-44	45-49	50-54
55-59	60-64	65-69	70-74
75-79	80-84	85-89	90 +

For each of the resulting classifications the person weights for records within the classification were adjusted by multiplying by the following ratio:

$$\frac{\text{Projected province-age-sex group population count}}{\text{Sum of the province-age-sex group person weights}}$$

When sample sizes were small, adjacent age group data for the same province and sex were combined before this adjustment was made.

**5c) Raking ratio adjustments**

The weights of each respondent were adjusted several times using a raking ratio procedure. This procedure ensured that estimates produced for RO-Stratum-Wave and Province-Age-Sex totals would agree with the projections. This adjustment was made by repeating steps 5a) and 5b) of the weighting procedures until each repetition of the step made a minimal adjustment to the weights.

**6) Final person weight**

The weight produced at the end of step 5) is the final person weight WGHT\_PER placed on the Main File.

**7) Household weight**

The person is considered to be the basic analysis unit. Measures have been put in place to ensure that the person weight matches the external totals, as can be seen from its derivation. However, it is sometimes necessary to estimate the number of households and, for this purpose, an approximate household weight was included in the Main file. This is simply the person weight divided by the number of household members eligible for the survey i.e. those aged 15 or over. The latter variable is called DVELLIG.

$$\text{WGHT\_HSD} = \text{WGHT\_PER} / \text{DVELLIG}$$

Note that the adjustments performed on the person weight such as raking ratio make WGHT\_HSD preferable to the preliminary household weight mentioned in 3) above.

## 7.2 Weighting policy

Users are cautioned against releasing unweighted tables or performing any analysis based on unweighted survey results. As was discussed in Section 7.1, there were several weight adjustments performed that depended on the province, stratum, age and sex of the respondent. Sampling rates as well as non-response rates varied significantly from province to province, and non-response rates varied with demographic characteristics. For example, non-respondents are often more likely to be males and more likely to be younger. In the responding sample, 2.5% were males between the ages of 15 and 19, while in the overall population, approximately 4.2% were males between 15 and 19. Therefore, it is clear that unweighted sample counts cannot be considered to be representative of the survey target population.

The total number of households in the survey's scope is estimated at 35,575. Among these resolved households, 20,401 usable responses were obtained, which gives a response rate of 57.3%. The distribution of the non-response and response categories is given in the table below:

Source	Number	%
1.Unresolved households	3,386	9.5
2.Household non-response	6,772	19.0
3.Refusal by selected person	1,881	5.3
4.Other non-response by person	3,135	8.8
5. Response	20,401	57.3
<b>Total Households</b>	<b>35,575</b>	<b>100.0</b>

In all, there were 11,788 non-response cases (lines 2, 3 and 4), which represents 33.1% of the households sample. Line 1 gives the number of unresolved households (those for which the composition of the household could not be determined) that were estimated to be within the survey's scope. Since the composition of the household could not be determined in those 3,386 cases, some of them may in fact not be within the survey's scope. Lines 3 and 4 show non-response occurring after the respondent was selected in households. In all, there were 1,881 cases of refusal by the selected person – i.e. 5.3% of the household's sample. The "other non-response" categories include cases where no response could be obtained because of language difficulties or other problems.

## 7.3 Types of estimates

Two types of 'simple' estimates are possible from the results of the General Social Survey. These are qualitative estimates (estimates of counts or proportions of people possessing certain qualities or characteristics) and quantitative estimates involving quantities or averages. More complex estimation and analyses are covered in Section 7.5.

### 7.3.1 Qualitative estimates:

It should be kept in mind that the target population for the GSS was non-institutionalized persons aged 15 and older, living in the ten provinces. Qualitative estimates are estimates of the number or proportion of this target population possessing certain characteristics. The number of people (5,825,246) who describe their state of health as excellent (SRH\_Q110 = 1) is an example of this kind of estimate. These estimates are readily obtained by summing the person weights (WGHT\_PER) of the records possessing the characteristic of interest. This estimate does not, however, adjust for non-response to the question in any way. If we make the assumption that those who either refused to answer the question or who responded 'Don't know' have the same distribution as those who responded, and then an adjusted estimate can be made. To do this, the proportion of the target population with this characteristic is estimated by ignoring the respondents with a 'Not stated' or 'Don't know' answer to question SRH\_Q110 and calculating the ratio of the total of the weights of those respondents who answered that their state of health was 'excellent' (SRH\_Q110=1) to that of all respondents who answered the question (SRH\_Q110=1, 2, 3, 4, or 5). This proportion is then multiplied by the size of the target population to produce the final estimate (it should be noted that this adjustment does not have to be done, but it can be if needed):

$$5,867,018 = 27,261,810 \times \frac{5,825,246}{27,067,715}$$

27,261,810 is the estimated number of persons aged 15 and over in the population (target population). 27,067,715 is the sum of the weights of all respondents who answered question SRH\_Q110 (i.e. SRH\_Q110 = 1,2,3,4 or 5).

When the proportion of responses that are 'don't know' or 'refused' is high the differences between the two estimates will be large.

### 7.3.2 Quantitative estimates

Some variables on the General Social Survey microdata file are quantitative in nature (e.g. age, number of paid vacation days taken in the past 12 months). From these variables, it is possible to obtain such estimates as the average number of weeks worked in the past 12 months. These quantitative estimates are of the following ratio form:

$$\text{Estimate (average)} = X / Y$$

The numerator (X) is a quantitative estimate of the total of the variable of interest (for example, the number of weeks worked in the past 12 months) for a given sub-population (for example, males in who worked in the past 12 months). In this example, X would be calculated by multiplying the person weight (WGHT\_PER) by the variable of interest (WKWE) when it is known,  $1 \leq WKWE \leq 52$ , (i.e. not equal to '96','97' or '99'), and summing this product over all records for males who worked i.e. SEX=1 and  $(1 \leq WKWE \leq 52)$ , which yields 454,592,060.

The denominator (Y) is the qualitative estimate of the number of persons within that sub-population (males who worked in the past 12 months). In this example, Y would be calculated by summing the person weight (WGHT\_PER) over all male respondents with  $1 \leq WKWE \leq 52$ , yielding 10,021,007.

The two estimates X and Y are derived independently and then divided to provide the quantitative estimate. The average number of weeks is then calculated to be:

$$\frac{454,592,060}{10,021,007} = 45.4$$

## 7.4 Guidelines for analysis

As is detailed in Section 4 of this document, the respondents from the GSS do not form a simple random sample of the target population. Instead, the survey had a complex design, with stratification and multiple stages of selection, and unequal probabilities of selection of respondents. Using data from such complex surveys presents problems to analysts because the survey design and the selection probabilities affect the estimation and variance calculation procedures that should be used.

The GSS used a stratified design, with significant differences in sampling fractions between strata. Thus, some areas are over-represented in the sample (relative to their populations) while some other areas are relatively under-represented; this means that the unweighted sample is not representative of the target population, even if there were no non-response. Non-response rates may vary by demographic group, making the unweighted sample even less representative.

The survey weights must be used when producing estimates or performing analyses in order to account as much as possible for the geographic over- and under-representation and for the under- or over- representation of age-sex groups or months of the year in the unweighted file. While many analysis procedures found in statistical packages allow weights to be used, the meaning or definition of the weight in these procedures often differs from that which is appropriate in a sample survey framework, with the result that while in many cases the estimates produced by the packages are correct, the variances that are calculated are almost meaningless.

For many analysis techniques (for example linear regression, logistic regression, estimation of rates and proportions, and analysis of variance), a method exists which can make the variances calculated by the standard packages more meaningful. If the weights on the data, or on the subset of the data that is of interest, are rescaled so that the average weight is one (1), then the variances produced by the standard packages will be more reasonable; they still will not take into account the stratification and clustering of the sample's design, but they will take into account the unequal probabilities of selection. This rescaling can be accomplished by dividing each weight by the overall average weight before the analysis is conducted.

Section 8 describes sampling variability and data reliability in more detail and Appendix A gives a series of tables that can be used to estimate the sampling variability of many qualitative estimates of totals and proportions.

## 7.5 Methods of estimation and interpretation of estimates

### 7.5.1 Estimating numbers of persons by using WGHT\_PER on the main file

As previously mentioned, a basic person weight has been assigned to each sampled individual and, as described in section 7.1, these weights have been adjusted to reflect the age and sex composition of the various provincial populations as estimated by Statistics Canada for each month covered by Cycle 22.

$$\begin{array}{l} 20,401 \\ \Sigma \\ i=1 \end{array} \text{ WGHT\_PER} = 27,261,810^1$$

<sup>1</sup> Estimate of the number of persons aged 15 and over in the population.

In general, when an estimate is based on the unit of observation being the person, the Main File and WGHT\_PER should be used. Examples of this are the average number of weeks worked by persons aged 25 to 29 years old, the percentage of persons who voted in the last provincial election, and the number of people aged between 25 and 44 who have done a favour for a neighbour in the past month.

The last example would be calculated as follows: WGHT\_PER would be summed up for all records on the main file with  $2 \leq \text{AGEGR10} \leq 3$  and  $\text{DOR\_Q628} = 1$ , giving an estimate of 6,095,364 persons aged 25 to 44 who had done their neighbour a favour in the month prior to the survey.

## **7.5.2 Estimating numbers of households by using WGHT\_HSD on the main file**

The weighting factor WGHT\_HSD should be used when estimating the number of households. For example, when estimating the number of households in Ontario, WGHT\_HSD would be summed over all records with PRV=35, yielding an estimate of 4,916,532 households.

## **8. RELEASE GUIDELINE AND DATA RELIABILITY**

It is important for users to become familiar with the contents of this section before publishing or otherwise releasing any estimates derived from the General Social Survey microdata file.

This section of the documentation provides guidelines to be followed by users. With the aid of these guidelines, users of the microdata file should be able to produce figures consistent with those produced by Statistics Canada and in conformance with the established guidelines for rounding and release. The guidelines can be broken into four broad sections: Minimum Sample Sizes for Estimates; Sampling Variability Policy; Sampling Variability Estimation; and Rounding Policy.

### **8.1 Minimum sample size for estimates**

Users should determine the number of records on the microdata file which contribute to the calculation of a given estimate. This number should be at least 15 in the case of persons. When the number of contributors to the weighted estimate is less than this, the weighted estimate should generally not be released regardless of the value of the Approximate Coefficient of Variation. If it is, it should be with great caution and the insufficient number of contributors associated with the estimate should be prominently noted.

### **8.2 Sampling variability guidelines**

The estimates derived from this survey are based on a sample of persons. Somewhat different figures might have been obtained if a complete census had been taken using the same questionnaire, interviewers, supervisors, processing methods, etc. as those actually used. The difference between the estimates obtained from the sample and the results from a complete count taken under similar conditions is called the sampling error of the estimate.

Errors which are not related to sampling may occur at almost every phase of a survey operation. Interviewers may misunderstand instructions, respondents may make errors in answering questions, the answers may be incorrectly entered into the CATI system, and errors may be introduced in the processing and tabulation of the data. These are all examples of non-sampling errors.

Over a large number of observations, randomly occurring errors will have little effect on estimates derived from the survey. However, errors occurring systematically will contribute to biases in the survey estimates. Considerable time and effort was made to reduce non-sampling errors in the survey. Quality assurance measures were used at each step of the data collection and processing cycle to monitor the quality of the data. These measures included the use of highly skilled interviewers, extensive training of interviewers with respect to the survey procedures and questionnaire, observation of interviewers to detect problems of questionnaire design or misunderstanding of instructions, and coding and edit quality checks to verify the processing logic.

### 8.2.1 Non-sampling errors

A major source of non-sampling errors in surveys is the effect of non-response on the survey results. The extent of non-response varies from partial non-response (failure to answer one or a few questions) to total non-response. Total non-response occurred because either the interviewer was unable to contact the respondent, no member of the household was able to provide the information (perhaps due to a language problem), or the respondent refused to participate in the survey. Total non-response was handled by adjusting the weight of households who responded to the survey to compensate for those who did not respond.

In most cases, partial non-response to the survey occurred when the respondent did not understand or misinterpreted a question, refused to answer a question, or could not recall the requested information.

### 8.2.2 Sampling errors

Since it is an unavoidable fact that estimates from a sample survey are subject to sampling error, sound statistical practice calls for researchers to provide users with some indication of the magnitude of this sampling error.

Although the exact sampling error of the estimate, as defined above, cannot be measured from sample results alone, it is possible to estimate a statistical measure of sampling error, the standard error, from the sample data. Using the standard error, confidence intervals for estimates (ignoring the effects of non-sampling error) may be obtained under the assumption that the estimates are normally distributed about the true population value. The chances are about 68 out of 100 that the difference between a sample estimate and the true population value would be less than one standard error, about 95 out of 100 that the difference would be less than two standard errors, and virtually certain that the differences would be less than three standard errors.

Since the absolute size of the sampling error of an estimate is often less important than its relative size (relative to the estimate itself) the standard error is not always the best measure of sampling error. For example, a standard error of 10 for an estimate of 20 would generally be taken as indicating that the estimate is a poor one, while the same standard error for an estimate of 1,000 would generally indicate a good estimate. For this reason the size of the sampling error is often expressed relative to the size of the estimate, as the coefficient of variation (c.v.). The coefficient of variation of an estimate is obtained by dividing the standard error of the estimate by the estimate itself, and the resulting fraction is usually expressed as a percentage. In the above example, the first estimate has a c.v. of 50% ( $10/20$ ), while the second has a c.v. of 1% ( $10/1,000$ ).

In order to provide a means of assessing the quality of many estimates, Statistics Canada has produced a set of Approximate Sampling Variability Tables for the GSS. These tables can be used to obtain approximate coefficients of variation for categorical-type estimates and proportions. More precise estimates of the sampling variability of estimates can be produced with the bootstrap method using bootstrap weights that have been created for this survey. See Section 8.3 for more details.

### 8.2.3 Guidelines for release of estimates

When considering releasing *and/or* publishing an estimate from the microdata file, users should consult the table below and follow the guideline that matches the coefficient of variation of the estimate.

Type of Estimate	Coefficient of Variation	Policy Statement
1. With Moderate Sampling Variability	0.0% to 16.5%	Estimates can be considered for general unrestricted release. No special notation is required.
2. With High Sampling Variability	16.6% to 33.3%	Estimates can be considered for general unrestricted release but should be accompanied by a warning cautioning users of the high sampling variability associated with the estimates.
3. With Very High Sampling Variability	33.4% or over	Estimates should generally not be released, but when they are it should be with great caution and the very high sampling variability associated with the estimate should be prominently noted.

### 8.3 Estimates of variance

Variance estimation is described separately for qualitative and quantitative estimates.

#### 8.3.1 Sampling variability for qualitative estimates

Derivation of the sampling variability of each of the qualitative estimates which could be generated from the survey would be an extremely costly procedure, and for most users, an unnecessary one. Consequently, approximate measures of sampling variability, in the form of tables, have been developed for use and are included in Appendix A ("Approximate Variance Tables"). These tables were produced using the coefficient of variation formula based on a simple random sample. Since the design of Cycle 22 of the General Social Survey was not a simple random sample, a factor called the Design Effect has been introduced into the variance formula. This factor was calculated for the microdata file.

The Design Effect for an estimate is the actual variance for the estimate (taking into account the design that was used) divided by the variance that would have resulted if the estimate had been derived from a simple random sample. The Design Effect used to produce the Approximate Variance Tables has been determined by first calculating Design Effects for a wide range of characteristics and then choosing among these a conservative value which will not give a false impression of high precision. These Design Effects are specified in the following table:

<u>Geographic sector</u>	<u>Person Design Effect</u>
Canada	1.58
Newfoundland and Labrador	1.43
Prince Edward Island	1.26
Nova Scotia	1.36
New Brunswick	1.35
Quebec	1.29
Ontario	1.42
Manitoba	1.34
Saskatchewan	1.29
Alberta	1.35
British Columbia	1.63
Atlantic Region	1.50
Prairie Region	1.49

Approximate variance tables for estimates using WGHT\_PER are provided at the Canada and provincial levels as well as for the Atlantic and Prairie Regions for the microdata file.

It should be noted that all coefficients of variation in these tables are approximate and therefore unofficial. However, more precise estimates of the sampling coefficients of variation for specific variables may be obtained using "bootstrap" weights and associated programs. The types of estimates supported include 'aggregates' or 'totals', proportions, ratios, differences between 'aggregates' or 'totals', as well as more sophisticated types of analyses such as estimates of coefficients from linear regressions and logistic regressions, among others.

The use of variable-specific variance calculation instead of the table-based approximations may allow users to feel more certain of the quality of their estimates, especially those with coefficients of variation estimated from the tables in the "Very High Sampling Variability" range (see the guidelines regarding the release of the survey estimates on preceding pages).

### **8.3.2 Sampling variability for quantitative estimates**

Approximate variances for quantitative variables cannot be as conveniently summarized. As a general rule, however, the coefficient of variation of a quantitative total will be larger than the coefficient of variation of the corresponding qualitative estimate (e.g., the number of persons contributing to the quantitative estimate). If the corresponding qualitative estimate has high sampling variability, then the quantitative total will in general have high sampling variability as well.

### **8.3.3 Bootstrap method for variance estimation**

In order to determine the quality of the estimate and to calculate the CV, the standard deviation must be calculated. Confidence intervals also require the standard deviation of the estimate. The GSS uses a multi-stage survey design and calibration, which means that there is no simple formula that can be used to calculate variance estimates. Therefore, an approximate method was needed. The bootstrap method is used because the sample design and calibration needs to be taken into account when calculating variance estimates. The bootstrap method does this, and with the use of the Bootvar program, discussed in the next subsection, is a method that is fairly easy for users.

The GSS uses the mean bootstrap method described by W. Yung (Variance estimation for public use microdata files; Symposium 97, New Directions in Surveys and Censuses: Proceedings, p. 91-95. Statistics Canada (1997)).

Independently, in each stratum, a simple random sample of  $(n-1)$  of the  $n$  units in the sample is selected with replacement. Note that since the selection is with replacement, a unit may be chosen more than once. This step is repeated  $R$  times to form  $R$  bootstrap samples. An average initial bootstrap weight based on the  $R$  samples is calculated for each sample unit in the stratum. The entire process (selecting simple random samples, recalculating weights for each stratum) is repeated  $B$  times, where  $B$  is large, yielding  $B$  different initial bootstrap weights. The GSS typically uses  $R=25$  and  $B=500$ , to produce 500 bootstrap weights.

These weights are then adjusted according to the same weighting process as the regular weights: non response adjustment, calibration and so on. The end result is 500 final bootstrap weights for each unit in the sample. The variation among the 500 possible estimates based on the 500 bootstrap weights are related to the variance of the estimator based on the regular weights and can be used to estimate it.

There are a number of reasons why a user may need to calculate the coefficient of variation of estimates with the bootstrap method. A few are given below.

First, if a user desires estimates at a geographic level smaller than the province (for example, at the urban or rural level), then the Approximate Variance tables provided are not adequate. Coefficients of variation of these estimates may be obtained using "domain" estimation techniques through the Bootstrap variance program. Second, should a user require more sophisticated analyses such as estimates of coefficients from linear regressions or logistic regressions, the Approximate Variance tables will not provide correct associated coefficients of variation. Although some standard statistical packages allow sampling weights to be incorporated in the analyses, the variances that are produced often do not properly take into account the design *and/or* calibration of the weights, whereas the Bootstrap variance program does so. Third, for estimates of quantitative variables, separate tables are required to determine their sampling error. Since most of the variables for the General Social Survey are categorical in nature, this has not been done. Thus, users wishing to obtain coefficients of variation for quantitative variables must do so through the Bootstrap variance program.

#### **8.3.4 Bootvar program for variance estimation**

Statistics Canada has developed a program that can perform Bootstrap variance estimation: the Bootvar program.

The Bootvar program is available in SAS format. It is made up of macros that compute variances for totals, ratios, differences between ratios and for linear and logistic regression.

Tips for using the GSS mean bootstrap weights in some commercial analytic software can be found in Appendix F.

**Bootvar may be downloaded from Statistics Canada's Research Data Centre (RDC) website. Users must accept the Click-Wrap licence before they can read the files. There is a document on the site explaining how to adapt the system to meet users' needs.**

## **9. ADDITIONAL INFORMATION**

Additional information about this survey can be obtained from the individuals listed below. Data from the survey is available through published reports, special request tabulations, and this microdata file. The microdata file is available from the Social and Aboriginal Statistics Division of Statistics Canada at a cost of \$2,140. Tabulations can be obtained at a cost that will reflect the resources required to produce the tabulation.

**Approximate Variance Tables**

## APPROXIMATE VARIANCE TABLES

By using the Approximate Variance Tables and the following rules, users should be able to determine approximate coefficients of variation for aggregates (totals), percentages, ratios, differences between totals, and differences between ratios.

### Rules for Obtaining Approximate Variances

The following rules should enable the user to determine the approximate coefficients of variation from the Approximate Variance Tables for estimates of the number, proportion or percentage of the surveyed population possessing a certain characteristic and for ratios and differences between estimates.

As noted in Section 8.1, each estimate should be derived from at least 15 respondents in order to be released, regardless of the Approximate Coefficient of Variation.

#### Rule 1: Estimates of Numbers Possessing a Characteristic (Aggregates)

The coefficient of variation (cv) depends only on the size of the estimated aggregate itself. On the Approximate Variance Table, locate the estimated aggregate in the left-most column of the table (headed "Numerator of Percentage") and follow the asterisks across to the first figure encountered. This figure is the estimated coefficient of variation.

#### Example 1:

*A user estimates that in Canada 463,442 females aged 15 years and over describe their state of health in general as poor (question SRH\_Q110=5). How does the user determine the approximate coefficient of variation for this estimate?*

*Refer to the approximate variance table for Canada level estimates (page A-9). The estimated aggregate does /not appear in the left-most column (the 'Numerator of Percentage' column), so it is necessary to use the closest figure, namely 450,000. The coefficient of variation for an estimated aggregate is found by referring to the first non-asterisk entry for that row, in this case 6.8%. This cv falls within the range of cv's for 'Unqualified' estimates (i.e. 0.0% - 16.5%, see section 8.2.3) allowing the estimate to be released without restriction.*

**Rule 2: Estimates of Percentages or Proportions Possessing a Characteristic**

The coefficient of variation of an estimated percentage or proportion depends on both the size of the percentage or proportion and the size of the total upon which the percentage is based. Estimated percentages or proportions are relatively more reliable than the corresponding estimates of the numerators of the percentages, particularly if the percentages are 50 percent or more. (Note that in the tables the cv's decline in value reading from left to right).

When the percentage or proportion is based upon the total population of the geographic area covered by the table, the cv of the percentage or proportion is the same as the cv of the numerator of the percentage. In this case, Rule 1 can be used.

When the percentage or proportion is based upon a subset of the total population (e.g., those in a particular age-sex group), reference should be made to the percentage (across the top of the table) and to the numerator of the percentage or proportion (down the left side of the table). The intersection of the appropriate row and column gives the coefficient of variation.

**Example 2:**

*A user estimates that in Canada 3.35% of females aged 15 years and over describe their state of health in general as poor (SRH\_Q110=5). This is the expression of the estimate obtained in Example 1 as a percentage of all females aged 15 years and over in Canada. How does the user determine the approximate coefficient of variation for this estimate?*

*Refer to the approximate variance table for Canada level estimates. Because the estimate is a percentage which is based on a subset of the population covered by the table, it is necessary to use both the percentage (3.35%) and the numerator portion of the percentage (463,442) to determine the approximate coefficient of variation. Since the numerator does not appear in the left-most column (the 'Numerator of Percentage' column), it is necessary to use the figure closest to it, namely 450,000. Similarly, the percentage estimate does not appear among the column headings, so it is necessary to use the figure closest to it, namely 2.0%. The figure at the intersection of the row and column selected, namely 6.8%, is the coefficient of variation. This cv falls within the range of cv's for 'Unqualified' estimates (i.e. 0.0% - 16.5%) allowing the estimate to be released without restriction.*

**Rule 3: Ratios**

In the case where the numerator is a subset of the denominator, the ratio should be converted to a percentage and Rule 2 applied. This would apply, for example, to the case where the denominator is the total number of males and the numerator is the number of males who have a secondary school diploma.

In the case where the numerator is not a subset of the denominator, the coefficient of variation of the ratio of two estimates is approximately equal to the square root of the sum of squares of each coefficient of variation considered separately. That is, the standard deviation of a ratio

$$R = X / Y \quad \text{is} \quad \text{sd}(R) = R * (\text{cv}(X)^2 + \text{cv}(Y)^2)^{1/2}$$

The coefficient of variation of R is approximately:

$$\begin{aligned} \text{cv}(R) &= \text{sd}(R) / R \\ &= (\text{cv}(X)^2 + \text{cv}(Y)^2)^{1/2} \end{aligned}$$

This formula will tend to overstate the error if X and Y are positively correlated and understate the error if X and Y are negatively correlated.

**Example 3:**

*A user estimates that in Canada among females aged 15 years and over, 463,442 describe their state of health in general as poor (question SRH\_Q110=5) and 2,859,085 describe their state of health in general as excellent (question SRH\_Q110=1). The user is interested in the ratio of females describing their health as excellent versus those describing their health as poor. How does the user determine the approximate coefficient of variation for this ratio estimate?*

*The numerator of the ratio estimate is 2,859,085 (X). Using Rule 1 (refer to Example 1), the coefficient of variation for this estimate is determined to be 2.4% cv(X). The denominator of the ratio estimate is 463,442 (Y). Again using Rule 1, the coefficient of variation is determined to be 6.8% cv(Y). Using Rule 3, the coefficient of variation of the ratio estimate is*

$$\begin{aligned} \text{cv} &= (0.024^2 + 0.068^2)^{1/2} \\ &= 0.0721 \end{aligned}$$

*Therefore at the Canada level, the ratio of females who describe their health as excellent versus females who describe their health as poor is 2,859,085 /463,442 or 6 to 1. The coefficient of variation of this estimate is 7.21%, and so the estimate can be released without restriction.*

**Rule 4: Differences Between Totals or Percentages**

The standard deviation of a difference between two estimates is approximately equal to the square root of the sum of squares of each standard deviation considered separately. That is, the standard deviation of a difference:

$$d = X - Y$$

is

$$sd(d) = ( (X * cv(X))^2 + (Y * cv(Y))^2 )^{1/2}$$

The coefficient of variation of d is approximately:

$$cv(d) = sd(d) / d$$

This formula is accurate for the difference between separate and uncorrelated characteristics but is only approximate otherwise.

**Example 4:**

*A user estimates that in Canada, among those 15 years and over, 3.35% (X) of females describe their state of health in general as poor and 3.04% (Y - an estimated 408,909) of males describe their state of health in general as poor. The user is interested in the difference between these two estimates. How does the user determine the approximate coefficient of variation for the estimate of the difference?*

*From Example 2, the coefficient of variation for the female estimate is 6.8%. The coefficient of variation for the male estimate is 7.2%.*

*The difference between the estimates is 0.31% Using Rule 4, standard deviation of the difference between the estimates is*

$$\begin{aligned} sd &= ((0.0335 \times 0.068)^2 + (0.0304 \times 0.072)^2)^{1/2} \\ &= 0.0032 \end{aligned}$$

*and the coefficient of variation is*

$$\begin{aligned} cv &= \frac{0.0032}{0.0031} \\ &= 1.02 \end{aligned}$$

*Therefore the coefficient of the difference between the estimates is 102% and the estimate should not be released.*

**Rule 5: Difference of Ratios**

In this case, Rules 3 and 4 are combined. The cv's of the two ratios are first determined using Rule 3, and the cv of their difference is found using Rule 4.

Confidence Limits

Although coefficients of variation are widely used, a more intuitively meaningful measure of sampling error is the confidence interval of an estimate. A confidence interval constitutes a statement on the level of confidence that the true value for the population lies within a specified range of values. For example a 95% confidence interval can be described as follows:

If sampling of the population is repeated indefinitely, each sample leading to a new confidence interval for an estimate, then in 95% of the samples the interval will cover the true population value.

Using the standard error of an estimate, confidence intervals for estimates may be obtained under the assumption that under repeated sampling of the population, the various estimates obtained for a population characteristic are normally distributed about the true population value. Under this assumption, the chances are about 68 out of 100 that the difference between a sample estimate and the true population value would be less than one standard error, about 95 out of 100 that the difference would be less than two standard errors, and about 99 out of 100 that the differences would be less than three standard errors. These different degrees of confidence are referred to as the confidence levels.

Confidence intervals for an estimate,  $\bar{X}$ , are generally expressed as two numbers, one below the estimate and one above the estimate, as  $(\bar{X}-k, \bar{X}+k)$  where  $k$  is determined depending upon the level of confidence desired and the sampling error of the estimate.

Confidence intervals for an estimate can be calculated directly from the Sampling Variability Tables by first determining from the appropriate table the coefficient of variation of the estimate, and then using the following formula to convert to a confidence interval CI:

$$CI_x = \{\bar{X} - (t)(\bar{X})(\alpha\bar{X}), \bar{X} + (t)(\bar{X})(\alpha\bar{X})\}$$

where  $\alpha\bar{X}$  is the determined coefficient of variation of  $\bar{X}$

- t = 1 if a 68% confidence interval is desired;
- t = 1.6 if a 90% confidence interval is desired;
- t = 2 if a 95% confidence interval is desired;
- t = 3 if a 99% confidence interval is desired.

**Example 5(a):**

*A user estimates that in Canada 463,442 females aged 15 years and over describe their state of health in general as poor (question SRH\_Q110=5). This estimate has an approximate coefficient of variation of 6.8%. The 95% confidence interval for this estimate is thus:*

$$\begin{aligned} CI &= \{463,442 - (2)(463,442)(0.068), 463,442 + (2)(463,442)(0.068)\} \\ &= \{463,442 - 63,028, 463,442 + 63,028\} \\ &= \{400,414, 526,470\} \end{aligned}$$

**Example 5(b):**

An estimated 3.35% of females aged 15 years and over in Canada described their state of health in general as poor or .0335 expressed as a proportion. From Example 2 this estimate has an approximate coefficient of variation of 6.8%. A 95% confidence interval for this estimate (expressed as a proportion) is

$$CI = \{0.0335 - (2)(0.0335)(0.068), 0.0335 + (2)(0.0335)(0.068)\}$$

$$= \{0.0289, 0.0381\}$$

With 95% confidence it can be said that between 2.89% and 3.81% of females aged 15 years and over in Canada, describe their state of health in general as poor.

**Note:** Release guidelines which apply to the estimate also apply to the confidence interval. For example, if the estimate is not releasable, then the confidence interval is not releasable either.

**T-test**

Standard errors may also be used to perform hypothesis testing, a procedure for distinguishing between population parameters using sample estimates. The sample estimates can be numbers, averages, percentages, ratios, etc. Tests may be performed at various levels of significance, where a level of significance is the probability of concluding that the characteristics are different when, in fact, they are identical.

Let  $X_1$  and  $X_2$  be sample estimates for 2 characteristics of interest. Let the standard error of the difference  $X_1 - X_2$  be  $\sigma_d$

$$\text{If } t = \frac{X_1 - X_2}{\sigma_d}$$

is between -2 and 2, then no conclusion about the difference between the characteristics is justified at the 5% level of significance. If however, this ratio is smaller than -2 or larger than +2, the observed difference is significant at the 5% level.

**Example 6:**

A user wishes to test at the 5% level of significance the hypothesis that at the Canada level there is no difference between percentage estimates of males and females who describe their state of health in general as poor. From Example 4, the estimate of the standard deviation of the difference between the estimates is 0.0032.

$$\text{Hence } t = \frac{0.0335 - 0.0304}{0.0032}$$

$$= 0.98$$

Since  $t = 0.98$ , there is no evidence to reject the hypothesis at the 5% significance level.

		=====	=====
		20,401	27,261,810

*Coverage:*        All respondents.  
                   Source: General Social Survey 2008, household composition matrix.  
                   Format: I1  
                   Weight variable: WGHT\_PER

*Note:*        This variable was derived using the children listed on the household composition matrix only. In cases of multigenerational households where the respondent lived with a spouse or partner as well as a child and a grandchild, FAMTYPE was set to 1. In cases where the respondent had no children in the household and lived with only one parent, FAMTYPE was set to 5. An intact family refers to a now-married or common-law couple where all children (listed in the household composition matrix) have both biological or adoptive parents in the household. A step family refers to a now-married or common-law couple in which at least one of the children (listed in the household composition matrix) is in a step relationship with one of the parents. The respondent might be a parent or a child aged 15 or older in the family.

*Variable Name:*        **PGRCOUNT**                    *Position:* 148                    *Length:* 2

Number of occupations in which the respondent reported knowing someone.

	FREQ	WTD
00 : 18	20,401	27,261,810
	=====	=====
	20,401	27,261,810

*Coverage:* All respondents.

Source: General Social Survey, 2008, derived from PGR\_Q112, PGR\_Q114, PGR\_Q122, PGR\_Q124, PGR\_Q132, PGR\_Q134, PGR\_Q142, PGR\_Q144, PGR\_Q152, PGR\_Q154, PGR\_Q162, PGR\_Q164, PGR\_Q172, PGR\_Q174, PGR\_Q182, PGR\_Q184, PGR\_Q192, PGR\_Q194, PGR\_Q202, PGR\_Q204, PGR\_Q212, PGR\_Q214, PGR\_Q222, PGR\_Q224, PGR\_Q232, PGR\_Q234, PGR\_Q242, PGR\_Q244, PGR\_Q252, PGR\_Q254, PGR\_Q262, PGR\_Q264, PGR\_Q272, PGR\_Q274, PGR\_Q282, PGR\_Q284.

Format: I2

Weight variable: WGHT\_PER

*Note:* This variable serves as a network diversity indicator, where a greater number of occupations (range: 0 to 18) indicates greater network diversity. For more information, see: Erickson, B.H.(2004) "The distribution of gendered social capital in Canada." pp. 27-50 in *Creation and Returns of Social Capital: A New Research Program*, eds. H. Flap and B. Volker. London: Routledge. This score (PGRCOUNT) is derived by assigning a value of 1 to every occupation where the respondent knows either a man, woman or both in that occupation, and summing the values to get a total network diversity score.

---

Format: I2

Weight variable: WGHT\_PER

*Note:* The index which measures sense of mastery is based on the work of Pearlin and Schooler (1978). It measures the extent to which individuals believe that their life chances are under their control. Higher scores indicate superior mastery. Respondents' answers are based on a 5-point scale. Reference: Pearlin, L.I. and C. Schooler (1978) "The Structure of Coping." Journal of Health and Social Behavior, Vol.19, pp. 2-21. An electronic version is available at [www.jstor.org](http://www.jstor.org).

General Social Survey 2008  
Cycle 22 - Social Networks

**Appendix E**  
**List of Variables and Labels**

Variable Name	Description
RECID	Record identification.
WGHT_PER	Person weight.
WGHT_HSD	Household weight.
AGEGR5	Age group of the respondent.
AGEGR10	Age group of the respondent.
SEX	Sex of respondent.
MARSTAT	Marital status of the respondent.
AGEPRGRDIF	Age difference between respondent and spouse/partner.
AGEHSDYC	Age of youngest household member living in the respondent's household.
SEXPR	Sex of the respondent's spouse/partner within the household.
PRYPEC	Type of partner the respondent has within the household.
CHRFLAG	Single child(ren) of the respondent living in the household.
CHRINHSDC	Number of respondent's child(ren) living in the household (any age or marital status).
AGECHRYC	Age of respondent's youngest single child living in the household.
CHRTIME6	Number of respondent's single child(ren) living in the household.
CHH0014C	Number of child(ren) aged from 0 to 14 years living in the respondent's household.
PARHSDC	Type of parents the respondent has within the household.
LIVARR08	Living arrangement of respondent's household.
LIVARR12	Living arrangement of respondent's household.
HSDSIZEC	Household size of respondent.
FAMTYPE	Respondent's type of family structure.
MULTIGEN	Three generations or more family in respondent's household.
PRV	Province of residence of the respondent.
REGION	Region of residence of the respondent.
LUC_RST	Urban/Rural indicator.
SCR_Q010	Do most of your relatives live in the same city or region as you?
SCR_Q120	In the past month, how often did you see any of your relatives, (outside of people you live with)?
SCR_Q130	(In the past month), how often did you communicate with any of your relatives by telephone, (outside of people you live with)?
SCR_Q140	(In the past month), how often did you communicate with any of your relatives by e-mail or Internet (outside of people you live with)?
SCR_Q150	Overall, how satisfied are you with how often you communicate with your relatives? Are you:
SCR_Q160	Are you dissatisfied because you communicate with your family members too often or not often enough?
SCR_Q810	How many relatives do you have who you feel close to, (that is, who you feel at ease with, can talk to about what is on your mind, or call on for help)?
SCR_Q820	Of these relatives you feel at ease with, how many live in the same city or local community as you?
SCR_Q830	Does this relative you feel at ease with live in the same city or local community as you?

Variable Name	Description
SCF_Q100	How many close friends do you have, (that is, people who are not your relatives, but who you feel at ease with, can talk to about what is on your mind, or call on for help)?
SCF_Q101	Does your close friend live in the same city or local community as you?
SCF_Q102	How many of your close friends live in the same city or local community as you?
SCF_Q110	Not counting your close friends or relatives, how many other friends do you have?
SCF_Q120	Does this other friend live in the same city or local community as you?
SCF_Q121	How many of these other friends live in the same city or local community as you?
SCF_Q125	Thinking of all your friends: ...in the past month, how often did you see any of your friends?
SCF_Q130	Thinking of all your friends: ...(in the past month), how often did you communicate with any of your friends by telephone?
SCF_Q140	Thinking of all your friends: ...(in the past month), how often did you communicate with any of your friends by e-mail or Internet?
SCF_Q150	Overall, how satisfied are you with how often you communicate with your friends? Are you:
SCF_Q160	Is this because you communicate with them too often or not often enough?
SCG_Q120	Think of all the friends you had contact with in the past month, whether the contact was in person, by telephone, or by e-mail. Of all these people: ...how many have the same mother tongue as you?
SCG_Q130	Think of all the friends you had contact with in the past month, whether the contact was in person, by telephone, or by e-mail. Of all these people: ...how many come from an ethnic group that is visibly different from yours?
SCG_Q150	Think of all the friends you had contact with in the past month, whether the contact was in person, by telephone, or by e-mail. Of all these people: ...how many are the same sex as you?
SCG_Q160	Think of all the friends you had contact with in the past month, whether the contact was in person, by telephone, or by e-mail. Of all these people: ...how many are in about the same age group as you?
SCG_Q170	Think of all the friends you had contact with in the past month, whether the contact was in person, by telephone, or by e-mail. Of all these people: ...how many have roughly the same level of education as you?
SCG_Q180	Of those friends who have a different level of education than you, do most of them have:
SCG_Q190	Think of all the friends you had contact with in the past month, whether the contact was in person, by telephone, or by e-mail. Of all these people: ...how many are from a similar household income level as you?
SCG_Q200	Of those friends who have a different household income level than you, %do most of them/%does he/she%% have:
SCP_Q110	In the past month, how many new people did you meet outside of work or school, that is people who you hadn't met before and who you intend to stay in contact with?
SCP_Q120C	How many of these people did you meet on the Internet?
IUR_Q100	In the past month, did you use the Internet?
IUR_Q115	In the past month, how often did you use the Internet for electronic banking?
IUR_Q125	(In the past month), how often did you use the Internet to search for information on goods or services?

<b>Variable Name</b>	<b>Description</b>
IUR_Q135	(In the past month), how often did you use the Internet to purchase goods or services?
IUR_Q136	Was this a typical month?
IUR_Q137	In a typical month, how often do you use the Internet to purchase goods or services?
IUR_Q140	In the past 12 months, did you use the Internet?
IUR_Q145	In the past 12 months, how often did you use the Internet to search for medical or health-related information?
IUR_Q149	In general, how useful have you found Internet health information?
IUR_Q155	In the past 12 months, how often did you use the Internet to access information on government programs or services in Canada?
PGR_Q112	Do you know: ...any women social workers?
PGR_Q114	Do you know: ...any men social workers?
PGR_Q122	Do you know: ...any women police officers or fire-fighters?
PGR_Q124	Do you know: ...any men (police officers or fire-fighters)?
PGR_Q132	Do you know: ...any women food or beverage servers?
PGR_Q134	Do you know: ...any men (food or beverage servers)?
PGR_Q142	Do you know: ...any women labourers in landscaping or grounds maintenance?
PGR_Q144	Do you know: ...any men (labourers in landscaping or grounds maintenance)?
PGR_Q152	Do you know: ...any women managers in sales, marketing or advertising?
PGR_Q154	Do you know: ...any men (managers in sales, marketing or advertising)?
PGR_Q162	Do you know: ...any women computer programmers?
PGR_Q164	Do you know: ...any men (computer programmers)?
PGR_Q172	Do you know: ...any women instructors or leaders in recreation and sport?
PGR_Q174	Do you know: ...any men (instructors or leaders in recreation and sport)?
PGR_Q182	Do you know: ...any women security guards?
PGR_Q184	Do you know: ...any men (security guards)?
PGR_Q192	Do you know: ...any women engineers?
PGR_Q194	Do you know: ...any men (engineers)?
PGR_Q202	Do you know: ...any women farmers?
PGR_Q204	Do you know: ...any men (farmers)?
PGR_Q212	Do you know: ...any women nurses?
PGR_Q214	Do you know: ...any men (nurses)?
PGR_Q222	Do you know: ...any women janitors or caretakers?
PGR_Q224	Do you know: ...any men (janitors or caretakers)?
PGR_Q232	Do you know: ...any women accountants or auditors?
PGR_Q234	Do you know: ...any men (accountants or auditors)?

Variable Name	Description
PGR_Q242	Do you know: ...any women graphic designers or illustrators?
PGR_Q244	Do you know: ...any men (graphic designers or illustrators)?
PGR_Q252	Do you know: ...any women delivery or courier drivers?
PGR_Q254	Do you know: ...any men (delivery or courier drivers)?
PGR_Q262	Do you know: ...any women early childhood educators or assistants?
PGR_Q264	Do you know: ...any men (early childhood educators or assistants)?
PGR_Q272	Do you know: ...any women sewing machine operators?
PGR_Q274	Do you know: ...any men (sewing machine operators)?
PGR_Q282	Do you know: ...any women carpenters?
PGR_Q284	Do you know: ...any men (carpenters)?
PGRCOUNT	Number of occupations in which the respondent reported knowing someone.
PGRCNTF	Number of occupations in which the respondent reported knowing any women.
PGRCNTM	Number of occupations in which the respondent reported knowing any men.
VCG_Q300	In the past 12 months, did you do unpaid volunteer work for any organization?
VCG_Q310	On average, about how many hours per month did you volunteer?
VCG_Q320	Have you met new people through volunteering in the past 12 months?
VCG_Q340	(In the past 12 months), did you donate money or goods to any organization or charity? Do not include membership fees or dues.
CER_Q110	In the past 12 months, were you a member or participant in: ...a union or professional association?
CER_Q111	In the past 12 months, were you a member or participant in: ...a political party or group?
CER_Q112	In the past 12 months, were you a member or participant in: ...a sports or recreational organization (such as a hockey league, health club, or golf club)?
CER_Q113	In the past 12 months, were you a member or participant in: ...a cultural, educational or hobby organization (such as a theatre group, book club or bridge club)?
CER_Q114	In the past 12 months, were you a member or participant in: ...a religious-affiliated group (such as a church youth group or choir)?
CER_Q115	In the past 12 months, were you a member or participant in: ...a school group, neighbourhood, civic or community association (such as PTA, alumni, block parents or neighbourhood watch)?
CER_Q116	In the past 12 months, were you a member or participant in: ...a service club or fraternal organization (such as Kiwanis, Knights of Columbus or the Legion)?
CER_Q120	In the past 12 months, were you a member or participant in any other type of organization that you have not mentioned?
CER_Q150	How many of all the groups we talked about were you a member or participant in the past 12 months?

Variable Name	Description
CER_Q160	How many of these groups are you active in through the Internet?
CER_Q170	Altogether, about how often did you participate in group activities and meetings?
CER_Q180	Over the past five years, would you say that your involvement in organizations has:
OMA_Q110	What is the organization you are most active in?
OMA_Q115C	How long have you been involved with this organization?
OMA_Q120	Compared with last year, would you say that your involvement with this organization has:
OMA_Q125	Thinking of all the people you met through this organization: ...how many have the same mother tongue as you?
OMA_Q130	Thinking of all the people you met through this organization: ...how many come from an ethnic group that is visibly different from yours?
OMA_Q140	Thinking of all the people you met through this organization: ...how many are the same sex as you?
OMA_Q150	Thinking of all the people you met through this organization: ...how many have roughly the same level of education as you?
OMA_Q160	Thinking of all the people you met through this organization: ...how many are from a similar household income level as you?
OMA_Q170	Thinking of all the people you met through this organization: ...how many are in the same age group as you?
OMA_Q210	Would you say that your involvement in this organization is primarily volunteering?
PER_Q110	Lots of people find it difficult to get out and vote. Did you vote in the last federal election?
PER_Q115	Were you eligible to vote in the last federal election?
PER_Q120	Did you vote in the last provincial election?
PER_Q125	Were you eligible to vote in the last provincial election?
PER_Q130	Did you vote in the last municipal or local election?
PER_Q135	Were you eligible to vote in the last municipal or local election?
PER_Q220	In the past 12 months, have you done any of the following activities: ...searched for information on a political issue?
PER_Q230	In the past 12 months, have you done any of the following activities: ...volunteered for a political party?
PER_Q250	In the past 12 months, have you done any of the following activities: ...expressed your views on an issue by contacting a newspaper or a politician?
PER_Q260	In the past 12 months, have you done any of the following activities: ...signed a petition?
PER_Q270	In the past 12 months, have you done any of the following activities: ...boycotted a product or chosen a product for ethical reasons?
PER_Q280	In the past 12 months, have you done any of the following activities: ...attended a public meeting?
PER_Q290	In the past 12 months, have you done any of the following activities: ...spoke out at a public meeting?

Variable Name	Description
PER_Q300	In the past 12 months, have you done any of the following activities: ...participated in a demonstration or march?
PER_Q330	About how many hours do you spend watching TV during a typical week to follow news and current affairs (such as international, national, regional or local)?
RCE_Q110	Which of the following changes, either positive or negative, have you experienced during the past 12 months? Have you experienced changes to do with: ...finances or income?
RCE_Q120	Which of the following changes, either positive or negative, have you experienced during the past 12 months? Have you experienced changes to do with: ...employment?
RCE_Q130	Which of the following changes, either positive or negative, have you experienced during the past 12 months? Have you experienced changes to do with: ...health?
RCE_Q140	Which of the following changes, either positive or negative, have you experienced during the past 12 months? Have you experienced changes to do with: ...parenting or child care?
RCE_Q150	Which of the following changes, either positive or negative, have you experienced during the past 12 months? Have you experienced changes to do with: ...home care of a sick or disabled person?
RCE_Q160	Which of the following changes, either positive or negative, have you experienced during the past 12 months? Have you experienced changes to do with: ...death of a loved one?
RCE_Q170	Which of the following changes, either positive or negative, have you experienced during the past 12 months? Have you experienced changes to do with: ...education?
RCE_Q180	Which of the following changes, either positive or negative, have you experienced during the past 12 months? Have you experienced changes to do with: ...legal matters?
RCE_Q190	Which of the following changes, either positive or negative, have you experienced during the past 12 months? Have you experienced changes to do with: ...living arrangements (for example, moving to a new house, moving in with another family member, a change in responsibilities within the household)?
RCE_Q200	Which of the following changes, either positive or negative, have you experienced during the past 12 months? Have you experienced changes to do with: ...family relationships?
RCE_Q210	Which of the following changes, either positive or negative, have you experienced during the past 12 months? Have you experienced changes to do with: ...personal achievements?
RCE_Q220	Which of the following changes, either positive or negative, have you experienced during the past 12 months? Have you experienced changes to do with: ...any other change?
F_RCE_D220	Number of changes experienced in the past 12 months.
F_RCE_D230	Change that had the greatest impact on the respondent's life or the change experienced during the past 12 months (if the respondent only declared one change).
RCE_Q235	Is this change related to the other change you experienced in the past 12 months?
RCE_Q236	Is this change related to any of the other changes you experienced in the past 12 months?
RCE_Q237_C01	Change related to the one that had the greatest impact - Finances or income
RCE_Q237_C02	Change related to the one that had the greatest impact - Employment
RCE_Q237_C03	Change related to the one that had the greatest impact - Health
RCE_Q237_C04	Change related to the one that had the greatest impact - Parenting or child care
RCE_Q237_C05	Change related to the one that had the greatest impact - Home care of sick or disabled person

Variable Name	Description
RCE_Q237_C06	Change related to the one that had the greatest impact - Death of a loved one
RCE_Q237_C07	Change related to the one that had the greatest impact - Education
RCE_Q237_C08	Change related to the one that had the greatest impact - Legal matters
RCE_Q237_C09	Change related to the one that had the greatest impact - Living arrangements
RCE_Q237_C10	Change related to the one that had the greatest impact - Family relationships
RCE_Q237_C11	Change related to the one that had the greatest impact - Personal achievements
RCE_Q237_C12	Change related to the one that had the greatest impact - Another change
F_RCE_D237	Number of changes that are not related to the one with the greatest impact.
RCESTART	Number of months since the change started to occur (change with the greatest impact if more than one change).
RCE_Q250	Is this % change still ongoing/situation still affecting you %?
RCEEND	Number of months since the change ended (change with the greatest impact if more than one change).
RCETIME	Number of months the change lasted, if it ended (change with the greatest impact if more than one change).
RCE_Q270	Would you say that this change has been more positive or negative?
RCE_Q280	Using a scale of 1 to 5, where 1 means very little impact and 5 means a very large impact, to what extent has this change impacted on your life?
RAG_Q110	Did you get help from: ...your family? (Such as your spouse/partner, parents, children or other relatives)
RAG_Q120	Did you get help from: ...your close friends?
RAG_Q130	Did you get help from: ...your friends other than your close friends?
RAG_Q140	Did you get help from: ...your co-workers?
RAG_Q150	Did you get help from: ...your neighbours?
RAG_Q160	Did you get help from: ...business people, such as your employer, financial advisor or a business friend?
RAG_Q170	Did you get help from: ...other professional people, such as a doctor, a lawyer or a counsellor?
RAG_Q180	Did you get help from: ...local government resources, such as the mayor or a municipal service?
RAG_Q190	Did you get help from: ...other government resources, such as a provincial or federal department or representative?
RAG_Q200	Did you get help from: ...a public institution such as a high school, college, university or library?

Variable Name	Description
RAG_Q210	Did you get help from: ...a social service or a health organization?
RAG_Q220	Did you get help from: ...a law or justice organization?
RAG_Q230	Did you get help from: ...a religious organization?
RAG_Q240	Did you get help from: ...another community organization?
RAG_Q250	Did you get help from: ...the Internet?
RAG_Q260	Did you get help from: ...other information or media resources, such as newspapers, books, TV or radio?
RAG_Q270	Did you get help from any other type of resource not mentioned before?
F_RAG_D270	Number of resources the respondent used for the change that had the greatest impact.
IRG_Q130_01_C01	Still thinking of the change to do with % greatest impact %, what kinds of help did you get from your family? Emotional or moral support (including spiritual support, prayer or 'being there')
IRG_Q130_01_C02	Still thinking of the change to do with % greatest impact %, what kinds of help did you get from your family? Financial support (excluding material goods)

IRG_Q160_11	Generally speaking, how satisfied are you with the help you have received from a social services or health organization? Are you:
IRG_Q160_12	Generally speaking, how satisfied are you with the help you have received from a law or justice organization? Are you:
IRG_Q160_13	Generally speaking, how satisfied are you with the help you have received from a religious organization? Are you:
IRG_Q160_14	Generally speaking, how satisfied are you with the help you have received from another community organization ? Are you:
IRG_Q160_15	Generally speaking, how satisfied are you with the help you have received from Internet? Are you:
IRG_Q160_16	Generally speaking, how satisfied are you with the help you have received from other information or media resources? Are you:
IRG_Q160_17	Generally speaking, how satisfied are you with the help you have received from any other type of resource not mentioned before? Are you:
RAG_Q300	Of all your sources of help, which did you find the most helpful?
RAG_Q310	Were there any resources that could have been useful and that were available to you, but that you did not use for the change to do with % greatest impact%?
RAG_Q320_C01	What were these resources? Your family?
RAG_Q320_C02	What were these resources? Your close friends?
RAG_Q320_C03	What were these resources? Your friends other than your close friends?
RAG_Q320_C04	What were these resources? Your co-workers?
RAG_Q320_C05	What were these resources? Your neighbours?
RAG_Q320_C06	What were these resources? Business people (employer, financial advisor or business friend)?
RAG_Q320_C07	What were these resources? Other professional people (doctor, lawyer or counsellor)?
RAG_Q320_C08	What were these resources? Local government resources (mayor or municipal service)?
RAG_Q320_C09	What were these resources? Other government resources (provincial or federal department or representative)?
RAG_Q320_C10	What were these resources? A public institution (high school, college, university or library)?
RAG_Q320_C11	What were these resources? A social services or health organization?
RAG_Q320_C12	What were these resources? A law or justice organization?
RAG_Q320_C13	What were these resources? A religious organization?
RAG_Q320_C14	What were these resources? Another community organization?
RAG_Q320_C15	What were these resources? Internet?
RAG_Q320_C16	What were these resources? Other information or media resources (newspapers, books, TV or radio)?
RAG_Q320_C17	What were these resources? Any other type of resource not mentioned before?

Variable Name	Description
UNG_Q110	Did you need any help that was not available for the change to do with %greatest impact%?
UNG_Q120_C01	What kinds of help did you need (that was not available for the change to do with %greatest impact %)? Emotional or moral support (including spiritual support, prayer or "being there")
UNG_Q120_C02	What kinds of help did you need (that was not available for the change to do with %greatest impact %)? Financial support (excluding material goods)
UNG_Q120_C03	What kinds of help did you need (that was not available for the change to do with %greatest impact %)? Material goods or gifts (e.g., food, clothes, furniture)
UNG_Q120_C04	What kinds of help did you need (that was not available for the change to do with %greatest impact %)? Transportation or running errands
UNG_Q120_C05	What kinds of help did you need (that was not available for the change to do with %greatest impact %)? Help with household work, home maintenance or child care
UNG_Q120_C06	What kinds of help did you need (that was not available for the change to do with %greatest impact %)? Help with personal care or health care needs
UNG_Q120_C07	What kinds of help did you need (that was not available for the change to do with %greatest impact %)? Professional services or expertise
UNG_Q120_C08	What kinds of help did you need (that was not available for the change to do with %greatest impact %)? Information or informal advice (excluding professional expertise)
UNG_Q120_C09	What kinds of help did you need (that was not available for the change to do with %greatest impact %)? Referral, networking or help making new contacts
UNG_Q120_C10	What kinds of help did you need (that was not available for the change to do with %greatest impact %)? Teaching, coaching or training
UNG_Q120_C11	What kinds of help did you need (that was not available for the change to do with %greatest impact %)? Support for political action (collective action)
UNG_Q120_C12	What kinds of help did you need (that was not available for the change to do with %greatest impact %)? Other
UNG_Q210	Were you aware of any government programs or services that you could have accessed to help you?
UNG_Q220	Did you use any of these government programs or services?
UNG_Q230	Why did you not use these resources?
UNG_Q240	If you were looking for information on government programs or services, how would you find it?
OLG_Q010	Did you make new social contacts because of the change to do with % greatest impact %?
OLG_Q020	Did you lose some previous social contacts because of this change?
OLG_Q030	As a result of this change: ... is your financial situation generally:
OLG_Q040	As a result of this change: ...how is your employment situation (in general)?
OLG_Q050	As a result of this change: ...(how is) your physical health (in general)?
OLG_Q060	As a result of this change: ...(how is) your mental well-being (in general)?
OLG_Q070	As a result of this change: ... (how is) your personal safety and security (in general)?
RSC_N200	Type of change: %random change%?

<b>Variable Name</b>	<b>Description</b>
RSCSTART	Number of months since the randomly selected change started to occur.
RSC_Q250	Is this % change still ongoing/situation still affecting you %?
RSCEND	Number of months since the randomly selected change ended.
RSCTIME	Number of months the randomly selected change lasted, if it ended.
RSC_Q270	Would you say that this change has been more positive or negative?
RSC_Q280	Using a scale of 1 to 5, where 1 means very little impact and 5 means a very large impact, to what extent has this change impacted on your life?
RAR_Q110_C01	From which resource(s) did you get help? Your family
RAR_Q110_C02	From which resource(s) did you get help? Your close friends
RAR_Q110_C03	From which resource(s) did you get help? Your friends other than your close friends
RAR_Q110_C04	From which resource(s) did you get help? Your co-workers
RAR_Q110_C05	From which resource(s) did you get help? Your neighbours
RAR_Q110_C06	From which resource(s) did you get help? Business people (employer, financial advisor or business friend)
RAR_Q110_C07	From which resource(s) did you get help? Other professional people (doctor, lawyer or counsellor)
RAR_Q110_C08	From which resource(s) did you get help? Local government resources (mayor or municipal service)
RAR_Q110_C09	From which resource(s) did you get help? Other government resources (provincial or federal department or representative)
RAR_Q110_C10	From which resource(s) did you get help? A public institution (high school, college, university or library)
RAR_Q110_C11	From which resource(s) did you get help? A social services or health organization
RAR_Q110_C12	From which resource(s) did you get help? A law or justice organization
RAR_Q110_C13	From which resource(s) did you get help? A religious organization
RAR_Q110_C14	From which resource(s) did you get help? Another community organization
RAR_Q110_C15	From which resource(s) did you get help? Internet
RAR_Q110_C16	From which resource(s) did you get help? Other information or media resources (newspapers, books, TV or radio)
RAR_Q110_C17	From which resource(s) did you get help? Any other type of resource not mentioned before
RAR_Q110_C95	From which resource(s) did you get help? No resource used
F_RAR_D110	Number of resources the respondent used for the randomly selected change.
IRR_Q130_01_C01	(Still thinking of the change to do with % random change %), what kinds of help did you get from your family? Emotional or moral support (including spiritual support, prayer or 'being there')
IRR_Q130_01_C02	(Still thinking of the change to do with % random change %), what kinds of help did you get from your family? Financial support (excluding material goods)
IRR_Q130_01_C03	(Still thinking of the change to do with % random change %), what kinds of help did you get from your family? Material goods or gifts (e.g., food, clothes, furniture)

Variable Name	Description
IRR_Q130_01_C04	(Still thinking of the change to do with % random change %), what kinds of help did you get from your family? Transportation or running errands

MAR_Q520_C03	Why %are/were% you dissatisfied? Not enough time for other activities (exclude work or family related activities)
MAR_Q520_C04	Why %are/were% you dissatisfied? Cannot find suitable employment
MAR_Q520_C05	Why %are/were% you dissatisfied? Employment related reason(s) (exclude spending too much time on job)
MAR_Q520_C06	Why %are/were% you dissatisfied? Health reasons (include sleep disorders)
MAR_Q520_C07	Why %are/were% you dissatisfied? Family related reason(s) (exclude not enough time for family)
MAR_Q520_C08	Why %are/were% you dissatisfied? Other
UWA_Q110	Last week, how many hours did you spend looking after: ...one or more of the children in your household, without pay?
UWA_Q120	Last week, how many hours did you spend looking after: ...one or more children outside of your household, without pay?
UWA_Q130	Last week, how many hours did you spend doing: ...unpaid housework, yard work or home maintenance for your household?
UWA_Q140	Last week, how many hours did you spend doing: ...unpaid housework, yard work or home maintenance for persons who live outside your household?
UWA_Q150	Last week, how many hours did you spend providing: ...unpaid care or assistance to one or more seniors who live in your household?
UWA_Q160	Last week, how many hours did you spend providing: ...unpaid care or assistance to one or more seniors who live outside your household?
ACMPRYR	Spouse's/partner's main activity during the past 12 months.
MAP_Q120	Was he/she studying full-time or part-time?
MAP_Q130	Did he/she have a job or was he/she self-employed at any time during the past 12 months?
MAP_Q131	How many weeks did he/she work during the past 12 months?
MAP_Q132	Was he/she mainly:
MAP_Q135C	In an average week, how many hours did he/she usually work?
MAP_Q140	What is the main reason why your spouse/partner usually works less than 30 hours per week?
MAP_Q145	Is his/her job permanent?
MAP_Q150	Did he/she have more than one paid job last week?
MAP_Q155	What is the main reason he/she worked at more than one job last week?
MAP_Q190	During the past 12 months, was %he/she% ever without a job and looking for work?

<b>Variable Name</b>	<b>Description</b>
EDUYR	Number of years of elementary and high school education successfully completed by the respondent.
EOR_Q110	Have you graduated from high school?
EOR_Q150	Have you had any further schooling beyond elementary/high school?
EDU5	Highest level of education obtained by the respondent. (5 groups)
EDU10	Highest level of education obtained by the respondent. (10 groups)
EOR_Q210	Did you attain your highest level of education in Canada or outside Canada?
EDUPR5	Highest level of education obtained by the respondent's spouse/partner - 5 groups.
EDUPR10	Highest level of education obtained by the respondent's spouse/partner - 10 groups.
EDUM5	Highest level of education obtained by the respondent's mother - 5 groups.
EDUM10	Highest level of education obtained by the respondent's mother - 10 groups.
EOM_Q210	How many years of elementary school has she completed?
EDUF5	Highest level of education obtained by the respondent's father - 5 groups.
EDUF10	Highest level of education obtained by the respondent's father - 10 groups.
EOF_Q210	How many years of elementary school has he completed?
SRH_Q110	In general, would you say your health is:
SRH_Q115	In general, would you say your mental health is:
SRH_Q120	Using a scale of 1 to 10 where 1 means "Very dissatisfied" and 10 means "Very satisfied", how do you feel about your life as a whole right now?
SRH_Q130	Thinking about the amount of stress in your life, would you say that most days are:
SRH_Q150	Compared to 5 years ago, would you say that your health is now:
HAL_Q120	Do you have any difficulty hearing, seeing, communicating, walking, climbing stairs, bending, learning or doing any similar activities?
HAL_Q150	Does a physical condition or mental condition or health problem reduce the amount or the kind of activity you can do: ...at home?
HAL_Q160	Does a physical condition or mental condition or health problem reduce the amount or the kind of activity you can do: ...at work or at school?
HAL_Q170	Does a physical condition or mental condition or health problem reduce the amount or the kind of activity you can do: ...in other activities, for example, transportation or leisure?
ACTLIMIT	Respondent is limited in the amount or kind of activity he/she can do at home, at work, at school or in other activities because of a physical condition or mental condition or health problem.
LTC_Q100	Do you have asthma?
LTC_Q110	Do you have arthritis, excluding fibromyalgia?
LTC_Q120	Do you have back problems, excluding fibromyalgia and arthritis?
LTC_Q130	Do you have high blood pressure?
LTC_Q140	Do you have migraine headaches?

Variable Name	Description
LTC_Q150	Do you have any other chronic conditions?
LTC_Q160_C01	What is this chronic condition? Heart disease
LTC_Q160_C02	What is this chronic condition? Mood disorder such as depression, bipolar disorder, mania or dysthymia
LTC_Q160_C03	What is this chronic condition? Diabetes
LTC_Q160_C04	What is this chronic condition? Anxiety disorder such as a phobia, obsessive-compulsive disorder or a panic disorder
LTC_Q160_C05	What is this chronic condition? Bowel disorder (Crohn's Disease, ulcerative colitis, Irritable Bowel Syndrome or bowel incontinence)
LTC_Q160_C07	What is this chronic condition? Intestinal or stomach ulcers
LTC_Q160_C08	What is this chronic condition? Chronic bronchitis
LTC_Q160_C09	What is this chronic condition? Cancer
LTC_Q160_C10	What is this chronic condition? Effects of a stroke
LTC_Q160_C11	What is this chronic condition? Emphysema
LTC_Q160_C12	What is this chronic condition? Chronic obstructive pulmonary disease (COPD)
LTC_Q160_C14	What is this chronic condition? Other
LTC_Q160_C15	What is this chronic condition? Cholesterol
LTC_Q160_C16	What is this chronic condition? Thyroid

FLG_Q110	Would you describe yourself as being usually:
FLG_Q310	I experience a general sense of emptiness.
FLG_Q320	There are plenty of people I can rely on when I have problems.
FLG_Q330	There are many people I can trust completely.
FLG_Q340	There are enough people I feel close to.
FLG_Q350	I miss having people around.
FLG_Q360	I often feel rejected.
SLP_Q110	Do you regularly have trouble going to sleep or staying asleep?
SLP_Q120	Do you take any medication to help you sleep?
TKG_Q110	How would you describe your usual ability to think and solve day-to-day problems? Are you:
MAS_Q110	Please tell me if you strongly agree, agree, neither agree nor disagree, disagree, or strongly disagree that: ...you have little control over the things that happen to you.
MAS_Q120	Please tell me if you strongly agree, agree, neither agree nor disagree, disagree, or strongly disagree that: ...there is really no way you can solve some of the problems you have.

Variable Name	Description
MAS_Q130	Please tell me if you strongly agree, agree, neither agree nor disagree, disagree, or strongly disagree that: ...there is little you can do to change many of the important things in your life.
MAS_Q140	Please tell me if you strongly agree, agree, neither agree nor disagree, disagree, or strongly disagree that: ...you often feel helpless in dealing with problems of life.
MAS_Q150	Please tell me if you strongly agree, agree, neither agree nor disagree, disagree, or strongly disagree that: ...sometimes you feel that you are being pushed around in life.
MAS_Q160	Please tell me if you strongly agree, agree, neither agree nor disagree, disagree, or strongly disagree that: ...what happens to you in the future mostly depends on you.
MAS_Q170	Please tell me if you strongly agree, agree, neither agree nor disagree, disagree, or strongly disagree that: ...you can do just about anything you really set your mind to.
MASCALE	Mastery scale.
TRT_Q110	Generally speaking, would you say that most people can be trusted or that you cannot be too careful in dealing with people?
TRT_Q310	Using a scale of 1 to 5 where 1 means 'Cannot be trusted at all' and 5 means 'Can be trusted a lot', how much do you trust each of the following groups of people: ...people in your family?
TRT_Q330	Using a scale of 1 to 5 where 1 means 'Cannot be trusted at all' and 5 means 'Can be trusted a lot', how much do you trust each of the following groups of people: ...people in your neighbourhood?
TRT_Q390	Using a scale of 1 to 5 where 1 means 'Cannot be trusted at all' and 5 means 'Can be trusted a lot', how much do you trust each of the following groups of people: ...people you work with or go to school with?
TRT_Q400	Using a scale of 1 to 5 where 1 means 'Cannot be trusted at all' and 5 means 'Can be trusted a lot', how much do you trust each of the following groups of people: ...strangers?
TRT_Q420	Would you say that you trust:
TRT_Q540	If you lost a wallet or purse that contained two hundred dollars, how likely is it to be returned with the money in it if it was found: ...by someone who lives close by? Would it be:
TRT_Q570	If you lost a wallet or purse that contained two hundred dollars, how likely is it to be returned with the money in it if it was found: ...by a complete stranger? Would it be:
TRT_Q610	How much confidence do you have in: ...the police?
TRT_Q630	How much confidence do you have in: ...the justice system and courts?
TRT_Q640	How much confidence do you have in: ...the health care system?
TRT_Q650	How much confidence do you have in: ...the school system?
TRT_Q660	How much confidence do you have in: ...the welfare system?
TRT_Q670	How much confidence do you have in: ...federal parliament?
TRT_Q680	How much confidence do you have in: ...banks?
TRT_Q690	How much confidence do you have in: ...major corporations?
TRT_Q700	How much confidence do you have in: ...local merchants and business people?

Variable Name	Description
VOR_Q110	Using a scale of 1 to 5, where 1 means it can never be justified, and 5 means it can always be justified: ...do you think telling lies in your own interest can be justified?
VOR_Q120	Using a scale of 1 to 5, where 1 means it can never be justified, and 5 means it can always be justified: ...what about failing to report damage you've done accidentally to a parked vehicle?
DWELC	Dwelling type of the respondent.
DWELLOWN	Dwelling owned by a member of the household
LIVE_DWELLING	Length of time respondent has lived in current dwelling.
LIVE_NEIGH	Length of time respondent has lived in current neighbourhood.
LIVE_LOCAL	Length of time respondent has lived in current city or local community.
DOR_Q622	Would you say that you know most, many, a few or none of the people in your neighbourhood?
DOR_Q623	About how many people in your neighbourhood do you know well enough to ask for a favour?
DOR_Q627	Would you say this neighbourhood is a place where neighbours help each other?
DOR_Q628	In the past month, have you done a favour for a neighbour?
DOR_Q629	In the past month, have any of your neighbours done a favour for you?
DOR_Q635	How would you describe your sense of belonging to your local community? Would you say it is:
DOR_Q636	What about (your sense of belonging) to your province?
DOR_Q637	What about (your sense of belonging) to Canada?
BRTHCAN	Country of birth of the respondent.
BRTHPRVC	Province of birth of respondent.
BRTHREGC	Country or region of birth of the respondent.
YRARRI	Range of years when the respondent came to live permanently in Canada.
AGEARRIGRC	Age groups of the respondent when came to live permanently in Canada.
BPR_Q50	Are you now, or have you ever been, a landed immigrant in Canada?
YRLNDIMM	Range of years when the respondent received his/her landed immigrant status.
AGELNDIMMGRC	Age groups of the respondent when received landed immigrant status.
BPR_Q60	Under which of the following broad immigration programs did you become a landed immigrant in Canada:
BPR_Q65	Was it you or another family member who applied under the points system?
ETHNIC7	Ethnic background of the respondent. (Seven categories)
BRTHPREGC	Country or region of birth of the respondent's partner.
ETHNICPR7	Ethnic background of the respondent's partner. (Seven categories)

Variable Name	Description
BRTHMREGC	Country or region of birth of the respondent's mother.
BRTHFREGC	Country or region of birth of the respondent's father.
AIR_Q110	Are you an Aboriginal person, that is, North American Indian, Métis or Inuit?
AIP_Q110	Is your %spouse/partner% an Aboriginal person, that is, North American Indian, Métis or Inuit?
VISMIN	Visible minority status of the respondent.
VISMINPR	Visible minority status of the respondent's spouse/partner
RELIGATT	Religious attendance of the respondent.
RLR_Q110	How important are your religious or spiritual beliefs to the way you live your life? Would you say they are:
RLR_Q120	In the past 12 months, how often did you practice religious or spiritual activities on your own? This may include prayer, meditation and other forms of worship taking place at home or in any other location.
RELIG6	Religion of respondent. In six categories.
LANCH	First childhood language of the respondent.
LANCHSUE	Respondent still understands first childhood language - English.
LANCHSUF	Respondent still understands first childhood language - French.
LANCHSUO	Respondent still understands first childhood language - Other.
LANHSDC	Respondent's household language.
INR_Q005	During the past 12 months, did you receive income from: ...employment including wages, salaries, commissions and tips?
INR_Q006	During the past 12 months, did you receive income from: ...self-employment including wages, salaries, commissions and tips?
INR_Q007	During the past 12 months, did you receive income from: ...investments (such as stocks, bonds, mutual funds)?
INR_Q008	During the past 12 months, did you receive income from: ...RRIFs (registered retirement income funds)?
INR_Q012	During the past 12 months, did you receive income from: ...employment insurance?
INR_Q013	During the past 12 months, did you receive income from: ...worker's compensation?
INR_Q014	During the past 12 months, did you receive income from: ...benefits from Canada or Quebec Pension Plan?

<b>Variable Name</b>	<b>Description</b>
INR_Q015	During the past 12 months, did you receive income from: ...retirement pensions, superannuation and annuities?
INR_Q016	During the past 12 months, did you receive income from: ...Basic Old Age Security?
INR_Q017	During the past 12 months, did you receive income from: ...Guaranteed Income Supplement or Survivor's Allowance?
INR_Q018	During the past 12 months, did you receive income from: ...Child Tax Benefits?
INR_Q019	During the past 12 months, did you receive income from: ...provincial or municipal social assistance or welfare?
INR_Q020	During the past 12 months, did you receive income from: ...Child Support/Alimony?
INR_Q021	During the past 12 months, did you receive income from: ...other income (e.g., rental income, scholarships, other government income, dividends, interest on bonds, deposits and savings certificates, etc.)?
INR_Q025	What was your main source of income during the past 12 months?
INCM	Annual personal income of the respondent.
INCMMEMC	Not including the respondent, number of household members receiving income from any source, during the past 12 months.
INCMHSD	Total household income.
WTBS_001	Bootstrap weight # 1 for personal weight.

**Appendix F**  
**Tips for using GSS mean bootstrap weights in  
some commercial analytic software**

## Tips for using GSS mean bootstrap weights in some commercial analytic software

A survey weight variable with a corresponding set of 500 mean bootstrap weight variables are provided with many GSS data files in order that a full design-based approach may be taken for doing analysis with the data.

A design-based approach to analysis first involves using the survey weight variable for obtaining weighted estimates of the quantities of interest. Then, additional information about the survey design is used in order to make estimates of the variances<sup>1</sup> (and covariances) of these estimated quantities. In the case of many GSS PUMF's, this additional information is in the form of 500 mean survey bootstrap weight variables, where each mean bootstrap weight is derived from 25 independent survey bootstrap samples<sup>2</sup>. The design-based estimates and variance estimates can then be used for making the inferences required in the analysis.

The form of a mean bootstrap variance estimate can be described briefly as follows:

Let  $\hat{\beta}$  be the weighted estimate of quantity of interest,  $\beta$ , computed using the survey weight variable  $w$ , and let  $\hat{\beta}^{(b)}$  be an estimate obtained in exactly the same manner, except for substituting the  $b$ th mean bootstrap weight variable  $w^{(b)}$  for the survey weight variable  $w$ ,  $b=1,2,\dots,500$ . This yields (mean) bootstrap estimates  $\hat{\beta}^{(1)}, \dots, \hat{\beta}^{(500)}$  of  $\beta$ . Then the usual mean bootstrap estimate of the variance of  $\hat{\beta}$  is

$$\hat{V}_B(\hat{\beta}) = \frac{25}{500} \sum_{b=1}^{500} (\hat{\beta}^{(b)} - \hat{\beta})^2. \quad (1)$$

If  $\hat{\beta}$  is a vector instead of a single value, such as if  $\hat{\beta}$  is the set of coefficients of a model, then the matrix of estimates of the variances and covariances of the elements of  $\hat{\beta}$  is

$$\hat{V}_B(\hat{\beta}) = \frac{25}{500} \sum_{b=1}^{500} (\hat{\beta}^{(b)} - \hat{\beta})(\hat{\beta}^{(b)} - \hat{\beta})'. \quad (\text{The value "25" in the formula is due to the fact that each GSS}$$

mean bootstrap weight is created from 25 bootstrap samples. The value "500" in the formula is due to the fact that we have 500 different mean bootstrap weights. If either the number of bootstrap samples used to create each mean bootstrap weight variable or the number of mean bootstrap weight variables should change from 25 and 500 respectively, then the values in formula (1) would need to change.)

Survey bootstrapping is just one replication approach that may be used in order to obtain design-based variance estimates with survey data. While several commercial software packages for design-based analysis offer replication approaches for variance estimation, they usually do not specify mean bootstrapping as one of these approaches. However, due to the similarity in the form of the variance estimate for the mean bootstrap and for the particular replication method called BRR with a Fay adjustment, programs that can carry out variance estimation by this latter approach with user-supplied replication weights can be used to obtain mean bootstrap variance estimates<sup>3</sup>. In particular, in these software, the 500 mean bootstrap weights provided in the GSS PUMF need to be designated as 500 BRR weights and the Fay adjustment factor must be given the value of

$$1 - \sqrt{1/25} = .8.$$

In the sections below, instructions will be given for implementing mean bootstrap variance estimation with GSS PUMF data, using 3 different commercial software packages that can carry out some design-based analysis for BRR with a Fay adjustment: Stata 9 or 10, SUDAAN and WesVar. In all GSS cycles where mean bootstrap weights are provided, the names given to these bootstrap variables in the user documentation are wtbs\_001 to wtbs\_500. The name of the survey weight variable is usually wght\_per.

---

1. The variance that is estimated in a design-based approach is the variability in an estimate due to resampling by exactly the same design from the same finite population.

2. More details about how these mean bootstrap weight variables are created can be obtained in the survey documentation.

3. For a more detailed description see Phillips (2004)

## Stata 9 or 10

Beginning with Version 9, the commercial software package Stata added some replication approaches for carrying out design-based variance estimation in its survey analysis commands. One replication approach offered is the BRR approach with a Fay adjustment, and it is this approach that would be specified when analyzing GSS data.

In order to specify this approach, the following is recommended:

1. Before using any of the survey analysis commands, use a “svyset” statement to declare the data to be survey data, to designate the variables that contain information about the survey design and to specify the method for variance estimation. Settings made by “svyset” are saved with a dataset when (or if) a dataset is saved. The form of the svyset statement to be used with a GSS analysis dataset would have the following form:

```
svyset [pweight=wght_per], vce(brr) fay(.8) brrweight(wtbs_001-wtbs_500) mse
```

Declaring **pweight=wght\_per** tells Stata that the survey weight (which is often called the probability weight) is the variable **wght\_per**.

The option **vce(brr)** states that the variance estimation approach to use is BRR.

The option **fay(.8)** states that the BRR variance estimation approach is to use a Fay’s adjustment of .8.

The option **brrweight(wtbs\_001-wtbs\_500)** states that the names of the BRR weight variables are **wtbs\_001**, **wtbs\_002**, ..., **wtbs\_500**. This option can also be designated as **brrweight(wtbs\_\*)** provided there are no variables other than the bootstrap weight variables whose names begin with “wtbs\_”.

Finally, the **mse** option tells Stata to calculate the variance using squared differences between bootstrap estimates and the full-sample estimate of the quantities of interest, as shown in equation (1). If this option is not included, Stata uses squared differences between each bootstrap estimate and the mean of all the bootstrap estimates. Both approaches should yield approximately the same result.

2. There is an extensive list of survey analysis commands in Stata, which take a design-based approach in their computations. These commands, described in the Stata documentation, are implemented through the use of the “svy” prefix along with the names of other estimators. For example, **svy: mean** is the command for estimating population and subpopulation means and estimates of variability taking a design-based approach. When the **svyset** statement precedes all survey commands, the survey commands do not have to contain any information about the design-based approach to be taken. It should be noted that, even though most of the commands that allow the “svy” prefix are also the names of commands for non-survey data, what is estimated, what options are available and what can be done through post-estimation change when the “svy” prefix is added.

## **SUDAAN**

SUDAAN is a commercial software package developed by the Research Triangle Institute specifically for analysis of data from complex sample surveys and other observational and experimental studies involving cluster-correlated data. The SAS-callable version of the software is particularly useful to people familiar with SAS. In Release 9.0 and later, all procedures in SUDAAN can take the BRR approach with a Fay adjustment to estimate variances and covariances.

Specification of the variance estimation approach to be used by SUDAAN is done in the procedure statement for a particular procedure. Additional sample design statements provide further information required by the program. In particular, to carry out mean bootstrapping with GSS data, the following is required:

- specify **DESIGN=BRR** in the procedure statement
- include the following WEIGHT statement to identify the survey weight variable:

**WEIGHT wght\_per;**

- include the REPWGT statement to indicate the names of the mean bootstrap variables on your data file and to give the number of bootstrap samples used to produce each mean bootstrap variable (which is used to calculate the Fay adjustment). In particular, for GSS PUMFs, this REPWGT statement would have the form:

**REPWGT wtbs\_001-wtbs\_500 / ADJFAY=25;**

## **WesVar**

WesVar is a software package produced by Westat which carries out various analyses of survey data using exclusively replication methods for variance estimation. One of the methods offered is BRR with a Fay adjustment. Quoting heavily from Phillips (2004), in WesVar, the variance estimation method is specified when creating a new WesVar data file. The resulting file is then used to define workbooks where table and regression requests are carried out. To define a WesVar data file with mean bootstrap weights:

- Move the replicate weight variables (i.e., wtbs-001 to wtbs\_500) to the *Replicates* box..
- Move the survey weight variable (i.e., wght\_per) to the *Full sample* box.
- For the mean bootstrap, specify the *Method* as Fay and specify Fay\_K=.8.
- Move analysis variables to the *Variables* box, a unique identifier to the ID box (optional), and save the file.

Phillips (2004) illustrates these instructions with an example using data from GSS 14.
