1. INTRODUCTION

This package is designed to enable interested users to access and manipulate the microdata file for the sixth cycle of the General Social Survey, conducted from January through December, 1991. It contains information on the objectives, methodology and estimation procedures as well as guidelines for releasing estimates based on the survey.

This document gives a description on how to correctly use the microdata file. Appendix D contains the data dictionary for the microdata file, the major part of this documentation package. The survey questionnaires are contained in Appendix B, and the variance tables are in Appendix A.

Excluding the appendices, this package is available in machine readable form.

2. OBJECTIVES

Increased pressure, over the last five to ten years, to operate more efficient government funded programmes, has led to a related increase in the information needed for policy formulation, programme development and evaluation. Many of these needs could not be filled through existing data sources or vehicles because of the range or periodicity of the information required.

The two primary objectives of the General Social Survey (GSS) aim at closing these gaps. These objectives are: to gather data on social trends in order to monitor temporal changes in the living conditions and well-being of Canadians; and to provide immediate information on specific social policy issues of current or emerging interest. The GSS is a continuing program with a single survey cycle each year.

To meet the stated objectives, the data collected by the GSS are made up of three components: Classification, Core and Focus.

Classification content consists of variables which provide the means of delineating population groups and for use in the analysis of Core and Focus data. Examples of classification variables are age, sex, education, and income.

Core content is designed to obtain information which monitors social trends or measures changes in society related to living conditions or well-being. Cycle 6 was the first cycle to return to previous core content: health. Most of the core content of Cycle 6 repeated Cycle 1, conducted in 1985. Much of the core content was also covered in the Canada Health Survey (1978/79), so the three surveys can be used to measure changes in health status over time.

Focus content is aimed at the second survey objective of GSS. This component obtains information on specific policy issues which are of particular interest to certain federal departments or other user groups. In general, focus content, is not expected to be repeated on a periodic basis. The focus content for Cycle 6 was diffuse: flu vaccinations, and emotional health measures sponsored by various divisions of Health and Welfare Canada and a health status classification system sponsored internally by Analytical Studies Branch.

3. POPULATION

The target population for the GSS was all persons 15 years of age and older in Canada, excluding:

1. residents of the Yukon and Northwest Territories;
2. full-time residents of institutions.

The survey employed Random Digit Dialling (RDD), a telephone sampling method. Households without telephones were therefore excluded, however, persons living in such households represent less than 2% of the target population. Survey estimates have been adjusted (weighted) to represent persons without telephones.

4. SURVEY DESIGN

Data for Cycle 6 of the GSS was collected monthly from January to December, 1991. The sample was evenly distributed over the 12 months to counterbalance seasonal variation in the information gathered. Most of the sample was selected using the Elimination of Non-Working Banks technique of Random Digit Dialling (RDD). A description of this method is provided in Section 4.2. There was also a supplementary sample of the elderly, which is described in Section 4.3. Stratification procedures used in the survey design are outlined in Section 4.1, and Sections 4.4 discusses sample

sizes. A small reinterview study was also conducted and is discussed in Section 4.5.

4.1 Stratification

In order to carry out sampling, each of the ten provinces was divided into strata or geographic areas. Generally, for each province one stratum represented the Census Metropolitan Areas (CMAs) of the province and another represented the non-CMA areas. There were two exceptions to this general rule:

- Prince Edward Island has no CMA and so did not have a CMA stratum
- Montreal and Toronto were each separate strata

4.2 Elimination of Non-working Banks RDD Design

The Elimination of Non-Working Banks (ENWB) sampling technique is a method of Random Digit Dialling in which an attempt is made to identify all working banks¹ for an area (i.e., to identify all banks with at least one household). Thus, all telephone numbers within non-working banks are eliminated from the sampling frame.

For each province, lists of telephone numbers in use were purchased from the telephone companies and lists of working banks were extracted. Each bank was assigned to a stratum within its province.

A special situation existed in Ontario and Quebec because some small areas are serviced by independent telephone companies rather than by Bell Canada. The area code prefixes for these areas were identified by matching the Bell file with a file of all area codes and prefixes. Area code prefixes from Ontario and Quebec and not on the Bell file were identified. All banks within these area code prefixes were generated and added to the sampling frame. Use of the Waksberg method² was not possible for these areas since it requires that an accurate population estimate be available for the

¹ A bank of telephone numbers is a set of 100 numbers with the same first eight digits (i.e. the same Area Code-Prefix-Bank ID). Thus 613-951-9180 and 613-951-9192 are in the same bank, but 613-951-9280 is in a different bank.

² Waksberg, J. "Sampling methods for Random Digit Dialling," *Journal of the American Statistical Association*, 73, (1978): 40-46.

survey area. Such an estimate was not available for the parts of Ontario and Quebec not covered by Bell.

A similar situation also existed for all of Prince Edward Island for the first eight months of the survey. During this period the Waksberg method would have provided a more efficient generation of household telephone numbers. However, the Waksberg method would not have been as statistically efficient (due to clustering) and also would have introduced operational complexities. In September, telephone files from the phone company servicing Prince Edward Island became available. The non-working banks were then eliminated from the frame.

A random sample of telephone numbers was generated in each survey month for each stratum (from the working banks). An attempt was made to generate the entire sample of telephone numbers on the first day of interviewing. Therefore, a prediction of the percentage of numbers dialed that would reach a household had to be made (this is known as the "hit rate"). The hit rate for January, the first survey month, was estimated using information from previous RDD surveys. Hit rates for subsequent months were revised as required based on January's experience.

For Cycle 6 of the GSS, 45.4% of the numbers dialed reached households. An attempt was made to conduct a GSS interview with one randomly selected person from each household.

4.3 Supplementary Sample of the Elderly

The Department of Health and Welfare sponsored a supplementary sample of seniors (aged 65 and over), which roughly doubled the size of the sample for this group. This supplementary sample was a simple random sample selected from lists of households that had recently been part of the Labour Force Survey sample and were known to have at least one senior living there.

4.4 Sample Sizes

The sample consisted of 14,875 households and a GSS Selection Control Form (GSS 6-1) was completed for each. The GSS 6-1 listed all household members and collected the following basic demographic information: age, sex, marital status and relation to the household reference person. A

person 15 years of age or older was randomly selected from households which were part of the RDD sample, and an individual 65 years of age or older was randomly chosen from households which were part of the supplementary sample. A GSS 6-2 was then completed for these selected persons.

The GSS 6-2 collected the following types of information: health status with respect to the prevalence of chronic health problems (Section A); two-week disability status (Section B); twelve month health care contacts (Section C); the use of flu shots (Section D); health status indicators (Section E); prevalence of activity limitations, the type of limitation and the cause of the limitation (Section F); physical condition and activity, height, weight and self-perceived weight (Section G); sleep (Section H); smoking (Section J); alcohol consumption (Section K); occupation and health (Section M); satisfaction measures (Section N); Bradburn emotional health scale (Section P); background socio-economic questions for classification purposes (Section Q); and a final section asking respondents for detailed contact information for follow-up (Section R). A response was obtained from 11,924 of the selected households, yielding an 80% response rate.

4.5 Reinterview

Cycle 6 also conducted a Reinterview study aimed at the following: measuring the quality of the data obtained from the main survey; measuring the response variance of respondents, i.e. the extent to which respondents' changed their answers from day to day; measuring the effect of interviewers on responses; measuring changes in the respondents health; and, finally, evaluating the clarity of the questionnaire. The Reinterview questionnaire was composed of Sections A to F from the Main Survey and a new section G which sought to determine if there had been any changes in the respondent's health since the main survey interview.

Sub-samples of respondents from the August and September RDD samples were reinterviewed in September and October respectively. Reinterviews were attempted with 555 main survey respondents and 510 responses were obtained. None of the reinterview data is contained on the public use file.

5. COLLECTION

Two questionnaires were used to conduct the interviews: the Selection Control Forms GSS 6-1 and

GSS 6-1B³, and the main questionnaire, the GSS 6-2. Respondents were interviewed in the official language of their choice. The French and English versions of the main questionnaire were identical with the exception of question Q16 "What language did you first speak in childhood?". Respondents were not asked if they still understood the language in which they were being interviewed. Interviews by proxy were allowed for language and health reasons. Questionnaires and procedures were field tested in August, 1990 in Halifax, Montreal and Toronto.

Data collection began the third week of January 1991 and continued through the second week of December 1991. The sample was evenly distributed over the 12 months. All interviewing took place using centralized telephone facilities in five of Statistics Canada's regional offices with calls being made from approximately 9 a.m. until 9:30 p.m., Monday to Saturday inclusive. The five regional offices were: Halifax, Montreal, Sturgeon Falls, Winnipeg and Vancouver. Interviewers were trained by Statistics Canada staff in telephone interviewing techniques, survey concepts and procedures in a two day classroom training session. The majority of interviewers had previous telephone interviewing experience.

It would be too lengthy to include all the survey manuals as part of this documentation package, however, they can be purchased (see Chapter 9). Shown below is a list of the manuals used in the survey:

GSS 6-3: Procedures Manual

GSS 6-4: Interviewer's Manual

GSS 6-6: Interviewer's Exercise Book

GSS 6-7: Senior Interviewer's Exercise Book.

GSS 6-8: Interviewer's Training Guide

GSS 6-20: Reinterview - Regional Office Procedures Manual

GSS 6-21: Reinterview - Interviewer's Manual

³ The 6-1 was used in the collection of the RDD sample and the 6-1B was used with the supplementary sample. The only difference between them is the age group of the respondents selected to complete a questionnaire i.e 15 years of age and over for the 6-1 and 65 years of age and over for the 6-1B.

6. PROCESSING

The following is an overview of the processing steps for Cycle 6 of the GSS.

6.1 Data Capture

Data from the survey questionnaires were entered directly into mini-computers in Statistics Canada's regional offices (ROs) and transmitted to Ottawa. The data capture program allowed for a valid range of codes for each question and automatically followed the flow of the questionnaire.

6.2 Edit and Imputation

All survey records were subjected to an exhaustive computer edit to identify and correct invalid or inconsistent information on the questionnaires. For the first time, a batch edit system was implemented for use in the Regional Offices. The system mainly edited the 6-2 for possible flow errors, values out of range and missing values. Edits on the 6-1 and 6-1B were limited to a few edits for the respondent's age and sex. In the event the interviewer was unable to correctly resolve the detected errors, it was possible for the interviewer to bypass the edit and forward the data to head office for resolution.

Head office edits performed the same checks as the batch edit system as well as more detailed edits. Records with missing or incorrect information were assigned non-response codes or corrected from other information from the respondent's questionnaire. In most cases editing was 'bottom-up', meaning that specific related information following a question with a branching pattern was employed to ensure the branching was correct. For example, question D3 'Did you have a flu shot during the fall or winter of 1990-1991?' was edited in relation to question D4 'Why did you not have a flu shot?' Correlation edits were also conducted, for example, question J7 of the Health Questionnaire was 'At what age did you last stop smoking daily?'. This question was edited in relation to the respondent's age as derived from question Q13 'What is your date of birth?'. These edits ensured that the information was consistent and complete among questions.

Due to the nature of the survey, imputation was not appropriate for most items and thus 'not stated'

codes were usually assigned for missing data. In some cases, the answer was not known but could be obtained deterministically by the questions which followed or from information from other areas of the survey.

Non-response was not permitted for those items required for weighting. Values were imputed in the rare cases where any of the following were missing: age, sex, and number of residential telephone lines. The imputation was based on a detailed examination of the questionnaire and the consideration of any useful data such as ages and sexes of other household members, and interviewer's comments.

DVTEL (number of residential telephone lines) was derived from questions Q5 to Q10 of the Health Questionnaire (GSS 6-2). When the questionnaire did not contain adequate information to derive DVTEL, it was assigned a value of one (1).

6.3 Coding

Several questions allowing write-in responses had the write-in information coded into either new unique categories, or to a listed category if the write-in information duplicated a listed category. Where possible (e.g., occupation, industry, language, ethnicity, country of birth and religion), the coding followed either the standard classification systems as used in the Census of Population or as in the case of health problems (F3) and nature of limitation (F2), the Health and Activity Limitation Survey.

6.4 Creation of Combined and Derived Variables

A number of variables on the file have been derived by using items found on the GSS 6-1 and GSS 6-2 questionnaires. Derived variable names generally start with DV and are followed by characters referring to the question number or subject. In some cases, the derived variables are straightforward and involve collapsing of categories. In other cases, several variables have been combined to create a new variable. The data dictionary provides comments indicating the origin of these variables.

6.5 Amount of Detail on Microdata File

In order to guard against disclosure, the amount of detail included on this file is less than is available on the master file retained by Statistics Canada. Variables with extreme values have been capped and information for some variables have been aggregated into broader classes (e.g., occupation, religion, ethnicity).

The measures taken to cap or group data have been indicated in the data dictionary.

7. ESTIMATION

When a probability sample is used, as was the case for the GSS, the principle behind estimation is that each person selected in the sample 'represents' (in addition to himself/herself) several other persons not in the sample. For example, in a simple random sample of 2% of the population, each person in the sample represents 50 persons in the population.

An overall weighting factor (FINAL_WT) was placed on each record to indicate the number of sampled persons that the record represents. This weighting factor refers to the number of times a particular record should contribute to a population estimate. For example, to estimate the number of persons who have graduated from high school, the value of FINAL_WT is summed over all records with this characteristic. This weighting process is described in Section 7.1.

7.1 Weighting

A self-weighting sample design is one for which the weights of each unit in the sample are the same. The portion of the GSS sample selected using the Elimination of Non-Working Banks (ENWB) sampling technique has such a design, each household within a stratum having an equal probability of selection.

This probability is equal to:

$$\frac{\text{Number of telephone numbers sampled within the stratum}}{\text{Total number of possible telephone numbers within the stratum}}$$

(The total number of possible telephone numbers for a stratum is equal to the number of working banks for a stratum times 100).

The supplementary component of the survey was a simple random sample drawn from households recently in the Labour Force Survey (LFS). Their individual probabilities of selection were thus proportional to the probability of selection of the household in the LFS.

Where possible, each survey month was weighted independently. This was done in an attempt to ensure that each survey month contributes equally to estimates. If monthly sample sizes were not large enough, two or more survey months were combined in certain steps of the weighting.

1) Basic Weight Calculation

Each household (responding and non-responding) in the RDD sample was assigned a weight equal to the inverse of its probability of selection. This weight was calculated independently for each stratum-month group as follows:

$$\frac{\text{Number of possible telephone numbers in each stratum-month group}}{\text{Number of sampled telephone numbers in each stratum-month group}}$$

Each household (responding and non-responding) in the supplementary sample was assigned the LFS "sub-weight" as the basic weight.

The RDD sample and the supplementary sample were combined at this point.

2) Non-Response Adjustment

Weights for responding households were adjusted to represent non-responding households. This was done independently within each stratum-month group. Records were adjusted by the following factor:

$$\frac{\text{Total of the household weights of all households in each stratum-month group}}{\text{Total of the household weights of responding households in each stratum-month group}}$$

Non-responding households were then dropped.

3) Multiple Telephone Adjustment

Weights for households with more than one residential telephone number (i.e. not used for business purposes only) were adjusted downwards to account for the fact that such households had a higher probability of being selected. The weight for each household was divided by the number of residential telephone numbers that serviced the household.

4) Person Weight Calculation

A person weight was then calculated for each person who responded to the survey, by multiplying the household weight for that person by the number of persons in the household who were eligible to be selected for the survey (i.e. for the RDD sample the number of persons 15 years of age or older and for the supplementary sample the number of persons 65 years of age or older).

5) Adjustment to External Totals.

The weights were adjusted several times using a raking ratio procedure. This procedure ensured that, based on the survey's total sample, estimates produced of the sizes of strata or of province-age-sex

groups would match external references. The two sets of groupings used for these adjustments were stratum-month and province-age-sex. The age groupings used were: 15-19, 20-24, 25-29, 30-34, 35-39, 40-44, 45-49, 50-54, 55-59, 60-64, 65-69, 70+.

Sample sizes were too small to allow the province-age-sex adjustments to be made at the survey month level. Also due to small sample sizes, there were cases where two or more adjacent age groups in the same province-sex group, or two adjacent months in the same stratum group, were collapsed before the adjustments were made.

The reference totals for the stratum-month adjustments were one twelfth of the population projections for each month. The reference totals for the province-age-sex adjustments were the average of the population projections for each month. At each stage in the adjustment process the weights were adjusted by the factor:

$$\frac{\text{reference total for group}}{\text{sum of person weights for group}}$$

The groupings used for the adjustments alternated between province-age-sex and stratum-month until the weights converged.

It should be noted that persons living in households without telephone service are included in the reference totals even though they were not sampled.

7.2 Weighting Policy

Users are cautioned against releasing unweighted tables or performing any analysis based on unweighted survey results. As was discussed in Section 7.1, there were several weight adjustments performed independently to the records of each province. Sampling rates as well as non-response rates varied significantly from province to province.

Contact was made or attempted with 14,875 households during the survey. Of these, 2,146 (14.4%) were non-responding households. The non-responding households included 833 household refusals,

981 households that could not be reached during the entire survey period ("ring-no-answer" households) and 332 cases where a response could not be obtained due to language difficulties or other problems. An interview was attempted with a person randomly selected from the eligible household members of the 12,729 responding households. From these households, 11,924 usable responses were obtained. The difference consists of 241 person-level refusals, 558 cases where the interview could not be completed for some other reason, and 6 cases where the person interviewed was ineligible. A response rate of 80.1% was obtained, when it is assumed that all of the households for which there was no response were "in scope" (i.e., had at least one eligible member).

It is known that non-respondents are more likely to be males and more likely to be younger. In the responding sample, 2.8% were males between the ages of 15 and 19, while in the overall population, approximately 4.5% are males between 15 and 19. Therefore, it is clear that the sample counts cannot be considered to be representative of the survey target population unless appropriate weights are applied.

7.3 Types of Estimates

Two types of 'simple' estimates are possible from the results of the General Social Survey. These are qualitative estimates (estimates of counts or proportions of people possessing certain characteristics) and quantitative estimates involving quantities or averages. More complex estimation and analyses are covered in Section 7.4.

7.3.1 Qualitative Estimates

It should be kept in mind that the target population for the GSS was non-institutionalized persons 15 years of age or over, living in the ten provinces. Qualitative estimates are estimates of the number or proportion of this target population possessing certain characteristics. The number of people (4,968,628) who describe their state of health as excellent (Question A2) is an example of this kind of estimate. These estimates are readily obtained by summing the final weights (FINAL_WT) of the records possessing the characteristic in question.

7.3.2 Quantitative Estimates

Some variables on the General Social Survey microdata file are quantitative in nature (e.g., M28 - days of work missed as a result of a workplace injury or illness). From these variables, it is possible to obtain such estimates as the average number of days of work missed by sex. These estimates are of the following ratio form:

$$\text{Estimate (average)} = X / Y$$

The numerator (X) is a quantitative estimate of the total of the variable of interest (say, days of work missed as a result of a workplace injury or illness) for a given sub-population (say, females who in the past 12 months suffered a workplace injury or illness). X would be calculated by multiplying the final weight (FINAL_WT) by the variable of interest (M28) and summing this product over all records for women who suffered a workplace injury or illness (DVSEX=2 and M27=1). The denominator (Y) is the qualitative estimate of the number of participants within that subpopulation (those women who had suffered a workplace injury or illness in the past 12 months). Y would be calculated by summing the final weight (FINAL_WT) over all records for females who reported suffering a workplace injury or illness in the past 12 months (DVSEX=2 and M27=1). The two estimates X and Y are derived independently and then divided to provide the quantitative estimate. The estimated average number of days of work missed for women who suffered a workplace injury or illness in the previous 12 months was:

$$28.8 = \frac{9,970,553}{346,657.4}$$

7.4 Guidelines for Analysis

As is detailed in Section 4 of this document, the respondents from the GSS do not form a simple random sample of the target population. Instead, the survey had a complex design, with stratification and multiple stages of selection, and unequal probabilities of selection of respondents. Using data from such complex surveys presents problems to analysts because the survey design and the selection probabilities affect the estimation and variance calculation procedures that should be used.

The GSS used a stratified design, with significant differences in sampling fractions between strata. Thus, some areas are over-represented in the sample (relative to their populations) while some other areas are relatively under-represented; this means that the unweighted sample is not representative of the target population.

The survey weights must be used when producing estimates or performing analyses in order to account for this over- and under-representation. While many analysis procedures found in statistical packages allow weights to be used, the meaning or definition of the weight in these procedures often differs from that which is appropriate in a sample survey framework, with the result that while in many cases the estimates produced by the packages are correct, the variances that are calculated are almost meaningless.

For many analysis techniques (for example linear regression, logistic regression, estimation of rates and proportions, and analysis of variance), a method exists which can make the variances calculated by the standard packages more meaningful. If the weights on the data, or any subset of the data, are rescaled so that the average weight is one (1), then the variances produced by the standard packages will be more reasonable; they still will not take into account the stratification and clustering of the sample's design, but they will take into account the unequal probabilities of selection. This rescaling can be accomplished by dividing each weight by the overall average weight before the analysis is conducted.

For an analysis of all respondents who are regular cigarette smokers, the following steps are required:

- "Select" all respondents from the file who were classified as regular smokers (DVTYPSMK=1);
- Calculate the Average Weight for these records;
- For each of these respondents calculate a "working" weight equal to $FINAL_WT / Average\ Weight$;
- Perform the analysis for these respondents using the "working" weight.

The calculation of truly meaningful variance estimates requires detailed knowledge of the design of the survey; such detail cannot be given in this microdata file because of confidentiality. Variances that take the sample design into account can be calculated for many statistics by Statistics Canada on a cost recovery basis.

7.5 Methods of Estimation and Interpretation of Estimates

The basic sampling weight assigned to each sampled individual has been adjusted to reflect the age and sex composition of the various provincial populations as projected by the Labour Force Survey, for each month of 1991.

$$\begin{aligned} \sum_{i=1}^{11,924^4} \text{FINAL_WT} &= 20,980,862 \\ &= \text{an estimate of the number} \\ &\quad \text{of persons 15 years of age} \\ &\quad \text{and older in the population.} \end{aligned}$$

When estimates of the number of persons are desired, FINAL_WT is to be used.

Examples & Interpretation:

- (i) Nearly 87% of Canadians 15 years of age and older (18.3 million) describe their state of health as "good" or better (A2 = 1, 2 or 3).
- (ii) 26% of the Canadian population 15 years of age and older were classified as regular cigarette smokers (DVTYPSMK=1). The 25-44 age group (03 <= DVAGE <=06) comprised 31% of regular cigarette smokers.
- (iii) 44% of the female population (DVSEX=2) can be classified as current drinkers (DVTYPDNK=1).

⁴ There were 11,924 responding households (with one randomly chosen respondent per household).

8. RELEASE GUIDELINES AND DATA RELIABILITY

It is important for users to become familiar with the contents of this section before publishing or otherwise releasing any estimates derived from the General Social Survey microdata file.

This section of the documentation provides guidelines to be followed by users. With the aid of these guidelines, users of the microdata file should be able to produce figures consistent with those produced by Statistics Canada and in conformance with the established guidelines for rounding and release. The guidelines can be broken into four broad sections: Minimum Sample Sizes for Estimates; Sampling Variability Policy; Sampling Variability Estimation; and Rounding Policy.

8.1 Minimum Sample Size For Estimates

Users should determine the number of records on the microdata file which contribute to the calculation of a given estimate. This number should be 15 or more. When the number of contributors to the weighted estimate is less than this, the weighted estimate should not be released regardless of the value of the Approximate Coefficient of Variation.

8.2 Sampling Variability Guidelines

The estimates derived from this survey are based on a sample of households. Somewhat different figures might have been obtained if a complete census had been taken using the same questionnaire, interviewers, supervisors, processing methods, etc. as those actually used. The difference between the estimates obtained from the sample and the results from a complete count taken under similar conditions is called the sampling error of the estimate.

Errors which are not related to sampling may occur at almost every phase of a survey operation. Interviewers may misunderstand instructions, respondents may make errors in answering questions, the answers may be incorrectly entered on the questionnaire and errors may be introduced in the processing and tabulation of the data. These are all examples of non-sampling errors.

Over a large number of observations, randomly occurring errors will have little effect on estimates

derived from the survey. However, errors occurring systematically will contribute to biases in the survey estimates. Considerable time and effort was made to reduce non-sampling errors in the survey. Quality assurance measures were implemented at each step of the data collection and processing cycle to monitor the quality of the data. These measures included the use of highly skilled interviewers, extensive training of interviewers with respect to the survey procedures and questionnaire, observation of interviewers to detect problems of questionnaire design or misunderstanding of instructions, procedures to ensure that data capture errors were minimized and coding and edit quality checks to verify the processing logic.

A major source of non-sampling errors in surveys is the effect of non-response on the survey results. The extent of non-response varies from partial non-response (failure to answer just one or some questions) to total non-response. Total non-response occurred because the interviewer was either unable to contact the respondent, no member of the household was able to provide the information, or the respondent refused to participate in the survey. Total non-response was handled by adjusting the weight of households who responded to the survey to compensate for those who did not respond.

In most cases, partial non-response to the survey occurred when the respondent did not understand or misinterpreted a question, refused to answer a question, could not recall the requested information, or could not provide proxy information.

Since it is an unavoidable fact that estimates from a sample survey are subject to sampling error, sound statistical practice calls for researchers to provide users with some indication of the magnitude of this sampling error.

Although the exact sampling error of the estimate, as defined above, cannot be measured from sample results alone, it is possible to estimate a statistical measure of sampling error, the standard error, from the sample data. Using the standard error, confidence intervals for estimates (ignoring the effects of non-sampling error) may be obtained under the assumption that the estimates are normally distributed about the true population value. The chances are about 68 out of 100 that the difference between a sample estimate and the true population value would be less than one standard error, about 95 out of 100 that the difference would be less than two standard errors, and virtually with certainty that the differences would be less than three standard errors.

Because of the large variety of estimates that can be produced from a survey, the standard deviation is usually expressed relative to the estimate to which it pertains. The resulting measure, known as the coefficient of variation of an estimate is obtained by dividing the standard error of the estimate by the estimate itself and is expressed as a percentage of the estimate. Before releasing and/or publishing any estimates from the microdata file, users should determine whether the estimate is releasable based on the guidelines shown on the following page.

	Type of Estimate	Coefficient of Variation	Policy Statement
1.	Unqualified	0.0 to 16.5%	Estimates can be considered for general unrestricted release. No special notation is required.
2.	Qualified	16.6 to 33.3%	Estimates can be considered for general unrestricted release but should be accompanied by a warning cautioning users of the high sampling variability associated with the estimates.
3.	Not for Release	33.4% or over	Estimates should not be released in any form under any circumstances. In such statistical tables, such estimates should be deleted.

Note: The sampling variability policy should be applied to rounded estimates.

8.3 Estimates of Variance

Variance estimation is described separately for qualitative and quantitative estimates.

8.3.1 Sampling Variability for Qualitative Estimates

Derivation of sampling variabilities for each of the qualitative estimates which could be generated from the survey would be an extremely costly procedure, and for most users, an unnecessary one. Consequently, approximate measures of sampling variability, in the form of tables, have been developed for use and are included in APPENDIX A ("Approximate Variance Tables"). These tables

were produced using the coefficient of variation formula based on a simple random sample. Since estimates for Cycle 6 of the General Social Survey are based on a complex sample design, a factor called the Design Effect has been introduced into the variance formula.

The Design Effect for an estimate is the actual variance for the estimate (taking into account the design that was used) divided by the variance that would result if the estimate had been derived from a simple random sample. The Design Effect used to produce the Approximate Variance Tables has been determined by first calculating Design Effects for a wide range of characteristics and then choosing among these a conservative value which will not give a false impression of high precision. These Design Effects are specified in the table below.

Design Effects

<u>Geographic Area</u>	<u>Design Effect</u>
Canada	1.66
Newfoundland	1.29
Prince Edward Island	1.19
Nova Scotia	1.33
New Brunswick	1.32
Quebec	1.33
Ontario	1.36
Manitoba	1.34
Saskatchewan	1.31
Alberta	1.33
British Columbia	1.32
Atlantic Region	1.41
Prairie Region	1.38

Approximate variance tables are provided for each province, the Atlantic Region, the Prairie Region and Canada. It should be noted that all coefficients of variation in these tables are approximate and, therefore unofficial. Estimates of actual variance for specific variables may be purchased from Statistics Canada. Use of actual variance estimates may allow users to release otherwise unreleasable

estimates; i.e., estimates with coefficient of variation in the "Not for Release" range (see the policy regarding the release of the survey estimates on preceding pages).

8.3.2 Sampling Variability For Quantitative Estimates

Approximate variances for quantitative variables cannot be as conveniently summarized. As a general rule, however, the coefficient of variation of a quantitative total will be larger than the coefficient of variation of the corresponding qualitative estimate (e.g., the number of persons contributing to the quantitative estimate). If the corresponding qualitative estimate is not releasable, then the quantitative total will in general not be releasable.

8.4 Rounding

In order that estimates produced from the General Social Survey microdata file correspond to those produced by Statistics Canada, users are urged to adhere to the following guidelines regarding the rounding of such estimates. It may be misleading to release unrounded estimates, as they imply greater precision than actually exists.

8.4.1 Rounding Guidelines

- (1) Estimates of totals in the main body of a statistical table should be rounded to the nearest thousand using the normal rounding technique (see definition in Section 8.4.2).
- (2) Marginal sub-totals and totals in statistical tables are to be derived from their corresponding unrounded components and then are to be rounded themselves to the nearest thousand units using normal rounding.
- (3) Averages, proportions, rates and percentages are to be computed from unrounded components and then are to be rounded themselves to one decimal using normal rounding.
- (4) Sums and differences of aggregates and ratios are to be derived from corresponding unrounded components and then rounded to the nearest thousand units or the nearest one decimal using

normal rounding.

- (5) In instances where, due to technical or other limitations, a different rounding technique is used resulting in estimates different from Statistics Canada estimates, users are encouraged to note the reason for such differences in the released document.

8.4.2 Normal Rounding

In normal rounding, if the first or only digit to be dropped is 0 to 4, the last digit to be retained is not changed. If the first or only digit to be dropped is 5 to 9, the last digit to be retained is raised by one. For example, the number 8499 rounded to thousands would be 8 and the number 8500 rounded to thousands would be 9.

9. ADDITIONAL INFORMATION

Additional information about this survey can be obtained from the individuals listed below. Data from the survey are available through published reports, special request tabulations, and this microdata file. The microdata file is available from the Housing, Family and Social Statistics Division of Statistics Canada at a cost of \$750.00. Tabulations can be obtained at a cost that will reflect the resources required to produce the tabulation.

APPENDIX A

Approximate Variance Tables

APPROXIMATE VARIANCE TABLES

By using the Approximate Variance Tables and the following rules, users should be able to determine approximate coefficients of variation for aggregates (totals), percentages, ratios, differences between totals, and differences between ratios.

Rules for Obtaining Approximate Variances

The following rules should enable the user to determine the approximate coefficients of variation from the Approximate Variance Tables for estimates of the number, proportion or percentage of the surveyed population possessing a certain characteristic and for ratios and differences between estimates.

As noted in Section 8.1, each estimate should be derived from at least 15 respondents in order to be released, regardless of the Approximate Coefficient of Variation.

Rule 1: Estimates of Numbers Possessing a Characteristic (Aggregates)

The coefficient of variation (cv) depends only on the size of the estimated aggregate itself. On the Approximate Variance Table, locate the estimated aggregate in the left-most column of the table (headed "Numerator of Percentage") and follow the asterisks across to the first figure encountered. This figure is the estimated coefficient of variation.

Example 1:

A user estimates that in Canada 390,931 females aged 15 years and over describe their state of health as poor compared to other people their age (question A2). How does the user determine the approximate coefficient of variation for this estimate?

Refer to the approximate variance table for Canada level estimates. The estimated aggregate does not appear in the left-most column (the 'Numerator of Percentage' column), so it is necessary to use the closest figure, namely 400,000. The coefficient of variation for an estimated aggregate is found by referring to the first non-asterisk entry for that row, in this case 8.5%. This cv falls within the range of cv's for 'Unqualified' estimates (i.e. 0.0% - 16.5%, pg. 21) allowing the estimate to be released without restriction.

Rule 2: Estimates of Percentages or Proportions Possessing a Characteristic

The coefficient of variation of an estimated percentage or proportion depends on both the size of the percentage or proportion and the size of the total upon which the percentage is based. Estimated percentages or proportions are relatively more reliable than the corresponding estimates of the numerators of the percentages, particularly if the percentages are 50 percent or more. (Note that in the tables the cv's decline in value reading from left to right).

When the percentage or proportion is based upon the total population of the geographic area covered by the table, the cv of the percentage or proportion is the same as the cv of the numerator of the percentage. In this case, Rule 1 can be used.

When the percentage or proportion is based upon a subset of the total population (e.g., those in a particular age-sex group), reference should be made to the percentage (across the top of the table) and to the numerator of the percentage or proportion (down the left side of the table). The intersection of the appropriate row and column gives the coefficient of variation.

Example 2:

A user estimates that in Canada 3.65% of females aged 15 years and over describe their state of health as poor compared to others their age (question A2). This is the expression of the estimate obtained in Example 1 as a percentage of all females aged 15 years and over in Canada. How does the user determine the approximate coefficient of variation for this estimate?

Refer to the approximate variance table for Canada level estimates. Because the estimate is a percentage which is based on a subset of the population covered by the table, it is necessary to use both the percentage (3.65%) and the numerator portion of the percentage (390,931) to determine the approximate coefficient of variation. Since the numerator does not appear in the left-most column (the 'Numerator of Percentage' column), it is necessary to use the figure closest to it, namely 400,000. Similarly, the percentage estimate does not appear among the column headings, so it is necessary to use the figure closest to it, namely 5.0%. The figure at the intersection of the row and column selected, namely 8.3%, is the coefficient of variation. This cv falls within the range of cv's for 'Unqualified' estimates (i.e. 0.0% - 16.5%, pg. 21) allowing the estimate to be released without restriction.

Rule 3: Ratios

In the case where the numerator is a subset of the denominator, the ratio should be converted to a percentage and Rule 2 applied. This would apply, for example, to the case where the denominator is the number of males and the numerator is the number of males who smoke regularly.

In the case where the numerator is not a subset of the denominator, the coefficient of variation of the ratio of two estimates is approximately equal to the square root of the sum of squares of each coefficient of variation considered separately. That is, the standard deviation of a ratio

$$R = X / Y$$

is

$$sd(R) = R * (cv(X)^2 + cv(Y)^2)^{1/2}$$

The coefficient of variation of R is approximately:

$$\begin{aligned} cv(R) &= sd(R) / R \\ &= (cv(X)^2 + cv(Y)^2)^{1/2} \end{aligned}$$

This formula will tend to overstate the error if X and Y are positively correlated and understate the error if X and Y are negatively correlated.

Example 3:

A user estimates that in Canada among females aged 15 years and over, 390,931 describe their state of health as poor compared to other people their age (question A2) and 2,442,276 describe their state of health as excellent as compared to others their age. The user is interested in the ratio of females describing their health as excellent versus those describing their health as poor. How does the user determine the approximate coefficient of variation for this ratio estimate?

The numerator of the ratio estimate is 2,442,276 (X). Using Rule 1 (refer to Example 1), the coefficient of variation for this estimate is determined to be 3.6% cv(X). The denominator of the ratio estimate is 390,931 (Y). Again using Rule 1, the coefficient of variation is determined to be 8.5% cv(Y). Using Rule 3, the coefficient of variation of the ratio estimate

is

$$cv = (0.036^2 + 0.085^2)^{0.5}$$
$$= .0923$$

Therefore at the Canada level, the ratio of females who describe their health as excellent versus females who describe their health as poor is 2,442,276/390,931 or 6.2 to 1. The coefficient of variation of this estimate is 9.23%, and so the estimate can be released without restriction.

Rule 4: Differences Between Totals or Percentages

The standard deviation of a difference between two estimates is approximately equal to the square root of the sum of squares of each standard deviation considered separately. That is, the standard deviation of a difference:

$$d = X - Y$$

is

$$sd(d) = \{ (X * cv(X))^2 + (Y * cv(Y))^2 \}^{1/2}$$

The coefficient of variation of d is approximately:

$$cv(d) = sd(d) / d$$

This formula is accurate for the difference between separate and uncorrelated characteristics but is only approximate otherwise.

Example 4:

A user estimates that in Canada, among those 15 years and over, 3.65% (X) of females describe their state of health as poor compared to others their age and 3.09% (Y - an estimated 316,783) of males describe their state of health as poor compared to other people their age. The user is interested in the difference between these two estimates. How does the user determine the approximate coefficient of variation for the estimate of the difference?

From Example 2, the coefficient of variation for the female estimate is 8.3%. The coefficient

of variation for the male estimate is 9.8%.

The difference between the estimates is 0.56%. Using Rule 4, standard deviation of the difference between the estimates is

$$\begin{aligned}sd &= ((0.0365 \times 0.083)^2 + (0.0309 \times 0.098)^2)^{0.5} \\ &= 0.0043\end{aligned}$$

and the coefficient of variation is

$$\begin{aligned}cv &= \frac{0.0043}{0.0056} \\ &= 0.7679\end{aligned}$$

Therefore the coefficient of the difference between the estimates is 76.79% and the estimate should not be released.

Rule 5: Difference of Ratios

In this case, Rules 3 and 4 are combined. The cv's of the two ratios are first determined using Rule 3, and the cv of their difference is found using Rule 4.

Example 5(a):

An estimated 707,715 persons described their state of health as poor (question A2) as compared to other people their age. This estimate has an approximate coefficient of variation of 6.1% (obtained from the 750,000 row, left-most column, of the Canada approximate variance table). The 95% confidence interval for this estimate is thus:

$$\begin{aligned} & \{707,715 - (2)(707,715)(0.061), 707,715 + (2)(707,715)(0.061)\} \\ & \{707,715 - 86,341, 707,715 + 86,341\} \\ & \{621,374, 794,056\} \end{aligned}$$

Example 5(b):

An estimated 3.65% of females aged 15 years and over in Canada described their state of health as poor when compared to other people their age or .0365 expressed as a proportion. From Example 2 this estimate has an approximate coefficient of variation of 8.3%. A 95% confidence interval for this estimate (expressed as a proportion) is

$$\begin{aligned} CI &= \{.0365 - (2 \times .0365 \times .083), .0365 + (2 \times .0365 \times .083)\} \\ &= \{.0304, .0426\} \end{aligned}$$

With 95% confidence it can be said that between 3.04% and 4.26% of females aged 15 years and over in Canada, describe their state of health as poor, compared to other people their age.

Note: Release guidelines which apply to the estimate also apply to the confidence interval. For example, if the estimate is not releasable, then the confidence interval is not releasable either.

T-test

Standard errors may also be used to perform hypothesis testing, a procedure for distinguishing between population parameters using sample estimates. The sample estimates can be numbers, averages, percentages, ratios, etc. Tests may be performed at various levels of significance, where a level of significance is the probability of concluding that the characteristics are different when, in fact, they are identical.

Confidence Limits

Although coefficients of variation are widely used, a more intuitively meaningful measure of sampling error is the confidence interval of an estimate. A confidence interval constitutes a statement on the level of confidence that the true value for the population lies within a specified range of values. For example a 95% confidence interval can be described as follows:

If sampling of the population is repeated indefinitely, each sample leading to a new confidence interval for an estimate, then in 95% of the samples the interval will cover the true population value.

Using the standard error of an estimate, confidence intervals for estimates may be obtained under the assumption that under repeated sampling of the population, the various estimates obtained for a population characteristic are normally distributed about the true population value. Under this assumption, the chances are about 68 out of 100 that the difference between a sample estimate and the true population value would be less than one standard error, about 95 out of 100 that the difference would be less than two standard errors, and about 99 out 100 that the differences would be less than three standard errors. These different degrees of confidence are referred to as the confidence levels.

Confidence intervals for an estimate, \bar{X} , are generally expressed as two numbers, one below the estimate and one above the estimate, as $(\bar{X}-k, \bar{X}+k)$ where k is determined depending upon the level of confidence desired and the sampling error of the estimate.

Confidence intervals for an estimate can be calculated directly from the Sampling Variability Tables by first determining from the appropriate table the coefficient of variation of the estimate \bar{X} , and then using the following formula to convert to a confidence interval CI:

$$CI_x = \{\bar{X} - (t)(\bar{X})(\sigma_{\bar{X}}), \bar{X} + (t)(\bar{X})(\sigma_{\bar{X}})\}$$

where $\sigma_{\bar{X}}$ is the determined coefficient of variation of \bar{X}

$t = 1$ if a 68% confidence interval is desired

$t = 1.6$ if a 90% confidence interval is desired

$t = 2$ if a 95% confidence interval is desired

$t = 3$ if a 99% confidence interval is desired

Let X_1 and X_2 be sample estimates for 2 characteristics of interest. Let the standard error of the difference $\bar{X}_1 - \bar{X}_2$ be σ_d

$$\text{If } t = \frac{\bar{X}_1 - \bar{X}_2}{\sigma_d} \text{ is between } -2 \text{ and } 2, \text{ then no conclusion}$$

about the difference between the characteristics is justified at the 5% level of significance. If however, this ratio is smaller than -2 or larger than +2, the observed difference is significant at the 5% level.

Example 6:

A user wishes to test at the 5% level of significance the hypothesis that at the Canada level there is no difference between percentage estimates of males and females who describe their state of health as poor, as compared to other people their age. From Example 4 the estimate of the standard deviation of the difference between the estimates is 0.0043.

$$\begin{aligned} \text{Hence } t &= \frac{0.0365 - 0.0309}{0.0043} \\ &= 1.30 \end{aligned}$$

Since $t = 1.30$ is less than 2, there is no evidence to reject the hypothesis at the 5% significance level.

APPROXIMATE VARIANCE TABLES FOR CANADA

<p>21. Hello, I'm from Statistics Canada. I'm calling you for a survey about the health of Canadians.</p>	<p>Bonjour, ici de Statistique Canada. Nous vous appelons concernant une étude au sujet de la santé des Canadiens.</p>
<p>22. I'd like to make sure that I've dialed the right number. Is this (read number)?</p> <p>Yes <input type="radio"/></p> <p>No <input type="radio"/> → Dial again, if still wrong. END</p>	<p>J'aimerais m'assurer que j'ai composé le bon numéro. S'agit-il du n° (lire le numéro)?</p> <p>Oui <input type="radio"/></p> <p>Non <input type="radio"/> → Composez de nouveau. S'il s'agit encore d'un mauvais numéro. METTEZ FIN A L'INTERVIEW.</p>
<p>23. All information we collect in this voluntary survey will be kept confidential. Your participation is essential if the survey results are to be accurate.</p>	<p>Tous les renseignements que vous fournirez pour cette enquête volontaire resteront confidentiels. Votre participation est essentielle afin que les résultats soient précis.</p>
<p>24. Is this the number for a business, an institution or a private home?</p> <p>Private home <input type="radio"/> } → Go to 27</p> <p>Both home and business <input type="radio"/> } → Go to 27</p> <p>Business, institution or other non residence <input type="radio"/> }</p>	<p>S'agit-il du numéro d'une entreprise, d'un établissement ou d'une maison privée?</p> <p>Maison privée <input type="radio"/> } → Passez à 27</p> <p>Entreprise et maison privée <input type="radio"/> } → Passez à 27</p> <p>Entreprise, établissement ou autre immeuble non résidentiel <input type="radio"/> }</p>
<p>25. Does anyone use this telephone number as a home phone number?</p> <p>Yes <input type="radio"/></p> <p>No <input type="radio"/> → Thank respondent and END</p>	<p>Quelqu'un utilise-t-il ce numéro de téléphone comme numéro personnel?</p> <p>Oui <input type="radio"/></p> <p>Non <input type="radio"/> → Remerciez le répondant et METTEZ FIN A L'INTERVIEW.</p>
<p>26. How many people live or stay at this address and use this number as a home phone number?</p> <p>Less than 15 <input type="radio"/></p> <p>15 or more <input type="radio"/> → Make appointment</p>	<p>Combien de personnes vivent ou demeurent à cette adresse et utilisent ce numéro de téléphone comme numéro personnel?</p> <p>Moins de 15 <input type="radio"/></p> <p>15 ou plus <input type="radio"/> → Fixez un rendez-vous</p>
<p>27. I need to select one person from your household for an interview. What is the first name and age of each person living or staying there who has no usual place of residence elsewhere? Please start with the oldest.</p> <p>(Enter names and ages in items Z3 and Z5.)</p>	<p>Je dois choisir une personne de votre ménage pour une interview. Quel est le prénom et l'âge de chaque personne qui vit ou demeure à cet endroit et qui n'a pas d'autre lieu habituel de résidence. Veuillez commencer par la personne la plus âgée du ménage.</p> <p>(Inscrivez le nom et l'âge aux rubriques Z3 et Z5.)</p>
<p>28. INTERVIEWER: Complete items Z6 through Z12 for each person recorded in item Z3.</p> <p>Refer to Interviewer Reference Card for instructions and codes.</p> <p>Then go to item 29.</p>	<p>INTERVIEWEUR: Remplissez les rubriques Z6 à Z12 pour chaque personne inscrite à la rubrique Z3.</p> <p>Pour les instructions et les codes, voir la Fiche de référence de l'intervieweur.</p> <p>Puis, passez à la rubrique 29.</p>

(Specify)

C2. Did you spend any nights as a patient in a hospital, nursing home or convalescent home during the last 12 months?

Yes ... 1 → C2A. How many nights?

--	--	--	--	--

 patient nights

No ... 2

C3. Over the past 12 months, have you experienced any delays in obtaining health care?

Yes 3

No 4

Refused 5 } Go to D1

C4. For which type of medical service did the delay occur? (Note: if more than one delay, ask about most recent)

Hospital emergency room treatment 1

Medical appointment with a general practitioner 2

Medical appointment with a specialist 3

Hospital admission for surgery 4

Hospital admission for other treatment 5

Nursing home or long-term care facility 6

Diagnostic test (eg. blood test, x-rays) 7

Other medical treatment 8 (Specify)

C5. How long was this delay?

1	2	3
Hours	Days	Weeks

Section D: Flu Shots

D1. Did your doctor or nurse recommend that you get a flu shot during the fall or winter of 1990-1991?

Yes 4

No 5

D2. Comment: This vaccination is usually given in the fall and protects against influenza for about one year.

D3. Did you have a flu shot during the fall or winter of 1990-1991?

Yes 6 → Go to E1

No 7

Don't know 8

Refused 9 } Go to E1

D4. Why did you not have a flu shot?

(Mark all that apply.)

- My doctor never mentioned it. 01
- My doctor didn't think it was necessary. 02
- I never thought about it. 03
- Flu is not that serious. 04
- I haven't heard about it. 05
- Too busy; never got around to it. 06
- I hardly ever get the flu. 07
- Fear of side effects. 08
- I feel the flu shot doesn't work. 09
- I feel it costs too much. 10
- Other 11 (Specify)

- Don't know (Probe for a reason) 12

Section E: Health Status Indicators

E1. The next set of questions ask about your day to day health. You may feel that some of these questions do not apply to you but it is important that we ask the same questions of everyone.

Vision

E2. Are you usually able to see well enough to read ordinary newspaper without glasses or contact lenses?

Yes 1 → Go to E5

No 2

Refused 3 → Go to E7

E3. Can you see well enough to read ordinary newspaper with glasses or contact lenses?

Yes 4 → Go to E5

No 5

Don't know (Don't wear glasses or contacts) 6

E4. Can you see at all?

Yes 7

No 8 → Go to E7

E5. Can you see well enough to recognize a friend on the other side of the street without glasses or contact lenses?

Yes 1 → Go to E7

No 2

<p>E6. Can you see well enough to recognize a friend on the other side of the street <u>with glasses or contact lenses</u>?</p> <p>Yes 3○</p> <p>No 4○</p> <p>Don't know (Don't wear glasses or contacts) 5○</p>	<p>Getting Around</p> <p>E15. INTERVIEWER:</p> <p><i>If a respondent says "sometimes" to any of the following questions, E16-E20 and E22, please prompt with "Is that usually?" If it is not, mark No.</i></p>

How much do you weigh?</p> <p>1 or 2 </p> <p>Pounds Kilograms</p> <p>Don't know 9998 <input type="radio"/></p>
<p>E31. How would you describe your usual intensity of pain or discomfort ...</p> <p>Mild? 1 <input type="radio"/></p> <p>Moderate? 2 <input type="radio"/></p> <p>Severe? 3 <input type="radio"/></p>	<p>G4. Do you consider yourself to be ...</p> <p>Overweight? 1 <input type="radio"/></p> <p>Underweight? 2 <input type="radio"/></p> <p>Just about right? 3 <input type="radio"/></p>

G5. I am now going to ask you questions about the amount of time you spend on physical activity at work or while doing your daily chores, but not leisure time activity.

A. How many hours per day do you usually spend standing or walking but not carrying or lifting things. Would that be...

- None? 01
- Less than 15 minutes? 02
- 15 minutes to less than 2 hours? 03
- Two to less than 4 hours? 04
- Four to less than 6 hours? 05
- Six hours or more? 06
- Don't know 07

B. How many hours per day do you usually spend lifting or carrying light loads, climbing stairs or hills? Would that be...

- None? 08
- Less than 15 minutes? 09
- 15 minutes to less than 2 hours? 10
- Two to less than 4 hours? 11
- Four to less than 6 hours? 12
- Six hours or more? 13
- Don't know 14

C. How many hours per day do you usually spend doing heavy work or carrying very heavy loads? Would that be...

- None? 15
- Less than 15 minutes? 16
- 15 minutes to less than 2 hours? 17
- Two to less than 4 hours? 18
- Four to less than 6 hours? 19
- Six hours or more? 20
- Don't know 21

G6. I am now going to ask you questions about the amount of time you spent on leisure time physical activity such as walking, sports, gardening or dancing during the last month.

A. Thinking back over the past month, how many hours per week did you spend on light physical activity so that your breathing was only a little faster than normal? Would that be...

- None? 22
- Less than one hour? 23
- One hour to less than 2 hours? 24
- Two hours to less than 3 hours? 25
- Three hours or more? 26
- Don't know 27

B. Thinking back over the past month, how many hours per week did you spend on moderate physical activity where your breathing was a lot faster than normal but talking was still possible? Would that be...

- None? 28
- Less than one hour? 29
- One hour to less than 2 hours? 30
- Two hours to less than 3 hours? 31
- Three hours or more? 32
- Don't know 33

C. Thinking back over the past month, how many hours per week did you spend on vigorous physical activity where your breathing was so fast that talking was very difficult or almost impossible? Would that be...

- None? 34
- Less than one hour? 35
- One hour to less than 2 hours? 36
- Two hours to less than 3 hours? 37
- Three hours or more? 38
- Don't know 39

G7. Overall, do you consider the amount of physical activity you usually get to be...

- Too much? 7
- Too little? 8
- The right amount? 9

Section H: Sleep

H1. Comment: Recent studies have shown that the amount of sleep a person gets may be related to their health.

H2. How long do you usually spend sleeping each night? (Do not include time spent resting.)

 | | | hours | | | minutes

Don't know 9998

H3. Do you regularly have trouble going to sleep or staying asleep?

- Yes 1
- No 2

H4. How often do you find your sleep refreshing?

- Most of the time? 3
- Sometimes? 4
- Never? 5

H5. How often do you find it difficult to stay awake when you want to?

- Most of the time? 6
- Sometimes? 7
- Never? 8

Section J: Smoking

J1. The next questions are about cigarette smoking.

J2. Do you smoke cigarettes...
 ◆ Daily? 1○
 Occasionally? 2○
 Not at all? 3○ } Go to J5
 Refused? 4○ → Go to J8

J3. About how many cigarettes do you smoke each day?
 [5] [] [] daily cigarettes

J4. At what age did you start smoking daily?
 [6] [] [] years of age → Go to J8

J5. Have you ever smoked cigarettes daily?
 ◆ Yes 7○
 No 8○
 Refused 9○ } Go to J8

J6. At what age did you start smoking daily?
 [1] [] [] years of age

J7. At what age did you last stop smoking daily?
 [2] [] [] years of age

J8. How many people in your household, excluding yourself, smoke cigarettes daily?
 [3] [] [] number of household smokers
 Don't know 398○

K4. In the past 12 months, how often on average, did you drink alcoholic beverages?
 Was it...
 Every day? 1○
 4-6 times a week? 2○
 2-3 times a week? 3○
 Once a week? 4○
 Once or twice a month? 5○
 Less often than once a month? 6○
 Don't know 7○

K5. In the past seven days, have you taken a drink?
 ◆ Yes 7○
 No 8○
 Refused 9○ } Go to M1

K6. Beginning with yesterday, how many drinks did you have on each of the last 7 days?
 (Interviewer: enter 00 on the days respondent had no drinks)

Section K: Alcohol

K1. Now I would like to ask you some questions about alcohol consumption.
 When we use the word drink it means:
 - One beer
 - One small glass of wine
 - 1 1/2 ounces of liquor

K2. Have you ever taken a drink?
 ◆ Yes 4○
 No 5○
 Refused 6○ } Go to M1

K3. In the last 12 months, have you taken a drink?
 ◆ Yes 7○
 No 8○
 Refused 9○ } Go to M1

Section M: Occupation and Health

M1. During the past 12 months, what best describes your MAIN activity? Were you mainly ...
 ◆ Working at a job or business? 1○ → Go to M12
 Looking for work? 2○ → Go to M3
 A student? 3○
 Keeping house? 4○
 Retired? 5○
 Other 6○ } Go to M3
 (Specify)
 []
 []
 Refused 7○ → Go to M3

M2. Were you studying full-time or part-time?
 Full-time 8○
 Part-time 9○

M3. Did you have a job or were you self-employed at any time during the past 12 months?

Yes 1 → Go to M12

No 2

Refused 3 → Go to M6

f) Bored? 16○	17○	18○	
g) Proud because someone complimented you on something you had done? 19○	20○	21○	
h) So restless you couldn't sit long in a chair? 22○	23○	24○	
i) That things were going your way? 25○	26○	27○	
j) Upset because someone criticized you? 28○	29○	30○	

Section Q: Classification

Q1. In what type of dwelling are you now living?
 Is it a ...
 Single detached house? 1○
 Low-rise apartment of less than 5 stories? 2○
 High-rise apartment of 5 or more stories? 3○
 Other 4○

Q2. Comment: We ask about mortgages because, as an expense, they are a good indicator of an individual's or family's overall economic situation.

Q3. Is this dwelling owned by a member of this household?
 Yes 5○ → **Q3A. Is there a mortgage on this dwelling?**
 No 6○
 Yes 7○
 No 8○
 Don't know 9○

Q4. What is your postal code? (Note: of residence)

 Don't know 1○

Q5. Do you have more than one telephone in your home?
 Yes 2○
 No 3○ → Go to Q11

<p>Q6. Do all the telephones have the same number?</p> <p>Yes <input type="radio"/> ⁴ → Go to Q11</p> <p>No <input type="radio"/> ⁵</p>	<p>Q12. In what year did you first immigrate to Canada?</p> <p style="text-align: center;"> </p> <p>Canadian citizen by birth <input type="radio"/> ⁹⁹⁸</p>																																																				
<p>Q7. Comment: Households with more than one telephone number have a greater chance of being selected by the survey. We ask these questions to adjust for this.</p>	<p>Q13. What is your date of birth?</p> <p style="text-align: center;"> </p> <p style="text-align: center;">Day Month Year</p> <p>Refused <input type="radio"/> ⁶ → Go to Q15</p>																																																				
<p>Q8. How many different numbers are there?</p> <p style="text-align: center;"> </p>	<p>Q14. Interviewer Check Item:</p> <p><i>Review year of birth in Q13.</i></p> <p><i>Is year 1940 or earlier?</i></p> <p>Yes <input type="radio"/> ¹</p> <p>No <input type="radio"/> ² → Go to Q16</p>																																																				
<p>Q9. Are any of these numbers for business use only?</p> <p>Yes <input type="radio"/> ⁶</p> <p>No <input type="radio"/> ⁷ → Go to Q11</p>	<p>Q15. Did you have any war time service in the active military forces of Canada or its allied forces?</p> <p>Yes <input type="radio"/> ³ → Q15A. Which conflict or war? <i>(Mark all that apply)</i></p> <p>No <input type="radio"/> ⁴</p> <div style="margin-left: 200px;"> <p>World War I <input type="radio"/> ⁵</p> <p>World War II <input type="radio"/> ⁶</p> <p>Korean conflict <input type="radio"/> ⁷</p> <p>Other <input type="radio"/> ⁸</p> </div>																																																				
<p>Q10. How many are for business use only?</p> <p style="text-align: center;"> business numbers</p>	<p>Q16. What language did you first speak in childhood? <i>(Accept multiple responses only if languages were used equally)</i></p> <table style="width: 100%; border: none;"> <thead> <tr> <th colspan="2"></th> <th colspan="2" style="text-align: center;">Do you still understand that those language(s)?</th> </tr> <tr> <th colspan="2"></th> <th style="text-align: center;">Yes</th> <th style="text-align: center;">No</th> </tr> </thead> <tbody> <tr> <td>English</td> <td>..... <input type="radio"/> ⁰¹</td> <td></td> <td></td> </tr> <tr> <td>French</td> <td>..... <input type="radio"/> ⁰² →</td> <td><input type="radio"/> ²³</td> <td><input type="radio"/> ²⁴</td> </tr> <tr> <td>Italian</td> <td>..... <input type="radio"/> ⁰³ →</td> <td><input type="radio"/> ²⁵</td> <td><input type="radio"/> ²⁶</td> </tr> <tr> <td>German</td> <td>..... <input type="radio"/> ⁰⁴ →</td> <td><input type="radio"/> ²⁷</td> <td><input type="radio"/> ²⁸</td> </tr> <tr> <td>Ukrainian</td> <td>..... <input type="radio"/> ⁰⁵ →</td> <td><input type="radio"/> ²⁹</td> <td><input type="radio"/> ³⁰</td> </tr> <tr> <td>Dutch</td> <td>..... <input type="radio"/> ⁰⁶ →</td> <td><input type="radio"/> ³¹</td> <td><input type="radio"/> ³²</td> </tr> <tr> <td>Chinese</td> <td>..... <input type="radio"/> ⁰⁷ →</td> <td><input type="radio"/> ³³</td> <td><input type="radio"/> ³⁴</td> </tr> <tr> <td>Hungarian</td> <td>..... <input type="radio"/> ⁰⁸ →</td> <td><input type="radio"/> ³⁵</td> <td><input type="radio"/> ³⁶</td> </tr> <tr> <td>Portuguese</td> <td>..... <input type="radio"/> ⁰⁹ →</td> <td><input type="radio"/> ³⁷</td> <td><input type="radio"/> ³⁸</td> </tr> <tr> <td>Polish</td> <td>..... <input type="radio"/> ¹⁰ →</td> <td><input type="radio"/> ³⁹</td> <td><input type="radio"/> ⁴⁰</td> </tr> <tr> <td>Other</td> <td>..... <input type="radio"/> ¹¹ →</td> <td><input type="radio"/> ⁴¹</td> <td><input type="radio"/> ⁴²</td> </tr> </tbody> </table> <p style="text-align: center;">↓ <i>(Specify)</i></p> <p style="text-align: center;"> </p> <p style="text-align: center;"> </p>			Do you still understand that those language(s)? Q17. What language do you speak most often at home?
(Accept multiple responses only if languages are spoken equally)

- English 34 ○
- French 35 ○
- Italian 36 ○
- German 37 ○
- Ukrainian 38 ○
- Dutch 39 ○
- Chinese 40 ○
- Hungarian 41 ○
- Portuguese 42 ○
- Polish 43 ○
- Other 44 ○

(Specify)

Q18. Excluding kindergarten, how many years of elementary and high school education have you successfully completed?

- No schooling 45 ○ → Go to Q22
- One to five years 46 ○
- Six 47 ○
- Seven 48 ○
- Eight 49 ○
- Nine 50 ○
- Ten 51 ○
- Eleven 52 ○
- Twelve 53 ○
- Thirteen 54 ○

(Specify)

Q19. Have you graduated from high school?

- Yes 1 ○
- No 2 ○

Q20. Have you had any further schooling beyond elementary high school?

- Yes 3 ○
- No 4 ○ → Go to Q22

Q21. What is the highest level of education that you have attained?

- Masters (M.A., M.Sc., M.Ed.) or earned doctorate (Ph.D., D.Sc., D.Ed.) 1 ○
- Degree in Medicine, Dentistry, Veterinary Medicine, or Optometry (M.D., D.D.S., D.M.D., D.V.M., D.D.) 2 ○
- Bachelor or undergraduate degree, or teacher's college (e.g. B.A., B.Sc., B.A.Sc., LL.B.) 3 ○
- Diploma or certificate from community college, CEGEP or nursing school 4 ○
- Diploma or certificate from trade, technical or vocational school, or business college 5 ○
- Some university 6 ○
- Some community college, CEGEP or nursing school 7 ○
- Some trade, technical or vocational school, or business college 8 ○
- Other 9 ○

(Specify)

Q22. What, if any, is your religion?

- No religion 01 ○ → Go to Q24
- Roman Catholic 02 ○
- United Church 03 ○
- Anglican 04 ○
- Presbyterian 05 ○
- Lutheran 06 ○
- Baptist 07 ○
- Eastern Orthodox 08 ○
- Jewish 09 ○
- Islam (Muslim) 10 ○
- Buddhist 11 ○
- Hindu 12 ○
- Sikh 13 ○
- Jehovah's Witnesses 14 ○
- Other 15 ○

(Specify)

Q23. Other than on special occasions, such as weddings, funerals or baptisms, how often did you attend services or meetings connected with your religion in the last 12 months? Was it ...

At least once a week? 1

At least once a month? 2

A few times a year? 3

At least once a year? 4

Not at all? 5

Q24. The ancestors of Canadians come from many ethnic and cultural groups such as Inuit, French, Scottish and Chinese. To which ethnic or cultural group(s) did your ancestors belong? (Accept multiple responses)

English 01

French 02

German 03

Scottish 04

Italian 05

Irish 06

Ukrainian 07

Chinese 08

Dutch (Netherlands) 09

Jewish 10

Polish 11

Black 12

North American Indian 13

Métis 14

Inuit/Eskimo 15

Other 16

↓
(Specify)

Canadian (probe: Any other group?) 17

Don't know 18

Q25. Are you currently receiving any income from a retirement pension, old age security or survivor benefits? (Exclude lump sum payments).

Yes 6

No 7

Refused 8 **Go to Q27**

Q26. Are you receiving ...

Yes No

a) Basic Old Age Security benefits paid by the Federal Government? 01 02

These benefits are paid monthly by the Federal Government to all Canadians and Landed Immigrants who are 65 years of age or older and meet the minimum residency requirements. This benefit increases every 3 months in relation to the cost of living.

b) Supplements to the Old Age Security pension: the Guaranteed Income Supplement or the Spouse's Allowance? 03 04

The Guaranteed Income Supplement is paid by the Federal Government to Old Age Security Pensioners who have little or no income. The pensioner must reapply every year to receive it.

Spouse's Allowance is paid by the Federal Government if a person is between 60 and 65 years of age, has little or no income, and is widowed or is the spouse of a pensioner.

Both the Guaranteed Income Supplement and the Spouse's Allowance are increased every 3 months in relation to the cost of living.

c) A retirement pension from Canada Pension Plan or Quebec Pension Plan? 05 06

This pension is paid by the Federal or Quebec government to individuals who have contributed to the plan. Benefits usually begin when the individual reaches 65 years of age but may be applied for as early as 60 years of age. This pension is increased in January of each year in relation to the cost of living.

d) A retirement pension from a former employer? 07 08

This pension is paid by a former employer upon retirement. It may be a pension that was either cost shared with your employer or one provided entirely by your employer.

e) A survivor benefit plan from the Canada Pension Plan or Quebec Pension Plan? 09 10

This benefit is paid by the Federal or Quebec Government to surviving spouses of individuals who have contributed to the Canada or Quebec Pension Plan. An individual must apply for these benefits. This pension is increased in January of each year in relation to the cost of living.

f) A survivor benefit plan from some source other than the Canada Pension Plan or Quebec Pension Plan? 11 12

This benefit is paid by a source other than the Federal or Quebec government to a surviving spouse.

Q27. Are you currently receiving any income from a disability pension. (Exclude lump sum payments)

Yes 1

No 2 *Go to Q30*

Refused 3

Q28. Are you receiving... Yes No

a) **A disability pension from Canada Pension Plan or Quebec Pension Plan?** 4 5

This benefit is paid by the Federal or Quebec Government to individuals who become disabled and who have applied for a Canada or Quebec Pension Plan Disability Benefit. Beneficiaries must have contributed to the Canada or Quebec Pension Plan. These benefits are increased in January of each year in relation to the cost of living.

b) **A disability pension from an employer benefit plan?** 6 7

This is a pension paid by a former employer as a result of a disability.

c) **A disability pension from some source other than Canada Pension Plan, the Quebec Pension Plan or an employer benefit plan?** 8 9

Q29. Comment: Both individual and household income are needed to study the relationship between an individual's overall economic situation and his/her health.

Q30. What is your best estimate of your own income from all sources, before deductions during the past 12 months?

Was your income...

Less than \$20,000? 01

 Less than \$10,000? 06

 Less than \$5,000? 10

 \$5,000 and more? 11

 \$10,000 and more? 07

 Less than \$15,000? 12

 15,000 and more? 13

\$20,000 and more? 02

 Less than \$40,000? 08

 Less than \$30,000? 14

 \$30,000 and more? 15

 \$40,000 and more? 09

 Less than \$80,000? 16

 \$80,000 to less than \$80,000? 17

 \$80,000 and more? 18

No income 03

Don't know 04

Refused 05

Q31. Not including yourself, how many other people in your household received income from any source, during the past 12 months?

8 | | people

Q32. Interviewer Check Item

Review Q31.

Is Q31 = 00? Yes 1 → *Go to R1*

No/Refused 2

Q33. What is your best estimate of the total income of all household members from all sources during the past 12 months? Was the total household income...

Less than \$20,000? 19

 Less than \$10,000? 24

 Less than \$5,000? 28

 \$5,000 and more? 29

 \$10,000 and more? 25

 Less than \$15,000? 30

 15,000 and more? 31

\$20,000 and more? 20

 Less than \$40,000? 26

 Less than \$30,000? 32

 \$30,000 and more? 33

 \$40,000 and more? 27

 Less than \$80,000? 34

 \$80,000 to less than \$80,000? 35

 \$80,000 and more? 38

No income 21

Don't know 22

Refused 23

Section R: Contacts for follow-up

R1. INTERVIEWER

Read the following section for each person interviewed.

This survey is part of a longer-term project to investigate the relationship between health and other social issues.

For this reason, we may need to contact your household in a year or more from now.

In case you move or change phone numbers, we would like to obtain your complete name and address. This information will be kept strictly confidential and will only be used to maintain contact with you.

Refused to provide information 3 O }
Refused to participate in future surveys 4 O } Go to R8

APPENDIX C
Topical Index of Variables

TOPICAL INDEX TO VARIABLES

<u>VARIABLE</u>	<u>VARIABLE DESCRIPTION</u>	<u>PAGE</u>
SECTION X: GENERAL CHARACTERISTICS		
SEQU	Sequence number	C1
SURMNTH	Survey month	C1
TYPE62	Form Type - English or French	C2
PROXY	Questionnaire a proxy	C2
SECTION A: HEALTH STATUS - PREVALENCE OF HEALTH PROBLEMS		
A2	Respondents state of health compared to others	C2
A3	Date blood pressure was last checked by doctor	C3
A4	Told by medical person - have high blood pressure?	C3
A5	Any medical treatment prescribed for condition?	C4
A6	Any trouble with your heart - heart attack, etc.?	C4
A7CAP	At what age were you first diagnosed	C5
A8	Do you have diabetes?	C5
A9CAP	At what age were you first diagnosed with diabetes	C6
A10A	Do you have arthritis, rheumatism or bursitis?	C6
A10B	Do you have asthma?	C7
A10C	Do you have emphysema, chronic bronchitis etc.?	C7
A10D	Do you have hay fever?	C7
A10E	Do you have skin or other allergies?	C8
A10F	Do you have a stomach ulcer?	C8
A10G	Do you have other digestive problems?	C8
A10H	Do you have recurring migraine headaches?	C9
A10I	Do you have high blood cholesterol?	C9
A10J	Do you have any emotional disorders?	C9
DVHLTHPR	Any health problems?	C10
SECTION B: TWO-WEEK DISABILITY STATUS		
B1	Main activity the last two weeks	C10
B2	In the last two weeks - stay in bed due to health?	C10
B3	Number of days in bed - all or most of the day	C11
B4	Interviewer check - respondent's main activity	C11
B5	Number of activity loss bed days	C12
B6	Excluding bed-days, did you cut down main activity?	C12
B7	Did you cut down normal activities due to health?	C12
B8	Number of days cut down all or most of the day	C13
B9	Interviewer check - respondent's main activity	C13
B10	Number of activity loss cut down days	C14
B11	During 14 days see/talk to a medical doctor?	C14
B12	What was the main reason for this contact	C15
DVDISDYS	Derived disability days	C15
DVACTLDY	Activity-loss days	C16

K6SAT	How many drinks did you have on Saturday	C59
K6SUN	How many drinks did you have on Sunday	C60
DVTYPDNK	Type of drinker	C60
DVWKVOL	Weekly volume	C61
SECTION M: OCCUPATION AND HEALTH		
M1	Main activity during the past 12 months	C61
M2	Were you studying full-time or part-time	C62
M3	Past 12 months - did you have a job/self-employed?	C62
M4	Did you look for a job in the last four weeks?	C62
M5CAP	How long have you been looking for a job	C63
M6	Have you ever worked at a job or business etc.?	C63
M8CAP	For how many years did you do this kind of work	C64
M11CAP	In what year did you last work	C64
M12	Did you do any work at a job/business last week?	C65
M13	Did you have a job you expected to return to?	C65
M14	Did you look for a job in the last four weeks?	C65
M15CAP	Length of time unemployed and looking for a job	C66

TOPICAL INDEX TO VARIABLES

<u>VARIABLE</u>	<u>VARIABLE DESCRIPTION</u>	<u>PAGE</u>
DVLFS	Derived labour force status.	C66
M16	Past 12 months - weeks employed	C67
M17CAP	During those weeks - hours/week usually worked	C67
DVWKACTY	Derived weekly activity during the year	C68
M18	Describe the hours you usually worked	C68
M19	How often did you work a night shift	C69
DVSOCAT	Grouped Standard Occupation Codes	C70
DVSICAT	Grouped Standard Industry Codes	C71
DVPINEO	Pineo socio-economic classification of occupations	C72
M23	In that job were you paid worker or self employed	C72
M25A	Employer provide you with a pension plan?	C73
M25B	Employer provide you with disability insurance?	C73
M25C	Employer provide you with survivor benefits?	C73
M25D	Employer provide you with medical benefits?	C74
M25E	Employer provide you with dental care benefits?	C74
M25F	Employer provide you with counselling services?	C74
M25G	Employer provide you with maternity leave?	C75
M26	Are you a member of a labour union?	C75
M27	Past 12 months-did you suffer a workplace injury?	C75
M28CAP	How many days of work did you miss as a result	C76
M29CAP	12 months-total days missed due to illness/injury	C76
M30A	Too many demands/hours of work caused you worry?	C77
M30B	Risk of accident or injury caused you worry?	C77
M30C	Poor interpersonal relations caused you worry?	C77
M30D	Sexual harassment caused you worry?	C78
M30E	Other harassment caused you worry?	C78
M30F	Discrimination of any kind caused you worry?	C78
M30G	Threat of layoff/job loss caused you worry?	C79
M30H	Anything else caused you worry?	C79
M31	Interviewer check: Any yes responses to M30?	C79
M32	Did you do anything to improve this situation?	C80
M33C1	What did you do - resigned?	C80
M33C2	What did you do - transferred jobs?	C80
M33C3	What did you do-change job with different employer	C81
M33C4	What did you do - reduced hours?	C81
M33C5	What did you do - changed to part-time?	C81
M33C6	What did you do - take a leave of absence?	C82
M33C7	What did you do - retire before age 65?	C82
M33C8	What did you do - change attitude?	C82
M33C9	What did you do - other?	C83
M34A	Did your job expose you to dust in air?	C83
M34B	How often were you exposed to dust in the air	C83
M34C	Does this have a negative impact on your health?	C84
M35A	Did your job expose you to dangerous chemicals?	C84
M35B	How often were you exposed to chemicals	C84
M35C	Does this have a negative impact on your health?	C85
M36A	Did your job expose you to loud noise?	C85
M36B	How often were you exposed to loud noise	C85
M36C	Does this have a negative impact on your health?	C86
M37A	Did your job expose you to computer screens?	C86

TOPICAL INDEX TO VARIABLES

<u>VARIABLE</u>	<u>VARIABLE DESCRIPTION</u>	<u>PAGE</u>
M37B	How often were you exposed to computer screens	C86
M37C	Did this have a negative impact on your health?	C87
M38A	Did your job expose you to poor quality air?	C87
M38B	How often were you exposed to poor quality air	C87
M38C	Does this have a negative impact on your health?	C88
M39A	Did your job expose you to any other dangers?	C88
M39B	How often were you exposed to this danger	C88
M39C	Does this have a negative impact on your health?	C89
DVHLTHHZ	Any workplace health hazard exposure?	C89
DVNEGIMP	Any negative health impact?	C90
M40	Interviewer check: Respondent living with spouse?	C90
M41	Spouse's main activity during past 12 months	C91
M42	Was he/she working full- or part-time	C91

SECTION N: SATISFACTION MEASURES

DVN2A	Health satisfaction	C92
DVN2B	Job or main activity satisfaction	C92
DVN2C	Life satisfaction	C93
N3	Would you describe your life as...	C93

SECTION P: BRADBURN EMOTIONAL HEALTH SCALE

P1A	How often have you felt: On top of the world	C94
P1B	How often have you felt: Very lonely	C94
P1C	How often have you felt: Excited/interested	C95
P1D	How often have you felt: Depressed/unhappy	C95
P1E	How often have you felt: Pleased about something	C96
P1F	How often have you felt: Bored	C96
P1G	How often have you felt: Proud	C97
P1H	How often have you felt: Restless	C97
P1I	How often have you felt: Things were going your way	C98
P1J	How often have you felt: Upset due to criticism	C98
DVPOSAFF	Bradburn positive affect scale	C99
DVNEGIAFF	Bradburn negative affect scale	C99
DVAFBAL	Bradburn affect balance scale	C100
DVAFBAL2	Bradburn affect balance scale - two categories	C100

SECTION Q: BACKGROUND SOCIO-ECONOMIC QUESTIONS FOR CLASSIFICATION PURPOSES

Q1	In what type of dwelling are you now living	C101
Q3	Is this dwelling owned by a member of this house?	C101
Q3A	Is there a mortgage on this dwelling?	C101
Q11	In what country were you born	C102
DVBORNRC	Respondents place of birth	C102
DVAGEIMC	Age at time of immigration	C103

TOPICAL INDEX TO VARIABLES

<u>VARIABLE</u>	<u>VARIABLE DESCRIPTION</u>	<u>PAGE</u>
Q15	Did you have any war time service in military?	C103
DVQ15A12	Which conflict or war - World War I or II?	C104
Q15AC3	Which conflict or war - Korean Conflict?	C104
Q15AC4	Which conflict or war - Other?	C104
DVQ16	Language first spoken in childhood	C105
DVQ16ESU	Do you still understand: English?	C105
DVQ16FSU	Do you still understand: French?	C106
DVQ16OSU	Do you still understand: Other?	C106
DVQ17	Language spoken most often at home	C107
Q18	Years of elementary/secondary schooling completed	C107
Q19	Have you graduated from high school?	C108
Q20	Any further schooling beyond elementary/secondary?	C108
Q21MOD	Highest level of education attained	C109
DVEDCMO	Highest level of education obtained	C109
DVQ22COL	Derived variable for Religion	C110
Q23	Other than special occasions- attendance at church	C110
DVQ24BR	Ethnic origin: British?	C111
DVQ24FR	Ethnic origin: French?	C111
DVQ24EU	Ethnic origin: Other European?	C112
DVQ24NA	Ethnic origin: North American?	C112
DVQ24OT	Ethnic origin: Other?	C113
Q25MOD	Do you receive any income from pensions etc.?	C113
Q26AMOD	Are you receiving basic old age security benefits?	C114
Q26BMOD	Are you receiving Supplements to Old Age Security?	C114
Q26CMOD	Are you receiving CPP or QPP?	C115
Q26DMOD	Are you receiving a retirement pension?	C115
Q26EMOD	Are you receiving a Survivor Benefit?	C116
Q26FMOD	Receiving a Survivor Benefit from other source?	C116
Q27	Do you receive any income from disability pension?	C116
Q28A	Receiving disability pension from CPP/QPP?	C117
Q28B	Receiving disability pension from employer?	C117
Q28C	Receiving disability pension from other source?	C117
DVPERINC	Personal income	C118
Q31CAP	Household members with income, excluding respondent	C118
DVHHINC	Household income	C119
DVINCAD5	Income adequacy in 5 discrete categories	C119

SECTION R: OTHER

DVAGEGR	Age of respondent	C120
DVSEX	Sex of respondent	C120
DVMS	Marital status of respondent	C121
DVHSCAP	Total number of persons living in household	C121
DVPROV	Province of residence of respondent	C122
DVCMA	Provincial CMA/Non-CMA Coding	C123
DVLVGRGR	Living arrangement of the respondent	C124
DVAGRYC	Age of respondent's youngest child living in HH	C124
DVRCO24C	Number of respondent's single children < 25 years	C125
FINALWT	Final weight	C125

APPENDIX D

NOT STATED	9 M	7	16683

WEIGHT VARIABLE: FINALWTSOURCE:

General Social Survey, 1991, page 2, question A3.

COVERAGE:

All respondents.

A4 Told by medical person - have high blood pressure?

Field: 7 Position: 12 Format: 11

<u>CONTENT</u>	<u>CODE</u>	<u>SAMPLE</u>	<u>POPULATION</u>
YES	1	2391	3310613
NO	2	9292	17081973
DO NOT KNOW	8 M	46	92090
NOT STATED	9 M	10	22472
NOT APPLICABLE	0 M	185	473713

WEIGHT VARIABLE: FINALWTSOURCE:

General Social Survey, 1991, page 2, question A4.

COVERAGE:

Respondents who answered A3 = 1,2,3,4 and 8.

DETAILED DESCRIPTION OF VARIABLES**A5 Any medical treatment prescribed for condition?**

Field: 8 Position: 13 Format: 11

<u>CONTENT</u>	<u>CODE</u>	<u>SAMPLE</u>	<u>POPULATION</u>
YES	1	1797	2275798
NO	2	563	971876
DO NOT KNOW	8 M	6	14241
NOT STATED	9 M	35	71170
NOT APPLICABLE	0 M	9523	17647777

WEIGHT VARIABLE: FINALWTSOURCE:

General Social Survey, 1991, page 2, question A5.

COVERAGE:

Respondents who answered A4 = 1.

A6 Any trouble with your heart - heart attack, etc.?

Field: 9 Position: 14 Format: 11

<u>CONTENT</u>	<u>CODE</u>	<u>SAMPLE</u>	<u>POPULATION</u>
YES	1	1193	1436788
NO	2	10684	19475932
DO NOT KNOW	8 M	46	65996
NOT STATED	9 M	1	2146

WEIGHT VARIABLE: FINALWTSOURCE:

General Social Survey, 1991, page 2, question A6.

COVERAGE:

All respondents.

DETAILED DESCRIPTION OF VARIABLES**A7CAP At what age were you first diagnosed**

Field: 10 Position: 15-16 Format: I2 Zero-filled

<u>CONTENT</u>	<u>VALUE</u>	<u>SAMPLE</u>	<u>POPULATION</u>
MEAN			48.70
MINIMUM	0		
MAXIMUM	80		
RANGE	80	1134	1376057
NEVER DIAGNOSED	96	7	5621
NOT APPLICABLE	97 M	10730	19541928
DO NOT KNOW	98 M	46	48305
NOT STATED	99 M	7	8949

WEIGHT VARIABLE: FINALWTSOURCE:

General Social Survey, 1991, page 2, question A7.

COVERAGE:

Respondents who answered A6 = 1.

COMMENTS:

Information in A7 was 'capped' at the value 80 (which indicates values of 80 and over) to create A7CAP.

A8 Do you have diabetes?

Field: 11 Position: 17 Format: 11

<u>CONTENT</u>	<u>CODE</u>	<u>SAMPLE</u>	<u>POPULATION</u>
YES	1	546	739886
NO	2	11338	20192361
DO NOT KNOW	8 M	38	46150

COMMENTS:

A summary measure of leisure time physical energy expenditure derived by summing across light (G6A), moderate (G6B) and vigorous (G6C) physical activity the product of an assigned intensity by total duration. The assigned intensities were: 5 kilocalories per minute for light physical activity; 7.5 kilocalories per minute for moderate physical activity; 10 kilocalories per minute for vigorous physical activity. Midpoints of durations were used. None (00); less than one hour (30); one hour to less than two hours (90); two hours to less than three hours (150); three hours or more (210).

NOT STATED	9 M	547	788713

WEIGHT VARIABLE: FINALWTSOURCE:

General Social Survey, 1991, Derived variable.

COVERAGE:

All respondents.

COMMENTS:

The cut-off points were as follows:

Sedentary - Dvpaindx < 0500

Moderate - 0500 <= Dvpaindx < 2000

Active - Dvpaindx >= 2000

Similar cut-off points were used in Cycle One and approximate the values used by Paffenbarger in his research.

COMMENTS:

Information collected in M15 was 'capped' at the value of 52 to create M15CAP.

DVLFS Derived labour force status.

Field: 152 Position: 214 Format: I1

<u>CONTENT</u>	<u>CODE</u>	<u>SAMPLE</u>	<u>POPULATION</u>
EMPLOYED	1	6188	12813060
UNEMPLOYED	2	596	1287448
NOT IN LABOUR FORCE	3	4971	6631657
NOT STATED	9 M	169	248697

WEIGHT VARIABLE: FINALWTSOURCE:

General Social Survey, 1991, Derived variable.

COVERAGE:

All respondents.

COMMENTS:

Approximation of labour force status as estimated by Labour Force Survey as not all the necessary questions were asked that would allow an exact replication of LFS rate.

Employed: worked at a job or business last week or did not work but had a job to which the respondent expected to return.

Unemployed: did not work last week (or within the last 12 months), nor did they have a job to which they expected to return and looked for a job in the last four weeks.

Not in Labour Force: all others.

DETAILED DESCRIPTION OF VARIABLES**M16 Past 12 months - weeks employed**

Field: 153 Position: 215-216 Format: I2 Zero-filled

<u>CONTENT</u>	<u>VALUE</u>	<u>SAMPLE</u>	<u>POPULATION</u>

DETAILED DESCRIPTION OF VARIABLES**DVPOSAFF Bradburn positive affect scale**

Field: 229 Position: 298-299 Format: I2 Zero-filled

<u>CONTENT</u>	<u>VALUE</u>	<u>SAMPLE</u>	<u>POPULATION</u>
MEAN			9.38
MINIMUM	5		
MAXIMUM	15		
RANGE	10	10432	18765164
NOT STATED	99 M	1492	2215697

WEIGHT VARIABLE: FINALWTSOURCE:

General Social Survey, 1991, Derived variable.

COVERAGE:

All respondents.

COMMENTS:

Bradburn's dimension of positive emotional health behaviour. Derived by summing scores across component variables - P1A, P1C, P1E P1G and P1I. Component variables are scored 1 = "often", 2 = "sometimes" and 3 = "never". Range of scores is from 05 (high positive affect) to 15 (low positive affect).

DVNEGAFF Bradburn negative affect scale

Field: 230 Position: 300-301 Format: I2 Zero-filled

<u>CONTENT</u>	<u>VALUE</u>	<u>SAMPLE</u>	<u>POPULATION</u>
MEAN			13.01
MINIMUM	5		
MAXIMUM	15		
RANGE	10	10496	18827154
NOT STATED	99 M	1428	2153708

WEIGHT VARIABLE: FINALWTSOURCE:

General Social Survey, 1991, Derived variable.

COVERAGE:

All respondents.

COMMENTS:

Bradburn's dimension of negative emotional health behaviour. Derived by summing scores across component variables - P1B,P1D,P1F,P1H and P1J. Component variables are scored 1 for "often", 2 for "sometimes" and 3 for "never". Range of scores is from 05 (high negative affect) to 15 (low negative affect).

DETAILED DESCRIPTION OF VARIABLES**DVAFBAL Bradburn affect balance scale**

Field: 231 Position: 302 Format: I1

<u>CONTENT</u>	<u>CODE</u>	<u>SAMPLE</u>	<u>POPULATION</u>
PAS GT NAS	1	6978	12713803
PAS = NAS	2	2916	5119200
PAS LT NAS	3	502	876200
NOT STATED	9 M	1528	2271658

WEIGHT VARIABLE: FINALWTSOURCE:

General Social Survey, 1991, Derived variable.

COVERAGE:

All respondents.

COMMENTS:

The Affect-Balance scale is usually used as the general measure of psychological well-being. The positive (PAS) and negative (NAS) effect scales are grouped into three levels before they are combined to form the affect balance scale. The three levels are: 05-07 (high), 08-12 (moderate) and 13-15 (low).

DVAFBAL2 Bradburn affect balance scale - two categories

Field: 232 Position: 303-304 Format: I2 Zero-filled

<u>CONTENT</u>	<u>VALUE</u>	<u>SAMPLE</u>	<u>POPULATION</u>
MEAN			13.63
MINIMUM	0		
MAXIMUM	20		
RANGE	20	10396	18709203
NOT STATED	99 M	1528	2271658

WEIGHT VARIABLE: FINALWTSOURCE:

General Social Survey, 1991, Derived variable.

COVERAGE:

All respondents.

COMMENTS:

The following is an alternative method of computing the affect balance scale NAS-PAS+10. This method has the advantage of permitting a finer classification of the population along a continuum. The range of scores is from 00 to 20 with 10 indicating a balance.
