For B2A to B6, respondents were to report only those
accident incidents which
met one of the following conditions:
(1) disrupted their normal activities for at least
half a day;
(2) resulted in out of pocket expenses of \$200 or
more; or
(3) required medical attention from a doctor or nurse.
Please note that the medical attention criteria is a
new condition in the 1993
survey. There is a one-to-one concurrence between
screen questions and Accident
Reports(GSS8-2F). As screen questions are exclusive of
the incidents
report is used to
characterize the incident, not the screening question.

Derived from responses to DVHHINC, DVPERINC and DVHHSIZE. This variable attempts to take household size into account when determining income adequacy in a fashion similar to the official Statistics Canada low-income cut-off levels. They should not be considered equivalent though as the income receiving units and the components included in total income are different.

COMMENTS:

"Yes" responses indicate incidents which occurred where the respondent works.

There is a distinction between the respondent's place of work and while the

respondent was working. For example, an accident involving the respondent's car

(resulting in out-of-pocket expenses of \$200+) that occurred while the

respondent was working inside is a "no" response, while a construction worker

hurting his hand on the site is a "Yes" response.

Interviewers were to consider respondents "present" when it was clear that they were on the immediate scene of the crime - i.e. they were in a position to be harmed or threatened by an offender. When it was not clear to the interviewer whether the respondent was present, the code for do not know was entered and G13 was asked directly to the respondent.

An object is considered to be a weapon when it is used to threaten or attack a person. The presence of a weapon implies a threat even if a verbal threat is not made by the offender. However, objects such as rocks or baseball bats used in committing vandalism are not considered weapons unless they are used to attack or threaten the victim.

Incident Level Variable.

The overall incident is classified by the most serious
crime within the

incident. The hierarchy of seriousness is displayed in the coding scheme.

An incident is coded "unclassifiable" when none of the codes above it in the hierarchy could be assigned.
