Record Weight

# HOUSEHOLD INTERNET USE SURVEY

January 09, 2003

January 2002

Page 136

Derived variable: **QUARTILE** Position: 425 Length: 1  
Collection Name: **QUARTILE**

Quartiles are based on the total household income after imputation has taken place. Quartiles are defined by two factors :

(a) an income marker and (b) the number of records required to make the sum of the final weights equal to 25%, 50%,

and 75% of the population. The income marker is derived by sorting the records by increasing values of income and

finding the first income value for which the cumulative weight is at least 25%, 50% or 75%. If several records have

values equal to the marker then the number of records required to have the sum of weights equal to 25%, 50% and

75% is determined and that number of records are put into one quartile and the remainder of the records at the marker

value are put into the next quartile.

For example: If 5 records have a value of \$20,000 (this being the marker value for quartile1) but only 3 records are

required to have the sum of weights in quartile 1 equal 25% of the population; three of the five records are placed in

quartile 1 and the remaining 2 are placed in quartile2.
