*Comment :* This variable indicates the type of heating equipment which is mostly used to heat the dwelling in winter.

Steam or hot water furnaces distribute central heating through radiators located throughout the house and connected by pressure pipes.

Forced hot air furnaces distribute central heating by a motor-driven fan through vents located throughout the dwelling. (This is the most common central heating system.) Furnaces with a pump are included in this category. Other hot air furnaces distribute central heating by convection (natural) flow of hot air through vents located throughout the house. Gravity furnaces are included in this category.

Heating stoves are localised heating units with no central distribution system to other parts of the house (for example, oil space heater, gas space heater, wood stoves). Also includes cookstoves and any other type of heating equipment not listed above.

Electric heating includes electric furnaces and permanently installed baseboard electric heating and other types such as floor or ceiling heating wires in all or most rooms.

<i>Comment :</i>	<p>Shelter includes expenditures on principal accommodation (either owned or rented) and on other accommodation such as vacation homes or accommodation while travelling.</p> <p>Prior to 1997 in the Family Expenditure Survey, mortgage interest payments were reported in the "Shelter" category under both "Owned living quarters" and "Owned vacation homes". (Mortgage principal payments were reported under "Net change in assets and liabilities" since they were considered to pertain to a change in the value of household assets.)</p> <p>For the Survey of Household Spending (starting with the 1997 reference year), interest payments are not available separately from principal. "Regular mortgage payments" on "Owned living quarters" (including both principal and interest) are included under "Shelter". However, the entire mortgage payment for owned vacation homes is included under "Money flows--assets, loans and other debts". Caution should therefore be used when comparing these data to data from previous years. Categories affected include: Total expenditure, Total current consumption, Principal accommodation, Owned living quarters, Regular mortgage payments, Other accommodation, Owned vacation home, and Money flows (assets, loans, and other debts).</p>

 home), legal services, financial services, dues to unions and professional  
 associations, contributions and dues for social clubs, forfeits of deposits, fines,  
 money lost, and purchase of tools and equipment for work.

Prior to 1997, in the Family Expenditure Survey, interest on personal loans and  
 interest paid on mortgages and loans for other property were reported under  
 "Miscellaneous". (Principal payments for mortgages and loans were reported  
 under "Money flows--assets, loans and other debts" since they were considered to  
 pertain to a change in the value of household assets or debts.)

For the Survey of Household Spending (starting with the 1997 reference year),  
 interest payments are not available separately from principal. Payments for  
 personal loans and mortgages and loans pertaining to other property (including  
 both principal and interest) are reported under "Money flows".

Also starting in 1997, expenditures for "Games of chance", formerly included  
 under "Miscellaneous" became a separate sub-category. Caution should therefore  
 be used when comparing these data to data from previous years. The categories  
 "Total current consumption" and "Total expenditure" are also affected since  
 "Miscellaneous" is a component of these categories.

*Type/Length:* Character (1)  
*Classification:* Derived  
*Long name:* Housing affordability indicator  
*Description:* This variable was developed by Statistics Canada for Canada Mortgage and Housing Corporation (CMHC).  
This variable uses a shelter cost-to-income ratio (STIR) to see if households spend more than an accepted amount on shelter: expenditures of 30 per cent or more are considered above the norm.  
*Theme:* ADVAR: ADDITIONAL VARIABLES  
*Processing :*

$$\text{Rent} = \text{RN\_Q020} \text{ Regular mortgage} = (\text{MT\_Q020} * \text{MT\_Q022}) + (\text{MT\_Q040} * \text{MT\_Q042})$$

$$+ (\text{MT\_Q060} * \text{MT\_Q062}) - (\text{OP\_Q030} * (100 - \text{PctExpAgainstBusiness\_OP\_Q070} / 100 \text{ if } \text{MT\_Q130} = 1) - (\text{MT\_Q125} \text{ if } \text{MT\_Q140} = 1) \text{ Condo charges} = \text{OP\_Q050} \text{ Property taxes} = \text{OP\_Q030}$$

$$\text{Water, fuel and electricity} = \text{UT\_Q010} + \text{UT\_Q020} + \text{UT\_Q030} + \text{UT\_Q040}$$

On this file, the housing affordability indicator is calculated as follows:

Affordable:  $\text{Rent} + \text{Regular mortgage payments} + \text{Condominium charges} + \text{Property taxes} + \text{Water, fuel and electricity} / \text{Household income before taxes} = \text{less than } 30\%$

Not affordable:  $\text{Rent} + \text{Regular mortgage payments} + \text{Condominium charges} + \text{Property taxes} + \text{Water, fuel and electricity} / \text{Household income before taxes} = 30\% \text{ or more}$

Not applicable: Households where household income before taxes = 0 or less, and households with shelter cost-to-income ratio (STIR) = 1 or more.

**SUITABLE***Type/Length:* Character (1)*Classification:* Derived*Long name:* Housing suitability indicator*Description:* This variable was developed by Statistics Canada for Canada Mortgage and Housing Corporation (CMHC) according to the National Occupancy Standard (NOS).*Theme:* ADVAR: ADDITIONAL VARIABLES*Processing :* The National Occupancy Standard (NOS), used to measure housing suitability, determines the number of bedrooms a household should have for households of different size and composition. According to the National Occupancy Standard, there must be one bedroom for each:

- cohabiting adult couple;
- unattached household member 18 years of age and over;
- same-sex pair of children under age 18;
- additional boy and/or girl in the family, unless there are two opposite sex siblings under 5 years of age, in which case they are expected to share a bedroom.

A household of one individual can occupy a bachelor unit (i.e., no bedroom).

For example, a household composed of a couple and two children (boy aged 4, and girl aged 2) is expected to require 2 bedrooms. When the boy turns 5 years old, the requirement would increase to 3 bedrooms.

*Comment :* The National Occupancy Standard was developed by CMHC through a formal Federal/ Provincial/Territorial consultation process to encompass the commonalities of all the provincial/territorial occupancy standards and to serve as Canada's official housing suitability measure or indicator.
