Theme/Subtheme: 01200 Sample control - Weights

wtcsld26

Start Position:	23
Type:	Decimal
Format:	99999.9999
Long Name:	Regular integrated cross-sectional weight for SLID
Description:	Regular integrated cross-sectional weight for SLID. This weight is valid for cross-sectional estimates using the Survey of Labour and Income Dynamics only and is available for all years of that survey, i.e., 1993 onwards. See also variable ICSWT26. Note that the SLID sample consisted of only one panel of respondents from 1993 to 1995, while since 1996 it consists of two panels of respondents; the weight takes this into account.

This is an integrated weight, which is to say that all persons in the same household receive the same weight. For estimates of families or households, the weight is counted once for each family or household.

Most recent revisions:
With the release of data for 2003, the weights were revised for 1993 to 2002. With this revision a new calibration strategy was implemented which included adding the number of earners as an additional dimension of the calibration. The number of earners was obtained from the Canada Revenue Agency T4 files. In addition, population control totals used in the calibration were updated based on the 2001 census.

With the release of data for 2004, the weights were revised for 2003. The calibration of the original weights for 2003 used modeled T4 data because the final T4 data was not yet available. The revision of the 2003 weights the following year (with the release of data for 2004), used the final T4 data in the calibration step.

With the release of data for 2005, the weights were revised for 2004. The calibration of the original weights for 2004 used modeled T4 data because the final T4 data was not yet available. The revision of the 2004 weights the following year (with the release of data for 2005), used the final T4 data in the calibration step.

Theme/Subtheme: 03130 Personal characteristics - Demographics - Major activity and health

mjacg26

Start Position:	43
Type:	Character
Long Name:	Person's major activity at end of refyear, group
Description:	Person's major activity at the end of reference year (grouping). This is a direct response to a question (not derived). Due to a technical problem in the collection of data for 1999, respondents aged 70 and older were not asked about their major activity that year. To compensate for this problem, an imputation program was developed during processing of 2000, using data for years 1998 and 2000. Nonetheless, as a result of this imputation, the number of respondents aged 70 and older with a value for major activity as "retired" is high in 1999 as compared to other years.

Not available prior to reference year 1996. Codes 08 and 09 of variable MJACT26 are available starting with reference year 1999. Between reference years 1996 and 1998 inclusively, this question was about the whole year. It was not specific to the end of the year.

Population:	Persons aged 16 or older for SLID (1993 onwards);
	Persons aged 15 and older for SCD (1976 - 1997)

Theme/Subtheme: 03300 Personal characteristics - Activity limitations

disabs26

Start Position:	48
Type:	Character
Long Name:	Flag - Disability status for the reference year
Description:	Disability status, for the reference year. This is a summary flag in response to several questions. Starting with reference year 1999, the screening questions for disability status were significantly modified to reflect the new questions prepared for the 2001 Census. The new questions ask whether the person has any difficulty doing any of the activities of daily living and whether the person has a physical condition or mental condition or health problem that reduces the amount or kind of activity he or she can do in any of a few different types of situations. Starting in 1999, this variable is "yes" if any of the following variables is "yes": CNDFG26, CNDHM26, CNDWK26, CNDJS26, CNDOT26. Prior to 1999, it is the same derivation based on the following variables, which represent the old version of the questions: DISLWK26, DISLOT26, DISHAN26. FOR SCF, indicates if respondent is permanently unable to work
Population:	Persons aged 16 or older for SLID (1993 onwards); Persons aged 15 and older for SCF (1976 - 1997)
Source Question:	For years 1993-1998: DISLWK26, DISLOT26, DISHAN26 Starting with 1999: DI_Q015, DI_Q020, DI_Q025, DI_Q030, DI_Q033 For SCF: IN_E620

uszga25

Start Position:	51
Type:	Character
Long Name:	Adjusted size of area of residence
Description:	Adjusted size of area of residence for determining relevant LICO. All areas within the same CMA/CA will be coded to the same size.

Adjusted size of area of residence is assigned according to the variable CMAPO25 (CMA/CA population). However, if the household is not in a CMA/CA, the USZGA25 code depends on the variable URBPO25 (Population of area of residence) and USZGA25 is equal to the variable URBSZG25 (Size of area of residence).

Note: Reference years prior to 1999 follow the 1991 Census geography-base boundaries. Reference years from 1999 and on follow the 2001 Census geography-base boundaries. The categories for USZGA25 is the same.

Population:	All households

repa25

Start Position:	65
Type:	Character
Long Name:	Repairs dwelling needed
Description:	Respondent's perception of the repairs the dwelling needed to restore it to its original condition.

Canada Mortgage and Housing Corporation (CMHC) defines the "adequacy" of a dwelling as not requiring major repairs.

"Major repairs" include, for example, corroded pipes, damaged electrical wiring, sagging floors, bulging walls, damp walls and ceilings, crumbling foundation, rotting porches and steps.

"Minor repairs" include, for example, small cracks in interior walls and ceilings, broken light fixtures and switches, leaking sinks, cracked or broken window panes, some missing shingles or siding, some peeling paint.

"Regular maintenance" includes, for example, painting, leaking faucets, clogged gutters or eaves troughs.

Remodelling or energy improvements are excluded.

Available starting with reference year 2002.

Population:	All households
Source Question:	SLIDHH.OR_Q005

scsum28

Start Position:	129
Type:	Character
Long Name:	Yearly summary of schedules of jobs during the refyear
Description:	Yearly summary of schedules of jobs held by respondent during the reference year. Full-year (53 weeks) and part-year (less than 53 weeks) are determined according to the annual labour force status. Full-time (130 hours or more per month) and part-time (less than 130 hours per month) are determined according to the monthly hours worked at all jobs.

Note: SLID has 53 weeks per year because it follows the operational calendar of the Labour Force Survey. Therefore, if one counts January 1st to January 7th as week number 1 and continues to the end of the year, there will be 53 weeks. However, the 53rd week may not necessarily be a full week with 7 days.

Type:	Character
Long Name:	Reason why person worked less than 30 hours per week
Description:	Reason why person worked less than 30 hours per week or part time at this job. Refers to last work schedule reported for the reference year. Code 06 and 09 are considered as "involuntary" part-time work. All other codes are considered as "voluntary" part-time work.

In RY 2002 a new category called "Personal preference" has been added to code 07.
In RY 2002 a new category has been created. It is called "Economic conditions", the new code is 09.
In RY 2003 a new category has been created. It is called "Semi-retired or pre-retired", the new code is 10.

Population:	Persons aged 16-69 and had a job during the reference year and job was part time
Source Question:	[CH_Q170]

Code	Description
01	Own illness or disability
02	Caring for own children
03	Caring for elder relative(s)
04	Other personal or family responsibilities
05	Going to school
06	Could only find part-time work
07	Did not want full-time work / Personal preference
08	Full-time work under 30 hours per week (nature of the job)
09	Business conditions
10	Semi-retired or pre-retired
90	Other

tothrp1

Start Position:	160
Type:	Numeric
Long Name:	Total hours paid at this job in refyear
Description:	Total hours paid at this job in reference year. This is equal to the total hours scheduled minus scheduled hours during any unpaid absences or months not worked in this job.

Absence spells are not collected if someone is not a paid worker nor on call. If we do not know whether an absence is paid, it is assumed it is unpaid and hours absent are subtracted from hours usually worked.

If value is missing, it is imputed using the average hours worked based on whether the person works full-time or part time (FLLPRT1), based on sex (SEX99), based on the number of months worked (NBMTWK1) and based on age groups (16 to 24, 25 to 49, 50 to 69). For respondents over 49, we do not take into account the sex for the imputation. This is done since the lower number of classes in this group.

imphwe1

Start Position:	175
Type:	Decimal
Format:	$999.99
Long Name:	Hourly wage at end of job or end of refyear
Description:	Implicit hourly wage for this paid worker job at the end of the reference year or end of the job if it ended during the reference year. The amount includes tips, bonuses and commissions.

For respondents who reported their wage or salary at this job as an hourly amount, the value is taken directly. For respondents who reported their wage or salary on some other basis, the amount is converted to an hourly "implicit" rate using information provided like number of months worked, number of weeks worked and number of hours per week usually worked.

Paid worker jobs with zero paid hours are assigned the value "not applicable".

Format:	$99,999,999
Long Name:	Disposable income for Market Basket Measure (MBM)
Description:	Concept of disposable income as intended for use with the Market Basket Measure (MBM). Not available for years prior to 1999. This concept of disposable income is calculated by deducting from gross income not only direct income taxes (which gives after-tax income) but also the following expenditures:

       - Employment Insurance (EI) contributions, EIPR42
       - Canada Pension Plan and Quebec Pension Plan (CPP/QPP) contributions, CQPC42
       - Registered pension plan (RPP) contributions, RPPC42
       - Union dues and professional membership dues and malpractice liability insurance premiums, UDPD42
       - Child care expenses incurred in order to hold a paid job, CCAR42
       - Support payments paid, ALIP42
       - Public health insurance premiums, PHPR42
       - Direct medical expenses, including private insurance premiums, MEDX42

Population:	Persons aged 16 and over. Exceptions: see variable ATINC42.

Format:	$99,999,999
Long Name:	Total of Old Age Security benefits
Description:	Total of Old Age Security benefits, i.e., the Old Age Security pension plus the Guaranteed Income Supplement. The federal Old Age Security (OAS) system includes a monthly pension plus an income supplement. The OAS pension is paid to Canadian residents aged 65 and over. In recent years, the pension may be partially or entirely withheld at source or clawed back through the tax system if family net income exceeds a certain level. OAS pensioners whose family net income falls under a certain level may also receive the Guaranteed Income Supplement (GIS). The supplement includes an allowance for spouses aged 60 to 64 of OAS pensioners.
Population:	Persons aged 16 and over. Female spouse receives the benefit, otherwise the oldest family member is given the benefit.

Theme/Subtheme: 01200 Sample control - Weights

wtcsld26

Start Position:	14
Type:	Decimal
Format:	99999.9999
Long Name:	Regular integrated cross-sectional weight for SLID
Description:	Regular integrated cross-sectional weight for SLID. This weight is valid for cross-sectional estimates using the Survey of Labour and Income Dynamics only and is available for all years of that survey, i.e., 1993 onwards. See also variable ICSWT26. Note that the SLID sample consisted of only one panel of respondents from 1993 to 1995, while since 1996 it consists of two panels of respondents; the weight takes this into account.

This is an integrated weight, which is to say that all persons in the same household receive the same weight. For estimates of families or households, the weight is counted once for each family or household.

Most recent revisions:
With the release of data for 2003, the weights were revised for 1993 to 2002. With this revision a new calibration strategy was implemented which included adding the number of earners as an additional dimension of the calibration. The number of earners was obtained from the Canada Revenue Agency T4 files. In addition, population control totals used in the calibration were updated based on the 2001 census.

With the release of data for 2004, the weights were revised for 2003. The calibration of the original weights for 2003 used modeled T4 data because the final T4 data was not yet available. The revision of the 2003 weights the following year (with the release of data for 2004), used the final T4 data in the calibration step.

With the release of data for 2005, the weights were revised for 2004. The calibration of the original weights for 2004 used modeled T4 data because the final T4 data was not yet available. The revision of the 2004 weights the following year (with the release of data for 2005), used the final T4 data in the calibration step.

Theme/Subtheme: 03510 Personal characteristics - Geography - Geographic area

uszga25

Start Position:	27
Type:	Character
Long Name:	Adjusted size of area of residence
Description:	Adjusted size of area of residence for determining relevant LICO. All areas within the same CMA/CA will be coded to the same size.

Adjusted size of area of residence is assigned according to the variable CMAPO25 (CMA/CA population). However, if the household is not in a CMA/CA, the USZGA25 code depends on the variable URBPO25 (Population of area of residence) and USZGA25 is equal to the variable URBSZG25 (Size of area of residence).

Note: Reference years prior to 1999 follow the 1991 Census geography-base boundaries. Reference years from 1999 and on follow the 2001 Census geography-base boundaries. The categories for USZGA25 is the same.

Population:	All households
Source Question:	DEC31HH.CMAPO25 or DEC31HH.URBPO25

Theme/Subtheme: 03630 Personal characteristics - Family and household characteristics - Economic family - size and type

fmtyp27

Start Position:	42
Type:	Character
Long Name:	Economic family type reference person
Description:	Economic family type. An economic family is composed of two or more persons living together who are related by blood, marriage, adoption or common-law. This variable is set using the major income earner in the economic family as the reference person. To reduce the length of the category descriptions, the following terms are used:

UNATTACHED INDIVIDUAL: While the definition of economic family does not include persons who do not live with a relative, such persons (called unattached individuals) are assigned an economic family id. If desired, data users can use this variable to separate unattached individuals from economic families.

ELDERLY: The major income earner in the economic family is aged 65 or over.

Spouse: The partner living with the major income earner in the family, including married, common-law and same-sex relationships.

MARRIED COUPLE: The major income earner and his/her spouse.

RELATIVE: A person related to the major income earner by blood, marriage, adoption or common-law.

CHILDREN: The family includes at least one child (birth, adopted, step, or foster) of the major income earner under age 18. Other relatives may also be in the family. Children of guardians are not considered "children" in this classification. In other words, older relatives are not treated as de facto parents when there is no direct parent identified.

LONE-PARENT FAMILY: Includes at least one child as defined above. Families where the parent is 65 years or older are excluded.

OTHER RELATIVE: A person in the economic family who is not the major income earner nor his/her spouse or child under age 18. Children aged 18 or over are considered to be "other relatives".

Population: All economic families

Code	Description
11	Unattached individual (elderly male)
12	Unattached individual (elderly female)
13	Unattached individual (non-elderly male)
14	Unattached individual (non-elderly female)

Theme/Subtheme: 01200 Sample control - Weights

wtcsld26

Start Position:	16
Type:	Decimal
Format:	99999.9999
Long Name:	Regular integrated cross-sectional weight for SLID
Description:	Regular integrated cross-sectional weight for SLID. This weight is valid for cross-sectional estimates using the Survey of Labour and Income Dynamics only and is available for all years of that survey, i.e., 1993 onwards. See also variable ICSWT26. Note that the SLID sample consisted of only one panel of respondents from 1993 to 1995, while since 1996 it consists of two panels of respondents; the weight takes this into account.

This is an integrated weight, which is to say that all persons in the same household receive the same weight. For estimates of families or households, the weight is counted once for each family or household.

Most recent revisions:
With the release of data for 2003, the weights were revised for 1993 to 2002. With this revision a new calibration strategy was implemented which included adding the number of earners as an additional dimension of the calibration. The number of earners was obtained from the Canada Revenue Agency T4 files. In addition, population control totals used in the calibration were updated based on the 2001 census.

With the release of data for 2004, the weights were revised for 2003. The calibration of the original weights for 2003 used modeled T4 data because the final T4 data was not yet available. The revision of the 2003 weights the following year (with the release of data for 2004), used the final T4 data in the calibration step.

With the release of data for 2005, the weights were revised for 2004. The calibration of the original weights for 2004 used modeled T4 data because the final T4 data was not yet available. The revision of the 2004 weights the following year (with the release of data for 2005), used the final T4 data in the calibration step.

Theme/Subtheme: 01200 Sample control - Weights

---

wtcsld26

Start Position:	23
Type:	Decimal
Format:	99999.9999
Long Name:	Regular integrated cross-sectional weight for SLID
Description:	Regular integrated cross-sectional weight for SLID. This weight is valid for cross-sectional estimates using the Survey of Labour and Income Dynamics only and is available for all years of that survey, i.e., 1993 onwards. See also variable ICSWT26. Note that the SLID sample consisted of only one panel of respondents from 1993 to 1995, while since 1996 it consists of two panels of respondents; the weight takes this into account.

This is an integrated weight, which is to say that all persons in the same household receive the same weight. For estimates of families or households, the weight is counted once for each family or household.

Most recent revisions:
With the release of data for 2003, the weights were revised for 1993 to 2002. With this revision a new calibration strategy was implemented which included adding the number of earners as an additional dimension of the calibration. The number of earners was obtained from the Canada Revenue Agency T4 files. In addition, population control totals used in the calibration were updated based on the 2001 census.

With the release of data for 2004, the weights were revised for 2003. The calibration of the original weights for 2003 used modeled T4 data because the final T4 data was not yet available. The revision of the 2003 weights the following year (with the release of data for 2004), used the final T4 data in the calibration step.

With the release of data for 2005, the weights were revised for 2004. The calibration of the original weights for 2004 used modeled T4 data because the final T4 data was not yet available. The revision of the 2004 weights the following year (with the release of data for 2005), used the final T4 data in the calibration step.
