Note of appreciation

Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

Executive Summary

SLID conducts two annual interviews: the Labour interview in January and the Income interview in May. These data are collected using computer-assisted interviewing. Thus there are no paper questionnaires required for data collection. The questions, responses and interview flows for Labour and Income are documented in other SLID research papers. This document presents the information for the Entry Exit portion of the Labour interview.

The Entry Exit Component consists of five separate modules. The Entry module is the first set of data collected. It is information collected to update household composition and place of residence. For each person identified in Entry, the Demographics module collects (or updates) the person's name, date of birth, sex and marital status. Then the Relationships module identifies (or updates) the relationship between each respondent and every other household member. The Exit module includes questions on who to contact for the next interview and the names, phone numbers and addresses of two contacts to be used only if future tracing of respondents is required. An overview of the Tracing Module is also included in this document.

1. Introduction

Each January, the Labour interview for the Survey of Labour and Income Dynamics (SLID) is conducted. Then, in May, SLID income data are collected. Both use computer-assisted interviewing (CAI) for data collection. The questions particular to each interview are preceded by different versions of the Entry Exit component.

For the SLID 2002 collection, panel 2 was in its sixth, and final, year of collection and panel 3 was in its third year. Both panels consisted of approximately 37,000 households and 88,000 people.

In Appendix 3, figures 1 and 2 present an overview of the flow of the interview and the flow of the Entry Exit component, respectively.

The ENTRY module collects/updates information on household members. For each household member listed at the last interview, the interviewer asks whether he/she is still a household member. For those who are not, information is collected on when the person moved out, the reason for leaving, and the new address and telephone number. If the entire household has moved, information on telephone number and address is updated. Finally, the interviewer asks if there are any new household members. If so, the interviewer first checks whether the new person is a “ghost” (those persons who used to belong to the household but who moved out and may have returned at this contact). A list of former household members (ghosts) is provided from the previous SLID interview for each household. If the person is not on this list, their name is added to the household roster. These new persons are joiners. The date when the person joined the household is asked as well as the person's previous province of residence.

The DEMOGRAPHICS module collects or updates the date of birth, sex and marital status of each household member.

The RELATIONSHIPS module identifies or updates the relationship between each household member and every other household member.

Most surveys which contain household and family variables construct family relationships in relation to a household reference person or "head". For example, a family composed of a husband, wife and two children might use either the husband or the wife as the reference person. We would end up with relationships of head, spouse, and children. By collecting family relationships based on a reference person we lose detailed information about family relationships. SLID collects an expanded set of demographic data by asking, each year, the relationship of every household member to every other household member, rather than by the traditional method of relating everyone to one reference person. The objective of this relationship approach is to collect data that reflect the changes that have taken place in family relationships over a six year period. As well, in a longitudinal survey, this approach avoids the need to re-ask relationships if the reference person leaves the household.

The EXIT module confirms the household contact name for the next interview and asks whether the household is planning a future move. If so the new address is recorded. The names, phone numbers and addresses of two friends or relatives, who may be contacted if future tracing of the household is required, is also collected.

Cases will be sent to the TRACING COMPONENT as a result of the answers given to certain questions in the Entry module.

This research paper presents the content of the ENTRY EXIT COMPONENT¹ including question wording, possible responses, and flows of questions.

2. How the application works

Standard Question Blocks:

The document "Standard Question Blocks for Social Survey CAI Applications" provides the basic specifications and documentation for standard Entry and Exit questions that are available for use by all surveys. These questions are grouped into "blocks" and each block is programmed individually. The blocks include pre-defined question text and response categories that cannot be changed. Survey

¹The Labour and Income questions are presented in other SLID research papers.

areas may select the blocks that they wish to include in their Entry and Exit components.

The following blocks are also called in the SLID Entry and Exit components (see Appendix 1):

Address Questions:

The Address block includes all the necessary question and interviewer instruction text necessary to gather a complete Canadian or US address. Addresses outside Canada and the US can also be gathered, but some information may have to be entered in fields not designed for collection of that information, e.g., the name of a country might be entered in the same field as the municipality.

Date Questions:

The date block has been programmed with full date information collected as three separate fields (in day / month / year order). This allows “Don’t Know” and “Refusal” to be entered for any or all of the fields, and also allows those fields containing numeric data to be validated. Naturally, only if all three of the fields contain numeric data will it be possible to validate them together.

It is possible to validate the entered date against other information, specifically a reference date. Survey areas must provide the reference date, and then a hard edit checking for consistency between the entered date and the reference date will be performed. If a reference date is not provided, the edit will not be performed.

Telephone Number:

Two standard blocks have been programmed to collect a telephone number. The North American Telephone block gathers a ten digit telephone number in two pieces, consisting of a three digit area code and a seven digit phone number. Validation of the area code field takes place before the seven-digit telephone number is collected, using a soft confirmation edit.

3. What's new

New questions:

ARC_R01

New question used when contact is re-established with a respondent who was unable to complete the survey.

Modified questions:

RNC_Q2F

Three new categories have been added to further break down the “Unrelated” relationship.

4. How to read this document

Text in **bold** letters is read, as worded, by the interviewer. Instructions for the interviewer are preceded by the word "INTERVIEWER" and are not read out loud to the respondent. The options "Don't know" (DK) and "Refuse" (R) are allowed on every question unless otherwise stated. However, the response categories are shown in this document only when the flow from these responses is not to the next question.

Question numbers

For each section, the question numbers refer to the actual numbers used in the programmed application which appear on the interviewer's computer screen.

Naming conventions

Naming conventions conform to the standards for Statistics Canada social surveys.

Questions with: Q (e.g. SL_Q01) = question text read to a respondent
 C (e.g. JOI_C01) = internal check
 N (e.g. CN_N02) = interviewer instruction
 E (e.g. AWC_E05) = edit message

Pre-fill items

These are items specific to each respondent's interview. The software adds the relevant information into the question, making the interviewer's job easier. Prefill items (shown in square brackets []) include:

["English"/"French"/"Other"] - This is the language in which the previous interview was conducted..

[Does[respondent name]/Do any of the following people] - If there is only one respondent living in the household, the first wording is used for the question and the appropriate respondent name is pre-filled. If there is more than one respondent living in the household, the second wording is used for the question and the list of members appears below the question text.

[respondent name] - This is the first and last name of the person to whom the question refers. This is not necessarily the person who is talking to the interviewer.

[month of birth], [day of birth], [year of birth] - This is the date of birth information recorded in the first interview with each respondent and confirmed in each subsequent interview. It is used to calculate the household member's age.

[calculated age] - Calculated from the reported date of birth, it is used to verify the date of birth information.

[reference year] - This is the year for which the information is collected (2001).

[marital status] - The reported value, used in subsequent questions to identify dates of changes in marital status.

[address] - For persons reporting a move, this is the previous address of residence.

[mailing address] - The mailing address obtained during the previous interview.

[province or territory] - This is the province or territory which is derived from the postal code reported.

[telephone number] – The telephone number obtained during the previous interview.

[month and year] - This is the period of the next interview; May of the current year (for the Income interview) if tax permission is not given, and January of the current year + 1 (for the next Labour interview) if tax permission is given.

Headers

For some question groups in CAI, important information is noted at the top of the screen. This information is given at the beginning of each section description.

Ranges

Hard Ranges of acceptable responses are specified for some of the questions. For example, in JOI_Q04 (when moved in) a hard range minimum of " January 1, [reference year]" exists. If the interviewer tries to enter a date earlier than this, the system will not accept it.

Dates

All dates are entered by number in boxes, using the dd/mm/yyyy format. "Refusal" and "Don't know" are also acceptable responses.

Outcome Codes

The Outcome Code is a two-digit code which indicates the result of a contact or attempted contact with a household during the conduct of a survey. The codes are grouped into "In Progress" and "Final" and some of the same outcome codes may appear on both lists.

Action Codes

An Action Code is assigned for 'refusal' cases only. It is a one-digit code which indicates the action to be taken for the next collection. Only a Senior interviewer or a PM has the authority to assign these codes.

9. Tracing component

Cases will be sent to the Tracing group as a result of the answers given to certain questions in the Entry module.

Tracing required for household

A household will be sent to tracing if the interviewer is unable to make contact with the respondents after several tries or when someone tells them the household has moved.

If, after many attempts, the answer to CN_N02 (Have you made contact?) is 'No' and the interviewer assigns an in-progress code of 30 (tracing required), the case will be sent to the Tracing group with the original sample identification number.

If the answer to SL_Q01 (Do any of the following people still live or stay in this household?) is 'No', the system automatically assigns an in-progress code of 30 (tracing required) and the case is sent to the Tracing group with the original sample identification number.

Tracing required for mover(s)

Each time one or more, but not all, household members move from a household, a new household containing these movers is created.

If the answer to PE_Q01 (Do the following people still live or stay in this household?) is 'No' for one or more household members, the reason for the move, the date of the move, the telephone number and address of the mover, and any other pertinent information will be asked. Once the application has exited the Entry component (i.e. all demographic and relationship information for the remaining members has been collected), a new household with a new sample identification number will be generated for the member(s) who have left and will automatically be sent to the Tracing group by the system.

All persons who have moved out of the household are moved together to form a case for tracing. During later contact with those members, it will be determined if they all live in one household or if additional households (cases) need to be created.

Each case will contain the following information

The original Case ID, phone number and address will appear at the top of the screen in the case of a household move. For movers in a newly created household, the new Case ID, previous address and previous phone number will appear.

A Members list will contain the name(s) of the new household member(s) with the old household members appearing as ghosts. Demographic information will also appear for all members (age, sex, marital status and member status).

Trace Sources are listed which contain the contact names and addresses collected during previous interviews, along with other trace sources which were added during tracing in previous years. The most recent source for movers, prev hhld, consists of the tracing information collected in the Entry module of the recent interview with the last household. Interviewers may also add new trace sources resulting from information obtained either through one of the other sources or through new research (i.e. local operator, post office, phone book, etc.).

A tracing interview is conducted with questions designed to lead the interviewer through an interview with the source or possibly the respondent. The results of the interview will be assigned automatically and will be one of five: Dead end; New lead; Appointment; Call back required; or Survey which will load the SLID application so that the interview can be completed.
