

Parameter Guide

This guide contains an encyclopedic reference to SPSPD/M parameters. An overview of parameters and a description of each of the three kinds of parameters (control, adjustment, and tax/transfer) is given.

Introduction

The Social Policy Simulation Model may be customized in two ways. The first is to modify the actual "C++" language source code. This requires knowledge of the programming language as well as knowledge about the actual structure and implementation of the model.

A far simpler but less flexible and less powerful means of changing the function of the model is to turn the knobs and flip the switches provided by the model designers. These knobs and switches are known as parameters.

The purpose of this document is to provide an explanation of all parameters provided with the model. This introduction provides an overview of the parameter files and types of parameters which control the model, methods available for their examination and the source of the individual parameter's values.

Section 2, organized by program, provides an overview of the parameters. For example, all parameters related to calculating Social Assistance (SAFLAG, SAELDOPT, SAFS, SFAOUT, and IMPSAOPT) are listed together and each has a one line description.

In Section 3, the parameters are described in fuller detail. The alphabetic organization of this section will allow the user to locate a specific parameter more easily. References to the program function are given in this section to provide a cross reference to the *Algorithm Guide*.

Parameter Files

The files containing the parameter values have names which are given the extensions ".cpr" (control parameters), ".apr" (database adjustment parameters), and ".mpr" (tax/transfer model parameters). The values assigned may be changed by editing these files; interactively, during the running of the model; or by external models which generate these parameter files as output. Users should consult the *SPSD/M User's Guide* for a full description of modifying parameter values. The parameters in the commodity tax section of the model are generated by an external Input/Output model and should be altered only through that model. See the *COMTAX User's Guide* for more details.

The SPSM is designed to provide a great deal of flexibility through changing parameter values. Parameters are used for controlling the function of the model, its reporting facilities, adjusting the data and to provide values and options for the tax/transfer simulations.

As distributed, the standard model algorithm uses over 850 parameters which are provided with default values for eighteen alternative variants, or distinct simulations:

1988 actual tax/transfer parameter values, projected database
1989 actual tax/transfer parameter values, projected database
1990 actual tax/transfer parameter values, projected database
1991 actual tax/transfer parameter values, projected database

1992 actual tax/transfer parameter values, projected database
1993 actual tax/transfer parameter values, projected database
1994 actual tax/transfer parameter values, projected database
1995 actual tax/transfer parameter values, projected database
1996 actual tax/transfer parameter values, projected database
1997 actual tax/transfer parameter values, projected database
1998 actual tax/transfer parameter values, 1998 database
1999 actual tax/transfer parameter values, projected database
2000 actual tax/transfer parameter values, projected database
2001 actual tax/transfer parameter values, projected database
2002 actual tax/transfer parameter values, projected database
2003 actual tax/transfer parameter values, projected database
2004 projected tax/transfer parameter values, projected database
2005 projected tax/transfer parameter values, projected database
2006 projected tax/transfer parameter values, projected database
2007 projected tax/transfer parameter values, projected database
2008 projected tax/transfer parameter values, projected database
2009 projected tax/transfer parameter values, projected database

Each of these variants is defined by a set of parameter files, as described above. For example, the 1988 variant is specified in the parameter files: `ba88.cpr`, `ba88.mpr` and `ba98_88.apr`.

The database adjustment parameters supplied with the full SPSD/M are based on differences between SPSD per capita base year (1998) figures and per capita national accounts data for available years. This method is also used for projected the value of tax/transfer parameters where necessary.

The following is a list of the parameter files included with the release of SPSD/M version 10.0. These files supercede all parameter files included with the version 9.2 release.

CONTROL	ADJUSTMENT	TAX/TRANSFER
BA88.CPR	BA98_88.APR	BA88.MPR
BA89.CPR	BA98_89.APR	BA89.MPR
BA90.CPR	BA98_90.APR	BA90.MPR
BA91.CPR	BA98_91.APR	BA91.MPR
BA92.CPR	BA98_92.APR	BA92.MPR
BA93.CPR	BA98_93.APR	BA93.MPR
BA94.CPR	BA98_94.APR	BA94.MPR
BA95.CPR	BA98_95.APR	BA95.MPR
BA96.CPR	BA98_96.APR	BA96.MPR
BA97.CPR	BA98_97.APR	BA97.MPR
BA98.CPR	BA98_98.APR	BA98.MPR
BA99.CPR	BA98_99.APR	BA99.MPR
BA00.CPR	BA98_00.APR	BA00.MPR
BA01.CPR	BA98_01.APR	BA01.MPR
BA02.CPR	BA98_02.APR	BA02.MPR
BA03.CPR	BA98_03.APR	BA03.MPR
BA04.CPR	BA98_04.APR	BA04.MPR
BA05.CPR	BA98_05.APR	BA05.MPR
BA06.CPR	BA98_06.APR	BA06.MPR
BA07.CPR	BA98_07.APR	BA07.MPR
BA08.CPR	BA98_08.APR	BA08.MPR
BA09.CPR	BA98_09.APR	BA09.MPR
BA88T.CPR		
BA89T.CPR		
BA90T.CPR		
BA91T.CPR		
BA92T.CPR		
BA93T.CPR		
BA94T.CPR		
BA95T.CPR		
BA96T.CPR		
BA97T.CPR		
BA98T.CPR		
BA99T.CPR		
BA00T.CPR		
BA01T.CPR		
BA02T.CPR		
BA03T.CPR		
BA04T.CPR		
BA05T.CPR		
BA06T.CPR		
BA07T.CPR		
BA08T.CPR		
BA09T.CPR		

The numeric portion of the file names refers to the calendar year which will be simulated.

Within these files, the SPSM uses several types of parameters. Different types are checked for validity using different rules. The following is a description of the parameter types currently defined:

FLAG	<p>A flag controls whether or not an algorithm (or program or calculation) is performed. With a value of one the algorithm is executed, with a value of zero it is not. Flag parameters always have the word "FLAG" as the last four letters in their name.</p> <p>A flag must take the value 0 or 1.</p>
OPTION	<p>An option parameter allows the choice of two or more algorithms (or programs or calculations). Values range from 1 to the number of options allowed. Option parameters always end in "OPT".</p> <p>A valid option value is an integer between 1 and the highest number allowed in the parameter definition.</p>
SCALAR	Scalar parameters take a single numeric value with or without a decimal point.
STRING	A string parameter is a short single line of text.
VECTOR	A vector is a single column of numbers. The first value is the number of values to follow. The program checks that the correct number of values are included.
LOOKUP TABLE	<p>A lookup table contains a single value followed by a set of three columns. The initial single value indicates the number of rows which are to follow. The tables are used in a similar manner as a tax table. A value, such as taxable income, is provided as a parameter to a look up program and the amount of tax payable is returned. In a lookup table, the first column represents the input value, such as taxable income. The second column represents the output value corresponding to the input value in the same column. The third column represents the marginal change in the output value for the next increment (or tax bracket).</p>
TABLE	A table is a numeric array with an arbitrary number of rows and columns. The array is preceded by a number indicating the number of rows to follow.

Users should note that some parameters have been estimated and the user is encouraged to inform us of the existence of more refined estimates or more appropriate values.

Examining Parameter Values

To review the values of the parameters for each variant, users may consult two sources. The actual parameter files included with the model are the primary source and are the definitive source to be consulted. In addition, as part of the online help guide, the *SPSD/M Parameter Guide* contains all the default values for the parameters.

Two tools have been provided to assist you in reviewing the parameter files directly:

compparm: This utility will compare any two parameter files and produce a report detailing their differences. Please refer to the *SPSD/M Tool User's Guide* for a detailed description of its use.

grep: This utility searches all specified files for a given string and displays lines in which the string is found. This allows for the comparison of the values of specific parameters across

multiple parameter files. Please refer to the *SPSD/M Tool User's Guide* for a detailed description of its use.

Users may also use a text editor to actually scan the parameter files directly. This method allows one to review all associated comments in context. Glass box users, and others, may wish to take this one step further and review the use of the parameters of interest in the C++ language source code provided with the model. For a detailed discussion of working with parameters and the parameter files please see the *SPSD/M User's Guide*.

Source of Parameter Values

The values used in the model have been drawn from a number of official publications associated with the tax/transfer system. For individual parameters, parameter values and sources organized by parameter may be found in the online parameter guide.

1 Parameter by Program

1.1 Model Control Parameters

1.1.1 General Information

CPRDESC	Description of SPSM run [string]
CPRVER	SPSD/M Release Version [string]
CPRSFIL	Starting Control parameter file [string]
LICENSEE	SPSD/M licensee [string]
AUTHOR	Name of person doing simulation [string]
OUTCPR	Name of control parameter file (out) [string]
ALGDESC	Names of standard and alternate algorithms
BRKFLAG	Activate interception of 'Break' key
BEEPFLAG	Beep on completion
CLOSEFLAG	Close window on completion
UPDATEINT	Interval between screen updates (hhlds)
ETAFLAG	Activate fraction completed display
ROUNDFLAG	Round disposable and consumable income
LOGFLAG	Produce a .log file for this run
OUTLOG	Name of log file (out) [string]

1.1.2 SPSD Input Files

INSPSD	Name of SPSD file (in) [string]
FXVFLAG	Read SHS expenditure vector file
INPFV	Name of SHS vector file (in) [string]
WGTF	Read weight file
INPWGT	Name of weight file (in) [string]
REFFLAG	Read reference results file
INPREF	Name of reference results file (in) [string]
REFVAR	Reference results file variables [string]

1.1.3 Database Adjustment

AGENAME	Name of database adjustment algorithm [string]
INPAPR	Name of database adjustment parameter file (in) [string]
OUTAPR	Name of database adjustment parameter file (out) [string]

1.1.4 Variant Information

VARALG	Name of variant algorithm [string]
VARMETH	Method of creating variant variables

VARDESC	Description of variant parameters [string]
INPVARMPR	Name of variant tax/transfer parameter file (in) [string]
OUTVARMPR	Name of variant tax/transfer parameter file (out) [string]
OUTMRSFLAG	Variant results file creation flag
OUTVARMRS	Name of variant results file (out) [string]
OUTMRSVARS	Variant results file variables [string]
OUTMRSFRAC	Variant results file preserves fractional part

1.1.5 Base Information

BASALG	Name of base algorithm [string]
BASMETH	Method of creating base variables
BASDESC	Description of base parameters [string]
INPBASMPR	Name of base tax/transfer parameter file (in) [string]
INPBASMRS	Name of base results file (in) [string]
INPMRSVARS	Base results file variables [string]

1.1.6 Subsampling, Random Number Seed

SAMPLEREQ	Size of sample requested
SAMPLE	Size of sample obtained
WGTTOT	Sum of weights on tax file
SEED	Random number generator seeds

1.1.7 Record Selection Facility

SELFLAG	Selection facility activation flag
SELUNIT	Selection facility family level
SELSPEC	Selection specification [string]
SELMAX	Selection facility maximum # of households

1.1.8 Marginal Tax Rate Facility

MARFLAG	Marginal tax rate facility activation flag
MARAMT	Amount to be added to variable for marginal calculation
MARVAR	Variable to add MARAMT to [string]
MARSPEC	Expression identifying recipients [string]
MARBASEFLAG	Save marginal results as base run flag

1.1.9 Turning Point Facility

TPFLAG	Turning point facility activation flag
TPSPEC	Expression identifying individuals to change

	[string]
TPVARS	Variables to modify [string]
TPMETH	Method for modifying variables [1=additive, 2=multiplicative]
TPLL	Lower limit for modified variables
TPUL	Upper limit for modified variables

1.1.10 User-defined Variables

UVARFLAG	Activate UVAR parameter for expressions
UVAR	User statements [string]

1.1.11 Text Output Facility

ASCFLAG	Text output facility activation flag
OUTASC	Name of text output file (out) [string]
ASCUNIT	Text output family level
ASCSTYLE	Style of text output
ASCDELIM	Field delimiter
ASCEXTPRC	Number of digits of extra precision
ASCVARS	Variables selected for text output [string]

1.1.12 SAS Output Facility

SASFLAG	SAS output facility activation flag
OUTSAS	Name of SAS output file (out) [string]
SASUNIT	SAS output family level
SASVARS	Variables selected for SAS output [string]
SASTITLE	SAS file label [string]

1.1.13 Reports

OUTTBL	Name of report file (out) [string]
--------	------------------------------------

1.1.14 Parameter Reporting

PRDFFLAG	Parameter difference report activation flag
----------	---

1.1.15 Tabular Reporting

1.1.15.1 Built-in Tables

T0FLAG	Canada totals table flag (Dollars)
T0AFLAG	Canada totals table flag (Units)
T1FLAG	Provincial totals table flag (Dollars)
T1AFLAG	Provincial totals table flag (Units)
T2FLAG	Income group totals table flag (Dollars)
T2AFLAG	Income group totals table flag (Units)

T3FLAG	Family type totals table flag (Dollars)
T3AFLAG	Family type totals table flag (Units)
T4FLAG	LICO ratio group totals table flag (Dollars)
T4AFLAG	LICO ratio group totals table flag (Units)
TABUNIT	Built-in tables family level
TABDELTA	Built-in tables winner/loser threshold
INCVAR	Variable to use for table 2 [string]
INCGP	Income cutpoints for table 2 [array]
PVRAT	Family poverty ratio fractions for table 4 [array]
LICOOPT	T4 LICO definition 1=BeforeTax 2=AfterTax

1.1.15.2 User-specified Tabulation Facility

XTFLAG	X-tab facility activation flag
XTSPEC	X-tab specification [string]
XTDBLFLAG	X-tab double precision activation flag
XTCOLS	X-tab desired print width
XTLINES	X-tab desired lines per page

1.1.15.3 Distributional Analysis Facility

DISTFLAG	Distribution facility activation flag
DISTUNIT	Distribution facility family level
DISTVAR	Distribution facility variable [string]
DISTSAMP	Distribution facility sample size
DISTZERO	Distribution facility zero inclusion flag
DISTP	Breakpoints for histogram plot [array]
DISTPWID	Width of histogram plot
DISTPHGT	Height of histogram plot
INEQFLAG	Inequality measures facility activation flag
INEQMEASURE	Type of inequality measure [social preference, center of weight distribution]

1.2 Database Adjustment Parameters

1.2.1 File Description Parameters

APRDESC	Description of database adjustment parameter file
APRVER	SPSD/M Release Version [string]
APRSFILE	Starting Adjustment parameter file [string]

1.2.2 Structural Parameters

1.2.2.1 Provincial Mapping

PROVMAP	Provincial remapping [prov]
---------	-----------------------------

1.2.2.2 Imputation Method

IMPUIBOPT	Imputation method, UI [1=none 2=rank]
IMPSAOPT	Imputation method, SA [1=none 2=rank]
IMPCQOPT	Imputation method, CQP [1=none 2=rank]

1.2.2.3 Calculation Options

DNINCFLAG	Disable no income flag for calculation
-----------	--

1.2.2.4 SHS Adjustments

CTTXRM	Base year commodity tax removal factor [com x prov]
CTCFALC	SHS reporting error adjustment: Alcohol [prov]
CTCFTOB	SHS reporting error adjustment: Tobacco [prov]
CTCFGAS	SHS reporting error adjustment: Gasoline [prov]
CTFAMSNA	SHS->SNA conceptual conversion factor [com]
KEEPNEGEXP	Retain negative expenditures in SHS

1.2.2.5 Classification Variable Parameters

EARNMIN	Earnings threshold to be an earner
---------	------------------------------------

1.2.2.6 Low Income Cut-off Parameters

PTF	Low income cut-off Before Tax [size, urban]
PTFAT	Low income cut-off After Tax [size, urban]
PVRAT	Family poverty ratio fractions for table 4 [array]

1.2.2.7 RRSP Adjustment Parameters

RRSPIFLAG	RRSP increment activation flag
RRSPEMIN	Minimum (rpp+rrsp) for increment if rpp>0
RRSPEMAX	Maximum (rpp+rrsp) for increment if rpp>0
RRSPEINC	Increment to rrsp if conditions & rpp>0
RRSPSMIN	Minimum (rrsp) for increment if rpp=0
RRSPSMAX	Maximum (rrsp) for increment if rpp=0
RRSPSINC	Increment to rrsp if conditions & rpp=0

1.2.3 Database Adjustment Factors

1.2.3.1 UI Growth Parameters

UIBASEYRMAX	Maximum insurable earnings for base year
UITARGYRMAX	Maximum insurable earnings for target year
PURB	Base year unemployment rate [prov]
PURC	Current year unemployment rate [prov]
PURR	Ratio current:base unemployment rate [prov]

1.2.3.2 Income, Expenditure and Deduction Items

All dollar denominated variables from the SLID, SHS and Greenbook have a corresponding growth parameter. The database value is always scaled by the corresponding parameter

value. Minimally, all these parameters are vectors by province. In some cases parameters will have an extra dimension (i.e.GFIEMP is grown by province and sex).

1.2.3.2.1 Market Income

GFIEMP	Growth Factor: Employment income [province,sex]
IEMPADJ	Adjustment Factor: Employment income [employment income breaks,province]
IEMPBRK	Adjustment Factor: Income breaks for income adjustment[employment income breaks]
GFISEFM	Growth Factor: Self-employed income - farming
GFISENF	Growth Factor: Self-employed income - non- farming
GFICAPG	Growth Factor: Capital gains (actual) (127 * 1.5)
GFIDIV	Growth Factor: Dividend income (actual) (120 / 1.5)
GFILOSS	Growth Factor: Business investment losses (217)
GFIPENS	Growth Factor: Pension income (115)
GFIALIMO	Growth Factor: Alimony Income
GFITRRSP	Growth Factor: Taxable RRSP withdrawals
GFITOTH	Growth Factor: Other non-government income (taxable)

1.2.3.2.2 Government Income

GFISA	Growth Factor: Social assistance income
GFSAPRED	Growth Factor: Predicted benefits from Social Assistance
GFUIPRED	Growth Factor: Predicted benefits from UI
GFIWORKC	Growth Factor: Worker's compensation
GFCPPL65	Growth Factor: CPP for age < 65
GFCPP65	Growth Factor: CPP for age 65
GFCPP66	Growth Factor: CPP for age 66
GFCPP67	Growth Factor: CPP for age 67
GFCPP68	Growth Factor: CPP for age 68
GFCPP69	Growth Factor: CPP for age 69
GFCPP70	Growth Factor: CPP for age 70
GFCPP71	Growth Factor: CPP for age 71
GFCPP72	Growth Factor: CPP for age 72
GFCPP73	Growth Factor: CPP for age 73
GFCPP74	Growth Factor: CPP for age 74
GFCPP75	Growth Factor: CPP for age 75
GFCPPG75	Growth Factor: CPP for age > 75

1.2.3.2.3 Deductions

GFADDED	Growth Factor: Additional deductions from net income (256)
GFALEXP	Growth Factor: Other allowable employment expenses (229)
GFCAPGEX	Growth Factor: Capital gains exemptions (254)

GFCARRY	Growth Factor: Carrying charges (221)
GFC CET	Growth Factor: Child care expenses associated with child
GFC CETT	Growth Factor: Child care expenses (Limit A, Form T778)
GFCGTC	Growth Factor: Caregivers tax credit (315)
GFCGLESS	Growth Factor: TCG Less Cap Gains Ded on Cap Prop Gifts
GFCHARIT	Growth Factor: Charitable donations (340)
GFCLOSS	Growth Factor: Allowable other years capital loss (253)
GFDALIMO	Growth Factor: Alimony paid (220)
GFDEPPCH	Growth Factor: Gifts of depreciable property (337)
GFDISOTH	Growth Factor: Disability amount for dependants (318)
GFDISSLF	Growth Factor: Disability amount for self (316)
GFDUES	Growth Factor: Union and professional dues (212)
GFEMPLO	Growth Factor: Employee home relocation loan dedn (248)
GFEXPLOR	Growth Factor: Exploration and development expenses (224)
GFFDSFT	Growth Factor: Foreign tax credit applied to surtax (511)
GFFORINC	Growth Factor: Net foreign income (508)
GFFORTX	Growth Factor: Foreign tax paid (507)
GFGIFTS	Growth Factor: Gifts to Canada/provinces/culture (342)
GFGSTREB	Growth Factor: GST rebate (457)
GFHOMSTU	Growth Factor: College residence/resident homeowner assistance (558)
GFIINVND	Growth Factor: Investment income (excluding dividend)
GFINTSTU	Growth Factor: Interest paid on student loans (319)
GFMEDGRO	Growth Factor: Medical expenses, gross (330)
GFMINCAR	Growth Factor: Minimum tax carryover (504)
GFMOVEXP	Growth Factor: Imputed moving expenses (219)
GFMSCHPD	Growth Factor: Manitoba school taxes paid
GFNCLOS	Growth Factor: Allowable other years non-capital loss (252)
GFNORTH	Growth Factor: Northern deductions (255)
GFOTHDED	Growth Factor: Other deductions from total income (232)
GFOTHPE	Growth Factor: Other dependant exemptions

	(305)
GFPARTLO	Growth Factor: Limited partnership losses (251)
GFPOLCON	Growth Factor: Federal political contributions (409)
GFPROPTX	Growth Factor: Net property taxes paid (556)
GFPRVPOL	Growth Factor: Provincial political contributions (565)
GFRENTPD	Growth Factor: Total rental payments (555)
GFRPP	Growth Factor: Registered pension plan contributions (207)
GFRRSP	Growth Factor: RRSP contributions (208)
GFSTKDED	Growth Factor: Stock option deduction (249)
GFTUITN	Growth Factor: Tuition fees (320)
1.2.3.2.4	Tax Credits
GFITC	Growth Factor: Federal investment tax credits (412)
GFLABTXG	Growth Factor: Labour funds tax credit (414)
GFPRVFTC	Growth Factor: Provincial foreign tax credit (Form T2036)
1.2.3.2.5	Family Expenditure Items
GFALIMO	Adjustment Factor: Alimony and child support
GFANNCON	Adjustment Factor: Annuity contracts and transfers to RRIFs
GFFMX	Adjustment Factor: consumer expenditure categories [commodity]
GFHOMEXP	Adjustment Factor: Expenses associated with princ residence
GFREPR	Adjustment Factor: Repairs paid
GFRECOM	Adjustment Factor: Real estate commissions
GFIPAC	Adjustment Factor: Life insurance premiums and annuity contributions
GFGVPEN	Adjustment Factor: Government pension plan contributions
GFPVPEN	Adjustment Factor: Private pension plan contributions
GFCQP	Adjustment Factor: CPP/QPP contributions
GFUIC	Adjustment Factor: UI contributions
GFINTAX	Adjustment Factor: Income taxes
GFPRTAX	Adjustment Factor: Property tax
GFTPTAX	Adjustment Factor: Transfer of property taxes
GFRFEES	Adjustment Factor: Registration and license fees
GFNES	Adjustment Factor: Not elsewhere stated
GFNCALP	Adjustment Factor: Positive change in assets and liabilities
GFNCALN	Adjustment Factor: Negative change in assets and liabilities

GFRRSPT	Adjustment Factor: Total RRSP contributions (SHS)
GFFABD	Adjustment Factor: Account balancing difference
GFFOMR	Adjustment Factor: Other money receipts
EXPADJ	Adjustment Factor: All expenditure adjustment
1.2.3.2.6	Employment Income Adjustment
IEMPADJ	Adjustment Factor: Employment income [employment income breaks,province]
IEMPBRK	Adjustment Factor: Income breaks for income adjustment[employment income breaks]

1.3 Government Transfers and Personal Income Taxes

1.3.1 Parameter File Description

MPRDESC	Description of tax/transfer parameter file
MPRVER	SPSD/M Release Version
MPRSFILE	Starting tax/transfer parameter file
TARGETYEAR	Year of analysis

1.3.2 Database Variable Activation

A number of deductions and tax credits are imputed from the Greenbook. Only those deductions and tax credits included on the tax forms for the year of the database can be imputed. These parameters are used to ‘turn off’ certain programs in years for which they do not apply. Even when these parameters are set to zero, the variables to which they apply will contain values but those values will not affect consumable income.

GSTREBFLAG	Database variable(gstreb) activation flag
------------	---

1.3.3 Government Transfers

1.3.3.1 Unemployment Insurance\Employment Insurance

UIFLAG	UI/EI Activation flag (UI and EI)
UIERNMAX	Maximum insurable earnings (UI and EI)
UIEIOPT	UI Employment Insurance reform option [1=UI, 2=EI Dec'95]
UIBASOPT	UI reform option [1=normal, 2=Apr'89] (UI and EI)
UIDEPOPT	UI dependency option [1=normal, 2=Feb'94] (UI only)
UIEIMTYPFLG	Flag to model main benefit type (UI and EI)
1.3.3.1.1	UI/EI contributions (UI and EI)
UIERNMAX	Maximum insurable earnings (UI and EI)

UIMINPCT	Exemption limit (percent of maximum insurable earnings) (UI only)
UIPF	UI contribution rate on earnings (UI and EI)
UIEIREF	EI contribution refund cut-in (EI only)
1.3.3.1.2 Minimum Weeks to Qualify (UI only)	
UIREGMINWK	Minimum weeks to qualify for regular benefits (UI only)
UIMATMINWK	Minimum weeks to qualify for maternity benefits (UI only)
UISICMINWK	Minimum weeks to qualify for sickness benefits (UI only)
UIFSHMINWK	Minimum weeks to qualify for fishing benefits (UI only)
1.3.3.1.3 Minimum Hours or Earnings to Qualify (EI only)	
UIREGHRMIN	Min. hours to qualify for reg. benefits [unempl. rate] (EI only)
UIMATHRMIN	Minimum hours to qualify for maternity benefits (EI only)
UISICHRMIN	Minimum hours to qualify for sickness benefits (EI only)
UIFSHERMIN	Min. earnings to qualify for fish. benefits [unempl. rate] (EI only)
UIEINEREFLG	Flag to check for hours for new entrants and re-entrants (EI only)
UINEREHRMIN	Minimum hours to qualify for new entrant or re-entrant (EI only)
1.3.3.1.4 Regional Qualification (UI only)	
UIRGNMIN	Regional unemployment rate (UI only)
UIRGNWKS	Weeks required for eligibility (UI only)
1.3.3.1.5 Repeater Qualification (UI only)	
UIREPUER	Regional unemployment rate [rates] (UI only)
UIREPPREV	Weeks of insurable employment [weeks] (UI only)
UIREPWWKD	Repeater eligibility requirements [weeks x rates] (UI only)
1.3.3.1.6 Training and Other types of benefits (UI and EI)	
UITRNBWKFCT	UI training benefit weeks adjustment factor (UI and EI)
UITRNBWKFCT	UI training benefit per week adjustment factor (EI and EI)
UIOTHWKFCT	UI other benefits weeks adjustment factor (UI and EI)
UIOTHBNWKFCT	UI other benefits per week adjustment factor (EI and EI)
1.3.3.1.7 Family Supplement (EI only)	

UIEIFSFLG	UI EI calculate family supplement flag (EI only)
UIEIFSOPT	UI EI calculate family supplement option (EI only)
UIEIFSRR	UI EI family supplement reduction rate (EI only)
UIEIFSRL	UI EI family supplement reduction level(EI only)
UIEIFIFLG	EI intensity rule exemption for family supplement receivers (EI only)
UIEIMFSP	EI Maximum family supplement percent of earnings (EI only)
UIEIFS1	Max fam supplement 1 child (EI only)
UIEIFS2	Max fam supplement 2 children (EI only)
UIEIFS3	Max fam supplement 3+ children (EI only)
UIEIFSTOPUP	Max fam supplement top up for more than 3 kids (EI only)
UIEIFSYNG	Max fam supplement top up for young children (EI only)

1.3.3.1.8 Minimum Divisor (EI only)

UIEIDIVFLG	EI minimum divisor flag (EI only)
UIEIDIV	EI minimum divisor [uer][divisor] (EI only)

1.3.3.1.9 Benefit Duration (UI and EI)

UIMAXBASEWKS	Maximum number of weeks - regular (UI and EI)
S	
UIMAXMATWKS	Maximum number of weeks - maternity (UI and EI)
UIEXTMATWKS	Additional weeks for maternity - behavioural response (UI and EI)
UIMAXSICWKS	Maximum number of weeks - sickness (UI and EI)
UIMAXFSHWKS	Maximum number of weeks - fishing (UI and EI)
UIMAXPARWKS	Maximum number of weeks - parental (UI and EI)
UIMAXDUR	Maximum duration of a UI claim (UI and EI)
UIEWK	Entitlement (weeks) [wkwrk, uer] (UI and EI)
UIWAITWKS	Minimum waiting period all claims (UI and EI)
UIREGWKFACT	UI regular benefit weeks adjustment factor (UI and EI)

1.3.3.1.10 Labour Force Extended Benefits (UI only)

UILFEFLAG	Labour force extended phase calculation flag (UI only)
UILFEMIN	Weeks worked in qualifying period [UILFEWKS index] (UI only)
UILFEWKS	Weeks LFE entitlement [UILFEMIN] (UI only)

1.3.3.1.11 Regional Extended Benefits (UI only)

UIRGEFLAG	Regional extended phase calculation flag (UI only)
UIRGEMIN	Unemployment rate for Regional Extended

UIRGEWKS	entitlement [UIRGEWKS index] (UI only) Weeks Regional Extended entitlement [UIRGEMIN] (UI only)
1.3.3.1.12 Benefit Rates (UI and EI)	
UIBASRATE	Benefit rate for basic phase (UI only)
UIENSRATE	Enhanced rate for basic phase (UI only)
UIENSRTCO	Enhanced rate cutoff (UI only)
UILFERATE	Benefit rate for labour force extended phase (UI only)
UIRGERATE	Benefit rate for regional extended phase (UI only)
UIEIRATE	Benefit rate under EI reform [Past Wks ben][Rate] (EI only)
UIEIYRS	Number of years of previous EI benefits calculated (EI only)
1.3.3.1.13 Option Activation (UI and EI)	
UIENTFLAG	Basic entrance requirements flag (UI and EI)
UIRGNFLAG	Regional requirements flag (UI only)
UIRPTFLAG	Repeater requirements flag (UI only)
UIBASFLAG	Basic phase calculation flag (UI and EI)
UILFEFLAG	Labour force extended phase calculation flag (UI only)
UIRGEFLAG	Regional extended phase calculation flag (UI only)
UIEFFFLAG	Observed effective weekly benefit rate flag (UI and EI)
UIEIOPT	UI Employment Insurance reform option [1=UI, 2=EI Dec'95]
UIBASOPT	UI reform option [1=normal, 2=Apr'89] (UI and EI)
UIDEPOPT	UI dependency option [1=normal, 2=Feb'94] (UI only)
1.3.3.1.14 Repayment (through tax system) (UI and EI)	
UIBAF	UI benefit recovery base amount factor (UI and EI)
UIBRP	UI benefit recovery portion (UI only)
UIBRA	UI repayment base amount (UI and EI)
UIBAFNR	UI EI benefit recovery base amount factor for non-repeaters (EI only)
UIEIRPR	UI EI benefit clawback rate (EI only)
UIEIBRP	Maximum clawback under EI reform [Past Wks ben][Rate] (EI only)
UIEINRT	UI EI Non repeater level for higher clawback turndown (EI only)
UIEIREPOPT	EI Benefit repayment option (1=repeaters have higher rate,2=one rate)(EI only)
UIBAFNR	UI EI benefit recovery base amount factor for

	non-repeaters (EI only)
UIBRANR	EI repayment base amount for non-repeaters (EI only)
1.3.3.1.15	UI Growth Parameters (APR parameters)
UIBASEYRMAX	Maximum insurable earnings for base year
UITARGYRMAX	Maximum insurable earnings for target year
PURB	Base year unemployment rate [prov]
PURC	Current year unemployment rate [prov]
PURR	Ratio current:base unemployment rate [prov]
1.3.3.1.16	UI/EI calibration (UI and EI)
UITARGET	UI/EI target for the number of cases (UI and EI)
UIEITKP	UI EI takeup rate [index] : index based on prov, sex, age, weeks
1.3.3.1.17	Parameters only used for Employment Insurance (EI only)
UIBAFNR	UI EI benefit recovery base amount factor for non-repeaters (EI only)
UIBRANR	EI repayment base amount for non-repeaters (EI only)
UIEIBRP	Maximum clawback under EI reform [Past Wks ben][Rate] (EI only)
UIEIDIV	EI minimum divisor [uer][divisor] (EI only)
UIEIFIFLG	EI intensity rule exemption for family supplement receivers (EI only)
UIEIFSFLG	UI EI calculate family supplement flag (EI only)
UIEIFSRL	UI EI family supplement reduction level(EI only)
UIEIFSRR	UI EI family supplement reduction rate (EI only)
UIEIMFSP	EI Maximum family supplement percent of earnings (EI only)
UIEINRT	UI EI Non repeater level for higher clawback turndown (EI only)
UIEIOPT	UI Employment Insurance reform option [1=UI, 2=EI Dec'95]
UIEIRATE	Benefit rate under EI reform [Past Wks ben][Rate] (EI only)
UIEIREF	EI contribution refund cut-in (EI only)
UIEIREOPT	EI Benefit repayment option (1=repeaters have higher rate,2=one rate)(EI only)
UIEIRPR	UI EI benefit clawback rate (EI only)
UIEIYRS	Number of years of previous EI benefits calculated (EI only)
UIMATHRMIN	Minimum hours to qualify for maternity benefits (EI only)
UIREGHRMIN	Min. hours to qualify for reg. benefits [unempl. rate] (EI only)
UISICHRMIN	Minimum hours to qualify for sickness benefits

UIFSHERMIN	(EI only) Min. earnings to qualify for fish. benefits [unempl. rate] (EI only)
UINEREHRMIN	Minimum hours to qualify for new entrant or re-entrant (EI only)
UIEINEREFLG	Flag to check for hours for new entrants and re-entrants (EI only)
UIEIDIVFLG	EI minimum divisor flag (EI only)

1.3.3.2 Family Allowance

FAFLAG	Family allowance flag
PFACFLAG	Use provincial configuration flag

1.3.3.2.1 All Provinces Except Alberta and Quebec

STDFA	Standard federal family allowance per child
-------	---

1.3.3.2.2 Alberta

AFAC1	Alberta FA benefit per child aged 0 - 6
AFAC2	Alberta FA benefit per child aged 7 - 11
AFAC3	Alberta FA benefit per child aged 12- 15
AFAC4	Alberta FA benefit per child aged 16- 17

1.3.3.2.3 Quebec

QAAFA	Quebec availability allowance (supplement) [parity,\$]
QAAFAFLAG	Availability Allowance: Supplement to Quebec FA
QFATCOPT	Quebec Family Allowance Tax Credit Option transfer=1, tax credit=2
QFAIFLAG	Quebec inclusion of federal family allowance in income flag
QFFSL	Federal family allowance: Quebec Configuration[parity,\$]
QFPSL	Quebec provincial family allowance [parity,\$]
QFS	Federal supplement per child 12-17 in Quebec configuration
QNBFA	Quebec newborn family allowance [parity,age]
QNBFAFLAG	Quebec newborn family allowance flag
QNBFLAG	Quebec newborn family random increase of child rank
QNBPOFLAG	Quebec newborn family allowance phase out flag
QNBPOPYR	Quebec newborn family allowance phase-out year proportion
QNBPOYR	Quebec newborn family allowance phase out year

1.3.3.2.4 Repayment (through tax system)

FATBPI	Family allowance take-back phase in
FATD	Family allowance turndown income
FARR	Family allowance repayment rate

1.3.3.3 Old Age Security (OAS)

OASFLAG	Old age security flag
BOAS	Basic OAS
1.3.3.3.1	Repayment (through tax system)
OASTBPI	OAS take-back phase in
OASTD	OAS turndown income
OASRR	OAS reduction rate
NETOASFLG	Net the clawback from Old Age Security

1.3.3.4 Guaranteed Income Supplement

GISFLAG	Federal GIS/SPA/ESPA flag
GISOASFLAG	1984 GIS top-up to OAS residence shortfall flag

1.3.3.4.1 Supplement Rates

BGISS	Basic GIS - single
BGISM	Basic GIS - married
BESPA	Basic GIS portion of extended SPA
PYINC	Deflator to calculate previous year income
GISRLS	Basic GIS reduction level: single pensioners
GISRLM	Basic GIS reduction level: married pensioners
SPARL	SPA reduction point: one married/ widowed
GISRRS	Basic GIS reduction rate: single pensioners
GISRRM	Basic GIS reduction rate: married pensioners
GISBE1	Breakeven for GIS one pensioner couple
GISBE2	Breakeven for GIS/SPA couple
SPAOASRR	OAS portion of SPA taxback rate
SPAXO	Benefit Cross-over GIS/SPA vs GIS one pensioner couple

1.3.3.4.2 Take-up Rates

GISTURFLAG	GIS take-up flag: apply 5 take-up tables
GISST	GIS take-up rate: single pensioner by benefit level [benefit,rate]
GISCT	GIS take-up rate: pensioner couple by benefit level [benefit,rate]
GISOT	GIS take-up rate: one pensioner couple by benefit level [benefit,rate]
SPAT	SPA take-up rate by benefit level [benefit,rate]
ESPAT	Extended SPA take-up rate by benefit level [benefit,rate]

1.3.3.5 Provincial Elderly Programs

GISTFLAG	Provincial GIS top-up flag
----------	----------------------------

1.3.3.5.1 Newfoundland

NFSBBAS	NFLD Low-Income Seniors' Benefit base amount
NFSBTD	NFLD Low-Income Seniors' Benefit turndown
NFSBRR	NFLD Low-Income Seniors' Benefit reduction rate

1.3.3.5.2 Nova Scotia

NSMAX	Nova Scotia maximum GIS supplement level
NS23	Nova Scotia GIS supplement for 2/3 GIS
NS13	Nova Scotia GIS supplement for 1/3 GIS
NSLT13	Nova Scotia GIS supplement for less than 1/3 GIS
1.3.3.5.3	New Brunswick
NBSB	New Brunswick Low-Income Seniors' Benefit
NBSBSPA	N.B. Low-Income Seniors' Benefit - SPA eligibility
1.3.3.5.4	Ontario
ONTS	Ontario GIS supplement: single pensioners
ONTC	Ontario GIS supplement: married pensioners
ONTSTG	Ontario sales tax grant for seniors
ONTPTG	Ontario property tax grant for seniors
ONTFPTG	Ontario property tax grant (fraction of rent)
1.3.3.5.5	Manitoba
MANS	Manitoba GIS supplement: single pensioners
MANC	Manitoba GIS supplement: married pensioners
MANSNPF	Manitoba GIS supplement reduction point: single
MANCNPF	Manitoba GIS supplement reduction point: married
1.3.3.5.6	Saskatchewan
SASKS	Saskatchewan GIS supplement: single pensioners
SASKC	Saskatchewan GIS supplement: married pensioners
SASKMINS	Saskatchewan GIS supplement minimum benefits: single
SASKMINC	Saskatchewan GIS supplement minimum benefits: married
SASKRR1	Saskatchewan GIS supplement reduction rate: regular
SASKRR2	Saskatchewan GIS supplement reduction rate: 1 GIS
SASKRR3	Saskatchewan GIS supplement reduction rate: SPA
1.3.3.5.7	Alberta
ALTAMIN	Alberta GIS supplement minimum annual benefit
ALTASC	Alberta GIS supplement maximum annual benefit
ALTASOPT	Alberta seniors option [1=GIST,2=new seniors benefit 1994]
ASBBASIC	Alberta seniors benefit annual basic benefit
ASBSS	Alberta seniors benefit senior spouse supplement
ASBNSS	Alberta seniors benefit non-senior spouse supplement
ASBRENT	Alberta seniors benefit renter supplement
ASBNOAS	Alberta seniors benefit reduction if no OAS

	[senior type]
ASBEMP	Alberta seniors benefit employment inclusion rate
ASBRR	Alberta seniors benefit reduction rate [senior type]
ASBSSOPT	Alberta seniors benefit 1 senior couple option [1=model separately,2=model as senior couples]
ASBSAB	Alberta seniors benefit supplemental accommodation benefit
ASBSABRR	Alberta seniors benefit supplemental accommodation reduction rate

1.3.3.5.8 British Columbia

BCS	British Columbia GIS supplement: single pensioners
BCC	British Columbia GIS supplement: married pensioners

1.3.3.6 Federal Sales Tax Credit

FSTCF	Federal sales tax credit amount for filer
FSTCS	Federal sales tax credit amount for spouse
FSTCC	Federal sales tax credit amount for dependant
FSTCL	Federal sales tax credit reduction level
FSTCR	Federal sales tax credit reduction rate
GSTFLAG	GST credit activation flag
GSTAC	GST additional credit amount
GSTAR	GST additional credit rate of net income
GSTAXM	GST additional credit exemption
GSTASPFLAG	Maximum GST additional credit for single parents flag
GSTCTUNC	GST credit take up by number of children

1.3.3.7 Federal Child Tax Credit

CTCOPT	Child tax credit option
CTCPC	Child tax credit per child
CTCTD	Family income child tax credit turndown
CTCRR	Child tax credit reduction rate
CTCREF	CTC post-reform rules flag
CTCSUP	CTC young child supplement
CTCERF	CTC child care expense reduction fraction
CTCTUR	CTC take up rate table [benefit,rate]
CTCINC	CTC family income scaling factor

1.3.3.8 Federal Child Tax Benefit

FCBBAS	Basic child benefit (per child)
FCBYNG	Supplement for children under age 7
FCBYNGR	Child care expense reduction rate
FCBLRG	Supplement for 3rd and subsequent kids

FCBTD	Federal child benefits family income turndown
FCBRR	Multi-children family income reduction rate
FCBRRS	Single-child family income reduction rate
FCBESR	Child benefits earned income supplement rate
FCBERR	Child benefits earning supplement reduction rate
FCBEIS	Child benefits earned income supplement
FCBECI	Child benefits earning supplement cut-in level
FCBETD	Child benefits earning supplement turndown level
FCBEIE	Flag for WIS dependent on number of children
FCBEMX	Earnings where WIS phase-in is at maximum
FCBEIS1	Enriched WIS for first child
FCBEIS2	Enriched WIS for second child
FCBEIS3	Enriched WIS for each additional child
FCBERR1	WIS reduction rate for families with 1 child
FCBERR2	WIS reduction rate for families with 2 children
FCBERR3	WIS reduction rate for families with 3+ children
ACBC1	Alberta Child benefit per child aged 0 - 6
ACBC2	Alberta Child benefit per child aged 7 - 11
ACBC3	Alberta Child benefit per child aged 12- 15
ACBC4	Alberta Child benefit per child aged 16- 17
QCBCFLG	Quebec Child benefit flag for Quebec calculation methodology
QCBC1	Quebec Child benefit for 1st child
QCBC2	Quebec Child benefit for 2nd child
QCBC3	Quebec Child benefit for 3rd child
QCBCS	Quebec Child benefit supplement child aged 12-17
PYINC	Deflator to calculate previous year income

1.3.3.9 Provincial Children Programs

1.3.3.9.1 Newfoundland

NCBFLG	Newfoundland child benefit activation flag
NCB1	Nfld. child benefit for first child
NCB2	Nfld. child benefit for second child
NCB3	Nfld. child benefit for third child
NCB4	Nfld. child benefit for 4th and subsequent child
NCBTD	Nfld. child benefit family income turndown
NCBPO	Nfld. child benefit family income phase out
NCBPI	Nfld. child benefit program phase in
NMBNS	Nfld. Mother-Baby Nutrition Supplement
NMBNSPI	Nfld. Mother-Baby Nutrition Supplement program phase in
NMBNSEXT	Nfld. Mother-Baby Nutrition Supplement newborn extra benefit
NMBNSEPI	Nfld. Mother-Baby Nutrition Supplement newborn benefit phase in

1.3.3.9.2 New Brunswick

NBCTBFLG	NB child benefit activation flag
NBCBBAS	NB Basic child benefit (per child)
NBCBTD	NB child benefits family income turndown
NBCBRR	NB Multi-children family income reduction rate
NBCBRRS	NB Single-child family income reduction rate
NBCBESR	NB Child benefits earned income supplement rate
NBCBERR	NB Child benefits earning supplement reduction rate
NBCBEIS	NB Child benefits earned income supplement
NBCBECI	NB Child benefits earning supplement cut-in level
NBCBETD	NB Child benefits earning supplement turndown level
NBCBPI	NB Child benefits phase-in rate

1.3.3.9.3 Nova Scotia

VCBFLG	NS child benefit activation flag
VCBTD	NS child benefit turndown
VCBBAS1	NS child benefit for first child
VCBBAS2	NS child benefit for second child
VCBBAS3	NS child benefit for third or additional child
VCBPO	NS child benefit family income phase out

1.3.3.9.4 Ontario

OCCEAFLG	Ont. Child Care Expense Credit activation flag
OCCEAPCT	Ont. Child Care Expense Credit qualifying percentage
OCCEAYNG	Ont. Child Care Expense Credit allowance per child
OCCEATD	Ont. Child Care Expense Credit family income turndown
OCCEARR	Ont. Child Care Expense Credit benefit reduction rate
OCWISFLG	Ont. Child Care Working Income Supplement activation flag
OCWISTD	Ont. Child Care Working Income Supplement minimum earnings
OCWISRR	Ont. Child Care Working Income Supplement Rate [children][rr]
OCWISSP	Ont. Child Care Working Income Supplement maximum benefit for single parents
OCCSEXT	Ont. Child Care Supplement One-time payment of extra benefit

1.3.3.9.5 Saskatchewan

SCBFLG	Sask Child Benefit activation flag
SCB1	Sask Child Benefit max for 1st child
SCB2	Sask Child Benefit max for 2nd child
SCB3	Sask Child Benefit max for 3rd and additional

	child
SCBTD1	Sask Child Benefit 1st turndown
SCBTD2	Sask Child Benefit 2nd turndown
SCBRR1	Sask Child Benefit 1st reduction rate [number of kids]
SCBRR2	Sask Child Benefit 2nd reduction rate [number of kids]
SCBSPA	Sask Child Benefit Single Parent Amount

1.3.3.9.6 Alberta

AFETCFLAG	Alberta Family Employment Tax Credit Activation Flag
AFETCAPC	Alberta Family Employment Tax Credit Amount Per Child [number of children]
AFETCNC	Alberta Family Employment Tax Credit Maximum Number of Children
AFETCCI	Alberta Family Employment Tax Credit Benefit Cut-in Level
AFETCBR	Alberta Family Employment Tax Credit Benefit Rate
AFETCTD	Alberta Family Employment Tax Credit Turndown Level
AFETCRR	Alberta Family Employment Tax Credit Reduction Rate

1.3.3.9.7 British Columbia

BCFBFLAG	Activate B.C. Family Bonus Program
BCFBBAS	B.C. Family Bonus amount per child
BCFBTD	B.C. Family Bonus Turndown
BCFBRR	B.C. Family Bonus multiple child reduction rate
BCFBRRS	B.C. Family Bonus single child reduction rate
BCFBPI	B.C. Family Bonus phase-in
BCEIBFLG	Activate B.C. Earned Income Benefit Program
BCBEIS1	B.C. Earned Income Benefit for first child
BCBEIS2	B.C. Earned Income Benefit for second child
BCBEIS3	B.C. Earned Income Benefit for each additional child
BCBERR1	B.C. EIB reduction rate for families with 1 child
BCBERR2	B.C. EIB reduction rate for families with 2 children
BCBERR3	B.C. EIB reduction rate for families with 3+ children
BCBEMX	B.C. Earned Income Benefit Income Reduction
BCBEITD	B.C. Earned Income Benefit Turndown
BCEIBPI	B.C. Earned Income Benefit Income Phase In
BCFBIFS	Activate B.C. Family Bonus to include Federal NCS

BCFBNCS1	B.C. Family Bonus National Child Supplement for first child
BCFBNCS2	B.C. Family Bonus National Child Supplement for second child
BCFBNCS3	B.C. Family Bonus National Child Supplement for each additional child
BCFBNCSRR1	B.C. Family Bonus NCS reduction rate for families with 1 child
BCFBNCSRR2	B.C. Family Bonus NCS reduction rate for families with 2 children
BCFBNCSRR3	B.C. Family Bonus NCS reduction rate for families with 3+ children
BCFBNCSTD	B.C. Family Bonus National Child Supplement Turndown

1.3.3.10 Social Assistance Parameters

SAFLAG	Social assistance flag
SAELDOPT	SA for elderly calculation method [1=~SA,2=GIST->~SA,3=diff]
SAFS	Federal share of social assistance [prov]
SFAOUT	Proportion of social assistance to eliminate
IMPSAOPT	Imputation method, SA [1=none 2=rank]
SAPFLAG	Social assistance predicted value flag
SATARGET	Social assistance target for predicted SA

1.3.3.11 Federal Refundable Medical Expense Supplement

MEDREMIN	Minimum earnings for refundable medical expense supplement
MEDRRATE	Proportion of expenses allowed for medical expense supplement
MEDRMAX	Maximum expenses allowed for medical expense supplement
MEDRRR	Reduction rate for the medical expense supplement

1.3.3.12 Federal relief for heating expenses

HEATRLFLG	Federal relief for heating expenses activation flag
HEATSNG	Federal relief for heating expenses for singles
HEATFAM	Federal relief for heating expenses for families

1.3.3.13 Provincial relief for heating expenses

1.3.3.13.1 Newfoundland

NHEATFLG	Newfoundland home heating fuel rebate activation flag
NHEATREB	Newfoundland home heating fuel rebate amount
NHEATSAFLG	Newfoundland home heating fuel rebate - SA recipients eligible

1.3.3.13.2 Nova Scotia

VHEATFLG	Nova Scotia Home Heating Assistance Rebate activation flag
VHEATREB	Nova Scotia home heating fuel rebate amount
VHEATSTD	Nova Scotia home heating fuel rebate income turndown for singles
VHEATFTD	Nova Scotia home heating fuel rebate income turndown for families
VHEATFRR	Nova Scotia home heating fuel rebate reduction rate for families
VHEATTU	Nova Scotia home heating fuel rebate take up

1.3.3.13.3 Saskatchewan

SHEATFLG	Saskatchewan Home Heating Assistance Rebate activation flag
SHEATSNG	Saskatchewan Home Heating Assistance Rebate for singles
SHEATFAM	Saskatchewan Home Heating Assistance Rebate for families

1.3.3.13.4 Alberta

AHEATFLG	Alberta Energy Tax Refund activation flag
AHEATREB	Alberta Energy Tax Refund amount

1.3.3.13.5 British Columbia

CHEATFLG	British Columbia Refundable Energy Credit activation flag
CHEATSNG	British Columbia Refundable Energy Credit for singles
CHEATFAM	British Columbia Refundable Energy Credit for families

1.3.3.14 Nova Scotia Direct Assistance Program

VDAFLAG	NS Direct assistance benefit flag
VDASB	NS Direct assistance benefit for singles
VDACB	NS Direct assistance benefit for couples
VDASI	NS Direct assistance maximum income for singles
VDACI	NS Direct assistance maximum income for couples
VDAFWC	NS Direct assistance benefit for families with children flag

1.3.3.15 Nova Scotia Taxpayer Refund

NSTXREFFLG	NS Taxpayer refund flag
NSTXREFAMT	NS Taxpayer refund amount

1.3.4 Calculation of Total Income

CAPGIR	Capital gains inclusion rate
FDGUR	Federal dividend gross-up rate

1.3.5 Personal Taxes

1.3.5.1 Deductions from Total Income

REPNETFLAG	Social program repayments reduce net income flag
------------	--

1.3.5.1.1 Employment Expense Deduction

ALEXPP	Proportion of other allowable employment expenses to use as deduction
FACTISENF	Scale-up factor for non-farm self-employment income

1.3.5.1.2 CPP/QPP Contributions

CPPXM	CPP/QPP exemptible earnings
YMPE	CPP/QPP maximum pensionable earnings
SECF	CPP/QPP contribution rate on self-employment earnings
WSCF	CPP/QPP contribution rate on employment earnings
WSCM	Ratio of self-employed to employed contribution fraction
CPPLT60	CPP/QPP Contributions Take up (under 60) by earnings with CPP income
CPP60T64	CPP/QPP Contributions Take up (60 - 64) by earnings with CPP income
CPPGT64	CPP/QPP Contributions Take up (over 64) by earnings with CPP income
CPPSEDEDFLG	CPP/QPP contribution deduction for self-employed earnings flag
CPPSEDFRC	CPP/QPP contribution deduction fraction for self-employed earnings

1.3.5.1.3 Child Care Expense Deduction

CCEATFLG	CCEA eligible->claimable transformation activation flag
CCEATLL	CCEA eligible->claimable lower limit
CCEATFR	CCEA eligible->claimable fraction
CCEALIM	CCEA overall limit
CCEAOAGE	CCEA Maximum eligible age for oldest child
CCEAYNG	CCEA young child limit
CCEAOLD	CCEA old child limit
CCEAEMPF	CCEA fraction of employment income (Limit `B')
CCESFLAG	CCE full-time student flag
CCEPTFLG	CCE part-time student flag
CCESYNG	CCEA young child limit for full-time students

CCESOLD	CCEA old child limit for full-time students
CCEROPT	Child care expense deduction recipient [1=mother,2=lower income]
CCEZOPT	CCE young kid optimization rules [1=use, 2=zero, 3=optimize]

1.3.5.2 Personal Tax Credits

1.3.5.2.1 Basic Exemption / Amount

BXM	Basic personal exemption/amount
BXMEXT	Basic personal amount extra top-up
BXMS	Basic personal exemption supplement
BXMSRR	Basic personal exemption supplement reduction rate
BXMSPI	Basic personal exemption supplement phase in

1.3.5.2.2 Age Exemption / Amount

AXM	Age amount
AXTD	Age amount net income turndown
AXRR	Age amount credit reduction rate
AXPI	Age amount phase in rate for 1994 and beyond

1.3.5.2.3 Married Exemption / Amount

MXM	Married exemption/amount
MXMT	Married exemption/amount turndown level
MXMEXT	Married amount extra top-up
MXMTEXT	Married amount turndown level extra top-up

1.3.5.2.4 Married Equivalent Exemption / Amount

EMXM	Married equivalent exemption/amount
EMXMT	Married equivalent exemption/amount turndown level
EMXMEXT	Married equivalent amount extra top-up
EMXMTEXT	Married equivalent amount turndown level extra top-up

1.3.5.2.5 Exemption / Amount for Dependent Children

YCXMT	Dependent child amount (1st child)
YCXMT	Dependent child amount (2nd child)
YCXMT	Dependent child amount (3rd ,etc.)
YCXMT	Dependent child exemption/amount turndown level

1.3.5.3 Other Deductions from Net Income

1.3.5.3.1 Pension Income Deduction / Amount

YPNDL	Maximum pension income deduction/amount
-------	---

1.3.5.3.2 Medical Expense Deduction / Amount

MEDANF	Medical allowance lower limit net income fraction
MEDALL	Medical allowance maximum lower limit

1.3.5.3.3 Charitable Donation Deduction / Amount

CHATNF	Charitable donations maximum net income fraction
CHATL1	Charitable donations amount level 1
CHATR1	Charitable donations tax credit rate 1
CHATR2	Charitable donations tax credit rate 2
CHATPROP	Charitable donations include gifts of depreciable property flag
1.3.5.3.4	Disability Deduction / Amount
MAXDX	Maximum disability deduction/amount
ODISTC	Maximum infirm dependent 18 or older tax credit
1.3.5.3.5	Education Deduction / Amount
EDXPM	Education amount per month of full-time studies
EDXPMPT	Education amount per month of part-time studies
MAXET	Maximum on transfer of education and tuition amount
1.3.5.3.6	Caregiver Tax Credit
CGTC	Caregiver Tax Credit
CGTCFLG	Caregiver Tax Credit activation flag
CGTCOPT	Caregiver Tax Credit option (1=max, 2=greenbook)
1.3.5.3.7	Interest on Student Loans Tax Credit
INTSLFLG	Interest on Student Loans Tax Credit Activation Flag
1.3.5.4	Federal Taxes
1.3.5.4.1	UI Contributions
UIERNMAX	Maximum insurable earnings (UI and EI)
UIMINPCT	Exemption limit (percent of maximum insurable earnings) (UI only)
UIPF	UI contribution rate on earnings (UI and EI)
UIEIREF	EI contribution refund cut-in (EI only)
UIEIREFTK	EI contribution refund take up
1.3.5.4.2	CPP/QPP Contributions
CPPXM	CPP/QPP exemptible earnings
YMPE	CPP/QPP maximum pensionable earnings
SECF	CPP/QPP contribution rate on self-employment earnings
WSCF	CPP/QPP contribution rate on employment earnings
WSCM	Ratio of self-employed to employed contribution fraction
CPPLT60	CPP/QPP Contributions Take up (under 60) by earnings with CPP income
CPP60T64	CPP/QPP Contributions Take up (60 - 64) by earnings with CPP income
CPPGT64	CPP/QPP Contributions Take up (over 64) by

CPPSEDEDFLG	earnings with CPP income CPP/QPP contribution deduction for self-employed earnings flag
CPPSEDFRC	CPP/QPP contribution deduction fraction for self-employed earnings

1.3.5.4.3 Basic Federal Tax

FTX	Federal tax table [taxable income,basic federal tax]
FNTCR	Federal non-refundable tax credit rate
FDTCR	Federal dividend tax credit rate

1.3.5.4.4 Federal Surtax

FSURL1	Federal surtax level 1
FSURR1	Federal surtax rate 1
FSURL2	Federal surtax level 2
FSURR2	Federal surtax rate 2

1.3.5.4.5 Federal Surtax Reduction

FSURTRMX	Maximum federal surtax reduction
FSURTRRR	Federal surtax reduction reduction rate
FSURTRRL	Federal surtax reduction reduction level

1.3.5.4.6 Federal Political Contribution

FPTC	Federal political contribution table [total donations,donation allowed]
FPTCBEN	Maximum federal political tax credit allowed

1.3.5.4.7 Labour Sponsored Funds Tax Credit

FLVCRT	Percent of labour-sponsored funds cost allowed as credit [prov]
FLVCMAX	Maximum labour-sponsored funds tax credit allowed

1.3.5.4.8 Federal Alternate Minimum Tax

AMTDIV	Alternative minimum tax: percentage of taxable dividends
AMTEX	Alternate minimum tax: exemption level
AMTFORTX	Alternative minimum tax: Foreign Income Tax Rate
AMTINCRT	Alternative minimum tax: Inclusion Rate
AMTNEGTI	Alternative minimum tax: Allow Negative Taxable Income Flag
AMTPRVDF	Alternative minimum tax: prov. tax difference definition[prov]
AMTSTK	Alternative minimum tax: Stock Option Proportion
AMTTX	Alternate minimum tax rate
AMTRPFLG	RRSP/RPP included in Alternate minimum tax (1=included)

1.3.5.4.9 Québec Tax Abatement

QTAP	Quebec tax abatement proportion of basic federal tax
------	--

1.3.5.5 Provincial Taxes

IMSHTOPT	Paid rent and property tax imputation option
----------	--

1.3.5.5.1 Newfoundland

NPTF	Newfoundland provincial tax fraction
NPTC	Newfoundland political contribution table [total donations,donation allowed]
NPTCBEN	Maximum Newfoundland political tax credit allowed
NSCI	Newfoundland provincial tax above which surtax applies
NSF	Newfoundland provincial surtax rate
NSCI2	Newfoundland provincial surtax level 2
NSF2	Newfoundland provincial surtax rate 2
NSTCFLAG	NFLD sales tax credit activation flag
NSTCA	NFLD sales tax credit amount for adults
NSTCC	NFLD sales tax credit amount for children
NSTCR	NFLD sales tax credit reduction rate
NSTCL	NFLD sales tax credit reduction level
NLVCMAX	Maximum NFLD labour-sponsored funds tax credit allowed

QSFDISFLAG	Quebec Simplified Form Disability tax credit inclusion flag
QSFMEDFLAG	Quebec Simplified Form medical expense tax credit inclusion flag

1.3.5.5.5.5 Refundable Tax Credits

The following parameter applies in many groups of parameters.

PYINC	Deflator to calculate previous year income
-------	--

1.3.5.5.5.5.1 Child care credit

CCEATFLG	CCEA eligible->claimable transformation activation flag
CCEATFR	CCEA eligible->claimable fraction
CCEATLL	CCEA eligible->claimable lower limit
QCCEAOLD	Quebec CCEA old child limit
QCCEAYNG	Quebec CCEA young child limit
QCCEOPT	Quebec CCE calculation option [1=deduction,2=refundable credit]
QCCETCR	Refundable CCE credit rate [net income, % cce claimable]

1.3.5.5.5.5.2 Consumer tax credit

QFAMDED	Quebec Family related deduction on income in refundable credits
QSTRBCRD	Quebec sales tax rebate base credit
QSTRCHLD	Quebec sales tax rebate children dependent credit
QSTRFLAG	Quebec sales tax rebate activation flag
QSTRFTP3	Quebec sales tax rebate family type 3 credit
QSTRFTP4	Quebec sales tax rebate family type 4 credit
QSTROPT	Quebec sales tax rebate option=1 based on imigis, =2 otherwise
QSTRRR	Quebec sales tax rebate reduction rate
QSTREXT	Quebec sales tax rebate extra amount

1.3.5.5.5.5.3 Family allowance tax credit

QFATCMIN	QFATC minimum benefit paid
QFATCMNK	QFATC Minimum benefits by kid rank
QFATCMRR	QFATC turn down income levels and reduction rate for married parents
QFATCMXK	QFATC Maximum benefits by kid rank
QFATCOPT	Quebec Family Allowance Tax Credit Option

	transfer=1, tax credit=2
QFATCSRR	QFATC turn down income levels and reduction rate for single parent
QFATCSUP	Quebec Family Allowance Tax Credit Supplement for single parent
QFATCTK	QFATC Take-up rates by total income
QFATD4K	QFATC turn down income for 4 children and more
QFATD4KI	QFATC turn down income increase by child for 4 children and more
QFATCK6	QFATC Supplement for kids under 6 in large families [#kids][#kids<6]
QFATCHIRR	QFATC High income reduction rate
QFATCHITD	QFATC High income turndown
QFATCK6PYR	QFATC supplement for kids under 6 phase out year proportion
QFATCK6YR	QFATC Supplement for kids under 6 phase out year
QFAMNETI	Quebec family allowance tax credit net income concept flag
<i>1.3.5.5.5.4 Housing parent tax credit</i>	
QHPTC	Quebec Housing Parent Tax Credit
QHPTCFLG	Quebec Housing Parent Tax Credit activation flag

AAMTOPT Alta alternative minimum tax option (1=none, 2=% fed, 3=fed adj inc, 4=% min amt)

DESCRIPTION

When Alberta tax on taxable income is calculated (ATXFLG = 1), there are four options as to how to calculate the provincial minimum tax.

When AAMTOPT is set to 1, then no provincial alternative minimum tax or minimum tax carryover is calculated.

When AAMTOPT is set to 2, then a percentage (AAMTPCTF) of the additional federal tax triggered by the federal minimum tax (imamtprv) is added to the basic provincial tax (imbpt). The definition of imamtprv is determined by the provincial vector AMTPRVDF. The provincial minimum tax carryover credit (impminco) is calculated using AAMTPCTF.

When AAMTOPT is set to 3, the income used in the provincial tax calculation is replaced by the net income used for alternative tax purposes (imamtinc) for people who triggered the federal minimum tax. Then the AAMTTX rate, usually set to the smallest non-zero tax rate, is applied in order to get the provincial tax before the non-refundable tax credits. The provincial minimum tax carryover credit (impminco) is calculated using AAMTTX.

When AAMTOPT is set to 4, then a percentage (AAMTPCTM) of the minimum tax triggered by the federal minimum tax calculations represents the basic provincial tax (imbpt). Provincial surtaxes are then calculated using this amount. The provincial minimum tax carryover credit (impminco) is calculated using AAMTPCTM.

AAMTPCTM Alta amt rate as pct of federal minimum tax amount

DESCRIPTION

When Alberta tax on taxable income is calculated (ATXFLG=1) and AAMTOPT is set to 4, then a percentage (AAMTPCTM) of the minimum federal tax due to the minimum tax is used as basic provincial tax (imbpt). This calculated value is used in the determination of the provincial surtax.

AAXPI Alta Age Amount phase in rate for 1994 and beyond

DESCRIPTION

This value is used to scale the amount of the reduction which will be applied to the provincial age tax credit. The parameter is only used when the Alberta provincial tax on taxable income is calculated (ATXFLG = 1).

See also impatxc, AAXM, AAXRR, and AAXTD.

AAXRR

Alta Age Amount credit reduction rate

DESCRIPTION

This parameter is the proportion of net income above a given threshold (AAXTD) which will be deducted from the provincial non-refundable age tax credit amount (AAXM). The parameter is only used when the Alberta provincial tax on taxable income is calculated (ATXFLG = 1).

See also impatxc, AAXTD, AAXPI.

ACGTC Alta Caregiver Tax Credit

DESCRIPTION

ACGTC multiplied by APNTCR is the maximum amount of the Alberta Caregiver Tax Credit (impcgtc). The parameter is only used when the provincial tax on taxable income is calculated (ATXFLG = 1).

For more explanation see ACGTCFLG.

ACGTCFLG Alta Caregiver Tax Credit activation flag

DESCRIPTION

The calculation of the Alberta Caregiver Tax Credit (impcgtc) is activated by the flag ACGTCFLG.

The Caregiver Tax Credit (impcgtc) provides additional tax assistance to individuals who provide in-home care for relatives. Eligible recipients include individuals residing with and providing in-home care for a parent or grandparent over 65 years of age, or for an infirm dependent relative.

The parameter ACGTCOPT provides users with the option to use the greenbook value of the Caregiver amount (idcgtc from Line 315 and Schedule 12 in the General Tax Guide) or to give the maximum (ACGTC) if idcgtc is greater than 0.

This non-refundable tax credit is only calculated when the provincial tax on taxable income is calculated (ATXFLG = 1).

ACGTCOPT Alta Caregiver Tax Credit Option (1=max, 2=greenbook)

DESCRIPTION

This parameter provides users with the option of how to calculate the provincial Caregivers Tax Credit (impcgtc). A value of 1 results in applying the maximum value (ACGTC) if the filer had an amount in idcgtc (from Line 315 and Schedule 12 in the General Tax Guide). To use the greenbook value of the Caregiver amount (idcgtc), this parameter must be set to 2. This non-refundable tax credit is only calculated when the provincial tax on taxable income is calculated (ATXFLG = 1) and the provincial caregivers tax credit is activated (ACGTCFLG = 1).

AFETCAPC Alberta Family Employment Tax Credit Amount Per Child [number of children]

DESCRIPTION

This parameter represents the maximum amount per child in the family, based on the number of children. The parameter AFETCNC contains the maximum number of children eligible for the credit. These amounts are used to determine maximum family benefits for the Alberta Employment Tax Credit program (imiafetc).

AGENAME Name of database adjustment algorithm [string]

DESCRIPTION

This control parameter describes the method and algorithms by which the database will be adjusted. The algorithm is always “standard adjustment” unless the algorithm is changed by the user in glass box mode. The AGENAME parameter cannot be changed by the user in black box mode. Its value is associated with the adjustment algorithm contained in the adj function. If a descriptive label for the complete set of adjustment parameters is required use APRDESC.

AHCIPE Alberta Health Care Insurance Plan Family Premium

DESCRIPTION

This parameter represents the Alberta Health Care Insurance Plan annual premium for couples and families before the premium subsidy is applied. See AHCIPIT for details on the premium subsidy.

AHCIPFSB Alberta Health Care Insurance Plan Family Subsidy Table

DESCRIPTION

This parameter represents the income threshold amounts and premium subsidy rates for the Alberta Health Care Insurance Plan subsidy, for non-senior couples and families. The value of the health premium, AHCIPF may be reduced based on the previous year's family taxable income. The calculated premium is equal to the maximum annual premium times (1.0 – corresponding subsidy rate). Where income exceeds the last income threshold, no premium subsidy is granted.

For non-senior couples and families, this parameter is only in effect when AHCIPSOPT is set to 1. See AHCIPIT for the subsidy calculations for seniors.

AHCIPIT Alberta Health Care Insurance Plan Income Threshold [family type]

DESCRIPTION

This parameter represents the income threshold amounts for the Alberta Health Care Insurance Plan subsidy, based on family type. The value of the health premium is determined by family size, AHCIPS for unattached individuals and AHCIPF for families. Lower income individuals and families may be eligible for a premium subsidy based on income. For non-seniors, the income threshold is based on taxable income for the head and spouse if applicable. For senior or couples with at least one senior, the income test is based on the non-deductible income used for the Alberta Seniors Benefit. If the income is less than the threshold then a full subsidy of the health premium is granted. Where the income is greater than the threshold, a partial subsidy may be granted. The health premium is determined by subtracting the income threshold from family income and multiplying the result by the subsidy rate AHCIPSR without exceeding the base premium amounts.

For non-senior individuals and couples/families, this parameter is only in effect when AHCIPSOPT is set to 2. The value of the calculated health premium (imphp) is assigned to the eldest in the census family.

For the purposes of this program the family type used in order for this parameter is:

- non-senior unattached individual
- non-senior couple without children
- non-senior couple with children
- senior unattached individual

- senior couple
- senior married to a non-senior

DESCRIPTION

This parameter determines the subsidy method used for non-senior individuals and couples/families. When this parameter is set to 1, the non-senior individual subsidy is based on the parameter AHCIPSSB and the non-senior subsidy for couples and families is based on AHCIPFSB. The subsidy for seniors is based on AHCIPIT when ALTASOPT is set to 2 and seniors are exempted from paying the premium when ALTASOPT is set to 1 or AHCIPSPI is set to 1.00.

AHCIPSR Alberta Health Care Insurance Plan Subsidy Rate

DESCRIPTION

This parameter represents the Alberta Health Care Insurance Plan subsidy rate used in the calculation of the premium subsidy. Families with incomes greater than the income threshold for their family type may be eligible for a partial subsidy on their health premium. The premium is determined by subtracting the income threshold AHCIPIT from family income and multiplying the result by this subsidy rate, without exceeding the base premium amount.

See AHCIPIT for details on the premium subsidy.

AHCIPSSB Alberta Health Care Insurance Plan Single Subsidy Table

DESCRIPTION

This parameter represents the income threshold amounts and premium subsidy rates for the Alberta Health Care Insurance Plan subsidy, for non-senior single individuals. The value of the health premium, AHCIPS may be reduced based on the previous year's taxable income. The calculated premium is equal to the maximum annual premium times (1.0 – corresponding subsidy rate). Where income exceeds the last income threshold, no premium subsidy is granted.

For single non-seniors, this parameter is only in effect when AHCIPSOPT is set to 1. See AHCIPIT for the subsidy calculations for seniors.

AMEDALL Alta Medical allowance maximum lower limit

DESCRIPTION

Alberta allowable medical expenses are calculated as actual expenses (idmedgro) less either AMEDANF percent of net income, or AMEDALL, whichever is less. The calculated

allowable expense is saved in impmeda. The provincial non-refundable medical expense tax credit (impmedtc) represents impmeda multiplied by APNTCR. It is only calculated when ATXFLG is set to 1.

AMTINCRT Alternative minimum tax: Inclusion Rate

DESCRIPTION

This parameter represents the overall inclusion rate for alternative minimum tax calculations. The non-taxable portion of capital gains to include in the calculation of adjusted taxable income is derived by AMTINCRT less CAPGIR. Only this proportion of the net non-deducted capital losses can be used to derive the adjusted taxable income for minimum tax purposes.

AMTNEGTI Alternative minimum tax: Allow Negative Taxable Income Flag

DESCRIPTION

When this parameter is set to 1, taxable income for the purposes of the federal alternative minimum tax is allowed to be negative. Taxable income is recalculated allowing it to be negative.

When this parameter is set to 0, taxable income for the purposes of the federal alternative minimum tax is set to imitax, which can not be negative.

AMTPRVDF Alternative minimum tax: prov. tax difference definition[prov]

DESCRIPTION

This parameter contains the provincial vector to define the concept of the additional tax due to minimum tax calculations that is to be used in the calculation of provincial alternative minimum tax. This parameter is used in conjunction with the provincial alternative minimum tax option parameter when it is set to 2 (to calculate the provincial minimum tax as a percentage of the additional federal tax due).

When the value is set to 0, the provincial minimum tax is calculated as a percentage of the difference between the final federal tax (including surtaxes) based on federal minimum tax

calculations and the final federal tax calculated prior to the application of the alternative minimum tax.

When the value is set to 1, the provincial minimum tax is calculated as a percentage of the minimum amount payable less the special foreign tax credit and the regular tax payable.

When the value is set to 2, the provincial minimum tax is calculated as a percentage of the minimum amount due to minimum tax calculations less the regular tax payable.

When the value is set to 3, the provincial minimum tax is calculated as a percentage of the minimum amount due to minimum tax calculations less the basic federal tax.

The resulting variable (imamtprv) contains the appropriate concept for calculating the provincial minimum tax. For those provinces that calculate provincial minimum tax as a percentage of additional federal tax, imamtprv is multiplied by the appropriate provincial rate of federal minimum tax.

AMXMT Alta married amount turndown level

DESCRIPTION

This parameter represents the provincial married exemption turndown when Alberta tax is calculated as a tax on taxable income. It is only used when ATXFLG is set to 1. The reduction is calculated as the dependant's net income less the turndown AMXMT.

AODISTC Alta Maximum infirm dependent 18 or older tax credit

DESCRIPTION

This parameter is the amount which can be claimed for the Alberta non-refundable tax credit for infirm dependents aged 18 and over if the filer has already claimed an amount for disabled dependents (idothpe). Note that the model assumes that there is only one disabled dependent. The parameter is only used when a provincial tax on taxable income is calculated (ATXFLG = 1).

APRDESC Description of database adjustment parameter file

DESCRIPTION

This database adjustment parameter can be used to provide a description of a particular set of database adjustment parameters found in a given database adjustment parameter file. This descriptive text is reproduced in the page headers of any requested output reports.

APRSFILE Starting Adjustment parameter file [string]

DESCRIPTION

This parameter contains the Statistics Canada supplied name of the default database adjustment parameter file (.apr). After modifying a parameter file users typically save the file with a different name. This parameter cannot be edited within the SPSM and is intended to inform the user of the original Statistics Canada supplied .apr file that their modified apr file is based on.

APRVER SPSD/M Release Version [string]

DESCRIPTION

This parameter contains the SPSD/M release version number of the database adjustment parameter file (.apr). Every SPSD/M version shipped has a version number and a complete set of parameter files necessary to run the model. If a user has multiple versions of the SPSM installed this parameter will help to identify which Version of the model the original parameter file was shipped with. This parameter cannot be edited within the SPSM.

DESCRIPTION

This table contains the figures necessary to calculate the Alberta Political Contribution Tax Credit. The first column represents the dollar amount of total Alberta political contributions to which the corresponding percentages of the third column are applied to calculate the total Allowable Alberta Political Contribution Tax Credit. Only the first and third columns of the table need to be specified.

APT**X** Alta tax table [taxable income,basic provincial tax]

DESCRIPTION

This table represents the Alberta tax curve used when calculating the tax on taxable income (ATXFLG = 1). The first column represents Taxable Income, the second represents the amount of Basic Provincial Tax payable at that level of taxable income, the third column represents the marginal tax rate for the interval between this and the next value in the table.

Only the first and third columns of the tax table need be specified. The second column is computed by the standard algorithm.

ASBBASIC Alberta seniors benefit annual basic benefit

DESCRIPTION

This parameter represents the basic annual benefit of Alberta's seniors for the years in which the Alberta Seniors Benefit system is active. This transfer payment scheme replaced the earlier Alberta Assured Income Plan. The resulting modelled benefit to Alberta seniors is stored in the imiasb variable.

DESCRIPTION

This parameter represents the proportion of total Alberta Seniors Benefit which a person who is not eligible for OAS is entitled to receive. It is an array parameter and depends on the tenure and marital status. The order is as follows:

- 0 = single senior who is renting
- 1 = single senior who owns a home
- 2 = senior married to a non senior who is renting
- 3 = senior married to a non senior who owns a home
- 4 = married senior couple who rent
- 5 = married senior couple who owns their home

ASBRR Alberta seniors benefit reduction rate [senior type]

DESCRIPTION

This parameter represents the phase out rate of the Alberta Seniors Benefit program. All non-deductible income greater than \$0 is phased out using this rate which depends on tenure and marital status. The order of the array is as follows:

- 0 = single senior who is renting
- 1 = single senior who owns a home
- 2 = senior married to a non senior who is renting
- 3 = senior married to a non senior who owns a home
- 4 = married senior couple who rent
- 5 = married senior couple who owns their home

ASBSAB Alberta seniors benefit supplemental accommodation benefit

DESCRIPTION

This parameter represents the supplemental accommodation annual benefit for Alberta's seniors who reside in long term care facilities. The Alberta Seniors Benefit Supplemental Accommodation Benefit is given to institutionalized elderly (idieflag=1) who are eligible for the base amount of the Alberta Seniors Benefit. The supplemental benefit is reduced by ASBSABRR times non-deductible income. The resulting modelled benefit to Alberta seniors is added to imiasb.

ASBSABRR Alberta seniors benefit supplemental accommodation reduction rate

DESCRIPTION

This parameter represents the phase out rate for the Alberta Seniors Benefit Supplemental Accommodation Benefit. The Alberta Seniors Benefit Supplemental Accommodation Benefit is given to institutionalized elderly (idieflag=1) who are eligible for the base amount of the Alberta Seniors Benefit. The supplemental benefit (ASBSAB) is reduced by ASBSABRR times non-deductible income. The resulting modelled benefit to Alberta seniors is added to imiasb.

ASBSSOPT Alberta seniors benefit 1 senior couple option [1=model separately,2=model as senior couples]

DESCRIPTION

When this parameter is equal to 1, seniors who are married to non-seniors are treated separately in the Alberta Seniors Benefit program. When it is equal to 2, these seniors are treated in the same manner as a two senior couple.

ASCDELIM Field delimiter

DESCRIPTION

As noted in the description of the ASCSTYLE parameter, setting ASCSTYLE to 3 or 4 produces a database-style output file. ASCDELIM allows the user to control the delimiter used to separate variable values when these styles of output are used. If ASCDELIM is empty, a space is used as the delimiter. If any other character is used (such as a comma), that character is used as the delimiter. As a special case, the string consisting of the three letters TAB will use a tab character as the output delimiter.

ASCEXTPRC Number of digits of extra precision

DESCRIPTION

If ASCEXTPRC is left at zero, the text file output facility will operate as described in the *User's Guide*. Otherwise, ASCEXTPRC extra digits of precision will be used when outputting variables using the facility. This extra precision is useful to accurately compute marginal tax rates when using the turning point facility.

ASCFLAG Text output facility activation flag

DESCRIPTION

This control parameter flag, when set to a value of 1, enables the text file output facility. When enabled, a file with the file name extension ".prn" will be written using ASCSTYLE format for ASCUNIT level of analysis and ASCVARS variables. The text file output facility provides a method for examining detailed SPSD/M microdata.

ASCI Alberta surtax cut-in

DESCRIPTION

In Alberta, provincial surtax (impsur) is calculated as ASF percent of provincial taxes above the level ASCI plus AFTAX percent of taxable income (imitax).

ASCSTYLE Style of text output

DESCRIPTION

When enabled by ASCFLAG, this control parameter controls the formatting of the resulting text file output report. Users should refer to the *User's Guide* for a detailed explanation of the text output facility that this parameter controls. Five different styles of report can be produced, as given below.

1. Each household is output as a group of output lines, one household per page and one variable is output per line. Both the variable's name and label are printed and values for each unit are shown in aligned columns.

2. Produces a report designed to be read using a spreadsheet import function. The layout is very similar to that for an style of 1, but variable labels and all superfluous spaces have been eliminated, and the printer page break character has been replaced by an empty literal string.
3. Produces a report designed to be read by a spreadsheet or database system. Each unit is recorded on a single line, with a single space between each variable value. The first line of the file contains a list of the variable names in the order in which they are written in the line.
4. Produces a report identical to style 3, but the first line is eliminated.
5. This style produces a fixed format which contains all variables, is blank delimited, and contains all records per case beginning with a household record which is followed by individual records. This style is intended for input to the bldspd program. Please refer to the *Tools User's Guide* for more details on the use of this style.

The default value of ASCSTYLE is 1.

ASCUNIT Text output family level

DESCRIPTION

When the text file output facility is activated using the ASCFLAG parameter, this control parameter is used to specify the family level of analysis of the resulting report. Valid values and their meanings are given below.

0	Individual
1	Nuclear Family
2	Census Family
3	Economic Family
4	Household

The default value for ASCUNIT is 0.

ASCVARS Variables selected for text output [string]

DESCRIPTION

When the text file output facility is activated using the ASCFLAG parameter, this control parameter is used to specify which variables are to be output in the resulting report. Analysis variables are rolled up to the family level specified by ASCUNIT, and class variables at lower levels refer to characteristics of the reference person of the family unit. Please see the *User's Guide* for a fuller discussion of family level in SPSS/M.

DESCRIPTION

In Alberta, provincial surtax(impstur) is calculated as ASF percent of provincial taxes above the level ASCI plus AFTAX percent of taxable income (imitax).

DESCRIPTION

This value is used to scale the amount of the reduction which will be applied to the age tax credit. It is used in 1994 to simulate the phase-in of the income testing of the age credit.

Legislation relating to this parameter was introduced in the 1994 Federal Budget which proposed that the non-refundable age tax credit “be subject to an income test which would target the assistance to seniors with low or modest incomes.” This reduction for higher income seniors was to be phased in over two years, with half the reduction applied in 1994 and the full reduction in 1995 and subsequent years.

See also imatxc, AXM, AXRR, and AXTD.

AXRR Age amount credit reduction rate

DESCRIPTION

This parameter is the proportion of net income above a given threshold (AXTD) which will be deducted from the non-refundable age tax credit amount (AXM).

Legislation relating to this parameter was introduced in the 1994 Federal Budget which proposed that the non-refundable age tax credit “be subject to an income test which would target the assistance to seniors with low or modest incomes.” Individual seniors with incomes above the threshold of AXTD would have the amount of the age credit reduced by AXRR proportion of income above that threshold. This reduction for higher income seniors was to be phased in over two years, with half the reduction applied in 1994 and the full reduction in 1995 and subsequent years.

See also imatxc, AXTD, AXPI.

DESCRIPTION

Individual seniors will have their non-refundable age tax credit reduced if their net income is above the value of this parameter.

Legislation relating to this parameter was introduced in the 1994 Federal Budget which proposed that the non-refundable age tax credit “be subject to an income test which would target the assistance to seniors with low or modest incomes.” Individual seniors with incomes above the threshold of AXTD would have the amount of the age credit reduced by AXRR proportion of income above that threshold. This reduction for higher income seniors was to be phased in over two years, with half the reduction applied in 1994 and the full reduction in 1995 and subsequent years.

BAMTOPT N.B. alternative minimum tax option (1=none, 2=% fed, 3=fed adj income, 4=% min amt)

DESCRIPTION

When New Brunswick tax on taxable income is calculated (BTXFLG = 1), there are four options as to how to calculate the provincial minimum tax.

When BAMTOPT is set to 1, then no provincial alternative minimum tax or minimum tax carryover is calculated.

When BAMTOPT is set to 2, then a percentage (BAMTPCTF) of the additional federal tax triggered by the federal minimum tax (imamtprv) is added to the basic provincial tax (imbpt). The definition of imamtprv is determined by the provincial vector AMTPRVDF. The provincial minimum tax carryover credit (impminco) is calculated using BAMTPCTF.

When BAMTOPT is set to 3, the income used in the provincial tax calculation is replaced by the net income used for alternative tax purposes (imamtinc) for people who triggered the federal minimum tax. Then the BAMTTX rate, usually set to the smallest non-zero tax rate, is applied in order to get the provincial tax before the non-refundable tax credits. The provincial minimum tax carryover credit (impminco) is calculated using BAMTTX.

When BAMTOPT is set to 4, then a percentage (BAMTPCTM) of the minimum tax triggered by the federal minimum tax calculations represents the basic provincial tax (imbpt). Provincial surtaxes are then calculated using this amount. The provincial minimum tax carryover credit (impminco) is calculated using BAMTPCTM.

BASALG Name of base algorithm [string]

DESCRIPTION

This control parameter contains a label associated with the tax/transfer algorithm requested by the user through the BASMETH parameter. It is informational and cannot be directly modified by the user.

BASDESC Description of base parameters [string]

DESCRIPTION

This control parameter contains the descriptive label associated with the input parameter file or results file used to produce base variables. It is informational and cannot be directly modified by the user. It is a copy of the MPRDESC parameter associated with the file in question.

BASMETH Method of creating base variables

DESCRIPTION

This control parameter specifies the method of determining base results. May be one of 4 values:

0. No base results will be used during the current program run
1. Results will be read from an SPSM results file (.MRS) specified in INPBASMRS
2. Results will be calculated using the standard algorithm with tax/transfer parameters specified in INPBASMPR.
3. Results will be calculated using the alternate algorithm with tax/transfer parameters specified in INPBASMPR.

The default value for BASMETH is 0.

DESCRIPTION

This is the maximum value of the New Brunswick age non-refundable tax credit before any reductions are applied. The parameter is only used when a provincial tax on taxable income is calculated (BTXFLG = 1).

BAXTD N.B. Age Amount net income turndown

DESCRIPTION

Individual seniors will have their non-refundable age tax credit reduced if their net income is above the value of this parameter. The parameter is only used when the New Brunswick provincial tax on taxable income is calculated (BTXFLG = 1).

BCBEMX B.C. Earned Income Benefit Income Reduction

DESCRIPTION

When BCEIBFLG is equal to 1, the British Columbia Earned Income Benefit (imibceib) is calculated depending on the number of children in the family. For families with lower incomes, the benefit starts to be phased in at BCEIBPI, and reaches its maximum at incomes of BCBEMX. The slope of the phase in is therefore calculated as the maximum working income supplement a family can receive divided by (BCBEMX – BCEIBPI).

BCEIBFLG Activate B.C. Earned Income Benefit Program

DESCRIPTION

When BCEIBFLG is assigned a value of 1, the calculation of the British Columbia Earned Income Benefit (imibceib), which depends on the presence of children in the family, is activated. For families with lower incomes, the benefit starts to be phased in at BCEIBPI, and reaches its maximum at incomes of BCBEMX. The slope of the phase in is therefore calculated as the maximum working income supplement a family can receive divided by (BCBEMX – BCEIBPI).

With a value of 0, calculation of the British Columbia Earned Income Benefit is suppressed.

DESCRIPTION

The activation flag of the BC Family Bonus (imibcbf). The calculation is activated when the flag is set to 1.

The basic amount of benefits is related to the number of children in the family (BCFBBAS). This amount is reduced according to the net family income. A different reduction rate is used if the family include only one child (see BCFBRR, BCFBRRS, BCFBTD).

When BCFBIFS is set to 1, the Family Bonus is decreased by an amount related to the National Child Supplement. This amount is calculated using the following parameters: BCFBNCS1, BCFBNCS2, BCFBNCS3, BCFBNCSRR1, BCFBNCSRR2, BCFBNCSRR3, BCFBNCSSTD.

BCFBNCSTD B.C. Family Bonus National Child Supplement Turndown

DESCRIPTION

When BCFBIFS is flagged on, the Basic B.C. Family Bonus is reduced by an amount related to the National Child Benefit Supplement (NCBS). This parameter represents the family net income turndown level used to calculate the amount related to the NCBS. When family net income exceeds this amount, the calculated bonus is reduced by BCFBNCSRR1 for families

with one child, BCFBNCSRR2 for families with two children and by BCFBNCSRR3 for families with three or more children.

See also BCFBNCS1, BCFBNCS2, BCFBNCS3.

BCFBPI B.C. Family Bonus phase-in

DESCRIPTION

When the parameter BCFBFLAG is set to one, the value of this parameter is always multiplied by the calculated amount of the B.C. Family Bonus (imibcfb). The parameter was designed to simulate the mid-year commencement of the program in July 1996.

BCFBTD B.C. Family Bonus Turndown

DESCRIPTION

The level of family net income (head plus spouse) above which the British Columbia Family Bonus (imibcfb) begins to be paid at a lower rate. If family income exceeds this amount, the

Family Bonus will be reduced by a proportion (BCFBRR) of net income for families with two or more children or by (BCFBRRS) for families with one child.

BCGTC N.B. Caregiver Tax Credit

DESCRIPTION

BCGTC multiplied by BPNTCR is the maximum amount of the New Brunswick Caregiver Tax Credit (impcgtc). The parameter is only used when the provincial tax on taxable income is calculated (BTXFLG = 1).

For more explanation see BCGTCFLG.

BCGTCFLG N.B. Caregiver Tax Credit activation flag

DESCRIPTION

The calculation of the New Brunswick Caregiver Tax Credit (impcgtc) is activated by the flag BCGTCFLG.

The Caregiver Tax Credit (impcgtc) provides additional tax assistance to individuals who provide in-home care for relatives. Eligible recipients include individuals residing with and providing in-home care for a parent or grandparent over 65 years of age, or for an infirm dependent relative.

The parameter BCGTCOPT provides users with the option to use the greenbook value of the Caregiver amount (idcgtc from Line 315 and Schedule 12 in the General Tax Guide) or to give the maximum (BCGTC) if idcgtc is greater than 0.

This non-refundable tax credit is only calculated when the provincial tax on taxable income is calculated (BTXFLG = 1).

ba09.mpr:	1	--	Copied from ba08.mpr

DESCRIPTION

This parameter provides users with the option of how to calculate the provincial Caregivers Tax Credit (impcgtc). A value of 1 results in applying the maximum value (BCGTC) if the filer had an amount in idcgtc (from Line 315 and Schedule 12 in the General Tax Guide). To use the greenbook value of the Caregiver amount (idcgtc), this parameter must be set to 2. This non-refundable tax credit is only calculated when the provincial tax on taxable income is calculated (BTXFLG = 1) and the provincial caregivers tax credit is activated (BCGTCFLG = 1).

BEEPFLAG Beep on completion

DESCRIPTION

The BEEPFLAG parameter, if activated by setting its value to 1, will produce a beeping sound when SPSM execution is complete. Users may find this facility convenient if operating on multiple machines, or if busy on other tasks.

The default value is 0.

BEMXM N.B. equivalent to married amount

DESCRIPTION

This parameter represents the equivalent to married tax credit when New Brunswick tax is calculated as a tax on taxable income. It is only calculated when BTXFLG is set to 1.

BEMXMT N.B. equivalent to married turndown level

DESCRIPTION

This parameter represents the provincial equivalent to married exemption turndown when New Brunswick tax is calculated as a tax on taxable income. It is only used when BTXFLG

is set to 1. The reduction is calculated as the dependant's net income less the turndown BEMXMT.

BMAXDX N.B. Maximum Disability deduction/amount

DESCRIPTION

This value represents the maximum New Brunswick non-refundable disability tax credit. It is given to individuals who claimed either a disability amount for self (iddisslf) or for a dependant (iddisoth). The parameter is only used when the provincial tax on taxable income is calculated (BTXFLG = 1).

BMEDALL N.B. Medical allowance maximum lower limit

DESCRIPTION

New Brunswick allowable medical expenses are calculated as actual expenses (idmedgro) less either BMEDANF percent of net income, or BMEDALL, whichever is less. The calculated allowable expense is saved in impmeda. The provincial non-refundable medical expense tax credit (impmedtc) represents impmeda multiplied by BPNTCR. It is only calculated when BTXFLG is set to 1.

BODISTC N.B. Maximum infirm dependent 18 or older tax credit

DESCRIPTION

This parameter is the amount which can be claimed for the New Brunswick non-refundable tax credit for infirm dependents aged 18 and over if the filer has already claimed an amount for disabled dependents (idothpe). Note that the model assumes that there is only one disabled dependent. The parameter is only used when a provincial tax on taxable income is calculated (BTXFLG = 1).

BPTX

N.B. tax table [taxable income,basic provincial tax]

DESCRIPTION

This table represents the New Brunswick tax curve used when calculating the tax on taxable income (BTXFLG = 1). The first column represents Taxable Income, the second represents the amount of Basic Provincial Tax payable at that level of taxable income, the third column represents the marginal tax rate for the interval between this and the next value in the table.

Only the first and third columns of the tax table need be specified. The second column is computed by the standard algorithm.

BRKFLAG Activate interception of `Break' key

DESCRIPTION

This flag, which is normally left at 1, activates the normal SPSM break processing described in the *User's Guide*. If de-activated, SPSM will exit immediately to MS-DOS when the break key combination is pressed.

BSCI New Brunswick provincial tax above which surtax applies

DESCRIPTION

In New Brunswick, provincial surtax (impsur) is calculated as BSF percent of provincial taxes above the level BSCI.

BTRBAS Base N.B. low income tax reduction

DESCRIPTION

This is the base amount for the New Brunswick Low income tax reduction.

Announced in the 2001 budget, the maximum Low Income Tax Reduction is equal to the sum of a base amount (BTRBAS) and an amount for a spouse or equivalent-to-spouse (BTRSP). It is then reduced for net income over BTRTD at a rate of BTRRR. The reduction cannot be more than taxes owing. The reduction is calculated at a family level but can be split amongst spouses.

BTRSP N.B. low income tax reduction for spouse or equivalent-to-spouse

DESCRIPTION

This is the married or equivalent-to-married amount for the New Brunswick Low income tax reduction.

Announced in the 2001 budget, the maximum Low Income Tax Reduction is equal to the sum of a base amount (BTRBAS) and an amount for a spouse or equivalent-to-spouse (BTRSP). It is then reduced for net income over BTRTD at a rate of BTRRR. The reduction cannot be more than taxes owing. The reduction is calculated at a family level but can be split amongst spouses.

BTRTD N.B. low income tax reduction Turndown

DESCRIPTION

This is the turndown for the New Brunswick Low income tax reduction.

Announced in the 2001 budget, the maximum Low Income Tax Reduction is equal to the sum of a base amount (BTRBAS) and an amount for a spouse or equivalent-to-spouse (BTRSP). It is then reduced for net income over BTRTD at a rate of BTRRR. The reduction cannot be more than taxes owing. The reduction is calculated at a family level but can be split amongst spouses.

BXM

Basic personal exemption/amount

DESCRIPTION

All filers receive this amount, multiplied by the parameter FNTCR, as their basic personal tax credit imbt. The 2005 Federal Budget announced additional amounts to be added to the personal amount for the years 2006 to 2008, which is found in the parameter BXMEXT. The 2005 Budget also announced a personal amount of \$10,000 for 2009.

See also BXMS and BXMEXT.

BXMEXT Basic personal amount extra top-up

DESCRIPTION

This parameter contains the additional amounts to be added to the basic personal amount as announced in the 2005 Federal Budget for the years 2006 to 2008. This amount will be added to BXM and then multiplied by FNTCR, the result is contained in imbtc. The 2005 Budget also announced a personal amount of \$10,000 for 2009, thus this parameter will be set to 0 for 2009.

See also BXM.

DESCRIPTION

This is the maximum value per person for the personal amount supplement available to low income Canadians. This measure was introduced in the Federal Budget in 1998 and cancelled in the 1999 budget. All filers are income tested (based on taxable income imdepni) for receipt of the supplement to the basic exemption.

Note that in the federal tax forms, only persons whose incomes are over the personal tax amount (BXM) claimed this credit. By giving it to persons with very low incomes there is no effect on taxes or applied tax credits. But when comparing the SPSM results with those of the Greenbook, the SPSM results may seem high.

BXMSRR Basic personal exemption supplement reduction rate

DESCRIPTION

This is the proportion of net income above the level of the basic exemption (BXM) plus the maximum supplement (BXMS) used to reduce the maximum supplement to the federal basic personal tax credit (BXMS). This measure was introduced in the Federal Budget in 1998 and cancelled in the 1999 Federal Budget. All filers are income tested (based on net income imdepni) for receipt of the supplement to the basic exemption.

CAMTOPT B.C. alternative minimum tax option (1=none, 2=% fed, 3=fed adj inc, 4=% min amt)

DESCRIPTION

When British Columbia tax on taxable income is calculated (CTXFLG = 1), there are four options as to how to calculate the provincial minimum tax.

When CAMTOPT is set to 1, then no provincial alternative minimum tax or minimum tax carryover is calculated.

When CAMTOPT is set to 2, then a percentage (CAMTPCTF) of the additional federal tax triggered by the federal minimum tax (imamprv) is added to the basic provincial tax (imbpt). The definition of imamprv is determined by the provincial vector AMTPRVDF. The provincial minimum tax carryover credit (impminco) is calculated using CAMTPCTF.

When CAMTOPT is set to 3, the income used in the provincial tax calculation is replaced by the net income used for alternative tax purposes (imamtinc) for people who triggered the federal minimum tax. Then the CAMTTX rate, usually set to the smallest non-zero tax rate, is applied in order to get the provincial tax before the non-refundable tax credits. The provincial minimum tax carryover credit (impminco) is calculated using CAMTTX.

When CAMTOPT is set to 4, then a percentage (CAMTPCTM) of the minimum tax triggered by the federal minimum tax calculations represents the basic provincial tax (imbpt). Provincial surtaxes are then calculated using this amount. The provincial minimum tax carryover credit (impminco) is calculated using CAMTPCTM.

CAMTTX B.C. amt rate as tax on adjusted income

DESCRIPTION

When British Columbia tax on taxable income is calculated (CTXFLG=1) and CAMTOPT is set to 3, the income used in the provincial tax calculation is replaced by the net income used for alternative tax purposes (imamtinc) for people who triggered the federal minimum tax. Then the CAMTTX rate, usually set to the smallest non-zero tax rate, is applied in order to get the provincial tax before the non-refundable tax credits.

CAXRR

B.C. Age Amount credit reduction rate

DESCRIPTION

This parameter is the proportion of net income above a given threshold (CAXTD) which will be deducted from the provincial non-refundable age tax credit amount (CAXM). The parameter is only used when the British Columbia provincial tax on taxable income is calculated (CTXFLG = 1).

See also `impatxc`, `CAXTD`, `CAXPI`.

CCEAOAGE CCEA Maximum eligible age for oldest child

DESCRIPTION

The child care expense allowance has two different levels of deductions depending on the child's age. This parameter sets the age of children above which child care expenses may not be claimed. Children below CCEAOAGE but above age 6 have their child care expense allowance imccea calculated with 'Limit C' set to CCEAOLD.

See also: CCEAYNG CCEAOLD

CCEATFLG CCEA eligible->claimable transformation activation flag

DESCRIPTION

Activates the child orientated expense variable in txcea. This redistributes expenses allowed back to the children by reducing the amount claimed for each child. When set to "1", actual expenses in the Survey of Household Spending data (idccet) are used and subjected to Limits "A", "B" and "C". When set to "0", value is determined by idccett.

CCEPTFLG CCE part-time student flag

DESCRIPTION

When this flag is set to 1, part-time students are treated in a similar manner as full time students regarding the calculation of the Child Care Expense amount. When activated, the number of months of part time study is considered in the calculation of the allowable deduction.

CCESFLAG CCE full-time student flag

DESCRIPTION

When this flag is set to 1, for full-time students who are single parents or where both parents are students, the Child Care Expense deduction is applied to all income (iminet) as opposed

to earned income. CCEAEMPF is then applied to total income in these cases. The deduction must be smaller than the number of weeks in school full-time plus the number of months in school part time (when CCEPTFLG is activated) times the sum of CCESOLD times the number of eligible children 7 and over and CCESYNG times the number of children under 7.

CCESOLD CCEA old child limit for full-time students

DESCRIPTION

When CCESFLAG is set to 1, full-time students can deduct child care expenses, up to a certain limit. The deduction must be smaller than the number of weeks in school full-time times the sum of CCESOLD times the number of eligible children 7 and over and CCESYNG times the number of children under 7.

CCEZOPT CCE young kid optimization rules [1=use, 2=zero, 3=optimize]

DESCRIPTION

This parameter is used to control the method by which child care expenses are handled for the calculation of the child tax credit/federal child benefits and child care exemption. When CCEZOPT is set to 1 then the family will always claim their child care expenses. When CCEZOPT is set to 2 then a family's child care expenses will never be claimed. When CCEZOPT is set to 3 then the function cceopt will be invoked to maximize the value of combined child care expense credits and the child tax credit/federal child benefits.

CCGTC B.C. Caregiver Tax Credit

DESCRIPTION

CCGTC multiplied by CPNTCR is the maximum amount of the British Columbia Caregiver Tax Credit (impcgtc). The parameter is only used when the provincial tax on taxable income is calculated (CTXFLG = 1).

For more explanation see CCGTCFLG.

CCGTCFLG B.C. Caregiver Tax Credit activation flag

DESCRIPTION

The calculation of the British Columbia Caregiver Tax Credit (impcgtc) is activated by the flag CCGTCFLG.

The Caregiver Tax Credit (impcgtc) provides additional tax assistance to individuals who provide in-home care for relatives. Eligible recipients include individuals residing with and providing in-home care for a parent or grandparent over 65 years of age, or for an infirm dependent relative.

The parameter CCGTCOPT provides users with the option to use the greenbook value of the Caregiver amount (idcgtc from Line 315 and Schedule 12 in the General Tax Guide) or to give the maximum (CCGTC) if idcgtc is greater than 0.

This non-refundable tax credit is only calculated when the provincial tax on taxable income is calculated (CTXFLG = 1).

CCGTCOPT B.C. Caregiver Tax Credit Option (1=max, 2=greenbook)

DESCRIPTION

This parameter provides users with the option of how to calculate the provincial Caregivers Tax Credit (impcgtc). A value of 1 results in applying the maximum value (CCGTC) if the filer had an amount in idcgtc (from Line 315 and Schedule 12 in the General Tax Guide). To use the greenbook value of the Caregiver amount (idcgtc), this parameter must be set to 2. This non-refundable tax credit is only calculated when the provincial tax on taxable income is calculated (CTXFLG = 1) and the provincial caregivers tax credit is activated (CCGTCFLG = 1).

CGTCFLG Caregiver Tax Credit activation flag

DESCRIPTION

The calculation of the non-refundable Caregiver Tax Credit (imcgtc) is activated by the flag CGTCFLG.

Beginning in 1998, the Caregiver Tax Credit (imcgtc) was introduced to provide additional tax assistance to individuals who provide in-home care for relatives. Eligible recipients include individuals residing with and providing in-home care for a parent or grandparent over 65 years of age, or for an infirm dependent relative.

The parameter CGTCOPT provides users with the option to use the greenbook value of the Caregiver amount (idcgtc from Line 315 and Schedule 12 in the General Tax Guide) or to give the maximum (CGTC) if idcgtc is greater than 0.

CGTCOPT Caregiver Tax Credit option (1=max, 2=greenbook)

DESCRIPTION

This parameter provides users with the option of how to calculate the federal Caregivers Tax Credit (imcgtc). A value of 1 results in applying the maximum value (CGTC) if the filer had an amount in idcgtc (from Line 315 and Schedule 12 in the General Tax Guide). To use the greenbook value of the Caregiver amount (idcgtc), this parameter must be set to 2. This non-refundable tax credit is only calculated when CGTCFLG =1.

CLITR B.C. Low Income Tax Reduction Credit

DESCRIPTION

This is the maximum amount for the British Columbia low income tax reduction credit. Announced in the 2005 budget, the maximum Low Income Tax Reduction Credit is equal to this amount, and then reduced for net income over CLITRTD at a rate of CLITRRR. The reduction cannot be more than taxes owing. The variable imprt contains the value of the calculated low income tax reduction.

CLOSEFLAG Close window on completion

DESCRIPTION

The CLOSEFLAG parameter is used to control the behaviour of the windows version of SPSM when a simulation has been completed. If CLOSEFLAG is 1, SPSM will close the display window when the simulation has been completed. If CLOSEFLAG is 0, SPSM will leave its progress reporting window activated on completion, allowing the user to examine the summary statistics. Once the user has examined the summary statistics, he or she can close SPSM using the Close button. This parameter has no effect in the console version of SPSM.

The default value for CLOSEFLAG is 0.

CLVCMAX Maximum B.C. labour-sponsored funds tax credit allowed

DESCRIPTION

This is the maximum value for the British Columbia labour sponsored funds tax credit (implvctc). The credit is derived as a proportion CLVCRT of the cost of the funds bought (idlabtxg) up to a maximum value CLVCMAX.

CMAXDX B.C. Maximum Disability deduction/amount

DESCRIPTION

This value represents the maximum British Columbia non-refundable disability tax credit. It is given to individuals who claimed either a disability amount for self (iddisslf) or for a dependant (iddisoht). The parameter is only used when the provincial tax on taxable income is calculated (CTXFLG = 1).

CMEDALL B.C. Medical allowance maximum lower limit

DESCRIPTION

British Columbia allowable medical expenses are calculated as actual expenses (idmedgro) less either CMEDANF percent of net income, or CMEDALL, whichever is less. The calculated allowable expense is saved in impmeda. The provincial non-refundable medical expense tax credit (impmedtc) represents impmeda multiplied by CPNTCR. It is only calculated when CTXFLG is set to 1.

CMSPRATE B.C. Medical Services Plan Subsidy Rate [income, rate]

DESCRIPTION

This parameter represents the income threshold amounts and premium subsidy rates for the British Columbia Medical Services Plan premium assistance. The value of the health premium, may be reduced based on the previous year's net income less any deductions allowed (CMSPSDED, CMSPCDED, CMSPADED and CMSPDDED). The calculated premium is equal to the maximum annual premium (CMSP) times (1.0 – corresponding subsidy rate). Where income exceeds the last income threshold, no premium subsidy is granted. The value of the premium is held in imphp.

CODISTC B.C. Maximum infirm dependent 18 or older tax credit

DESCRIPTION

This parameter is the amount which can be claimed for the British Columbia non-refundable tax credit for infirm dependents aged 18 and over if the filer has already claimed an amount for disabled dependents (idothpe). Note that the model assumes that there is only one disabled dependent. The parameter is only used when a provincial tax on taxable income is calculated (CTXFLG = 1).

CPP60T64 CPP/QPP Contributions Take up (60 - 64) by earnings with CPP income

DESCRIPTION

This is a take-up rate for contributions to CPP/QPP for individuals in the 60 to 64 age range who have received some CPP income (idicqp) as well as earned income (idiemp, idisenf, idisefm). The take up is based on employment income and represent the proportion who should still contribute to CPP/QPP based on their earnings. Special tabulations using the Greenbook data were used to determine the proportions.

CPPGT64 CPP/QPP Contributions Take up (over 64) by earnings with CPP income

DESCRIPTION

This is a take-up rate for contributions to CPP/QPP for individuals over the age of 64 who have received some CPP income (idicqp) as well as earned income (idiemp, idisenf, idisefm). The take up is based on employment income and represent the proportion who should still contribute to CPP/QPP based on their earnings. Special tabulations using the Greenbook data were used to determine the proportions.

CPPSEDEDFLG CPP/QPP contribution deduction for self-employed earnings flag

DESCRIPTION

When CPPSEDEDFLG is turned on, a fraction (CPPSEDFRC) of a person's contributions to the CPP/QPP in regards to their self employment earnings are treated as a deduction (imcppse) and is added to imdedft. The rest, along with the contributions on wages and salaries, can still be claimed as a tax credit (imcppctc).

CPRDESC Description of SPSM run [string]

DESCRIPTION

This control parameter can be used to provide a descriptive title to a specific SPSM run.

CPRSFILE Starting Control parameter file [string]

DESCRIPTION

This parameter contains the Statistics Canada supplied name of the default model control parameter file (.cpr). After modifying a parameter file users typically save the file with a different name. This parameter cannot be edited within the SPSM and is intended to inform the user of the original Statistics Canada supplied .cpr file that their modified cpr file is based on.

CPRVER SPSD/M Release Version [string]

DESCRIPTION

This parameter contains the SPSD/M release version number of the model control parameter file (.cpr). Every SPSD/M version shipped has a version number and a complete set of parameter files necessary to run the model. If a user has multiple versions of the SPSM installed this parameter will help to identify which Version of the model the original parameter file was shipped with. This parameter cannot be edited within the SPSM.

CPTCBEN Maximum B.C. political tax credit allowed

DESCRIPTION

This parameter is the maximum Allowable British Columbia Political Tax Credit.

CPTX B.C. tax table [taxable income,basic provincial tax]

DESCRIPTION

This table represents the British Columbia tax curve used when calculating the tax on taxable income (CTXFLG = 1). The first column represents Taxable Income, the second represents the amount of Basic Provincial Tax payable at that level of taxable income, the third column represents the marginal tax rate for the interval between this and the next value in the table.

Only the first and third columns of the tax table need be specified. The second column is computed by the standard algorithm.

CSCI British Columbia surtax first cut-in level

DESCRIPTION

This is the first level of provincial tax payable above which a surtax at the rate of CSF applies.

For British Columbia, the SPSM calculates provincial surtax (impsur) as CSF percent of provincial taxes (imtxp) above the level CSCI plus CSF2 percent of provincial taxes above the level CSCI2 less an allowance of CSDC for each dependant child (imchclm).

CSF British Columbia surtax first level rate

DESCRIPTION

This is the surtax rate payable on provincial tax payable above the level CSCI.

For British Columbia, the SPSM calculates provincial surtax (impsur) as CSF percent of provincial taxes (imtxp) above the level CSCI plus CSF2 percent of provincial taxes above the level CSCI2 less an allowance of CSDC for each dependant child (imchclm).

CSF2

British Columbia surtax second level rate

DESCRIPTION

The rate which is applied to Provincial Income Tax (imtxp) exceeding CSCI2 to calculate the BC surtax. Thus the total rate of surtax above the second tier cut-in CSCI2 would be the sum of this parameter and CSF.

For British Columbia, the SPSM calculates provincial surtax (impsur) as CSF percent of provincial taxes (imtxp) above the level CSCI plus CSF2 percent of provincial taxes above the level CSCI2 less an allowance of CSDC for each dependant child (imchclm).

CTCFALC SHS reporting error adjustment: Alcohol [prov]

DESCRIPTION

The sum of the alcohol expenditures on the SPSD/M are known to be well below the provincial control totals. The role of this parameter is to scale the model expenditures to conform with these control totals. This is necessary as alcohol is amongst the most heavily taxed commodities.

CTCFGAS SHS reporting error adjustment: Gasoline [prov]

DESCRIPTION

The sum of the gasoline expenditures on the SPSD/M are not in alignment with the provincial control totals. This parameter is used to scale the gasoline expenditures to conform with provincial control totals. Like alcohol, gasoline is a heavily taxed commodity.

CTCFTOB SHS reporting error adjustment: Tobacco [prov]

DESCRIPTION

The sum of the tobacco expenditures on the SPSD/M fall short of provincial control totals. This parameter scales the model expenditures to conform with these control totals. Tobacco is the most heavily taxed commodity.

CTCINC CTC family income scaling factor

DESCRIPTION

Family net income calculated for the purposes of taxing back the Child Tax Credit is always multiplied by this factor prior to taxing back Child Tax Credits.

CTCREF	CTC post-reform rules flag
---------------	----------------------------

DESCRIPTION

In 1988 a number of changes were introduced to the child tax credit including a supplement for young children and the reduction of benefits by child care expenses claimed. When CTCREF is set to 1 the 1988 reform rules will be applied.

DESCRIPTION

The level of family net income (head plus spouse) above which the Federal Child Tax Credit begins to be paid at a lower rate. If family income (the sum of the net income of the head and spouse) exceeds this amount, the total Child Tax Credit is reduced by a proportion (CTCRR) of income exceeding the turndown CTCTD.

CTFAMSNA SHS->SNA conceptual conversion factor [com]

DESCRIPTION

There exist some conceptual differences between the expenditures of the input-output model which computes the effective commodity tax parameters and the SPSP/M observation stemming from survey data. This parameter is used to adjust the SPSP/M expenditures before applying the input-output commodity tax rates. For additional information on this issue, consult the *Commodity Tax User's Guide*.

CTFCID Federal custom import duties [com]

DESCRIPTION

This parameter represents the effective tax rates of one of six detailed federal commodity tax types. Custom import duties are levied on imported goods used for both manufacture and final demand consumption. They are ad-valorem based. Their impact is being diminished as the General Agreement on Tariffs and Trade (GATT) discussions lead to rate reductions. These levies are incorporated into the producer's price of a good such that revenues from the federal manufacturer's sales tax and other excise taxes are subject to their levels.

CTFEXD Federal excise duties [com]

DESCRIPTION

This parameter represents the effective tax rates of one of six detailed federal commodity tax types. Under the excise act duties are levied on tobacco products and alcoholic beverages (other than wines) made in Canada. These commodities are under the control of the crown until these duties are paid. They are then stamped accordingly. These duties, like custom import duties, are included in the producer's price of the commodity. They typically take the form of specific quantity rates; they are not ad-valorem taxes. Revenues generated by the manufacturers sales tax and federal excise takes are conditioned on these levels.

CROSS REFERENCE

Function	Description
ctmod	Compute commodity taxes for individuals and households
mpc	Calculate derived model parameters and do edits

VALUES

File/Year	Value	Growth	Source

CTFEXD Please see actual parameter files or /spsd/parmvals.prn
for values

DESCRIPTION

This parameter represents the effective tax rates of one of six detailed federal commodity tax types. Some commodities are additionally taxed on the producer price base through provisions in the Excise Tax Act. Taxes under this heading include: Gasoline, Diesel, and Aviation Fuel excise taxes; Tobacco and Alcohol excise taxes; Air transportation tax; Telecommunications programming tax; other excise taxes levied on heavy cars, air conditioners, jewelry, clocks, watches, lighters, playing cards etc.

DESCRIPTION

This parameter represents the effective tax rates of one of six detailed federal commodity tax types. It is levied on all finished manufactured goods at the producer's sales price irrespective of whether wholesalers, retailers, or individual consumers are the purchasers. It is levied upon the customs value of imported goods, including any applicable duty. For a list of exemptions see the *COMTAX Users Guide*.

DESCRIPTION

This parameter represents the effective tax rates of one of six detailed federal commodity tax types. These are taxes which were brought in under the 1981 National Energy Program. They had significant impacts on Federal Government revenues through the early 1980s but by 1986 they have been phased out. They are as follows: Natural Gas & Gas Liquids Excise Tax; Oil Export Charges; Canadian Ownership Special Charge.

CTFTOT	federal total retail tax equivalent
---------------	-------------------------------------

DESCRIPTION

This is a derived parameter calculated in mpc.c. It is a total across all commodities of Federal custom import duties, Federal excise duties, Federal excise taxes, Federal manufacturer's sales, Federal other energy taxes, and Federal retail sales tax.

CROSS REFERENCE

Function	Description
ctmod	Compute commodity taxes for individuals and households
mpc	Calculate derived model parameters and do edits
txhhexp	Compute and pro-rate household taxes, rent, etc.

DESCRIPTION

This parameter is the scaling factor supplied by the user to allow for adjustments to local property taxes.

CTPPLQ Provincial profits on liquor commissions [prov]

DESCRIPTION

This parameter represents the effective tax rates of one of six detailed provincial commodity tax types. These profits are defined as the value of gross sales less administrative and general expenses. The value of gross sales is, in part, a function of the markups over costs the provincial government applies. These changes do not require statutory revisions.

CTPRST Provincial retail sales tax [com x prov]

DESCRIPTION

This parameter represents the effective provincial sales tax rates, by expenditure category and province, on consumer's expenditure. Note that retail sales taxes associated with the business sector have been "pushed through" and are incorporated into CTPRST. Note also that effective tax rates are expressed with a "tax-free" consumption denominator. Please see the *Consumer Tax User's Guide* for a more complete exposition on effective tax rates.

DESCRIPTION

This parameter represents the effective tax rates of one of six detailed provincial commodity tax types. This tax is applied to cigarettes and cut tobacco. In both cases it is a specific rate tax either by cigarette or by the gram.

CTPTOT provincial total retail tax equivalent

DESCRIPTION

This is a derived parameter calculated in mpc.c parameter controls the way in which commodity taxes are calculated. It is a total across all commodities of retail sales tax, provincial industrial commodity taxes, and rates for other specific commodity taxes.

CROSS REFERENCE

Function	Description
ctmod	Compute commodity taxes for individuals and households
mpc	Calculate derived model parameters and do edits
txhexp	Compute and pro-rate household taxes, rent, etc.

CTSAVE All positive savings

DESCRIPTION

This parameter is the scaling factor supplied by the user to allow for adjustments to household savings.

CROSS REFERENCE

Function	Description
ctmod	Compute commodity taxes for individuals and households

CTTXRM Base year commodity tax removal factor [com x prov]

DESCRIPTION

The Input - Output based effective tax rates are generated with a denominator net of taxes to facilitate direct interpretation of alternate commodity tax regimes. Since the household expenditure observations on the SPSD are inclusive of survey year taxes, this factor must first be applied to the data before alternate effective rates can be properly used.

CTXFLG B.C. tax on taxable income activation flag

DESCRIPTION

When this flag is turned on, British Columbia taxes get calculated as a tax on taxable income instead of as a percentage of federal taxes.

CYPNDL B.C. Pension Income Deduction Amount

DESCRIPTION

This is the maximum dollar amount of pension income which may be claimed as a British Columbia non-refundable tax credit. The parameter is only used when the provincial tax on taxable income is calculated (CTXFLG = 1).

CROSS REFERENCE

Function	Description

DISTFLAG Distribution facility activation flag

DESCRIPTION

This control parameter activates the distributional analysis facility of SPSM, which allows the user to produce certain distributional reports on an SPSD/M variable.

DISTP Breakpoints for histogram plot [array]

DESCRIPTION

This control parameter, when activated by DISTFLAG, is a vector of decile cutpoints used on the horizontal axis of the histogram frequency plot. Only values which fall between the first and last values of DISTP are used to produce the plot, so that DISTP also functions to truncate tails of the distribution for display purposes.

DISTPHGT Height of histogram plot

DESCRIPTION

This control parameter, when activated by DISTFLAG, controls the number of vertical print positions used to produce the histogram plot. If this number is increased, the histogram plot can show a greater amount of detail.

The default value of DISTPHGT is 17.

DISTPWID Width of histogram plot

DESCRIPTION

This control parameter, when activated by DISTFLAG, controls the number of horizontal print positions used to produce the histogram plot. If this number is increased, the plot can show a greater amount of detail.

The default value of DISTPWID is 70.

DISTSAMP Distribution facility sample size

DESCRIPTION

This control parameter, when activated by DISTFLAG, controls how many sample observations are maintained in memory for computing deciles and the histogram plot. If this number is increased, the deciles can be computed more accurately, but at the cost of increased use of the computer memory.

The default value of DISTSAMP is 3000.

DISTUNIT Distribution facility family level

DESCRIPTION

When the distribution facility report is activated using the DISTFLAG parameter, this control parameter is used to specify the family level of analysis of the resulting report. Valid values and their meanings are given below.

- 0. Individual
- 1. Nuclear Family
- 2. Census Family
- 3. Economic Family
- 4. Household

The default value for DISTUNIT is 0.

DISTVAR Distribution facility variable [string]

DESCRIPTION

The value of the DISTVAR control parameter is any valid class or analysis variable name for which a histogram plot and distributional statistics are desired. The value of DISTFLAG must be set to 1 or this parameter will be ignored.

DISTZERO Distribution facility zero inclusion flag

DESCRIPTION

This control parameter, when activated by DISTFLAG, controls whether or not observations of the variable specified by DISTVAR with value zero are to be included when producing the distribution reports.

The default value of DISTZERO is 1.

DNINCFLAG Disable no income flag for calculation

DESCRIPTION

For efficiency purposes the SPSM sets a flag when an individual has no income and skips several calculations as a result. If an individual receives income in the course of a simulation the flag is turned. If DNINCFLAG is set to one then the income flag will be set to one for all individuals. This will result in no difference in model results but the model will take approximately 30% longer to execute.

EARNMIN Earnings threshold to be an earner

DESCRIPTION

This parameter, found in the database adjustment (.apr) parameter file, is used to specify the minimum employment and self-employment income an individual must have in order to be considered an "earner". This value is used to produce the class variables nfnearn, cfnearn, efnearn, and hdnearn.

EDXPM Education amount per month of full-time studies

DESCRIPTION

Dollar amount multiplied by number of eligible full-time months of study to determine education deduction.

EMXM Married equivalent exemption/amount

DESCRIPTION

A head with no spouse may claim a dependent child for this amount plus EMXMEXT for the Equivalent-to-Spouse amount. This amount is reduced by the child's net income exceeding the turndown level (EMXMT + EMXMTEXT). The 2005 Federal Budget announced additional amounts to be added to the equivalent-to-spouse amount for the years 2006 to 2008, which are found in the parameter EMXMEXT. The 2005 Budget also announced an equivalent-to-spouse amount of \$8,500 for 2009.

See also EMXMEXT and EMXMTEXT.

EMXMEXT Married equivalent amount extra top-up

DESCRIPTION

This parameter contains the additional amounts to be added to the equivalent-to-married amount as announced in the 2005 Federal Budget for the years 2006 to 2008. This amount will be added to EMXM and then multiplied by FNTCR, the result is contained in incemc. The 2005 Budget also announced an equivalent-to-married amount of \$8,500 for 2009, thus this parameter will be set to 0 for 2009.

See also EMXM, EMXMT and EMXMTEXT.

EMXMT Married equivalent exemption/amount turndown level

DESCRIPTION

The equivalent-to-spouse amount (EMXM + EMXMEXT) begins to be reduced when the applicable child's net income exceeds this amount plus EMXMTEXT. This parameter is used in the calculation of incemc.

EMXMTEXT Married equivalent amount turndown level extra top-up

DESCRIPTION

The equivalent-to-married amount (EMXM + EMXMEXT) begins to be reduced when the spouse's net income exceeds EMXMT plus this amount. This parameter is used in the calculation of imcemc. The 2005 Federal Budget announced a married amount income turndown value of \$850 for the year 2009; this parameter is set to 0 for 2009.

See EMXMT

ETAFLAG Activate fraction completed display

DESCRIPTION

When activated, ETAFLAG will cause SPSM to generate a horizontal histogram which indicates an estimate of what percentage of the requested simulation has been completed. Note that the estimate will not be particularly accurate when selecting small samples.

The default value for ETAFLAG is 1.

EXPADJ Adjustment Factor: All expenditure adjustment

DESCRIPTION

This parameter adjusts expenditures to better represent values in the database year. The value for the parameter remains constant for all model years and is applied prior to the other expenditure growth factors. The parameter is indexed by province (hdprov).

This parameter should be set to 1 when outputting data in order to build a new database (bldfxv). Otherwise the parameter will be applied twice.

DESCRIPTION

This parameter can be used to "gross-up" non-farm self-employment income before applying the federal tax algorithm. It does not increase the real income received by an individual, but rather increases the amount of income used when calculating taxes. It is intended to be used to simulate the effect of reducing the deductibility of employment expenses. If this kind of simulation is not desired, FACTISENF should be set to the value 1.0.

FARR Family allowance repayment rate

DESCRIPTION

This parameter allows the repayment of Family Allowance based on net family income. If set to 0, Family Allowances are not repaid. If set to 1, the amount repaid is calculated as the lesser of Taxable Family Allowances (imtf) or a proportion FARR of family net income exceeding the reduction level FATD. The repayment amount is added to the variable imrepay and is not considered a deduction from net income.

FCBEIE Flag for WIS dependent on number of children

DESCRIPTION

This parameter controls whether the original earned income supplement (also known as the working income supplement) is used, or whether the enriched version, with different amounts

depending on the number of children in the family, is used. When FCBEIE is set to 0, the original earned income supplement is used. When it is set to 1, the enriched working income supplement proposed in the 1997 budget is calculated.

FCBEIS Child benefits earned income supplement

DESCRIPTION

This parameter represents the amount of the federal earned-income supplement which increases the Federal Child Benefit for low-income working families. When FCBEIE is set to 1, the benefit depends on the number of children. FCBEIS is replaced by FCBEIS1, FCBEIS2, and FCBEIS3.

FCBEMX Earnings where WIS phase-in is at maximum

DESCRIPTION

When FCBEIE is equal to 1, the Working Income supplement depends on the number of children in the family. For families with lower incomes, the benefit starts to be phased in at FCBEIC, and reaches its maximum at incomes of FCBEMX. The slope of the phase in is therefore calculated as the maximum working income supplement a family can receive divided by (FCBEMX – FCBEIC).

FCBERR Child benefits earning supplement reduction rate

DESCRIPTION

This parameter represents the rate at which the earned income supplement (FCBEIS) will be reduced by when family net income exceeds the (FCBETD) turn down level. When FCBEIE is set to 1, the reduction rate depends on the number of children and FCBERR1, FCBERR2, and FCBERR3 replace FCBERR.

FCBESR Child benefits earned income supplement rate

DESCRIPTION

This parameter represents the rate at which the earned income supplement (FCBEIS) will be increased when family net income exceeds the (FCBECI) cut-in level. When FCBEIE is set to 1, this parameter is replaced by FCBEMX since the rate of increase will depend on the number of children in the household.

DESCRIPTION

The level of family net income (head plus spouse) above which the Federal Child Benefit begins to be paid at a lower rate. If family income exceeds this amount, the Child Benefit will be reduced by a proportion (FCBRR) for families with two or more children or by (FCBRRS) for families with one child.

FLVCMAX Maximum labour-sponsored funds tax credit allowed

DESCRIPTION

This is the maximum value for the federal labour sponsored funds tax credit (imlabtxc). The credit is derived as a proportion FLVCRT[prov] of the cost of the funds bought (idlabtxg) up to a maximum value FLVCMAX.

Note that in 1996, people who bought shares prior to March 6 could claim a 20% rate whereas shares bought afterwards had a 15% rate. In the model we simply use a 15% rate.

FLVCRT Percent of labour-sponsored funds cost allowed as credit [prov]

DESCRIPTION

This is the rate for the federal labour sponsored funds tax credit (imlabtxc). The credit is derived as a proportion FLVCRT[prov] of the cost of the funds bought (idlabtxg) up to a maximum value FLVCMAX.

Prior to 1988, the federal government provided a credit only if the province already such a program in place.

Note that in 1996, people who bought shares prior to March 6 could claim a 20% rate whereas shares bought afterwards had a 15% rate. In the model we simply use a 15% rate.

FPTC Federal political contribution table [total donations,donation allowed]

DESCRIPTION

This table contains the figures necessary to calculate the Federal Political Contribution Tax Credit. The first column represents the dollar amount of total federal political contributions to which the designated percentages of the third column are applied to calculate the total Allowable Federal Political Contribution Tax Credit. Only the first and third columns of the table need to be specified.

FSURL1 Federal surtax level 1

DESCRIPTION

Three level parameters and three rate parameters are provided to calculate a one, two or three-stage Federal Surtax. Surtax Rate 1 (FSURR1) is applied to Basic Federal Tax exceeding this Surtax Level 1 (FSURL1) to calculate the first component of the surtax.

FSURTRMX Maximum federal surtax reduction

DESCRIPTION

This represents the maximum value of the Federal Surtax Reduction.

Note that when the surtax reduction is being phased in or out at 50%, the maximum value as well as the reduction rate (FSURTRRR) should be half the value as printed on the tax form.

DESCRIPTION

This table represents the Federal tax curve. The first column represents Taxable Income, the second represents the amount of Basic Federal Tax payable at that level of taxable income, the third column represents the marginal tax rate for the interval between this and the next value in the table.

Only the first and third columns of the tax table need be specified. The second column is computed by the standard algorithm.

FXVFLAG Read SHS expenditure vector file

DESCRIPTION

When this flag is set to 1, expenditure totals and commodity tax simulations are performed.

The default value for FXVFLAG is 1.

GFADDED Growth Factor: Additional deductions from net income (256)

DESCRIPTION

The value for Additional Deductions from Net Income (idadded) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFALEXP Growth Factor: Other allowable employment expenses (229)

DESCRIPTION

During database adjustment, the database value for Other Allowable Employment Expenses (idalexp) is always multiplied by this value.

GFALIMO Adjustment Factor: Alimony and child support

DESCRIPTION

When CTFLAG is set to 1, the database value of household Alimony and child support (fxalimo) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFANNCON Adjustment Factor: Annuity contracts and transfers to RRIFs

DESCRIPTION

When CTFLAG is set to 1, the database value of household Annuity Contracts and Transfers to RRIFs (fxanncon) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFCAPGEX Growth Factor: Capital gains exemptions (254)

DESCRIPTION

The value for Capital Gains Exemptions (idcapgex) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFCARRY Growth Factor: Carrying charges (221)

DESCRIPTION

During database adjustment, the database value for Carrying Charges (idcarry) is always multiplied by this value.

GFC CET Growth Factor: Child care expenses associated with child

DESCRIPTION

During database adjustment, , the database value of household expenditure on Child Care (idccet) is always multiplied by this factor.

GFC CETT Growth Factor: Child care expenses (Limit A, Form T778)

DESCRIPTION

The value for Child Care Expenses (idccett) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFCGLESS Growth Factor: TCG Less Cap Gains Ded on Cap Prop Gifts

DESCRIPTION

The value for the value of taxable capital gains minus the capital gains deduction on gifts of capital property (idcgless) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFCGTC Growth Factor: Caregivers tax credit (315)

DESCRIPTION

The value for the Caregiver amount (idcgtc) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFCHARIT Growth Factor: Charitable donations (340)

DESCRIPTION

During database adjustment, the database value for Charitable Donations (idcharit) is always multiplied by this value. This, combined with new weights, allows data from the base year to represent current year values.

GFCLOSS Growth Factor: Allowable other years capital loss (253)

DESCRIPTION

During database adjustment, the database value for Previous Years Capital Losses (idccloss) is always multiplied by this value.

GFCPP65 Growth Factor: CPP for age 65

DESCRIPTION

This parameter allows the growth of CPP/QPP benefits for recipients aged 65 years. During database adjustment, the database value for CPP/QPP Benefits for individuals aged 65 years (idicqp) is always multiplied by this value. Separate growth factors by age allow for the phasing in of the program.

GFCPP66 Growth Factor: CPP for age 66

DESCRIPTION

This parameter allows the growth of CPP/QPP benefits for recipients aged 66 years. During database adjustment, the database value for CPP/QPP Benefits for individuals aged 66 years (idicqp) is always multiplied by this value. Separate growth factors by age allow for the phasing in of the program.

GFCPP67 Growth Factor: CPP for age 67

DESCRIPTION

This parameter allows the growth of CPP/QPP benefits for recipients aged 67 years. During database adjustment, the database value for CPP/QPP Benefits for individuals aged 67 years (idicqp) is always multiplied by this value. Separate growth factors by age allow for the phasing in of the program.

GFCPP68 Growth Factor: CPP for age 68

DESCRIPTION

This parameter allows the growth of CPP/QPP benefits for recipients aged 68 years. During database adjustment, the database value for CPP/QPP Benefits for individuals aged 68 years (idicqp) is always multiplied by this value. Separate growth factors by age allow for the phasing in of the program.

GFCPP69 Growth Factor: CPP for age 69

DESCRIPTION

This parameter allows the growth of CPP/QPP benefits for recipients aged 69 years. During database adjustment, the database value for CPP/QPP Benefits for individuals aged 69 years (idicqp) is always multiplied by this value. Separate growth factors by age allow for the phasing in of the program.

GFCPP70 Growth Factor: CPP for age 70

DESCRIPTION

This parameter allows the growth of CPP/QPP benefits for recipients aged 70 years. During database adjustment, the database value for CPP/QPP Benefits for individuals aged 70 years (idicqp) is always multiplied by this value. Separate growth factors by age allow for the phasing in of the program.

GFCPP71 Growth Factor: CPP for age 71

DESCRIPTION

This parameter allows the growth of CPP/QPP benefits for recipients aged 71 years. During database adjustment, the database value for CPP/QPP Benefits for individuals aged 71 years (idicqp) is always multiplied by this value. Separate growth factors by age allow for the phasing in of the program.

GFCPP72 Growth Factor: CPP for age 72

DESCRIPTION

This parameter allows the growth of CPP/QPP benefits for recipients aged 72 years. During database adjustment, the database value for CPP/QPP Benefits for individuals aged 72 years (idicqp) is always multiplied by this value. Separate growth factors by age allow for the phasing in of the program.

GFCPP73 Growth Factor: CPP for age 73

DESCRIPTION

This parameter allows the growth of CPP/QPP benefits for recipients aged 73 years. During database adjustment, the database value for CPP/QPP Benefits for individuals aged 73 years (idicqp) is always multiplied by this value. Separate growth factors by age allow for the phasing in of the program.

GFCPP74 Growth Factor: CPP for age 74

DESCRIPTION

This parameter allows the growth of CPP/QPP benefits for recipients aged 74 years. During database adjustment, the database value for CPP/QPP Benefits for individuals aged 74 years (idicqp) is always multiplied by this value. Separate growth factors by age allow for the phasing in of the program.

GFCPP75 Growth Factor: CPP for age 75

DESCRIPTION

This parameter allows the growth of CPP/QPP benefits for recipients aged 75 years. During database adjustment, the database value for CPP/QPP Benefits for individuals aged 75 years (idicqp) is always multiplied by this value. Separate growth factors by age allow for the phasing in of the program.

GFCPPG75 Growth Factor: CPP for age > 75

DESCRIPTION

This parameter allows the growth of CPP/QPP benefits for recipients aged 76 or over. During database adjustment, the database value for CPP/QPP Benefits for individuals over age 75 (idicqp) is always multiplied by this value. Separate growth factors by age allow for the phasing in of the program.

GFCPPL65 Growth Factor: CPP for age < 65

DESCRIPTION

This parameter allows the growth of CPP/QPP benefits for recipients aged 64 or younger. During database adjustment, the database value for CPP/QPP Benefits for individuals under age 65 (idicqp) is always multiplied by this value. Separate growth factors by age allow for the phasing in of the program.

GFCQP Adjustment Factor: CPP/QPP contributions

DESCRIPTION

When CTFLAG is set to 1, the database value of household CPP/QPP Contributions (fxcq) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFDALIMO Growth Factor: Alimony paid (220)

DESCRIPTION

The value for Alimony Paid (iddalimo) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFDEPPCH Growth Factor: Gifts of depreciable property (337)

DESCRIPTION

The value for the Gifts of depreciable property (iddeppch) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFDISOTH Growth Factor: Disability amount for dependants (318)

DESCRIPTION

The value for Disability Amount for Dependents (iddisoth) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFDISSLF Growth Factor: Disability amount for self (316)

DESCRIPTION

The value for Disability Amount for Self (iddisslf) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFDUES Growth Factor: Union and professional dues (212)

DESCRIPTION

During database adjustment, the database value for the Deduction for Professional and Union Dues (imputed from T1 records, iddues) is always multiplied by this value.

GFEMPLO Growth Factor: Employee home relocation loan dedn (248)

DESCRIPTION

The value for Employee Home Relocation Loan Deduction (idemplo) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFEXPLOR Growth Factor: Exploration and development expenses (224)

DESCRIPTION

The value for Exploration and Development Expenses (idexplor) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFFABD Adjustment Factor: Account balancing difference

DESCRIPTION

When CTFLAG is set to 1, the database value of household Account Balancing Difference (fxfabd) is always multiplied by this factor.

GFFDSFT Growth Factor: Foreign tax credit applied to surtax (511)

DESCRIPTION

This growth factor is used to adjust the new database variable idfdsft.

DESCRIPTION

This factor is used in conjunction with commodity tax modeling. There exist some known discrepancies in consumer expenditure categories between the SHS and other reliable data sources. This factor has been provided to adjust the SHS levels up or down to reduce the differences in the following important commodity tax areas:

0. Food and Non-alcoholic Beverages
 1. Alcoholic Beverages
 2. Tobacco products
 3. Men's & Boy's Clothing
 4. Men's and boy's clothing repair & alteration
 5. Women's and children's clothing
 6. Women's clothing, repair & alteration
 7. Footwear
 8. Shoe repair
9. Gross imputed rent
10. Gross rent paid
11. Other shelter expenses
12. Electricity
13. Natural gas
14. Other fuels
15. Furniture and floor covering
16. Upholstery and furniture repairs
17. Household appliances
18. Household equipment repairs
19. Semi-durable household furnishings
20. Non-durable household supplies
21. Domestic and child care services
22. Other household services
23. Medical care
24. Hospital care and the like
25. Accident and sickness insurance
26. Drugs and pharmaceutical products
27. New and used (net) motor vehicles
28. Motor vehicles parts and accessories
29. Motor vehicle repairs
30. Motor fuels and lubricants
31. Other motor vehicle related services
32. Purchased transportation
33. Communications
34. Recreation, sporting and camping equip.
35. Recreation equipment repair and rentals

- 36. Reading and entertainment supplies
- 37. Recreational services
- 38. Educational and cultural services
- 39. Jewelry and watches
- 40. Jewelry and watch repair
- 41. Leather goods & other personal effects
- 42. Toilet articles and cosmetics
- 43. Personal care
- 44. Restaurants and accommodation services
- 45. Financial, legal & other services
- 46. Operating expenditures of non-profit org.
- 47. Net expenditure abroad

GFFOMR Adjustment Factor: Other money receipts

DESCRIPTION

When CTFLAG is set to 1, the database value of household Other Money Receipts (fxfomr) is always multiplied by this factor.

GFFORINC Growth Factor: Net foreign income (508)

DESCRIPTION

The value for Net Foreign Income (idforinc) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFFORTX Growth Factor: Foreign tax paid (507)

DESCRIPTION

The value for Foreign Tax Paid (idfortx) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFGIFTS Growth Factor: Gifts to Canada/provinces/culture (342)

DESCRIPTION

The value for Gifts to Canada/Provinces/Culture (idgifts) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFGSTREB Growth Factor: GST rebate (457)

DESCRIPTION

The value for GST rebate (457) (idgstreb) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFGVPEN Adjustment Factor: Government pension plan contributions

DESCRIPTION

When CTFLAG is set to 1, the database value of household Government Pension Plan Contributions (fxgvpen) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFHOMEXP Adjustment Factor: Expenses associated with princ residence

DESCRIPTION

When CTFLAG is set to 1, the database value of household Expenses associated with the principal residence (fxhomexp) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFHOMSTU Growth Factor: College residence/resident homeowner assistance (558)

DESCRIPTION

The value for College Residence/Resident Homeowner Assistance (idhomstu) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFIALIMO Growth Factor: Alimony Income

DESCRIPTION

The value for Alimony income received (idialimo) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFICAPG Growth Factor: Capital gains (actual) ($127 * 1.5$)

DESCRIPTION

During database adjustment, the database value for Capital Gains/Losses (idicapg) is always multiplied by this value.

GFIDIV Growth Factor: Dividend income (actual) ($120 / 1.5$)

DESCRIPTION

During database adjustment, the database value for Dividends (ididiv) is always multiplied by this value.

GFIEMP Growth Factor: Employment income [province,sex]

DESCRIPTION

This Vector allows the growth of Employment Income (idiemp). This is a two dimensional parameter indexed by province and sex of worker.

Users should note that when using the UI and TX standard algorithms together the values of GFIEMP are applied using different algorithms.

GFIINVND Growth Factor: Investment income (excluding dividend)

DESCRIPTION

The value for the Interest and other investment income (idiinvnd) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFILOSS Growth Factor: Business investment losses (217)

DESCRIPTION

During database adjustment, the database value for Investment Losses (idiloss) is always multiplied by this value.

GFINTAX Adjustment Factor: Income taxes

DESCRIPTION

When CTFLAG is set to 1, the database value of household Income Taxes (fxintax) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFINTSTU Growth Factor: Interest paid on student loans (319)

DESCRIPTION

The value for the Interest on student loans (idintstu) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFIPAC Adjustment Factor: Life insurance premiums and annuity contributions

DESCRIPTION

The value for Life Insurance Premiums and Annuity Contributions (fxipac) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFIPENS Growth Factor: Pension income (115)

DESCRIPTION

During database adjustment, the database value for Pension Income (idipens) is always multiplied by this value.

GFISA Growth Factor: Social assistance income

DESCRIPTION

During database adjustment, the database value for Social Assistance (idisa) is always multiplied by this value.

GFISEFM Growth Factor: Self-employed income - farming

DESCRIPTION

During database adjustment, the database value for Self-employed Farm Income (idisefm) is always multiplied by this value.

GFISENF Growth Factor: Self-employed income - non-farming

DESCRIPTION

During database adjustment, the database value for Self-employed Non-farm Income (idisenf) is always multiplied by this growth factor.

GFITC Growth Factor: Federal investment tax credits (412)

DESCRIPTION

During database adjustment, the database value for Federal Investment Tax Credit (iditc) is always multiplied by this value.

GFITOTH Growth Factor: Other non-government income (taxable)

DESCRIPTION

During database adjustment, the database value for Taxable Other Income (iditoth) is always multiplied by this value.

GFITRRSP Growth Factor: Taxable RRSP withdrawals

DESCRIPTION

The value for Taxable RRSP withdrawals (iditrrsp) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFIWORKC Growth Factor: Worker's compensation

DESCRIPTION

The value for Workers compensation benefits (idiworkc) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFLABTXG Growth Factor: Labour funds tax credit (414)

DESCRIPTION

The value for the Labour Funds Tax Credit (idlabt看) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GMEDGRO Growth Factor: Medical expenses, gross (330)

DESCRIPTION

The value for Gross Medical Expenses (idmedgro) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GMINCAR Growth Factor: Minimum tax carryover (504)

DESCRIPTION

The value for Minimum Tax Carryover (idmincar) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GMOVEXP Growth Factor: Imputed moving expenses (219)

DESCRIPTION

The value for Imputed Moving Expenses (idmovexp) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFMSCHPD Growth Factor: Manitoba school taxes paid

DESCRIPTION

The value for Manitoba school taxes paid (idmschpd) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFNCALN Adjustment Factor: Negative change in assets and liabilities

DESCRIPTION

When CTFLAG is set to 1, the negative database values for Net Change in Assets and Liabilities (Savings) (fxncal) are always multiplied by this factor. This allows for the growth from a base year to represent current year values.

GFNCALP Adjustment Factor: Positive change in assets and liabilities

DESCRIPTION

When CTFLAG is set to 1, the positive database values for Net Change in Assets and Liabilities (Savings) (fxncal) are always multiplied by this factor. This allows for the growth from a base year to represent current year values.

GFNCLOS Growth Factor: Allowable other years non-capital loss (252)

DESCRIPTION

During database adjustment, the database value for Other Years Non-Capital Losses (idnclos) is always multiplied by this value.

GFNES Adjustment Factor: Not elsewhere stated

DESCRIPTION

When CTFLAG is set to 1, the database value of household expenditures not included in other defined expenditure Categories (fxnes) is always multiplied by this factor. This allows for the growth from a base year to represent current year values.

GFNORTH Growth Factor: Northern deductions (255)

DESCRIPTION

The value for Northern Deductions (idnorth) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFOTHDED Growth Factor: Other deductions from total income (232)

DESCRIPTION

The value for Other Deductions from Total Income (idothded) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFOTHPE Growth Factor: Other dependant exemptions (305)

DESCRIPTION

During database adjustment, the database value for Other Personal Exemptions (idothpe) is always multiplied by this value.

GFPARTLO Growth Factor: Limited partnership losses (251)

DESCRIPTION

The value for Limited Partnership Losses (idpartlo) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFPOLCON Growth Factor: Federal political contributions (409)

DESCRIPTION

The value for Federal Political Contributions (idpolcon) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFPROPTX Growth Factor: Net property taxes paid (556)

DESCRIPTION

The value Net Property Taxes Paid (idproptx) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFPRTAX Adjustment Factor: Property tax

DESCRIPTION

When CTFLAG is set to 1, the database value of household Property Tax (fxprtax) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFPRVFTC Growth Factor: Provincial foreign tax credit (Form T2036)

DESCRIPTION

The value for the Provincial Foreign Tax Credit (idprvftc) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFPRVPOL Growth Factor: Provincial political contributions (565)

DESCRIPTION

The value for Provincial Political Contributions (idprvpol) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFPVPEN Adjustment Factor: Private pension plan contributions

DESCRIPTION

When CTFLAG is set to 1, the database value of household Private Pension Plan Contributions (fxvpven) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFRECOM Adjustment Factor: Real estate commissions

DESCRIPTION

When CTFLAG is set to 1, the database value of household Real Estate Commissions (fxrecom) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFRENTPD Growth Factor: Total rental payments (555)

DESCRIPTION

The value for Total Rental Payments (idrentpd) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFREPR Adjustment Factor: Repairs paid

DESCRIPTION

When CTFLAG is set to 1, the database value of household expenditure on repairs and maintenance of the principal residence (fxrepr) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFRFEES Adjustment Factor: Registration and license fees

DESCRIPTION

When CTFLAG is set to 1, the database value of household Registration and License Fees (fxrfees) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFRPP Growth Factor: Registered pension plan contributions (207)

DESCRIPTION

During database adjustment, the database value for RPP Contributions (idrpp) is always multiplied by this value.

GFRRSP Growth Factor: RRSP contributions (208)

DESCRIPTION

During database adjustment, the database T1 imputed value for RRSP Contributions (idrrsp) is always multiplied by this value.

GFRRSPT Adjustment Factor: Total RRSP contributions (SHS)

DESCRIPTION

When CTFLAG is set to 1, the database value of household expenditure on Registered Retirement Savings Plans as reported in the SHS survey (fxrrspt) is always multiplied by this factor. This allows for the growth from a base year to represent current year values.

GFSAPRED Growth Factor: Predicted benefits from Social Assistance

DESCRIPTION

The value for Predicted amount of SA received (idsapred) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFSTKDED Growth Factor: Stock option deduction (249)

DESCRIPTION

The value for the Stock Option Deduction (idstkded) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFTPTAX Adjustment Factor: Transfer of property taxes

DESCRIPTION

When CTFLAG is set to 1, the database value of household Transfer of Property Taxes (fxtptax) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFTUITN Growth Factor: Tuition fees (320)

DESCRIPTION

During database adjustment, the database value for Tuition Fees (idtuitn) is always multiplied by this value.

GFUIC Adjustment Factor: UI contributions

DESCRIPTION

When CTFLAG is set to 1, the database value of household expenditure on Unemployment Insurance Contributions (fxuic) is always multiplied by this factor.

GFUIPRED Growth Factor: Predicted benefits from UI

DESCRIPTION

The value for Predicted amount of UI received (iduipred) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GISBE1 Breakeven for GIS one pensioner couple

DESCRIPTION

GISBE1 represents the level of family income at which the GIS benefits of a pensioner married to a non-pensioner have been reduced to exactly zero. This is a derived parameter

calculated in mpc.c. The figure is calculated as a fixed relationship to other input parameters as follows.

$$\text{GISBE1} = \text{MP.BGISS} / \text{MP.GISRRM} + \text{MP.BOAS} + \text{MP.GISRLS};$$

CROSS REFERENCE

Function	Description
mpc	Calculate derived model parameters and do edits

GISBE2	Breakeven for GIS/SPA couple
---------------	------------------------------

DESCRIPTION

This is a derived parameter calculated in mpc.c. GISBE2 represents the level of family income at which the combined GIS and SPA benefits of a pensioner married to a SPA recipient have been reduced to exactly zero.

$$\text{GISBE2} = (\text{MP.BGISM} * 2) / (\text{MP.GISRRM} * 2) + \text{MP.BOAS} / \text{MP.SPAOASRR} + \text{MP.GISRLM}$$

CROSS REFERENCE

Function	Description
gis	Compute GIS/SPA for elderly
mpc	Calculate derived model parameters and do edits

GISCT	GIS take-up rate: pensioner couple by benefit level [benefit,rate]
--------------	--

DESCRIPTION

Probability by GIS benefit level group of a married two OAS pensioner family applying for the Guaranteed Income Supplement. These probabilities are applied only when the parameter GISTURFLAG is set to 1.

CROSS REFERENCE

Function	Description
gis	Compute GIS/SPA for elderly

GISFLAG Federal GIS/SPA/ESPA flag

DESCRIPTION

When this parameter is assigned a value of 1, the GIS function is executed and Federal Guaranteed Income Supplement (imigis), Spouses Allowance and Extended Spouses Allowance (imispa) are calculated. With a value of 0, they are not. This parameter will automatically be set to 0 if the OASFLAG parameter is not set to 1.

GISOASFLAG 1984 GIS top-up to OAS residence shortfall flag

DESCRIPTION

When GISOASFLAG is set to one the maximum GIS benefit for recipients of partial OAS will be increased by the difference between actual and maximum OAS benefits. This corresponds to the change in the OAS/GIS system of October 1984. (Note: While the

meaning of this parameter has not changed the detailed description of it was left out of the original documentation)

GISTFLAG Provincial GIS top-up flag

DESCRIPTION

When this parameter is assigned a value of 1, the six Provincial GIS Supplementation programs are activated. With a value of 0, they are not. This parameter will automatically be set to 0 (in mpc.c) if the GISFLAG parameter is set to 0.

CROSS REFERENCE

GSTCTUNC GST credit take up by number of children

DESCRIPTION

This is a take-up rate for the GST Credit based on the number of eligible children in the family. A take up of 1.000 denotes that all eligible recipients (based on family net income) would still receive the credit. A value less than 1.000 would result in only that proportion still getting the credit and the remainder would not. The first column denotes the number of

eligible children in the family where 3 represent 3 or more children. The second column represents the proportion that will receive the credit.

HEATRLFLG Federal relief for heating expenses activation flag

DESCRIPTION

When HEATRLFLG is turned on, persons will receive a transfer from the federal government for the relief of heating expenses (imheatrl). In order to receive it, a person has to have received a GST credit (imfstc). Qualifying persons who live with a spouse or children receive HEATFAM and others receive HEATSNG.

Note that, as indicated in the federal economic statement 2000, in order to receive a check in 2001 a person had to qualify for the GST credit in January 2001 or June 2000. In the SPSM this is the modeled GST credit for 2000 (we assume that the entire check is given in June), based on 1999 income. In order to simplify the code, we used receipt of the 2001 GST credit as a proxy for receipt of the 2000 GST credit. Given the fact that there were no change in rules governing the GST credit in these two years, this should have a small effect.

ba09.mpr:	0	--	Copied from ba08.mpr

DESCRIPTION

This is the amount a qualifying single person with no children would receive for the relief of heating expenses (imheatrl). It is calculated when HEATRLFLG is turned on.

See HEATRLFLG for more information.

IEMPADJ Adjustment Factor: Employment income [employment income
breaks,province]

DESCRIPTION

This parameter adjusts Employment Income (idiemp) to represent administrative values in the data base year. The value for the parameter remains constant for all model years and is applied prior to GFIEMP. This is a two dimensional parameter indexed by employment income breakpoints (IEMPBRK) and province (hdprov).

This parameter should be set to 1 when outputting data in order to build a new database (bldspd). Otherwise the parameter will be applied twice.

IEMPBRK Adjustment Factor: Income breaks for income adjustment[employment
income breaks]

DESCRIPTION

This Vector determines the employment income breakpoints to be used in the growth of idiemp using IEMPADJ.

IMPCQPOPT Imputation method, CQP [1=none 2=rank]

DESCRIPTION

CPP/QPP benefits are under-reported on the SLID, as compared to administrative data. In the process of SPSPD creation, a statistical method of correcting this problem has been made. This option has been provided to select between using this correction [default] or to disable CPP/QPP imputation altogether.

IMPSAOPT Imputation method, SA [1=none 2=rank]

DESCRIPTION

Social assistance benefits are under-reported on the SLID, as compared to administrative data. In the process of SPSD creation, a statistical method of correcting this problem has been made. This option has been provided to select between using this correction [default] or to disable social assistance imputation altogether.

Note that the IMPSAOPT parameter will not have the desired effect if the model parameter SAPFLAG is turned on. In this case, imputed values will be assigned in order to reach the target as specified by the parameter SATARGET. In order to disable social assistance imputations, SAPFLAG must also be turned off.

IMPUIBOPT Imputation method, UI [1=none 2=rank]

DESCRIPTION

UI benefits are under-reported on the SLID, as compared to administrative data. In the process of SPSD creation, two distinct statistical methods of correcting this problem were made. This option has been provided to select between these two methods, or to disable UI imputation altogether if desired.

IMSHTOPT Paid rent and property tax imputation option

DESCRIPTION

When this parameter is set to 1, imputation of provincial paid rents and property taxes are calculated based on Greenbook data, when set to 2, they are based on SHS data.

INCGP Income cutpoints for table 2 [array]

DESCRIPTION

This control parameter is a vector of values used to provide the income cutpoints which define the columns of the hard-wired Tables 2 and 2A. Tables 2 and 2A can be activated using T2FLAG and T2AFLAG.

INCVAR Variable to use for table 2 [string]

DESCRIPTION

This string control parameter specifies the variable (usually an income variable) that is used to determine the column dimension of tables 2, 2A, 4, and 4A. Please see the [*User's Guide*](#) for more information.

The default value for INCVAR is `_immicons`.

INEQFLAG Inequality measures facility activation flag

DESCRIPTION

This parameter activates the calculation of inequality measures. Up to 10 different inequality measures can be produced.

The underlying function used to produce the measures is developed by Duclos, Jean-Yves and Martin, Tabi (1996), “*Linear Inequality Measures and the Redistribution of Income*”, Cahier de recherche 96-08, CRÉFA, Université Laval. It is a two parameter class of linear inequality measure, the Generalized GINI. If v is the social preference and q produce symmetric weights around its value, for $0 < q < 1$ then the weights $k(p)$ are:

$$k(p) = \frac{v(v+1)|q-p|^{(v-1)}}{q^{(v+1)} + (v+q)(1-q)^v},$$

Those weights are applied to the difference between an equal cumulative income distribution and the actual cumulative income distribution for p , the cumulative population distribution.

The interesting aspect of this measure is its ability to reproduce the GINI when v is set to 1, the S-GINI index when q is set to 1.

In this measure, all the weights are symmetric around q. When v is lower than one, the weights structure is more like a pyramid centered at q, and is a V or U shape centered at q when v is greater than one. For more information, see the [User's Guide](#).

INEQMEASURE Type of inequality measure [social preference, center of weight distribution]

DESCRIPTION

The calculation of an Inequality Measure is activated by setting INEQFLAG to 1.

The underlying function used to produce the measures is developed by Duclos, Jean-Yves and Martin, Tabi (1996), "*Linear Inequality Measures and the Redistribution of Income*", Cahier de recherche 96-08, CRÉFA, Université Laval. It is a two parameters class of linear inequality measures, the Generalized GINI. If v is the social preference and q produce symmetric weights around its value, for $0 < q < 1$ then the weights k(p) are:

$$k(p) = \frac{v(v+1)|q-p|^{(v-1)}}{q^{(v+1)} + (v+q)(1-q)^v},$$

Those weights are applied to the difference between an equal cumulative income distribution and the actual cumulative income distribution for p, the cumulative population distribution.

The interesting aspect of this measure is its ability to reproduce the GINI when v is set to 1, the S-GINI index when q is set to 1.

In this measure, all the weights are symmetric around q. When v is lower than one, the weights structure is more like a pyramid centered at q, and is a V or U shape centered at q when v is greater than one.

Up to 10 different inequality measures can be computed with INEQMEASURE. The first parameter is v, the second q. As a special case when q is set to 99.0 the inequality measure is centered at the population share of the median income.

For more information, see the [User's Guide](#).

INPAPR Name of database adjustment parameter file (in) [string]

DESCRIPTION

This control parameter gives the name of the file (using the conventions of the host operating system) which contains the database adjustment parameters to be used when executing

SPSM. Note that under MS-DOS, names without a drive specifier or any slashes refer to the current directory.

INPBASMPR Name of base tax/transfer parameter file (in) [string]

DESCRIPTION

This control parameter gives the name of the file (using the conventions of the host operating system) which contains the tax/transfer parameters to be used to produce base result variables. Note that under MS-DOS, names without a drive specifier or any slashes refer to the current directory. BASMETH must be either 2 or 3 for INPBASMPR to have any effect.

INPBASMRS Name of base results file (in) [string]

DESCRIPTION

The value of this control parameter is a binary SPSD/M results file filename. If the full path name of the file is omitted, the path will default to the current directory. When the value of BASMETH is set to 1, this file is used for determining base results.

INPF XV Name of SHS vector file (in) [string]

DESCRIPTION

This control parameter gives the name of the file (using the conventions of the host operating system) which contains the SHS expenditure vector binary database. Note that under MS-DOS, names without a drive specifier or any slashes refer to the current directory.

INPMRSVARS Base results file variables [string]

DESCRIPTION

The value of this control parameter is generated during an SPSM program run. The parameter is set to a string of variable names of variables found in the input base results file specified in INPBASMRS. The user is not able to edit this parameter interactively in the SPSM dialogue.

INPREF Name of reference results file (in) [string]

DESCRIPTION

This control parameter gives the name of the file (using the conventions of the host operating system) which contains the household and individual binary database to be used as an input reference file when executing SPSM. Note that under MS-DOS, names without a drive specifier or any slashes refer to the current directory.

INSPD Name of SPSP file (in) [string]

DESCRIPTION

This control parameter gives the name of the file (using the conventions of the host operating system) which contains the household and individual binary database to be used when executing SPSM. Note that under MS-DOS, names without a drive specifier or any slashes refer to the current directory.

INVARMPR Name of variant tax/transfer parameter file (in) [string]

DESCRIPTION

This control parameter gives the name of the file (using the conventions of the host operating system) which contains the tax/transfer parameters to be used to produce variant result variables. Note that under MS-DOS, names without a drive specifier or any slashes refer to the current directory.

INPWT Name of weight file (in) [string]

DESCRIPTION

This control parameter gives the name of the file (using the conventions of the host operating system) which contains the household weight binary database to be used when executing SPSM. Note that under MS-DOS, names without a drive specifier or any slashes refer to the current directory.

INTSLFLG Interest on Student Loans Tax Credit Activation Flag

DESCRIPTION

The calculation of the non-refundable interest on student loan tax credit (imintsl) is activated by the flag INTSLFLG.

Beginning in 1998, the interest paid in the year on certain student loans may be claimed as a tax credit by eligible filers. It is calculated using the Greenbook variable for interest paid on student loans (idintstu).

KEEPNEGEXP Retain negative expenditures in SHS

DESCRIPTION

Certain expenditure items (sale of cars and RV's) are permitted to be negative expenditures on the SHS database. For commodity tax modeling purposes these expenditures must be treated as receipts. This adjustment parameter controls the treatment of negative expenditure items on the SHS database. With a value of zero Negative expenditures are treated as income in the calculation of commodity taxes. For Tax/Transfer simulations the setting must be zero. With a value of 1 the user can recover the original SHS data for output or tabulation.

LICENSEE SPSD/M licensee [string]

DESCRIPTION

This control parameter is produced by SPSM and contains the name of the person or organization licensed to use this particular copy of SPSD/M.

LICOOPT T4 LICO definition 1=BeforeTax 2=AfterTax

DESCRIPTION

This option determines whether the before-tax or the after-tax LICOs will be applied to results for built-in table number 4. When LICOOPT is set to 1 the before-tax LICO PTF will be used and when LICOOPT is set to 2 the after-tax LICO PTFAT will be used.

Further details on low-income analysis with the SPSM can be found in the SPSD/M *User's Guide* in the miscellaneous facilities section.

LOGFLAG Produce a .log file for this run

DESCRIPTION

The LOGFLAG parameter allows the user to control whether or not a log file of the SPSM run will be written. If LOGFLAG is 1, a file recording all the output normally displayed on the screen in the console version is written to the file specified by the OUTLOG parameter. If LOGFLAG is 0, no such file is written. The LOGFLAG parameter is particularly useful in the Windows version of SPSM, since it allows later examination of the details of the simulation run. It is also useful for documentation of any SPSM run.

The default value for LOGFLAG is 0.

MAMTOPT Man. alternative minimum tax option (1=none, 2=% fed, 3=fed adj inc, 4=% min amt)

DESCRIPTION

When Manitoba tax on taxable income is calculated (MTXFLG = 1), there are four options as to how to calculate the provincial minimum tax.

When MAMTOPT is set to 1, then no provincial alternative minimum tax or minimum tax carryover is calculated.

When MAMTOPT is set to 2, then a percentage (MAMTPCTF) of the additional federal tax triggered by the federal minimum tax (imamtprv), is added to the basic provincial tax (imbpt). The definition of imamtprv is determined by the provincial vector AMTPRVDF. The provincial minimum tax carryover credit (impminco) is calculated using MAMTPCTF.

When MAMTOPT is set to 3, the income used in the provincial tax calculation is replaced by the net income used for alternative tax purposes (imamtinc) for people who triggered the federal minimum tax. Then the MAMTTX rate, usually set to the smallest non-zero tax rate, is applied in order to get the provincial tax before the non-refundable tax credits. The provincial minimum tax carryover credit (impminco) is calculated using MAMTTX.

When MAMTOPT is set to 4, then a percentage (MAMTPCTM) of the minimum tax triggered by the federal minimum tax calculations represents the basic provincial tax (imbpt). Provincial surtaxes are then calculated using this amount. The provincial minimum tax carryover credit (impminco) is calculated using MAMTPCTM.

MAMTPCTM Man. amt rate as pct of federal minimum tax amount

DESCRIPTION

When Manitoba tax on taxable income is calculated (MTXFLG=1) and MAMTOPT is set to 4, then a percentage (MAMTPCTM) of the minimum federal tax due to the minimum tax is used as basic provincial tax (imbpt). This calculated value is used in the determination of the provincial surtax.

MANLTCF Manitoba learning tax credit factor

DESCRIPTION

This is the Manitoba Learning Tax Credit factor. In order to calculate the Manitoba Learning Tax Credit, this factor is multiplied to the education and tuition tax credits (imedtxc and imtutxc) minus the education credits transferred to parents or spouse (imedtrf) plus the education credits transferred from children or spouse (imedrcv).

MANLTMAX Manitoba learning tax credit maximum amount per student

DESCRIPTION

This represents the maximum amount of education costs (tuition and education) per student which can be used to derive the Manitoba Learning Tax Credit. In order to calculate the Manitoba Learning Tax Credit, a factor (MANLTCF) is multiplied to the education and tuition tax credits (imedtxc and imtutxc) minus the education credits transferred to parents or spouse (imedtrf) plus the education credits transferred from children or spouse (imedrcv).

MARAMT Amount to be added to variable for marginal calculation

DESCRIPTION

This control parameter gives the amount of money to be added to income when the marginal tax rate facility has been activated through MARFLAG. Please refer to the *User's Guide* for more information.

MARBASEFLAG Save marginal results as base run flag

DESCRIPTION

This control parameter tells the SPSM marginal tax rate facility (activated using MARFLAG) to store additional information in the variables normally used to store base run results. If this parameter is 1, SPSM first checks to see that no base run has been requested (if a base run has been requested, an error message is produced). Then the marginal tax rate calculations are carried out normally, except that the results of the 'delta' run are saved as the 'base' results, allowing various calculations to be performed after the fact by the analyst interested in marginal tax rate analysis. Please refer to the *User's Guide* for more information.

MARFLAG Marginal tax rate facility activation flag

DESCRIPTION

This control parameter activates the SPSM marginal tax rate facility. This facility can be used to calculate marginal tax rates by income source, amount, recipient, and family level. Please refer to the *User's Guide* for more information.

MARSPEC Expression identifying recipients [string]

DESCRIPTION

This control parameter allows the user to specify which individuals are to receive MARAMT when the marginal tax rate facility has been activated through MARFLAG. Please refer to the *User's Guide* for more information.

MARVAR Variable to add MARAMT to [string]

DESCRIPTION

This control parameter gives the income source to be incremented when the marginal tax rate facility has been activated through MARFLAG. It must be the name of a valid SPSP "id" income variable. Please refer to the *User's Guide* for more information.

MAXDX Maximum disability deduction/amount

DESCRIPTION

This value represents the maximum Disability Amount and is given as a non-refundable tax credit (imdisatc) to all individuals with a positive value for either a disability amount for self (iddisslf) or a disability amount for other dependents (iddisoht).

MAXRR Man. Age Amount credit reduction rate

DESCRIPTION

This parameter is the proportion of net income above a given threshold (MAXTD) which will be deducted from the provincial non-refundable age tax credit amount (MAXM). The parameter is only used when the Manitoba provincial tax on taxable income is calculated (MTXFLG = 1).

See also impatxc, MAXTD, MAXPI.

MCGTCFLG Man. Caregiver Tax Credit activation flag

DESCRIPTION

The calculation of the Manitoba Caregiver Tax Credit (impcgtc) is activated by the flag MCGTCFLG.

The Caregiver Tax Credit (impcgtc) provides additional tax assistance to individuals who provide in-home care for relatives. Eligible recipients include individuals residing with and providing in-home care for a parent or grandparent over 65 years of age, or for an infirm dependent relative.

The parameter MCGTCOPT provides users with the option to use the greenbook value of the Caregiver amount (idcgtc from Line 315 and Schedule 12 in the General Tax Guide) or to give the maximum (MCGTC) if idcgtc is greater than 0.

This non-refundable tax credit is only calculated when the provincial tax on taxable income is calculated (MTXFLG = 1).

MCGTCOPT Man. Caregiver Tax Credit Option (1=max, 2=greenbook)

DESCRIPTION

This parameter provides users with the option of how to calculate the provincial Caregivers Tax Credit (impcgtc). A value of 1 results in applying the maximum value (MCGTC) if the filer had an amount in idcgtc (from Line 315 and Schedule 12 in the General Tax Guide). To use the greenbook value of the Caregiver amount (idcgtc), this parameter must be set to 2. This non-refundable tax credit is only calculated when the provincial tax on taxable income is calculated (MTXFLG = 1) and the provincial caregivers tax credit is activated (MCGTCFLG = 1).

MEDREMIN Minimum earnings for refundable medical expense supplement

DESCRIPTION

If earnings are less than this parameter, then a person is eligible to apply for the refundable medical expense supplement (immedref). Earnings are calculated as employment income (idiemp) plus self-employment income (idisenf + idisefm) minus registered pension plan deduction (idrpp) minus annual union, professional, or like dues (iddues) minus other employment expenses (idalexp).

MEDRRR Reduction rate for the medical expense supplement

DESCRIPTION

The refundable medical expense supplement (immedref) is reduced by MEDRRR percent of net family income in excess of a turndown. The turndown is the sum of the basic exemption (BXM), the married exemption (MXM) and the maximum disability amount (MAXDX).

MHMASOPT Manitoba homeowner assistance option (1=Model 2=database)

DESCRIPTION

When this parameter is set to 1, the Manitoba Homeowners Assistance (immhmas) is modelled. Any family with non-zero property taxes (improptx) is assumed to have had the

minimum amount of assistance (MPMINC) taken off as a deduction from their municipal property tax statement.

When the option is set to 2, immhmas is set to the database variable (idhomstu).

MMEDALL Man. Medical allowance maximum lower limit

DESCRIPTION

Manitoba allowable medical expenses are calculated as actual expenses (idmedgro) less either MMEDANF percent of net income, or MMEDALL, whichever is less. The calculated allowable expense is saved in impmeda. The provincial non-refundable medical expense tax credit (impmedtc) represents impmeda multiplied by MPNTCR. It is only calculated when MTXFLG is set to 1.

DESCRIPTION

This parameter is the amount which can be claimed for the Manitoba non-refundable tax credit for infirm dependents aged 18 and over if the filer has already claimed an amount for disabled dependents (idothpe). Note that the model assumes that there is only one disabled dependent. The parameter is only used when a provincial tax on taxable income is calculated (MTXFLG = 1).

MPNTCR Man. provincial non-refundable tax credit rate

DESCRIPTION

This single parameter sets the tax credit rate for all of the non-refundable tax credits in Manitoba. Each tax credit is calculated separately and summed for a total credit. The parameter is only used when a provincial tax on taxable income is calculated (MTXFLG = 1).

CROSS REFERENCE

MPRSFILE Starting tax/transfer parameter file

DESCRIPTION

This parameter contains the Statistics Canada supplied name of the default tax/transfer parameter file (.mpr).

After modifying a parameter file users typically save the file with a different name. This parameter cannot be edited within the SPSM and is intended to inform the user of the original Statistics Canada supplied .mpr file that their modified .mpr file is based on.

MPRVER SPSPD/M Release Version

DESCRIPTION

This parameter contains the SPSPD/M release version number of the tax/transfer parameter file (.mpr). Every SPSPD/M version shipped has a version number and a complete set of parameter files necessary to run the model. If a user has multiple versions of the SPSM installed this parameter will help to identify which Version of the model the original parameter file was shipped with. This parameter cannot be edited within the SPSM.

MPTC Manitoba political contribution table [total donations,donation allowed]

DESCRIPTION

This table contains the figures necessary to calculate the Manitoba Political Contribution Tax Credit. The first column represents the dollar amount of total Manitoba political contributions to which the corresponding percentages of the third column are applied to calculate the total Allowable Manitoba Political Contribution Tax Credit. Only the first and third columns of the table need to be specified.

DESCRIPTION

This table represents the Manitoba tax curve used when calculating the tax on taxable income (MTXFLG = 1). The first column represents Taxable Income, the second represents the amount of Basic Provincial Tax payable at that level of taxable income, the third column represents the marginal tax rate for the interval between this and the next value in the table.

Only the first and third columns of the tax table need be specified. The second column is computed by the standard algorithm.

MSCHBXM Manitoba school tax basic amount

DESCRIPTION

This is the basic value of the Manitoba homeowners' school tax assistance. It is reduced by income over the turndown MSCHTD by a rate MSCHRR. The value of the benefit is also rounded (see MSCHRND). The benefit may not exceed school taxes paid (idmschpd) less the minimum threshold of MSCHMNTH. The school tax assistance is added to the basic property tax credit and applied against occupancy costs in order to derive the total property tax credit (impptxtc).

DESCRIPTION

The Manitoba homeowners' school tax assistance was implemented in 1993 and is part of the total property tax credit (impptxtc). MSCHFLAG turns it on or off. In order to qualify for assistance, Manitoba residents must be homeowners and be older than MSCHAGE. The basic credit is MSCHBXM which is reduced by income over the turndown MSCHTD by a rate MSCHRR. The value of the benefit is also rounded (see MSCHRND). The benefit may not exceed school taxes paid (idmschpd) less the minimum threshold of MSCHMNTH. The school tax assistance is added to the basic property tax credit and applied against occupancy costs in order to derive the total property tax credit (impptxtc).

MSCHRND Manitoba school tax assistance rounding unit

DESCRIPTION

This is the rounding factor of the Manitoba homeowners' school tax assistance. The basic credit MSCHBXM is reduced by income over the turndown MSCHTD by a rate MSCHRR. The value of the benefit is also rounded. The formula used is the following:

$$\text{MSCHBXM} - (\text{MSCHRND} * \text{int}((\text{income} - \text{MSCHTD}) * \text{MSCHRR} / \text{MSCHRND}))$$

*Note that this formula in the code also protects against negative values.

The benefit may not exceed school taxes paid (idmschpd) less the minimum threshold of MSCHMNTN. The school tax assistance is added to the basic property tax credit and applied against occupancy costs in order to derive the total property tax credit (impptxtc).

MSCHRR Manitoba school tax reduction rate

DESCRIPTION

This is the reduction rate of the Manitoba homeowners' school tax assistance. The basic credit MSCHBXM is reduced by income over the turndown MSCHTD by a rate MSCHRR. The value of the benefit is also rounded (see MSCHRND). The benefit may not exceed school taxes paid (idmschpd) less the minimum threshold of MSCHMNTH. The school tax assistance is added to the basic property tax credit and applied against occupancy costs in order to derive the total property tax credit (impptxtc).

DESCRIPTION

All married filers are eligible to claim this amount plus MXMEXT as an exemption or a tax credit, subject to reductions based on the spouse's net income. The 2005 Federal Budget announced additional amounts to be added to the married amount for the years 2006 to 2008, which are found in the parameter MXMEXT. The 2005 Budget also announced a married amount of \$8,500 for 2009.

MXMEXT Married amount extra top-up

DESCRIPTION

This parameter contains the additional amounts to be added to the married amount as announced in the 2005 Federal Budget for the years 2006 to 2008. This amount will be added to MXM and then multiplied by FNTCR, the result is contained in immartxc. The 2005 Budget also announced a married amount of \$8,500 for 2009, thus this parameter will be set to 0 for 2009.

See also MXM and MXMTEXT.

NAMTOPT NFLD alternative minimum tax option (1=none, 2=% fed, 3=fed adj income, 4=% min amt)

DESCRIPTION

When Newfoundland tax on taxable income is calculated (NTXFLG = 1), there are four options as to how to calculate the provincial minimum tax.

When NAMTOPT is set to 1, then no provincial alternative minimum tax or minimum tax carryover is calculated.

When NAMTOPT is set to 2, then a percentage (NAMTPCTF) of the additional federal tax triggered by the federal minimum tax (imamtrv) is added to the basic provincial tax (imbpt). The definition of imamtrv is determined by the provincial vector AMTPRVDF. The provincial minimum tax carryover credit (impminco) is calculated using NAMTPCTF.

When NAMTOPT is set to 3, the income used in the provincial tax calculation is replaced by the net income used for alternative tax purposes (imamtinc) for people who triggered the federal minimum tax. Then the NAMTTX rate, usually set to the smallest non-zero tax rate, is applied in order to get the provincial tax before the non-refundable tax credits. The provincial minimum tax carryover credit (impminco) is calculated using NAMTTX.

When NAMTOPT is set to 4, then a percentage (NAMTPCTM) of the minimum tax triggered by the federal minimum tax calculations represents the basic provincial tax (imbpt). Provincial surtaxes are then calculated using this amount. The provincial minimum tax carryover credit (impminco) is calculated using NAMTPCTM.

NAMTPCTM NFLD amt rate as pct of federal minimum tax amount

DESCRIPTION

When Newfoundland tax on taxable income is calculated (NTXFLG=1) and NAMTOPT is set to 4, then a percentage (NAMTPCTM) of the minimum federal tax due to the minimum tax is used as basic provincial tax (imbpt). This calculated value is used in the determination of the provincial surtax.

NBCBPI NB Child benefits phase-in rate

DESCRIPTION

When the parameter NBCTBFLG is set to one, the value of this parameter is always multiplied times the calculated amount of the New Brunswick Child tax benefit (imnbcben). The parameter was designed to simulate the partial year benefits due to the commencement of the program in April 1997.

NBCBTD NB child benefits family income turndown

DESCRIPTION

The level of family net income (head plus spouse) above which the New Brunswick Child Benefit begins to be paid at a lower rate. If family income exceeds this amount, the Child Benefit will be reduced by a proportion (NBCBRR) for families with two or more children or by (NBCBRRS) for families with one child.

DESCRIPTION

This is the value of the Low-Income Seniors' Benefit. People who received the federal Guaranteed Income Supplement (GIS) or the federal Spouse's Allowance depending on NBSBSPA, are eligible to receive this benefit (imigist) for New Brunswick. When both spouses receive GIS (or SPA depending on NBSBSPA), only one spouse may receive the Low-Income Seniors' Benefit. In the SPSP/M, the spouse with the lowest net income receives the benefit (or the oldest spouse when both spouses have the same net income).

NBSBSPA N.B. Low-Income Seniors' Benefit - SPA eligibility

DESCRIPTION

When this flag is set to 1, people who received either the federal Guaranteed Income Supplement (GIS), the Widowed Spouse's Allowance or the Extended Spouse's Allowance (SPA) are eligible to receive this benefit (imigist) for New Brunswick. When both spouses receive GIS and/or SPA, only one spouse may receive the Low-Income Seniors' Benefit.

When this flag is set to 0, only those who have received GIS would be eligible for the New Brunswick Low-Income Seniors' Benefit. When both spouses receive GIS, only one spouse may receive the Low-Income Seniors' Benefit.

In the SPSD/M, the spouse with the lowest net income receives the benefit (or the oldest spouse when both spouses have the same net income).

DESCRIPTION

This flag turns on or off the Newfoundland and Labrador Child Benefit. The Newfoundland and Labrador Child Benefit (imncb) is a tax-free monthly payment to help low-income families with the cost of raising children under age 18. Benefits from this program are combined with the Canada Child Tax Benefit into a single monthly payment. The program was implemented in July 1999.

Under the Newfoundland and Labrador Child Benefit program, you may be entitled to receive a benefit of NCB1 for the first child, NCB2 for the second child, NCB3 for the third child, and NCB4 for each additional child. The benefit is reduced when net family income is greater than NCBTD and is completely phased out when net family income is at least NCBPO.

NCGTC **NFLD Caregiver Tax Credit**

DESCRIPTION

NCGTC multiplied by NPNTCR is the maximum amount of the Newfoundland Caregiver Tax Credit (impcgtc). The parameter is only used when the provincial tax on taxable income is calculated (NTXFLG = 1).

For more explanation see NCGTCFLG.

NCGTCFLG NFLD Caregiver Tax Credit activation flag

DESCRIPTION

The calculation of the Newfoundland Caregiver Tax Credit (impcgtc) is activated by the flag NCGTCFLG.

The Caregiver Tax Credit (impcgtc) provides additional tax assistance to individuals who provide in-home care for relatives. Eligible recipients include individuals residing with and providing in-home care for a parent or grandparent over 65 years of age, or for an infirm dependent relative.

The parameter NCGTCOPT provides users with the option to use the greenbook value of the Caregiver amount (idcgtc from Line 315 and Schedule 12 in the General Tax Guide) or to give the maximum (NCGTC) if idcgtc is greater than 0.

This non-refundable tax credit is only calculated when the provincial tax on taxable income is calculated (NTXFLG = 1).

ba08.mpr:	1	--	Copied from ba07.mpr
ba09.mpr:	1	--	Copied from ba08.mpr

DESCRIPTION

This parameter provides users with the option of how to calculate the provincial Caregivers Tax Credit (impcgtc). A value of 1 results in applying the maximum value (NCGTC) if the filer had an amount in idcgtc (from Line 315 and Schedule 12 in the General Tax Guide). To use the greenbook value of the Caregiver amount (idcgtc), this parameter must be set to 2. This non-refundable tax credit is only calculated when the provincial tax on taxable income is calculated (NTXFLG = 1) and the provincial caregivers tax credit is activated (NCGTCFLG = 1).

NEDXPMPT NFLD Education Amount per month of part-time studies

DESCRIPTION

This parameter represents the dollar amount multiplied by the number of eligible part-time months of study to determine the Newfoundland and Labrador education tax credit. This parameter is only used when the provincial tax on taxable income is calculated (NTXFLG = 1).

CROSS REFERENCE

NETOASFLG Net the clawback from Old Age Security

DESCRIPTION

When this parameter is assigned a value of 1, the Old Age Security clawback (imoasr) is netted from OAS (imioas). It thus appears as a lower transfer and lower tax – government and household balance variables are unaffected. With a value of 0, the OAS clawback is reported as a tax.

NFSBBAS NFLD Low-Income Seniors' Benefit base amount

DESCRIPTION

This is the base value of the Newfoundland Low-Income Seniors' Benefit which was introduced in 1999. All seniors aged 65 and over, with annual family income less than NFSBTD are eligible to receive the maximum benefit NFSBBAS. This benefit will be reduced by NFSBRR for each dollar of family income over NFSBTD.

NHEATFLG Newfoundland home heating fuel rebate activation flag

DESCRIPTION

When NHEATFLG is turned on, eligible households will receive a home heating fuel rebate (NHEATREB) from the Newfoundland government for assistance with heating fuel expenses. The rebate is payable to households that use home heating fuel as the primary source of heat and where an individual in that household receives any amount of the Newfoundland and Labrador Child Benefit, Newfoundland and Labrador HST credit or the Newfoundland and Labrador Seniors' Benefit or Social assistance (the latter only applies when NHEATSAFLG is turned on). Households that use electricity or wood as the primary heat source are not eligible for the rebate. The value of the rebate is held in impheatr.

NLITRF NFLD low income tax reduction family maximum

DESCRIPTION

This is the maximum amount for the Newfoundland and Labrador low income tax reduction for families, including couples, couples with kids and single parent families.

Announced in the 2004 budget, the maximum Low Income Tax Reduction for families is equal to this amount, and then reduced for family net income over NLITRFIT at a rate of NLITRRR. The reduction cannot be more than taxes owing. It is assigned to the spouse with the higher net income. The variable imprt contains the value of the calculated low income tax reduction.

DESCRIPTION

This is the income threshold for the Newfoundland and Labrador low income tax reduction for families.

Eligible filers will have their maximum low income tax reduction (NLITRF) reduced if their family net income is greater than this amount. The reduction will be reduced by NLITRRR of the income exceeding the threshold. The reduction cannot be more than taxes owing. It is assigned to the spouse with the higher net income. The variable `imptr` contains the calculated value of the low income tax reduction.

NLITRRR NFLD low income tax reduction credit reduction rate

DESCRIPTION

This is the reduction rate for the Newfoundland and Labrador low income tax reduction.

Announced in the 2004 budget, the maximum Low Income Tax Reduction is equal to a maximum amount (NLITRS for single, NLITRF for families), which is then reduced for net income over NLITRSIT for single or family net income over NLITRFIT for families, at this reduction rate. The reduction cannot be more than taxes owing. The variable imptr contains the value of the calculated low income tax reduction.

NLITRS NFLD low income tax reduction single maximum

DESCRIPTION

This is the maximum amount for the Newfoundland and Labrador low income tax reduction for single persons without dependents.

Announced in the 2004 budget, the maximum Low Income Tax Reduction for single persons is equal to this amount, and then reduced for net income over NLITRSIT at a rate of NLITRRR. The reduction cannot be more than taxes owing. The variable imptr contains the value of the calculated low income tax reduction.

NLITRSIT NFLD low income tax reduction single income threshold

DESCRIPTION

This is the income threshold for the Newfoundland and Labrador low income tax reduction for single persons without dependents.

Eligible filers will have their maximum low income tax reduction (NLITRS) reduced if their net income is greater than this amount. The reduction will be reduced by NLITRRR of the income exceeding the threshold. The reduction cannot be more than taxes owing. The variable `imptr` contains the calculated value of the low income tax reduction.

NMBNS Nfld. Mother-Baby Nutrition Supplement

DESCRIPTION

This parameter contains the annual amount for the Newfoundland and Labrador Mother-Baby Nutrition Supplement, which is the amount per child under age 1 to be given to

families with net incomes less than NCBPO. The Mother-Baby Nutrition Supplement begins in July 2002. The parameter NMBNSPI controls the phase-in of this new program. The value of the supplement is saved in the variable immmbns and added to impfp (provincial family programs).

NMBNSEPI Nfld. Mother-Baby Nutrition Supplement newborn benefit phase in

DESCRIPTION

This parameter controls the phase in for the newborn extra benefit of the Newfoundland and Labrador Mother-Baby Nutrition Supplement. The newborn extra benefit is to be given to families, who are eligible for the Mother-Baby Nutrition Supplement, at the time of the birth of their child. The benefit amount (NMBNSEXT) is multiplied by this parameter. The Mother-Baby Nutrition Supplement newborn extra benefit begins in July 2004.

NMEDALL NFLD Medical allowance maximum lower limit

DESCRIPTION

Newfoundland and Labrador allowable medical expenses are calculated as actual expenses (idmedgro) less either NMEDANF percent of net income, or NMEDALL, whichever is less. The calculated allowable expense is saved in impmeda. The provincial non-refundable medical expense tax credit (impmedtc) is calculated as impmeda times NPNTCR. It is only calculated when NTXFLG is set to 1.

NMEDANF NFLD Medical allowance lower limit net income fraction

DESCRIPTION

Allowable medical expenses are calculated as actual expenses less either NMEDANF percent of net income, or NMEDALL, whichever is less. The Newfoundland and Labrador non-refundable medical expense tax credit is only calculated when NTXFLG is set to 1.

NODISTC NFLD Maximum infirm dependent 18 or older tax credit

DESCRIPTION

This parameter is the amount which can be claimed for the Newfoundland and Labrador non-refundable tax credit for infirm dependents aged 18 and over if the filer has already claimed an amount for disabled dependents (idothpe). Note that the model assumes that there is only one disabled dependent. The parameter is only used when a provincial tax on taxable income is calculated (NTXFLG = 1).

NPTC Newfoundland political contribution table [total donations,donation allowed]

DESCRIPTION

This table contains the figures necessary to calculate the Newfoundland Political Contribution Tax Credit. The first column represents the dollar amount of total Newfoundland political contributions (idprvpol) to which the corresponding percentages of the third column are applied in calculating the total allowable Newfoundland Political Contribution Tax Credit. Only the first and third columns of the table need to be specified.

NPTX

NFLD tax table [taxable income,basic provincial tax]

DESCRIPTION

This table represents the Newfoundland tax curve used when calculating the tax on taxable income (NTXFLG = 1). The first column represents Taxable Income, the second represents the amount of Basic Provincial Tax payable at that level of taxable income, the third column represents the marginal tax rate for the interval between this and the next value in the table.

Only the first and third columns of the tax table need be specified. The second column is computed by the standard algorithm.

NSCI Newfoundland provincial tax above which surtax applies

DESCRIPTION

This is the level of provincial tax payable (imtxp) above which a surtax at the rate of NSF applies.

For Newfoundland, the SPSM calculates provincial surtax (impsur) as NSF percent of provincial taxes (imtxp) above the level NSCI plus NSF2 percent of provincial taxes (imtxp) above the level NSCI2.

Starting in the 2000 taxation year, modifications were made to the calculation of the Newfoundland surtax. See NSF2 and NSCI2.

NSTCA NFLD sales tax credit amount for adults

DESCRIPTION

This parameter represents the basic Newfoundland Sales Tax Credit for adults. The total family sales tax credit (on behalf of the head, spouse and dependants) is reduced by a fraction (NSTCR) of family net income (head and spouse) exceeding the turndown level (NSTCL). This parameter is used only if NSTCFLAG is set to 1.

NSTCL NFLD sales tax credit reduction level

DESCRIPTION

The level of family net income above which the total family Newfoundland Sales Tax Credit is reduced.

Note that non-taxable transfer income is included in the calculation of net income for this reduction. Non-taxable transfer income includes federal and provincial Social Assistance, the Guaranteed Income Supplement, Spouses Allowance and Worker's Compensation Benefits.

This parameter is used only if NSTCFLAG is set to 1.

NSTXREFAMT NS Taxpayer refund amount

DESCRIPTION

This is the amount of the Nova Scotia Taxpayer refund (innstxrf). The refund is payable if the person paid NS provincial taxes in the previous two years. In the SPSM, the refund is payable if the person paid taxes in the current year. The program is turned on by the flag NSTXREFFLG.

OAMTOPT Ont. alternative minimum tax option (1=none, 2=% fed, 3=fed adj inc, 4=% min amt)

DESCRIPTION

When Ontario tax on taxable income is calculated (OTXFLG = 1), there are four options as to how to calculate the provincial minimum tax.

When OAMTOPT is set to 1, then no provincial alternative minimum tax or minimum tax carryover is calculated.

When OAMTOPT is set to 2, then a percentage (OAMTPCTF) of the additional federal tax triggered by the federal minimum tax (imamtprv) is added to the basic provincial tax (imbpt). The definition of imamtprv is determined by the provincial vector AMTPRVDF. The provincial minimum tax carryover credit (impminco) is calculated using OAMTPCTF.

When OAMTOPT is set to 3, the income used in the provincial tax calculation is replaced by the net income used for alternative tax purposes (imamtinc) for people who triggered the federal minimum tax. Then the OAMTTX rate, usually set to the smallest non-zero tax rate, is applied in order to get the provincial tax before the non-refundable tax credits. The provincial minimum tax carryover credit (impminco) is calculated using OAMTTX.

When OAMTOPT is set to 4, then a percentage (OAMTPCTM) of the minimum tax triggered by the federal minimum tax calculations represents the basic provincial tax (imbpt). Provincial surtaxes are then calculated using this amount. The provincial minimum tax carryover credit (impminco) is calculated using OAMTPCTM.

OAMTPCTM Ont. amt rate as pct of federal minimum tax amount

DESCRIPTION

When Ontario tax on taxable income is calculated (OTXFLG=1) and OAMTOPT is set to 4, then a percentage (OAMTPCTM) of the minimum federal tax due to the minimum tax is used as basic provincial tax (imbpt). This calculated value is used in the determination of the provincial surtax.

OASRR OAS reduction rate

DESCRIPTION

This parameter is available for testing the effects of repaying OAS benefits based on a proportion of net income. The OAS repayment is calculated as the lesser of OAS Benefits (imioas) and a proportion OASRR of net income exceeding the reduction level OASTD. The calculated OAS repayment is added to imrepay, All Repayments. If OASRR is set to 0, no repayment is calculated.

DESCRIPTION

The proportion of gross capital gains (idicapg) that are treated as taxable in Ontario.

When OCGIRFLG is activated (set to 1), the Ontario taxable income for the purpose of Ontario taxes is reduced by amount of gross capital gains times the difference in the federal capital gains inclusion rate (CAPGIR) and the Ontario capital gains inclusion rate. (idicapg * (CAPGIR – OCAPGIR)). The resulting value for the taxable income is imiotax. This is only used when OTXFLG is set to 1.

OCCEAFLG Ont. Child Care Expense Credit activation flag

DESCRIPTION

The activation flag of the Ontario refundable child care expense tax credit (imoccea). The calculation is activated when the value is set to 1, no calculation if the value is zero. This program was revised and superseded by the Ontario Child Care Supplement for Working Families introduced in the Ontario Budget of May 1998.

OCCEATD Ont. Child Care Expense Credit family income turndown

DESCRIPTION

The level of family net income (head plus spouse) above which the refundable Ontario child care expense tax credit (imoccea) begins to be paid at a lower rate. If family income exceeds this amount, the maximum family benefit will be reduced by a proportion (OCCEARR) of net income.

OCCSEXT Ont. Child Care Supplement One-time payment of extra benefit

DESCRIPTION

This parameter contains the amount of the one-time payment per child under 7 to families eligible to receive the Ontario Child Care Working Income Supplement in 2001 as announced in the Ontario Economic Outlook and Fiscal Review (2001). The value of the extra supplement is saved in the variable imoccext and added to impfp (provincial family programs).

OCGIRFLG Ont. Capital Gains Inclusion Rate Activation Flag

DESCRIPTION

When this flag is activated (set to 1), the Ontario taxable income for the purpose of Ontario taxes is reduced by amount of gross capital gains times the difference in the federal capital gains inclusion rate (CAPGIR) and the Ontario capital gains inclusion rate. (idicapg * (CAPGIR – OCAPGIR)). The resulting value for the taxable income is imiotax. This is only used when OTXFLG is set to 1.

OCGTCFLG Ont. Caregiver Tax Credit activation flag

DESCRIPTION

The calculation of the Ontario Caregiver Tax Credit (impcgtc) is activated by the flag OCGTCFLG.

The Caregiver Tax Credit (impcgtc) provides additional tax assistance to individuals who provide in-home care for relatives. Eligible recipients include individuals residing with and providing in-home care for a parent or grandparent over 65 years of age, or for an infirm dependent relative.

The parameter OCGTCOPT provides users with the option to use the greenbook value of the Caregiver amount (idcgtc from Line 315 and Schedule 12 in the General Tax Guide) or to give the maximum (OCGTC) if idcgtc is greater than 0.

This non-refundable tax credit is only calculated when the provincial tax on taxable income is calculated (OTXFLG = 1).

OCGTCOPT Ont. Caregiver Tax Credit Option (1=max, 2=greenbook)

DESCRIPTION

This parameter provides users with the option of how to calculate the provincial Caregivers Tax Credit (impcgtc). A value of 1 results in applying the maximum value (OCGTC) if the filer had an amount in idcgtc (from Line 315 and Schedule 12 in the General Tax Guide). To use the greenbook value of the Caregiver amount (idcgtc), this parameter must be set to 2. This non-refundable tax credit is only calculated when the provincial tax on taxable income

is calculated (OTXFLG = 1) and the provincial caregivers tax credit is activated (OCGTCFLG = 1).

OCWISFLG Ont. Child Care Working Income Supplement activation flag

DESCRIPTION

This parameter controls the activation of the Ontario Child Care Supplement for Working Families introduced in the Ontario Budget of May 1998. When set to 1 benefits under this program will be calculated. The Ontario Budget of May 2000 announced a higher annual maximum for single parents of OCWISSP.

DESCRIPTION

For families with earnings from work, this parameter is used to calculate the maximum Ontario Child Care Supplement for Working Families. The parameter represents the benefit rate as a proportion which is applied to family earnings above the threshold OCWISTD. This lookup parameter is indexed by the number of children under the age of 7 in the census family.

DESCRIPTION

For families with earnings from work, this parameter is used in the calculation of the maximum Ontario Child Care Supplement for Working Families. The parameter represents the threshold of family earnings above which maximum benefits are calculated as a proportion (OCWISRR) of family earnings up to a ceiling of OCCEAYNG times the number of children under the age of 7 in the census family.

ODISTC Maximum infirm dependent 18 or older tax credit

DESCRIPTION

This parameter is the amount which can be claimed for the federal non-refundable tax credit for infirm dependents aged 18 and over if the filer has already claimed an amount for disabled dependents (idothpe). Note that the model assumes that there is only one disabled dependent.

DESCRIPTION

When OEHTFLAG is set to 1, the Ontario Employer Health Tax is calculated. It is reduced using a deduction which is calculated as OEHTDRR times the total tax due. The total tax minus the deduction is the tax due (imonteht).

OEHTRR1 OEHT - Rate 1

DESCRIPTION

This is the first tax rate for the Ontario Employer Health Tax. When a person's income from self-employment is less than OEHTTD1, the Employer Health Tax is calculated as the rate times any self-employment earnings greater than the exemption OEHTEX.

The Ontario Employer Health Tax is only calculated when OEHTFLAG is equal to 1. The Tax is then reduced by a tax deduction calculated using OEHTDRR.

ba08.mpr:	0.00000	--	Copied from ba07.mpr
ba09.mpr:	0.00000	--	Copied from ba08.mpr

DESCRIPTION

This is the second rate for the Ontario Employer Health Tax. When a person's income from self-employment is less than OEHTTD2, but greater than OEHTTD1, the Employer Health Tax is calculated by adding OEHTRR1 times the difference between the first turndown (OEHTTD1) and the exemption rate (OEHTEX) and OEHTRR2 times the difference between earnings from self-employment and OEHTTD1.

The Ontario Employer Health Tax is only calculated when OEHTFLAG is equal to 1. The Tax is then reduced by a tax deduction calculated using OEHTDRR.

OEHTRR3 OEHT - Rate 3

DESCRIPTION

When self-employment earnings are greater than OEHTTD2, the Ontario Employer Health Tax is calculated as OEHTRR3 times earnings from self-employment which are greater than the exemption OEHTEX.

The Ontario Employer Health Tax is only calculated when OEHTFLAG is equal to 1. The Tax is then reduced by a tax deduction calculated using OEHTDRR.

OEHTTD1 OEHT - Turndown 1

DESCRIPTION

This is the first turndown for the Ontario Employer Health Tax. When a person's income from self-employment is less than this value, the Employer Health Tax is calculated using the rate OEHTRR1 on self-employment earnings over the exemption OEHTEX. The Ontario Employer Health Tax is only calculated when OEHTFLAG is equal to 1.

DESCRIPTION

This is the second turndown for the Ontario Employer Health Tax. When a person's income from self-employment is less than this value, but greater than OEHTTD1, the Employer Health Tax is calculated by adding OEHTRR1 times the difference between the first turndown (OEHTTD1) and the exemption rate (OEHTEX) and OEHTRR2 times the difference between earnings from self-employment and OEHTTD1. The Ontario Employer Health Tax is only calculated when OEHTFLAG is equal to 1.

OEMXMT Ont. equivalent to married turndown level

DESCRIPTION

This parameter represents the provincial equivalent to married exemption turndown when Ontario tax is calculated as a tax on taxable income. It is only used when OTXFLG is set to 1. The reduction is calculated as the dependant's net income less the turndown OEMXMT.

OFTCOPT Ontario foreign tax credit application option

DESCRIPTION

If this parameter has a value of 1 then the Ontario foreign tax credit is applied before the Ontario Tax Reduction is calculated; with a value of 2 the Ontario foreign tax credit is

applied after the Ontario Tax Reduction. The switch in the application of foreign tax credits was announced in the Ontario 2004 Budget in order to redress the calculation of the Ontario Tax Reduction so that the benefit goes to those who need it most.

DESCRIPTION

This table look-up parameter provides the schedule of premiums for the Ontario Health Premium. The first column of the table gives various levels of the individual taxable income. The second column gives the amount of the required premium. The table is accessed using the lkup1 function which interpolates the lookup in the second column. The value of the calculated premium is multiplied by the phase in rate OHPPI.

The Ontario Health Premium was announced in the Ontario 2004 Budget, to be implemented in July 2004.

The value of the calculated premium is held in imphp and this amount is added to imptax.

OHPPI Ontario Health Premium program phase in

DESCRIPTION

This parameter provides the program phase in of the Ontario Health Premium. Individuals in Ontario are required to pay a health premium based on taxable income as per the table in OHPBASE. The value of the premium is multiplied by the phase in rate. The Ontario Health Premium was announced in the Ontario 2004 Budget, to be implemented in July 2004.

The value of the calculated premium is held in imphp and this amount is added to imptax.

OMEDALL Ont. Medical allowance maximum lower limit

DESCRIPTION

Ontario allowable medical expenses are calculated as actual expenses (idmedgro) less either OMEDANF percent of net income, or OMEDALL, whichever is less. The calculated allowable expense is saved in impmeda. The provincial non-refundable medical expense tax credit (impmedtc) represents impmeda multiplied by OPNTCR. It is only calculated when OTXFLG is set to 1.

DESCRIPTION

Allowable medical expenses are calculated as actual expenses less either OMEDANF percent of net income, or OMEDALL, whichever is less. The Ontario non-refundable medical expense tax credit is only calculated when OTXFLG is set to 1.

OMTY Ontario tax reduction limit

DESCRIPTION

Ontario Provincial Income Tax may be reduced for filers with Ontario taxes below OMTY. The reduction is calculated as OMTY less OTRF times Ontario Income Tax. This parameter applies only if ORDOPT is set to 1 or 2.

OODISTC Ont. Maximum infirm dependent 18 or older tax credit

DESCRIPTION

This parameter is the amount which can be claimed for the Ontario non-refundable tax credit for infirm dependents aged 18 and over if the filer has already claimed an amount for disabled dependents (idothpe). Note that the model assumes that there is only one disabled dependent. The parameter is only used when a provincial tax on taxable income is calculated (OTXFLG = 1).

OPNTCR Ont. provincial non-refundable tax credit rate

DESCRIPTION

This single parameter sets the tax credit rate for all of the non-refundable tax credits in Ontario. Each tax credit is calculated separately and summed for a total credit. The parameter is only used when a provincial tax on taxable income is calculated (OTXFLG = 1).

OPTC Ontario political contribution table [total donations,donation allowed]

DESCRIPTION

This table contains the figures necessary to calculate the Ontario Political Contribution Tax Credit. The first column represents the dollar amount of total Ontario political contributions to which the corresponding percentages of the third column are applied to calculate the total Allowable Ontario Political Contribution Tax Credit. Only the first and third columns of the table need to be specified.

OPTX Ont. tax table [taxable income,basic provincial tax]

DESCRIPTION

This table represents the Ontario tax curve used when calculating the tax on taxable income (OTXFLG = 1). The first column represents Taxable Income, the second represents the amount of Basic Provincial Tax payable at that level of taxable income, the third column represents the marginal tax rate for the interval between this and the next value in the table.

Only the first and third columns of the tax table need be specified. The second column is computed by the standard algorithm.

OPYTAX Estimate of previous year's Ontario taxes

DESCRIPTION

This parameter estimates the previous year's taxes. The taxpayer dividend (imotxdv) is equal to taxes paid in the previous year up to a maximum (OTXDVMAX). People who paid over 0\$ in taxes would get a minimum rebate of OTXDVMIN. The benefit is included in refundable tax credits. Since it is based on the previous year's taxes, the taxes are multiplied by OPYTAX in order to estimate the lagged effect.

ORDOPT Ontario tax reduction calculation option

DESCRIPTION

If ORDOPT has a value of 1 then the Ontario Tax reduction is calculated based on taxable income; with a value of 2 it is calculated based on Ontario Tax; with a value of 3 it is based on Ontario Tax as well as the number of dependants. The switch in calculation method from taxable income to Ontario tax occurred in 1988 and then expanded to include dependants in 1990.

DESCRIPTION

The amount of Ontario Provincial Income Tax above which the surtax rate (OSSMR) is applied. In 1984, the Ontario Social Services Maintenance Tax is simulated using this rate. This parameter is also used, where appropriate, to simulate the Ontario Fair Share Health Care Levy which is a basic surtax calculation.

OSSMR2 Ontario surtax second level rate

DESCRIPTION

The rate which is applied to Provincial Income Tax (imtxp) exceeding OSSML2 to calculate the Ontario surtax. The total rate of surtax above the second tier cut-in OSSML2 would be the sum of this parameter and OSSMR.

For Ontario, the SPSM calculates provincial surtax (impsur) as OSSMR percent of provincial taxes (imtxp) above the level OSSML plus OSSMR2 percent of provincial taxes above the level OSSML2.

This parameter is used, where appropriate, to simulate the Ontario Fair Share Health Care Levy which is a basic surtax calculation.

OTRBPA Ontario tax reduction basic personal amount

DESCRIPTION

When the parameter ORDOPT is set to 3, the Ontario tax reduction will be calculated making use of number of dependants and the parameter OTRBPA is used to indicate the dollar value of the basic personal amount of the tax reduction.

OTRDDA Ontario tax reduction disabled dependant amount

DESCRIPTION

When the parameter ORDOPT is set to 3, the Ontario tax reduction will be calculated making use of the number of dependants and the parameter OTRDDA is used to indicate the dollar value of the amount of the tax reduction allowed for each disabled dependant. This parameter is not currently in use pending improved information on disability status of family members.

OTRF Ontario tax reduction Ontario tax multiplier

DESCRIPTION

This parameter represents the tax multiplier to be used in the calculation of the Ontario tax reduction. When ORDOPT is set to 2, the reduction is calculated as OMTY less OTRF times Ontario Income Tax. When ORDOPT is set to 3, the reduction is derived as OTRFP times the personal reduction less OTRF times Ontario Income Tax.

OTRFP Ontario tax reduction personal amount multiplier

DESCRIPTION

When the parameter ORDOPT is set to 3, the Ontario tax reduction will be calculated making use of the number of dependants. The parameter OTRFP is used to multiply the dollar value of all basic and dependant credits. The resulting value is used to compare to Ontario income tax multiplied by OTRF.

OTXDVMAX Maximum taxpayer dividend

DESCRIPTION

The taxpayer dividend (imotxdv) is equal to taxes paid in the previous year up to a maximum (OTXDVMAX). People who paid over 0\$ in taxes would get a minimum rebate of OTXDVMIN. The benefit is included in refundable tax credits. Since it is based on the previous year's taxes, the taxes are multiplied by OPYTAX in order to estimate the lagged effect.

OTXDVMIN Minimum taxpayer dividend for people with non-zero taxes

DESCRIPTION

This represents the minimum amount of the taxpayer dividend for people who paid over 0\$ in taxes. The taxpayer dividend (imotxdv) is equal to taxes paid in the previous year up to a maximum (OTXDVMAX). The benefit is included in refundable tax credits. Since it is based on the previous year's taxes, the taxes are multiplied by OPYTAX in order to estimate the lagged effect.

OUTAPR Name of database adjustment parameter file (out) [string]

DESCRIPTION

This control parameter gives the name of the file (using the conventions of the host operating system) which will contain the database adjustment parameters which were used to adjust SPSD variables. SPSM writes out such a file only if the user changed one or more database adjustment parameters from the values in the corresponding input file INPAPR. Note that under MS-DOS, names without a drive specifier or any slashes refer to the current directory.

OUTASC Name of text output file (out) [string]

DESCRIPTION

This control parameter gives the name of the file (using the conventions of the host operating system) which will contain the output report generated by the text output facility. The text output facility must be activated using ASCFLAG for OUTASC to have any effect. Note that under MS-DOS, names without a drive specifier or any slashes refer to the current directory.

OUTCPR Name of control parameter file (out) [string]

DESCRIPTION

This control parameter gives the name of the file (using the conventions of the host operating system) which will contain the output control parameter file. An output control parameter file is always created, and includes any changes the user made to the input control parameter file. In addition, certain "read-only" parameters which are created by SPSM for informational purposes may have changed values. Note that under MS-DOS, names without a drive specifier or any slashes refer to the current directory.

OUTLOG Name of log file (out) [string]

DESCRIPTION

The OUTLOG parameter gives the name of the output file that will contain a log of the SPSM run, provided that this facility has been activated using the LOGFLAG parameter. See the description of the LOGFLAG parameter for more information. A default value for OUTLOG will be generated by adding an extension of .log to the SPSM run name, but can be overridden.

OUTMRSFLAG Variant results file creation flag

DESCRIPTION

If the value of the control parameter OUTMRSFLAG is set to 1, a results file (with name given by OUTVARMRS) will be created containing variant results for variables specified in OUTMRSVARS. Results are always saved at the individual (not family or household) level.

OUTMRSFRAC Variant results file preserves fractional part

DESCRIPTION

This control parameter can be used to preserve the fractional part (if present) of all variables written to the model results (MRS) file. If this flag is off, all output values are converted to integers before being written to the results file. If this flag is turned on, the fractional part of the output variables will be retained, and there will be no differences between base MRS variables and modelled variables for an identical run. This flag may result in a significant increase in the size of the model results file.

OUTMRSVARS Variant results file variables [string]

DESCRIPTION

This control parameter contains a list of tax/transfer calculated variables whose variant values will be recorded in the file named OUTVARMRS if the variant results file facility has been activated by OUTMRSFLAG. Only variant tax/transfer variables (that is, those that begin with "ct" or "im") or user variables can be recorded in a results file.

OUTSAS Name of SAS output file (out) [string]

DESCRIPTION

If the SAS results file facility has been activated using SASFLAG, then the control parameter OUTSAS contains the name of the resulting SAS file. Because SAS files contain an encrypted header structure, SPSM must use the header of an identically-named existing SAS file to create a new SAS file named OUTSAS. The existing SAS file must have been created using the 6.03 library engine. If such file does not exist, SPSD/M will create "spsmtemp.ssd" because SPSD/M already know how to create such file. The user can then change "spsmtemp.ssd" to some other name if desired by using the PROC DATASETS procedure in SAS. Because SAS native files contain a generated key in their header, SPSM can only write over existing SAS files (using the existing generated key in their header), or else produce a file with the name "spsmtemp.ssd", whose header key is already known.

An associated file, with the same stem as OUTSAS but with extension ".sfm", is also produced when the SAS output facility is activated. It is a text file which contains SAS source code (PROC FORMAT and associated statements) which will define the formats for any class variables given in SASVARS. It (or equivalent statements) should be included in any SAS job which reads the SAS file named by OUTSAS.

See User's Guide, SAS Output Facility.

OUTTBL Name of report file (out) [string]

DESCRIPTION

This control parameter gives the name of the file (using the conventions of the host operating system) which will contain all summary reports generated by SPSM output facilities, including the cross tabulation facility and distributional analysis facility. Note that under MS-DOS, names without a drive specifier or any slashes refer to the current directory.

OUTVARMPR Name of variant tax/transfer parameter file (out) [string]

DESCRIPTION

This control parameter gives the name of the file (using the conventions of the host operating system) which will contain the output variant tax/transfer parameters. SPSM writes out such a file only if the user changed one or more variant tax/transfer parameters from the values in the corresponding input file INPVARMPR. Note that under MS-DOS, names without a drive specifier or any slashes refer to the current directory.

OUTVARMRS Name of variant results file (out) [string]

DESCRIPTION

This control parameter gives the name of the file (using the conventions of the host operating system) which will contain the output variant results. Such a file is generated only if the user activates the variant result file facility using OUTMRSFLAG. Note that under MS-DOS, names without a drive specifier or any slashes refer to the current directory.

OYPNDL Ont. Pension Income Deduction Amount

DESCRIPTION

This is the maximum dollar amount of pension income which may be claimed as an Ontario non-refundable tax credit. The parameter is only used when the provincial tax on taxable income is calculated (OTXFLG = 1).

PAMTOPT P.E.I. alternative minimum tax option (1=none, 2=% fed, 3=fed adj inc, 4=% min amt)

DESCRIPTION

When Prince Edward Island tax on taxable income is calculated (PTXFLG = 1), there are four options as to how to calculate the provincial minimum tax.

When PAMTOPT is set to 1, then no provincial alternative minimum tax or minimum tax carryover is calculated.

When PAMTOPT is set to 2, then a percentage (PAMTPCTF) of the additional federal tax triggered by the federal minimum tax (imamtprv) is added to the basic provincial tax (imbpt). The definition of imamtprv is determined by the provincial vector AMTPRVDF. The provincial minimum tax carryover credit (impminco) is calculated using PAMTPCTF.

When PAMTOPT is set to 3, the income used in the provincial tax calculation is replaced by the net income used for alternative tax purposes (imamtinc) for people who triggered the federal minimum tax. Then the PAMTTX rate, usually set to the smallest non-zero tax rate, is applied in order to get the provincial tax before the non-refundable tax credits. The provincial minimum tax carryover credit (impminco) is calculated using PAMTPCTF.

When PAMTOPT is set to 4, then a percentage (PAMTPCTM) of the minimum tax triggered by the federal minimum tax calculations represents the basic provincial tax (imbpt). Provincial surtaxes are then calculated using this amount. The provincial minimum tax carryover credit (impminco) is calculated using PAMTPCTM.

PAMTPCTM P.E.I. amt rate as pct of federal minimum tax amount

DESCRIPTION

When Prince Edward Island tax on taxable income is calculated (PTXFLG=1) and PAMTOPT is set to 4, then a percentage (PAMTPCTM) of the minimum federal tax due to the minimum tax is used as basic provincial tax (imbpt). This calculated value is used in the determination of the provincial surtax.

PCGTCFLG P.E.I. Caregiver Tax Credit activation flag

DESCRIPTION

The calculation of the Prince Edward Island Caregiver Tax Credit (impcgtc) is activated by the flag PCGTCFLG.

The Caregiver Tax Credit (impcgtc) provides additional tax assistance to individuals who provide in-home care for relatives. Eligible recipients include individuals residing with and providing in-home care for a parent or grandparent over 65 years of age, or for an infirm dependent relative.

The parameter PCGTCOPT provides users with the option to use the greenbook value of the Caregiver amount (idcgtc from Line 315 and Schedule 12 in the General Tax Guide) or to give the maximum (PCGTC) if idcgtc is greater than 0.

This non-refundable tax credit is only calculated when the provincial tax on taxable income is calculated (PTXFLG = 1).

PCGTCOPT P.E.I. Caregiver Tax Credit Option (1=max, 2=greenbook)

DESCRIPTION

This parameter provides users with the option of how to calculate the provincial Caregivers Tax Credit (impcgtc). A value of 1 results in applying the maximum value (PCGTC) if the filer had an amount in idcgtc (from Line 315 and Schedule 12 in the General Tax Guide). To use the greenbook value of the Caregiver amount (idcgtc), this parameter must be set to 2. This non-refundable tax credit is only calculated when the provincial tax on taxable income is calculated (PTXFLG = 1) and the provincial caregivers tax credit is activated (PCGTCFLG = 1).

PMAXDX P.E.I. Maximum Disability deduction/amount

DESCRIPTION

This value represents the maximum Prince Edward Island non-refundable disability tax credit. It is given to individuals who claimed either a disability amount for self (iddisslf) or for a dependant (iddisoht). The parameter is only used when the provincial tax on taxable income is calculated (PTXFLG = 1).

PMEDALL P.E.I. Medical allowance maximum lower limit

DESCRIPTION

Prince Edward Island allowable medical expenses are calculated as actual expenses (idmedgro) less either PMEDANF percent of net income, or PMEDALL, whichever is less. The calculated allowable expense is saved in impmeda. The provincial non-refundable medical expense tax credit (impmedtc) represents impmeda multiplied by PPNTCR. It is only calculated when PTXFLG is set to 1.

PODISTC P.E.I. Maximum infirm dependent 18 or older tax credit

DESCRIPTION

This parameter is the amount which can be claimed for the Prince Edward Island non-refundable tax credit for infirm dependents aged 18 and over if the filer has already claimed an amount for disabled dependents (idothpe). Note that the model assumes that there is only one disabled dependent. The parameter is only used when a provincial tax on taxable income is calculated (PTXFLG = 1).

PPTC P.E.I. political contribution table [total donations,donation allowed]

DESCRIPTION

This table contains the figures necessary to calculate the Prince Edward Island Contribution Tax Credit. The first column represents the dollar amount of total Prince Edward Island political contributions to which the corresponding percentages of the third column are applied to calculate the total Allowable Prince Edward Island Political Contribution Tax Credit. Only the first and third columns of the table need to be specified.

PPTX P.E.I. tax table [taxable income,basic provincial tax]

DESCRIPTION

This table represents the Prince Edward Island tax curve used when calculating the tax on taxable income (PTXFLG = 1). The first column represents Taxable Income, the second represents the amount of Basic Provincial Tax payable at that level of taxable income, the third column represents the marginal tax rate for the interval between this and the next value in the table.

Only the first and third columns of the tax table need be specified. The second column is computed by the standard algorithm.

PRDFFLAG Parameter difference report activation flag

DESCRIPTION

When this control parameter is set to 1, a report is written to the file given by OUTTBL. This report shows tax/transfer parameter differences between base and variant. A more sophisticated parameter difference report can be obtained by using the compparm utility, which is documented in the *Tools User's Guide*.

PROVMAP Provincial remapping [prov]

DESCRIPTION

Provincial remapping facility to enable the reassignment of province codes. This parameter contains a vector of the province codes, starting in the east with Newfoundland set to 0 and ending in British Columbia, which is coded as 9. The default values for this parameter are as follows:

PROVMAP 10 # Provincial remapping

0	(Newfoundland)
1	(Prince Edward Island)
2	(Nova Scotia)
3	(New Brunswick)
4	(Quebec)
5	(Ontario)
6	(Manitoba)
7	(Saskatchewan)
8	(Alberta)
9	(British Columbia)

This could be used to assign to one or more provinces another province's tax transfer system. For example, to assign Ontario's tax transfer system to every province, the vector would be changed to the following:

PROVMAP 10 # Provincial remapping

PTF Low income cut-off Before Tax [size, urban]

DESCRIPTION

This parameter, defined in the database adjustment parameter file, is a two dimensional array giving a user-supplied "before-tax income threshold" for families by number of persons and urban area, thus allowing the use of Statistics Canada Low Income Cut-offs in SPSM.

See also PTFAT for the before-tax LICOs. Further details on low-income analysis with the SPSM can be found in the SPSD/M *User's Guide* in the miscellaneous facilities section.

PTFAT Low income cut-off After Tax [size, urban]

DESCRIPTION

This parameter, defined in the database adjustment parameter file, is a two dimensional array giving a user-supplied "After-tax income threshold" for families by number of persons and urban area, thus allowing the use of Statistics Canada's after-tax Low Income Cut-offs in

SPSM. The default values in parameter files are Statistics Canada's after-tax low-income cut-offs.

See also PTF for the before-tax LICOs. Further details on low-income analysis with the SPSM can be found in the SPSD/M *User's Guide* in the miscellaneous facilities section.

PTRBAS Base PEI low income tax reduction

DESCRIPTION

This is the base amount for the Prince Edward Island Low income tax reduction.

Announced in the 2000 budget, the maximum Low Income Tax Reduction is equal to the sum of a base amount (PTRBAS), an amount for a spouse or equivalent-to-spouse (PTRSP), and an amount for each dependent child (PTRKID). It is then reduced for net income over PTRTD at a rate of PTRRR. The reduction cannot be more than taxes owing. The reduction is calculated at a family level but can be split amongst spouses.

PURB Base year unemployment rate [prov]

DESCRIPTION

This parameter is the base year unemployment rate by province.

PURC Current year unemployment rate [prov]

DESCRIPTION

This parameter is the current year unemployment rate by province.

PURR Ratio current:base unemployment rate [prov]

DESCRIPTION

The parameter is the ratio of PURC over PURB.

PVRAT Family poverty ratio fractions for table 4 [array]

DESCRIPTION

This control parameter is a vector which defines the ranges of family-specific income threshold ratios to be used when producing the hard-wired tables 4 or 4A. Please see the [User's Guide](#) for more information on the hard-wired tables.

DESCRIPTION

CPI deflator applied to income to obtain estimate of the previous year's income for needs tested programs. Calculated using the CPI, Canada, All Items annual average January-December. The CPI for the previous year is divided by the CPI for the current year.

QAAFA Quebec availability allowance (supplement) [parity,\$]

DESCRIPTION

The Quebec Availability allowance is paid as a supplement to Quebec family allowances starting in 1989. This vector parameter has three elements corresponding to the sequential position in the family of each child. The value of each element represents the dollar value of the benefits. The parameter is effective only when QAAFAFLAG is set to 1.

Starting in 1998, the program is replaced by the Quebec Family Allowance Tax Credit which is activated when QFATCOPT is set to 2.

For more details see QFATCOPT.

QAAFAFLAG Availability Allowance: Supplement to Quebec FA

DESCRIPTION

The Quebec Availability allowance is paid as a supplement to Quebec family allowances starting in 1989. When QAAFAFLAG is set to one the Quebec Availability allowance will be paid as a supplement to provincial family allowances using amounts specified in the QAAFA parameter.

Starting in 1998, the program is replaced by the Quebec Family Allowance Tax Credit which is activated when QFATCOPT is set to 2.

For more details see QFATCOPT.

ba09.mpr:	1.00000	0.0%	Copied from ba08.mpr

DESCRIPTION

When this parameter is set to 0, the basic exemption used in the calculation of the Quebec alternative minimum tax is QAMTX.

When this parameter is set to 1, the basic exemption for the purposes of the Quebec alternative minimum tax is calculated as net income (imqinet) less taxable capital gains exemption (imqcapgx) divided by QCAPAMTX. This result is then added to QAMTX to determine the basic exemption.

See QAMTXFLG for program description.

QAMTDIV Quebec Alternative Minimum Tax Taxable Dividend Limit

DESCRIPTION

This parameter is used in the test to determine if the Quebec Alternative Minimum Tax should be calculated. Individuals with dividends (imqidivt) in excess of this amount will be subjected to the Alternative Minimum Tax calculation to determine if they will have to pay any additional amounts.

See QAMTXFLG for program description.

QAMTINCRT Quebec Alternative Minimum Tax Inclusion Rate

DESCRIPTION

This parameter represents the overall inclusion rate for the Quebec alternative minimum tax calculations. The non-taxable portion of capital gains to include in the calculation of adjusted taxable income is derived by QAMTINCRT less QCAPGIR. Only this proportion of the net non-deducted capital losses (idclose) and the allowable business investment losses (idiloss) can be used to derive the adjusted taxable income for minimum tax purposes.

See QAMTXFLG for program description.

QAMTNEGTI Quebec Alternative Minimum Tax Allow Negative Taxable Income

DESCRIPTION

When this parameter is set to 1, taxable income for the purposes of the Quebec alternative minimum tax is allowed to be negative. Taxable income is recalculated allowing it to be negative.

When this parameter is set to 0, taxable income for the purposes of the Quebec alternative minimum tax is set to imitax, which can not be negative.

See QAMTXFLG for program description.

QAMTRITC Quebec Alternative Minimum Tax Retirement Income Credit Deduction

DESCRIPTION

When this parameter is set to 0, the retirement income tax credit (imqritc) will be added back to the adjusted taxable income in the calculation of the Quebec Alternative Minimum Tax.

Beginning in 1998, this parameter is set to 1 allowing the retirement income tax credit to be used as a deduction in the calculation of the adjusted taxable income.

See QAMTXFLG for program description.

QAMTSTTC Quebec Alternative Minimum Tax Spouse Transfer of Tax Credits Flag

DESCRIPTION

When this parameter is set to 1, the transfer of spouse tax credits (imqtcts) will be added back to the adjusted taxable income in the calculation of the Quebec Alternative Minimum Tax.

Beginning in 2003, this parameter is set to 0 reflecting the change in legislation so no amount related to the spouse can be used in the calculation of alternative minimum tax. This was announced in 2004 and retroactive to 2003.

See QAMTXFLG for program description.

QAMTXFLG Quebec alternative minimum tax, QAMTX, activation flag

DESCRIPTION

The Alternative Minimum Tax in Quebec is activated by QAMTXFLG. Individuals are initially tested to determine if the alternative minimum tax needs to be calculated. Those individuals who have completed the general tax form (imqsfflg = 0) and have met at least one of the following conditions will be subjected to the alternative minimum tax calculation:

- dividends (imqidivt) in excess of QAMTDIV, or
- capital gains (idicapg) greater than zero, or
- exploration and development expenses (idexplor), or
- limited partnership losses (idpartlo) beginning in 1995, or
- carrying charges (idcarry) beginning in 1995, or
- stock option deductions (imqstkdd) when QAMTXSTKFLG is set to 0.

The adjusted taxable income is calculated by adding to taxable income (imqitax) the following items:

- contributions to RRSPs (idrrsp) and RPPs (idrpp) when QAMTRPFLG is on,
- exploration and development expenses (idexplor),
- limited partnership losses when QAMTXREF is activated,
- carrying charges (idcarry) when QAMTXREF is activated,
- the home relocation loan deduction (idemplo),
- stock option deduction (imqstkdd) when QAMTXSTKFLG is set to 0,

- and the non-taxable proportion of capital gains ($\text{idicapg} * (\text{QAMTINCRT} - \text{QCAPGIR})$).

The adjusted taxable income is reduced by a proportion of taxable dividends ($\text{imqdivt} / \text{QDIVRAT}$), and the allowable non-taxable proportion (QAMTINCRT less QCAPGIR) of business investment losses (idiloss) and net capital losses of previous years (idcloss).

When QAMTCBX is on, the difference between net income (imqinet) and the capital gains deduction (imqcapgx) divided by QCAPAMTX is added to the basic exemption level of QAMTX . The adjusted taxable income less the exemption is multiplied by the Quebec Alternative Minimum tax rate (QAMTTX). This amount is then reduced by the non-refundable tax credits less the retirement tax credit when QAMTRITC is set to 0 and tax credits transferred from a spouse (imqtcts) when QAMTSTTC is set to 1.

If the calculated value of the Alternative Minimum Tax is higher than the calculated tax using the standard algorithm, the difference is stored in imqamt . A flag, imqamtfg , identifies the individuals with the modified income tax.

Beginning in 1997, the taxable income used to calculate the adjusted taxable income is allowed to be negative. When the parameter QAMTNEGTI is activated, the taxable income is recalculated allowing it to be negative.

QAPFFLG Quebec anti-poverty fund activation flag

DESCRIPTION

In 1997, an Anti-Poverty Fund tax is implemented as a tax on the combined value of income tax and the surtax, at a rate QAPFRAT. The resulting value is added to the income tax to be paid and store in imqapf.

QAXPI Quebec age exemption reduction phase in

DESCRIPTION

This value is used to scale the amount of the reduction which will be applied to the age tax credit. It is used in 1996 to simulate the phase-in of the income testing of the age credit.

Legislation relating to this parameter was introduced in the 1996 Quebec Budget which proposed that the non-refundable age tax credit “be subject to an income test which would target the assistance to seniors with low or modest incomes.” This reduction for higher income seniors was to be phased in over two years, with half the reduction applied in 1996 and the full reduction in 1997 and subsequent years.

See also imqatc, QAXM, QAXRR, and QAXTD.

DESCRIPTION

This parameter is the proportion of net income above a given threshold (QAXTD) which will be deducted from the non-refundable age tax credit amount (QAXM).

Legislation relating to this parameter was introduced in the 1996 Quebec Budget which proposed that the non-refundable age tax credit “be subject to an income test which would target the assistance to seniors with low or modest incomes.” Individual seniors with incomes above the threshold of \$26,000 would have the amount of the age credit reduced by 15% of income above that threshold. This reduction for higher income seniors was to be phased in over two years, with half the reduction applied in 1996 and the full reduction in 1997 and subsequent years.

See also imqatc, QAXTD, QAXPI.

QAXTD Quebec age exemption income turn down

DESCRIPTION

Individual seniors will have their non-refundable age tax credit reduced if their net income is above the value of this parameter.

Legislation relating to this parameter was introduced in the 1996 Provincial Budget which proposed that the non-refundable age tax credit “be subject to an income test which would target the assistance to seniors with low or modest incomes.” Individual seniors with incomes above the threshold of \$26,000 would have the amount of the age credit reduced by 15% of income above that threshold. This reduction for higher income seniors was to be phased in over two years, with half the reduction applied in 1996 and the full reduction in 1997 and subsequent years.

QCAFLAG Quebec Child Assistance refundable tax credit flag

DESCRIPTION

This flag activates the Quebec Child Assistance Program. The Child Assistance Program, announced in the 2004 Quebec Budget, is designed to replace and enhance the Quebec family allowance, the non-refundable tax credit for children and the tax reduction for families. Beginning in 2005, families will receive a child assistance payment in the form of a non-taxable refundable tax credit. It is a universal program for tax filers.

When this flag is set to 1, a couple with children can receive a maximum amount QCAMAX depending on the number of kids in the family. In the case of a single parent family, QCASPMAX will be added to the amount granted to a couple. The Child Assistance amount will be reduced on the basis of family income. For couples with children, benefits start to be reduced at family income of QCATDC by the reduction rate QCARR. For single parent families, benefits are reduced by QCARR when family income exceeds QCATDS. The minimum amount families can receive (QCAMIN) is based on the number of children. The minimum amount which single parents can add to the minimum amounts per child is QCASPMIN.

When this program is activated, the family tax reduction is turned off (QFTRFLAG set to 0), the Quebec Family Allowance Tax Credit is turned off (QFATCOPT set to 1) and the Quebec dependent child tax credits are set to 0 (QYCXM1 and QYCXM2). The dependent children tax credits will be enhanced as a result of the universal Child Assistance. See QDTCWCA, QDTCNCA1 and QDTCNCA2 for more information.

The calculated amount of the Child Assistance payment is held in imqca, which is added to the amount of refundable tax credits, imptc.

QCALRFLG Quebec combined age, living alone retirement credit

DESCRIPTION

When QCALRFLG is set to 1, the combined age, living alone, and retirement credit is activated (imqcalr). This credit replaces the age credit (imqatc), retirement credit (imqritc) and living alone credit (imqlatc).

See imqcalr for a more detailed description.

QCAMAX Quebec Child Assistance Maximum [number of children]

DESCRIPTION

Under the Quebec Child Assistance Program, this parameter represents the maximum amount per child in the family. The maximum amount for the 5th and each subsequent child is the same as the maximum for the 4th child in the family. The maximum amount of the child assistance based on the number of children, plus the additional credit amount for single parent families may be reduced if the family income exceeds the income turndown, which is QCATDC for couples and QCATDS for single parent families. See QCAFLAG for more information on the Child Assistance Program.

DESCRIPTION

Under the Quebec Child Assistance Program, this parameter represents the minimum amount per child in the family. The minimum amount for the 5th and each subsequent child is the same as the minimum for the 4th child in the family. The minimum child assistance for a family with 2 children would be equal to the minimum amount for the 1st child plus the minimum amount for the second child, plus the minimum amount for a single parent family (QCASPMIN) if applicable. See QCAFLAG for more information on the Child Assistance Program.

DESCRIPTION

Under the Quebec Child Assistance Program, this parameter represents the reduction rate that is applied to the child assistance and single parent additional amount, if applicable, when family income exceeds the turndown. The family income turndown for couples is QCATDC and for single parents, it is QCATDS. See QCAFLAG for more information on the Child Assistance Program.

QCASPMAX Quebec Child Assistance Maximum Single Parent additional credit

DESCRIPTION

Under the Quebec Child Assistance Program, this parameter represents the maximum amount to be added to the child assistance amount for eligible single parent families. Eligible single parents with family income above QCATDS will see their Child Assistance payment reduced by the reduction rate QCARR. The minimum single parent amount is QCASPMIN. See QCAFLAG for more information on the Child Assistance Program.

QCBCFLG Quebec Child benefit flag for Quebec calculation methodology

DESCRIPTION

When this flag is activated, Quebec has a specialized Child Tax Benefit system in place, which takes into account the number and ages of the children. If this flag is set to 0, the federal basic amount per child is used.

DESCRIPTION

In Quebec, the federal Child Tax Benefit programme entitlements are based on the number of children and the ages of children. This parameter represents the supplementary entitlement given with respect to each child between the ages of 12-17.

See also QCBC1, QCBC2, and QCBC3.

QCCEOPT Quebec CCE calculation option [1=deduction,2=refundable credit]

DESCRIPTION

In Quebec, provisions for tax relief related to child care expenses have been calculated in two distinct ways; first as a deduction from total income or more recently as a refundable tax credit. When this parameter is set to 1, the Quebec child care expense deduction (imqccea) will be calculated. When it is set to 2 the refundable child care expense tax credit (imqcetc) will be calculated.

QCCETCR Refundable CCE credit rate [net income, % cce claimable]

DESCRIPTION

This lookup table parameter provides the proportions of allowable child care expenses which may be claimed for the refundable child care expense tax credit (imqccetc). These proportions are determined by looking up the child care expense net income for the family (imqcceni) in the left most column and finding the appropriate proportion in the middle column.

QCPPOPT Quebec CPP/QPP contribution deduction/credit option
 [1=deduction,2=credit]

DESCRIPTION

When this parameter is set to 1 CPP/QPP contributions will be treated as a deduction from Quebec total income in calculating Quebec provincial taxable income and added to (imqdedft). When this parameter is set to 2, CPP/QPP contributions will be treated as a tax credit (imqcpptc).

QDTCNCA1 Quebec Dependent Tax Credit Amount for first dependent without child assistance

DESCRIPTION

This parameter contains the amount that parents, whose adult children (18+) are students, may claim as part of their tax credits respecting dependents for the first adult dependent student, providing that there are no children in the family eligible for the child assistance. This will only be in effect when QCAFLAG is set to 1. The total value of the dependent tax credit is multiplied by QNTCR. The resulting tax credit is added to imqddtc.

QDTCNCA2 Quebec Dependent Tax Credit Amount for other dependents without child assistance

DESCRIPTION

This parameter contains the amount that parents, whose adult children (18+) are students, may claim as part of their tax credits respecting dependents for the second and subsequent adult dependent students, providing that there are no children in the family eligible for the child assistance. This amount, less the income of the dependent, may also be added for dependent adult children not in school. This will only be in effect when QCAFLAG is set to

1. The total value of the dependent tax credit is multiplied by QNTCR. The resulting tax credit is added to imqdtc.

QDTCSPA Quebec Dependent Tax Credit Single Parent Amount (no child assistance)

DESCRIPTION

This parameter contains the maximum additional amount for the Quebec dependant tax credit amount for single-parent families. This will only be in effect when QCAFLAG is set to 1. Single parent families may add, in the calculation of a tax credit respecting adult dependants who are students, this amount. The total value of the dependent tax credit is multiplied by QNTCR. The resulting tax credit is added to imqdctc. This amount replaces QLPXM.

QDTCWCA Quebec Dependent Tax Credit Amount Per Older Dependent with Child Assistance

DESCRIPTION

This parameter contains the amount per completed full-time term (up to a maximum of 2) that parents whose children (under 18) are enrolled in vocational training at the secondary level or postsecondary studies may claim as part of their tax credits respecting dependents. This will only be in effect when QCAFLAG is set to 1. The total value of the dependent tax

credit is multiplied by QNTCR. The resulting tax credit is saved in imqdctc. This amount replaces QPSXM.

QEEXPDED Quebec employment expenses deduction application flag

DESCRIPTION

This parameter denotes the application of employment expenses in the calculation of net income for Quebec provincial taxes. When this parameter is assigned to 1, the employment expenses are added to the total deductions (imqdedft). When this parameter is 0, the employment expenses are used to reduce the total income (imqitot). This represents a change to the Quebec Income Tax forms in 1998.

QEMPDEDM Quebec earned income deduction for workers maximum

DESCRIPTION

Beginning in 2006, individuals will be able to deduct, in the calculation of their taxable income for a given taxation year, an amount equal to QEMPDEDP of their eligible earned

income for the year, up to this amount. Eligible income includes wages and salaries as well as self-employment income. The value of the modeled Quebec earned income deduction is saved in `imqempdd` and added to `imqdedfn`.

QFAIFLAG Quebec inclusion of federal family allowance in income flag

DESCRIPTION

In calculating total income for Quebec Provincial Income Tax, this parameter controls whether or not Taxable Family Allowances (imqtfa) are included in Total Income imqitot. If set to a value of 1, Taxable Family Allowances are included, if set to 0, they are not.

QFAMDED Quebec Family related deduction on income in refundable credits

DESCRIPTION

When QFAMFLG is set to 0, persons who lived alone had this value used to reduce their income used for calculating the tax reduction for families (imqei) in order to calculate the real estate tax refund (imqptr) and the refundable QST credit (imqstr).

When QFAMFLG is set to 1, this is the amount which reduces net income in order to calculate the tax reduction for families (imqftr), the amount with respect to age, for a person living alone, or for retirement income (imqcalr), the real estate tax refund (imqptr) and the refundable QST credit (imqstr).

DESCRIPTION

The calculation of the family tax credit is modified in 1998. The new calculation is activated by the flag QFAMFLG. The family net income is reduced by the family deduction (the reduced family income), QFAMDED, that is increased to \$26,000. A first part of the family credit is associated to a person living alone or with one or more dependant children, QEIA3 and QEIA5, all others (QEIA1, QEIA2, QEIA4) are set to zero. The amount for elderly, QEIAA, and for retirement income remains. The value of the first part of the credit is then the difference between those credits and the reduced family income considered at a rate QFAMRAT.

The second part of the family tax credit remains the same for the family structure with dependant children, the rate applied to the reduced family income, QFTRRR, is increased from 4% to 6%.

See also QFAMRAT.

QFAMNETI Quebec family allowance tax credit net income concept flag

DESCRIPTION

This parameter defines the income definition to be used in the calculation of Quebec family allowance tax credit (imqfatc).

When assigned to 0, the income test is based on the net income of the individual and the net income of the spouse, if applicable. When assigned to 1, the net income is based on line 220 of the tax form and has the same calculation regardless of which form, general or simplified, was completed. The new concept of net income is calculated as total income less contributions paid to an RPP (idrpp), contributions paid to an RRSP (idrrsp), contributions to CPP/QPP by self-employed workers (imqcppse), if applicable and social benefits repayment (imrepay) if applicable. Beginning in 1998, this is the net income concept to be used to determine net family income. The flag is set to 1 beginning in 1999, since the calculation for the Quebec family allowance tax credit is based on previous year's income.

QFATCHITD QFATC High income turndown

DESCRIPTION

Under the Quebec Family Allowance Tax Credit (QFATCOPT=2), this parameter represents the high income turndown level. For families with net income over this amount, the Quebec Family Allowance Tax Credit is equal to the minimum benefit amount (depending on the number of children) less the difference between the family net income and this turndown amount multiplied by the applicable reduction rate (QFATCHIRR).

QFATCK6PYR QFATC supplement for kids under 6 phase out year proportion

DESCRIPTION

Under the Quebec Family Allowance Tax Credit (QFATCOPT=2), an extra supplement was available for large families with children under the age of 6 who were also born before August 1, 1997. This parameter contains the proportion of the year that is before August 1. For each child in the family under the age of 6, their age is compared to the difference between TARGETYEAR and QFATCK6YR. If this difference is less than their age, they qualify as an eligible child. If the difference is equal to the child's age (meaning that their year of birth would be 1997), then a random number is compared to this parameter to determine if the child was born before August 1.

QFATCK6YR QFATC Supplement for kids under 6 phase out year

DESCRIPTION

Under the Quebec Family Allowance Tax Credit (QFATCOPT=2), an extra supplement was available for large families with children under the age of 6 who were also born before August 1, 1997. This parameter contains the year cutoff point for this program. For each child in the family under the age of 6, their age is compared to the difference between TARGETYEAR and this parameter. If this difference is less than their age, they qualify as an eligible child. If the difference is equal to the child's age (meaning that their year of birth would be 1997), then a random number is compared to QFATCK6PYR to determine if the child was born before August 1.

QFATCOPT Quebec Family Allowance Tax Credit Option transfer=1, tax credit=2

DESCRIPTION

When set to 2 it activates the calculation of the Quebec Family Allowance Tax Credit. When set to 1 it activates the calculation of the Quebec family allowance, the Quebec new born allocation and the Quebec availability allowance.

The Quebec Family Allowance Tax Credit started in September 1997 – 1998 in the model. The Quebec Family Allowance Tax Credit is a credit based on previous year net family income and is non-taxable. The maximum credits vary with the number of children (QFATCMXK), and a supplement QFATCSUP is allocated to single parent families. For families with 4 kids and more, a supplement, QFATCK6, is added that varies with the number of kids in the family and the number of kids under 6. The credit is maximum until it reaches the first turn down income level with a specific reduction rate. The sequence of turn down incomes and reduction rates for single parent families are in QFATCSRR and for married couples in QFATCMRR. The turning point at QFATD4K is increased by QFATD4KI for each child over three. The benefits are reduced up to a minimum based on the number of children in the family (QFATCMNK) until the net family income reaches the last turning point in either QFATCSRR or QFATCMRR. At this last turning point the benefits are starting to reduce until they reach a minimum for payments of QFATCMIN. The program is implemented by copying the reduction rate table (QFATCSRR or QFATCMRR) into a temporary table. Then another temporary table assigns benefits and reduction rates to turning point incomes. Finally, the calculated benefits, imqfatc, are assigned to the women in the married couples or to the head of the single parent family. A take-up rate, QFATCTK, selects the assigned individual only if a random number is higher than the level specified by its total income. As a standard, QFATCTK is set to zero and all individuals are selected.

QFFSL Federal family allowance: Quebec Configuration[parity,\$]

DESCRIPTION

In federal family allowances are based on the number of children in the family. In the look-up table, the first column represents the number of children, the second column is the cumulative amount and the third column represents the marginal amount per child.

QFPSL Quebec provincial family allowance [parity,\$]

DESCRIPTION

In Quebec, the provincial portion of Family Allowances are also based on the number of children in the family. The table is used similarly to QFFSL.

Starting in 1998, the program is replaced by the Quebec Family Allowance Tax Credit which is activated when QFATCOPT is set to 2.

For more details see QFATCOPT.

QFS Federal supplement per child 12-17 in Quebec configuration

DESCRIPTION

In Quebec, the provincial government pays a Family Allowance Supplement of this amount on behalf of each child aged 12 to 17.

Starting in 1998, this program is replaced by the Quebec Family Allowance tax Credit and is activated when QFATCOPT is set to 2.

See QFATCOPT for more details.

QGFTCR Quebec credit rate for gifts over upper limit

DESCRIPTION

This is the rate used to calculate the Quebec tax credit for gifts and charitable donations that exceed QGIFTL1 when QGIFTHCR is equal to 1. For gifts and charitable donations up to QGIFTL1, the Quebec nominal tax credit rate (QNTCR) is used.

See also QGIFTL1, QGIFTOPT, imqchatc and QNTCR.

QGIFTHCR Quebec higher tax credit on large gifts activation flag

DESCRIPTION

When this parameter is set to 1, large gifts are subject to a higher tax credit rate. Beginning in 2000, there are two tax credit rates applied to gifts in Quebec. Allowable gifts up to QGIFTL1 use the QNTCR. The higher credit rate QGFTCR is applied to allowable gifts over QGIFTL1. The total value of the tax credit is imqchatc.

QGIFTL1 Quebec minimum gift limit subject to higher credit rate

DESCRIPTION

When QGIFTHCR is equal to 1, different tax credit rates are used depending on the size of the gift. The Quebec nominal tax credit rate (QNTCR) is used on the amount of gifts and charitable donations up to this limit. The tax credit rate for gifts and charitable donation above this amount will be QGFTCR.

See also QGFTCR, QGIFTOPT, imqchatc and QNTCR.

QGIFTOPT Quebec gifts as tax credit

DESCRIPTION

When this parameter is set to 1, imqchara is calculated as a deduction of net income. Starting in 1993, the parameter is set to 2, and charity and gifts, imqchatc, are now tax credit. When QGIFTFLG is set to zero, before 1998, gifts are not subject to a maximum. Starting in 1998, QGIFTFLG is set to 1 when charity and gifts were subject to the same maximum based on net income.

QHPTCFLG Quebec Housing Parent Tax Credit activation flag

DESCRIPTION

The calculation of the Quebec Home Parent Tax Credit (imqhptc) is activated by the flag QHPTCFLG. The refundable credit started in 1992. The level of refundable credit is based on the duration of parent or grandparent stay in the economic family. The base level of the credit is QHPTC.

QHPTCOPT Quebec Housing Parent Tax Credit Calculation option

DESCRIPTION

This parameter provides users with the option of how to calculate the Quebec Tax Credit with respect to Housing of a Parent (imqhptc). A value of 1 results in applying the maximum value (QHPTC) if the filer had an amount in idcgtc (from Line 315 and Schedule 12 in the General Tax Guide). To use the greenbook value of the Caregiver amount (idcgtc), this parameter must be set to 2. This refundable tax credit is only calculated when the housing parent tax credit is activated (QHPTCFLG = 1). The resulting value of the tax credit is also added to imptc.

QHSC Quebec Health Services Fund Contribution table

DESCRIPTION

This table look-up parameter provides the schedule of payments for the Quebec Health Services Fund Contribution (imqhsfc). The first column of the table gives various levels of the health services fund net income. The second column gives the amount of the required contribution. The table is accessed using the lkup1 function which interpolates the lookup in the second column.

The net income used to lookup an individual's contribution is defined as:

imqitot	Total Income
less	
idiemp	Wages and salaries
idialimo	Alimony Received
idivid * QHSCDIR	QHSCDIR proportion of dividends
imioas * QHSOASFG	Optional exemption of OAS benefits
imoasr * !QHSOASFG	OAS Repayments
imuibr	UI Repayments
iddalimo	Alimony Paid
idcarry	Carrying charges
imqiloss	Allowable investment losses
imqalexp * !QEEXPDED	Allowable employment expenses
imqcppse * QITSFSEW	CPP/QPP contributions on self-employment
imisa * QSPBFLAG	Social Assistance (if included in total income)
imigis * QSPBFLAG	GIS Benefits (if included in total income)
imispa * QSPBFLAG	Spouse's Allowance Benefits (if included in total income)
idworkc * QSPBFLAG	Worker's Compensation Benefits (if included in total income)

Under the simplified tax form system, imuibr is deducted only when QHSSFUIR is set to 1, imqiloss is deducted only when QHSSFLLS is set to 1, idcarry is deducted only when QHSSFCAR is set to 1 and iddalimo is deducted only when QHSSFALM is set to 1.

QHSCI Quebec surtax first cut-in level

DESCRIPTION

This is the level of provincial tax payable (imtxp) above which a surtax at the rate of QHSF applies.

For Quebec, the SPSM calculates provincial surtax (impsur) as QHSF percent of provincial taxes (imtxp) above the level QHSCI plus QHSF2 percent of provincial taxes above the level QHSCI2.

QINTSLTC Quebec student loan interest tax credit flag

DESCRIPTION

The calculation of the Quebec non-refundable interest on student loan tax credit (imqintsl) is activated by the flag QINTSLTC.

Beginning in 1998, the interest paid in the year on certain student loans may be claimed as a tax credit by eligible filers. It is calculated using the Greenbook variable for interest paid on student loans (idintstu).

QITSFSEW Quebec improved tax system for self-employed worker activation flag

DESCRIPTION

When this parameter is set to 1, the improved tax system for self-employed workers is activated. This improved system was announced in the Quebec 2000 Budget to enable the increasing number of self-employed workers to benefit from the simplified tax form. When this parameter is set to 0, the difference between the flat amount provided under the

simplified tax system and the maximum contribution to the CPP/QPP with respect to pensionable self-employed earnings would exclude a number of self-employed workers from the simplified tax system.

This system will standardize the tax treatment applicable to that part of the contribution paid by a worker in respect of pensionable self-employed earnings that could be equated with an employer's contribution, and refrain from excluding a growing number of self-employed workers from the simplified tax system. When activated, it will result in a conversion of QITSSEF of the tax credit granted in respect of amounts payable as contributions on pensionable self-employed earnings to the CPP/QPP into a deduction in the calculation of income. This new deduction will be applied to the calculation of income under the simplified tax system and to the income used to determine the contribution to the Health Services Fund payable by individuals.

QITSSEF Quebec percentage of self-employ CPP/QPP contributions to convert to deduction

DESCRIPTION

When QITSFSEW is activated (equal to 1), this parameter represents the proportion of the tax credit granted in respect of amounts payable as contributions on pensionable self-employed earnings to the CPP/QPP that is to be converted into a deduction in the calculation of income. This new deduction will be applied to the calculation of income under the simplified tax system and to the income used to determine the contribution to the Health Services Fund payable by individuals. This system will standardize the tax treatment applicable to that part of the contribution paid by a worker in respect of pensionable self-employed earnings that could be equated with an employer's contribution, and refrain from excluding a growing number of self-employed workers from the simplified tax system.

QLAXPI Quebec living alone phase-in

DESCRIPTION

This value is used to scale the amount of the reduction which will be applied to the living alone tax credit. It is used in 1996 to simulate the phase-in of the income testing of the living alone credit.

Legislation relating to this parameter was introduced in the 1996 Quebec Budget which proposed that the non-refundable living alone tax credit “be subject to an income test which would target the assistance to low or modest incomes.” Individual living alone with incomes above the threshold of \$26,000 would have the amount of the living alone credit reduced by 15% of income above that threshold. This reduction for higher income seniors was to be phased in over two years, with half the reduction applied in 1996 and the full reduction in 1997 and subsequent years.

DESCRIPTION

This parameter is the proportion of net income above a given threshold (QLAXTD) which will be deducted from the non-refundable living alone tax credit amount (QLAXM).

Legislation relating to this parameter was introduced in the 1996 Quebec Budget which proposed that the non-refundable living alone tax credit “be subject to an income test which would target the assistance to low or modest incomes.” Individual living alone with incomes above the threshold of \$26,000 would have the amount of the living alone credit reduced by 15% of income above that threshold. This reduction for higher income seniors was to be phased in over two years, with half the reduction applied in 1996 and the full reduction in 1997 and subsequent years.

QLAXTD Quebec living alone turn down

DESCRIPTION

Individual living alone will have its non-refundable living alone tax credit reduced if its net income is above the value of this parameter.

Legislation relating to this parameter was introduced in the 1996 Quebec Budget which proposed that the non-refundable living alone tax credit “be subject to an income test which would target the assistance to low or modest incomes.” Individual living alone with incomes above the threshold of \$26,000 would have the amount of the living alone credit reduced by 15% of income above that threshold. This reduction for higher income seniors was to be phased in over two years, with half the reduction applied in 1996 and the full reduction in 1997 and subsequent years.

DESCRIPTION

This parameter defines the income definition to be used in the calculation of Quebec medical expenses (imqmeda) and refundable tax credit for medical expenses (imqmedrc).

When assigned to 1, the income test is based on the net income of the individual and the net income of the spouse, if applicable. When assigned to 2, the income test is based as the total income (imqitot) less idrpp, idrrsp, imrepay (when QREPFAMI is set to 1) and imqcppse (when QITSFSEW is set to 1).

QMEDOPT Quebec Medical Tax Credit option

DESCRIPTION

When this parameter is set to 1, the medical expense tax credit is based on individual net income and subject to the limitation of QMEDALL; when set to 2, starting in 1997, it is subject to the family income with no limitation and is allocated to the spouse with the highest net income.

QMEDRMIN Minimum earnings for Quebec refundable tax credit for medical expenses

DESCRIPTION

If employment earnings are less than this parameter, then a person is eligible to apply for the Quebec refundable tax credit for medical expenses (imqmedrc). Earnings are calculated as employment income (idiemp) plus self-employment income (idisenf + idisefm) minus registered pension plan deduction (idrpp) minus annual union, professional, or like dues (iddues) minus other employment expenses (idalexp).

QMRTCFLG Quebec refundable tax credits for medical expenses activation flag

DESCRIPTION

When QMRTCFLG is assigned to 1, the Quebec refundable tax credit for medical expenses (imqmedrc) is calculated for persons aged 18 and over who had employment related earnings greater than QMEDRMIN. The maximum refundable credit will be the lesser of QMEDRMAX and QMEDRATE percent of eligible medical expenses (imqmeda). It is reduced by QMEDRRR percent of net family income in excess of QMEDRTD.

When QMRTCFLG is assigned to 0, the calculation of the Quebec refundable tax credit for medical expenses is suppressed.

QNBFA Quebec newborn family allowance [parity,age]

DESCRIPTION

The Quebec Newborn Family Allowance program began in 1988. The rows in this parameter correspond to the rank of the child in the family in increasing order. The columns correspond to the age of the child. The value of each cell represents the dollar value of the benefits. The parameter is effective only when QNBFAFLAG is set to 1.

Starting in 1998, the program is replaced by the Quebec Family Allowance Tax Credit which is activated when QFATCOPT is set to 2. The Newborn Allowance gradually phases out for those who were already in the program.

For more details see QFATCOPT.

QNBFAFLAG Quebec newborn family allowance flag

DESCRIPTION

When QNBFAFLAG is set to one the Quebec Newborn allowance is implemented. The benefits are set according to the rank of the newborn in the family, at the birth time. Observed rank can be different from the allocation rank, the opportunity of increasing the rank is set with the flag QNBRFLAG.

Starting in 1998, the program is replaced by the Quebec Family Allowance Tax Credit which is activated when QFATCOPT is set to 2. The Newborn Allowance gradually phases out for those who were already in the program.

For more details see QFATCOPT.

QNBPOFLAG Quebec newborn family allowance phase out flag

DESCRIPTION

This parameter activates the phase out of the Quebec Newborn Family Allowance. Children born after 30 September 1997 are not eligible to receive the allowance for newborn children. As a result, this program will progressively disappear until the year 2002. Any child whose age is equal to the difference between TARGETYEAR and QNBPOYR, and whose month of birth is greater than September, which is determined by comparing a random number to QNBPOPYR, would not be eligible for the newborn allowance.

See also QNBFAFLAG.

QNBPOPYR Quebec newborn family allowance phase-out year proportion

DESCRIPTION

This parameter represents the proportion of the phase out year of the Quebec Newborn Family Allowance where children would still be eligible for the allowance. Children born after 30 September 1997 are not eligible to receive the allowance for newborn children. The phase out is activated by QNBPOFLAG. Any child whose age is equal to the difference between TARGETYEAR and QNBPOYR, and whose month of birth is greater than September (if a random number is greater than this parameter), would not be eligible for the newborn allowance.

See also QNBFAFLAG.

DESCRIPTION

When QNBFLAG is set to one then rank of children in a family of age 1 and 2 is randomly increase to reflect the rank structure observed by the Régie des rentes du Québec. When the rank is increase, rank of older children is also increased.

Starting in 1998, the program is replaced by the Quebec Family Allowance Tax Credit which is activated when QFATCOPT is set to 2. The Newborn Allowance gradually phases out for those who were already in the program.

For more details see QFATCOPT.

QNFSDED Quebec deduction of net federal supplements (SPA and GIS) from net income flag

DESCRIPTION

This parameter denotes the application of net federal supplements (guaranteed income supplements (imigis) and spousal allowances (imispa)) in the calculation of taxable income for Quebec provincial taxes. When this parameter is assigned to 1, the net federal supplements are added to the total deductions from net income (imqdedfn). Under the simplified tax system, when this parameter is assigned to 1, the net federal supplements are deducted from net income in the calculation of taxable income. When this parameter is 0, the net federal supplements are not deducted from net income (imqinet). This represents a change to the Quebec Income Tax forms in 1994.

QNORFAMI Quebec Northern Deductions from Family Tax Credit Income flag

DESCRIPTION

When this parameter is set to 1 then Northern deductions (idnorth) will be deducted from the family net income used to determine family related tax credits such as the tax reduction for families, the real estate tax refund and the refundable Quebec sales tax credit.

QNORTHDED Quebec northern deductions - 0=for taxable income, 1=for net income

DESCRIPTION

This parameter determines where the deduction for residents of designated remote areas (idnorth) is to be applied. When set to 0, this deduction is added to imqdedfn, the deductions used in the calculation of taxable income. Beginning in 2003, this parameter is set to 1, and this deduction is added to imqdedft, deductions used to calculate net income.

QODISTC Quebec infirm dependent amount (18 and over)

DESCRIPTION

This parameter is the amount which can be claimed for the Quebec non-refundable tax credit for infirm dependents aged 18 and over if the filer has already claimed an amount for disabled dependents (idothpe). Note that the model assumes that there is only one disabled dependent. The calculated credit is added to imqdtc.

QPCOPT Quebec political contribution option

DESCRIPTION

When set to 1, the calculation of the political contribution credit is based on a single rate, QPTC. When set to 2, the credit varies with the level of political contribution, QPCTR.

Note that the database variable idprvpol is currently always zero in Quebec. This is due to the fact that it is imputed from the Greenbook which does not contain Quebec provincial data. These parameters will therefore have no effect unless users overwrite the variable using the database reference facility.

DESCRIPTION

When this parameter is set to 1, the repayment to federal social programs (imrepay) is applied as a deduction from total income in the calculation of net income under the simplified tax system (when QSFDED is set to 0). It is also applied to the calculation of eligible family income for certain tax credits.

QRNCGFLG Quebec Natural Caregivers Tax Credit activation flag

DESCRIPTION

The calculation of the Quebec Refundable Natural Caregivers Tax Credit (imqncgtc) is activated by the flag QRNCGFLG. The refundable credit started in 2006. The credit is granted to individuals who are also eligible for the federal caregivers tax credit and it is assumed that only one person is cared for by each filer with the federal amount. The maximum level of the credit is QRNCGTC. This new refundable credit will replace the refundable tax credit for housing a parent (QHPTC) and the transfer of the unused portion of the non-refundable tax credit respecting a severe and prolonged mental or physical impairment. The value of the credit is added to imptc, refundable provincial tax credits.

QTRFLAG Quebec real estate rebate activation flag

DESCRIPTION

In calculating total tax credits for Quebec Provincial Income Tax, this parameter controls whether or not the Quebec Real Estate Rebate is included in the Provincial Tax Credit (imptc). If set to a value of 1, the Quebec Real Estate Rebate is included, if set to 0, it is not.

QSADED Quebec deduction of social assistance benefits from net income flag

DESCRIPTION

This parameter denotes the application of social assistance benefits (imisa) in the calculation of taxable income for Quebec provincial taxes. When this parameter is assigned to 1, the social assistance benefits are added to the total deductions from net income (imqdedfn). Under the simplified tax system, when this parameter is assigned to 1, the social assistance benefits are deducted from net income in the calculation of taxable income. When this parameter is 0, the social assistance benefits are not deducted from net income (imqinet). This represents a change to the Quebec Income Tax forms in 1994 and 1998.

QSFDED Quebec Simplified Form - additional deductions for net income calculation flag

DESCRIPTION

Beginning in 2003, the Quebec provincial income tax system will standardize net income calculated under the simplified system with that calculated under the general tax system. When this parameter is set to 0, net income determined under the general system will allow a number of additional deductions, while the net income calculated under the simplified tax system will only include certain deductions, the remaining deductions being replaced by a

flat amount as part of non-refundable credits. Setting this parameter to 1 provides the same deductions to be applied in both the general and simplified tax systems in the calculation of net income. The standardization of net income represents an improvement in the concept of family income used for tax credits and transfer programs.

QSFDISFLAG Quebec Simplified Form Disability tax credit inclusion flag

DESCRIPTION

When this flag is turned on, people filling out the simplified tax form (imqsfflg = 1) can claim the amount for severe and prolonged mental or physical impairment (imqdistc).

See QSFOPT for more information on the simplified tax form.

QSFMEDFLAG Quebec Simplified Form medical expense tax credit inclusion flag

DESCRIPTION

This parameter determines whether or not the non-refundable tax credit for medical expenses can be used in the simplified tax form. Setting this parameter to 0 does not include the medical tax credit in the calculation of non-refundable tax credits under the simplified tax system. Setting this parameter to 1 allows the calculated amount for the medical expenses tax credit ($imqmeda * QNTCR$) to be applied in the simplified tax system, by adding it to the total non-refundable tax credit amount, $imqtottc$.

QSFOPT Quebec Simplified Form Option (1=general 2=simplified 3=optimized)

DESCRIPTION

This parameter controls whether or not the simplified tax form is used in Quebec. The simplified tax program, which includes a flat tax credit, started in 1998. People were allowed to decide whether it was in their benefit to fill out the simplified or general tax form. A worksheet was provided in order to facilitate the choice.

The SPSM has implemented this tax system in the following way. When QSFOPT is set to 1, everyone in Quebec fills out the general tax form. This is the system which was in place prior to 1998. If QSFOPT is set to 2, then everyone fills in the simplified tax form. And when QSFOPT is set to 3, then an optimization procedure is run. In this scenario, an approximation of the worksheet which was provided with the 1998 tax form is calculated prior to the computation of taxes. People are assigned to either the general tax form (which includes all deductions) or the simplified tax form (which includes few deduction but an additional credit - QSFTC). The variable imqsfllg notes which form was chosen.

A person can transfer all of their extra credits and deductions to their spouse when both spouses fill out the simplified tax form. When using the general form, only a limited number of deductions can be transferred. Because the worksheet does not take into account all the inter-spouse complexities, the optimization procedure will tend to overstate taxes. While it is very accurate for single persons, it tends to maximize the individual's gain which is not necessarily the couple's gain. The model may therefore slightly overstate Quebec taxes.

QSFSMXI Quebec simplified form spouse maximum income for work sheet

DESCRIPTION

This amount is used in the work sheet to determine which tax form in Quebec can be used (simplified or general) when QSFOPT = 3. When the spouse's income is less than this amount, the spouse's QSFTC can be included in the work sheet.

See QSFOPT for more information on the simplified tax form.

QSFTC Quebec Simplified Form tax credit

DESCRIPTION

This is the value of the flat amount which people who filled the Simplified Tax System were allowed to add to their Basic Amount (QBXM). Only people who file a simplified tax form (imqsflg = 1) get this amount. In a previous version of the model, it was entitled the low income credit.

See QSFOPT for more information on the simplified tax form.

QSFTXCR Quebec Simplified Form - transfer unused credits to spouse under either tax system

DESCRIPTION

Beginning in 2003, to ensure that the tax credits are used in full, the mechanism used to transfer non-refundable tax credits between spouses will be extended to all taxpayers,

regardless of whether they file under the general or the simplified tax system. This is accomplished by setting the parameter QSFTXCR to 1, which will allow spouses to transfer the remaining non-refundable tax credits that they do not need. When this parameter is set to 0, spouses can transfer certain non-refundable tax credits as long as they both use the same tax system.

DESCRIPTION

This parameter denotes the application social program benefits, namely social assistance benefits (imisa), worker's compensation (idiworkc) and net federal supplements (guaranteed income supplements (imigis) and spousal allowances (imispa)), in the calculation of net income (imqinet) for Quebec provincial taxes. When this parameter is assigned to 1, social assistance benefits, worker's compensation and net federal supplements are added to total income (imqitot). When this parameter is 0, social assistance benefits, worker's compensation and net federal supplements are not added to total income. This represents a change to the Quebec Income Tax forms in 1994.

QSTRBCRD Quebec sales tax rebate base credit

DESCRIPTION

This amount is the base credit used to calculate the Quebec sales tax refund (imqstr) for Quebec Provincial Income Tax. The credit is base on family income (QSTROPT = 2) except for the first year of implementation where it is base on imigis (QSTROPT= 1). The calculation of the Sales Tax Rebate is activated with QSTRFLAG. A credit (QSTRCHILD) is added for each child in the family. A second credit is added (QSTRFTP3) when no spouse is present and at least one dependent child is present, and finally another credit is added (QSTRFTP4) is for a person living alone or with at least one dependent. The credit is reduced by the income considered at a rate QSTRRR.

QSTREXT Quebec sales tax rebate extra amount

DESCRIPTION

The amount QSTREXT is the extra amount of sales tax credit. It is added to families who receive non-zero imqstr or who would have received some had they not received social assistance. There is no reduction rate applied to this extra amount.

QSTSCA Quebec Single Tax System Complementary Amount

DESCRIPTION

This is the value of the complimentary amount which people who filled the Single Tax System were allowed to add to their total tax credits. This amount will be multiplied by the Non-Refundable Tax Credit Rate (QNTCR) before being added to imqtotc. The complimentary amount replaces the tax credits for contributions to QPP, EI and the Health Services Fund. In cases where the total contributions to the QPP, EI and the Health Services

Fund exceed this complimentary amount, taxpayers may claim the full value of their contributions. The Single Tax System was introduced for 2005 and replaces the former General and Simplified Tax Systems. Under the Single Tax System, QSFOPT is set to 1.

QTROPT Quebec Tax Reduction calculation option 1=universal 2=income tested

DESCRIPTION

When this parameter has a value of 1 the Quebec provincial tax reduction (imptr) will be calculated as a flat rate (QTRP) proportion of provincial tax payable (imtxp).

With a value of 2, the Quebec income tested provincial tax reduction (imqitr) will be calculated. The amount of this reduction varies with basic provincial tax payable (imbpt) phasing out to zero at the QTRBE level of basic tax payable. The maximum tax reduction possible can be calculated by multiplying QTRBE times QTRP.

DESCRIPTION

This table represents the Taxable Income/Tax Rate tax curve for Quebec. The first column represents a level of taxable income defining the lower limit of a range. The second column is the amount of Basic Provincial Tax payable at the corresponding taxable income. The third column represents the marginal tax rate for the income range. Only the first and third columns of this table need be specified in the parameter file.

DESCRIPTION

This parameter represents the credit rates used to calculate the maximum value for the Quebec Work Premium, based on family type. For the purposes of this program the family type used in order in these parameters are: person living alone, couple without children, single parent family and couple with children.

The value of the work premium is phased in by the credit rate QWPCR[family type] for employment income in excess of QWPEIPI[family type] until it reaches the maximum value QWPMAX[family type]. The amount of the work premium may then be reduced based on family income in excess of the income turndown QWPTD[family type] by the reduction rate QWPRR.

QWPEIPI Quebec Work Premium Employment Income Phase In [family type]

DESCRIPTION

This parameter represents the vector by family type of the phase in credit rates used in the calculation of the Quebec Work Premium refundable tax credit. The work premium is based on family type, the order for this vector: person living alone, couple without children, single parent family and couple with children.

The value of the work premium is phased in by the credit rate QWPCR[family type] for employment income in excess of QWPEIPI[family type] until it reaches the maximum value QWPMAX[family type]. The amount of the work premium may then be reduced based on family income in excess of the income turndown QWPTD[family type] by the reduction rate QWPRR.

QWPFLAG Quebec Work Premium refundable tax credit flag

DESCRIPTION

This flag activates the Quebec Work Premium when set to 1. The Work Premium, announced in the 2004 Quebec Budget, is designed to encourage low- and middle-income workers to enter, re-enter or stay in the labour market. Beginning in 2005, eligible individuals/families will receive a work premium in the form of a non-taxable refundable tax credit.

The parameters associated with the Work Premium (QWPCR, QWPEIPI, QWPMAX and QWPTD) are based on family types. For the purposes of this program the family type used in order in these parameters are: person living alone, couple without children, single parent family and couple with children.

The value of the work premium is phased in by the credit rate QWPCR[family type] for employment income in excess of QWPEIPI[family type] until it reaches the maximum value QWPMAX[family type]. The amount of the work premium may then be reduced based on family income in excess of the income turndown QWPTD[family type] by the reduction rate QWPRR.

The calculated amount of the Work Premium is held in imqwrkpr, which is added to the amount of refundable tax credits, imptc. In the event that both spouses have employment income, the spouse with the higher net income is assigned the credit.

QWPMAX Quebec Work Premium Maximum [family type]

DESCRIPTION

This parameter represents the maximum value for the Quebec Work Premium, based on family type. For the purposes of this program the family type used in order in these parameters are: person living alone, couple without children, single parent family and couple with children.

The value of the work premium is phased in by the credit rate QWPCR[family type] for employment income in excess of QWPEIPI[family type] until it reaches the maximum value QWPMAX[family type]. The amount of the work premium may then be reduced based on family income in excess of the income turndown QWPTD[family type] by the reduction rate QWPRR.

QWPRR Quebec Work Premium Reduction Rate

DESCRIPTION

This parameter represents the reduction rate used to calculate the Quebec Work Premium when family income exceeds the income thresholds which are based on family type (QWPTD). This reduction rate is used for all family types.

The value of the work premium is phased in by the credit rate QWPCR[family type] for employment income in excess of QWPEIPI[family type] until it reaches the maximum value QWPMAX[family type]. The amount of the work premium may then be reduced based on family income in excess of the income turndown QWPTD[family type] by the reduction rate QWPRR.

ba09.mpr:	0.10000	0.0%	Grown from ba08.mpr using NONE=1.0000

DESCRIPTION

This parameter represents the income turndown amounts for the Quebec Work Premium, based on family type. For the purposes of this program the family type used in order in these parameters are: person living alone, couple without children, single parent family and couple with children.

The value of the work premium is phased in by the credit rate QWPCR[family type] for employment income in excess of QWPEIPI[family type] until it reaches the maximum value QWPMAX[family type]. The amount of the work premium may then be reduced based on family income in excess of the income turndown QWPTD[family type] by the reduction rate QWPRR.

QYPPI Quebec deduction phase-in for pension income

DESCRIPTION

This value is used to scale the amount of the reduction which will be applied to the pension income tax credit. It is used in 1996 to simulate the phase-in of the income testing of the pension income credit.

Legislation relating to this parameter was introduced in the 1996 Quebec Budget. Individual seniors with pension incomes (idipens) above the threshold (QYPTD) of \$26,000 would have the amount of the maximum pension income credit (QYPDL) reduced (QYPRR) by 15% of income above that threshold. This reduction for higher income pensions was to be phased in over two years, with half the reduction applied in 1996 and the full reduction in 1997 and subsequent years.

See also imqritc, QYPRR, QYPDL, QYPTD.

QYPRR

Quebec deduction reduction rate for pension income

DESCRIPTION

This parameter is the proportion of net pension income above a given threshold (QYPTD) which will be deducted from the non-refundable pension income tax credit amount (QYPDL).

Legislation relating to this parameter was introduced in the 1996 Quebec Budget. Individual seniors with pension incomes (idipens) above the threshold (QYPTD) of \$26,000 would have the amount of the maximum pension income credit (QYPDL) reduced (QYPRR) by 15% of income above that threshold. This reduction for higher income pensions was to be phased in over two years, with half the reduction applied in 1996 and the full reduction in 1997 and subsequent years.

See also imqritc, QYPTD, QYPPI.

QYPTD Quebec deduction turn down for pension income

DESCRIPTION

Individual seniors will have their non-refundable pension income tax credit reduced if their net pension income is above the value of this parameter.

Legislation relating to this parameter was introduced in the 1996 Quebec Budget. Individual seniors with pension incomes (idipens) above the threshold (QYPTD) of \$26,000 would have the amount of the maximum pension income credit (QYPDL) reduced (QYPRR) by 15% of income above that threshold. This reduction for higher income pensions was to be phased in over two years, with half the reduction applied in 1996 and the full reduction in 1997 and subsequent years.

See also imqritc, QYPRR, QYPPI.

REFFLAG Read reference results file

DESCRIPTION

This parameter invokes the reference variable facility. When this parameter is set to 1, the model will read a series of variables (REFVARS) from an SPSM results file (INPREF). Please see the *User's Guide* for details on the results file facility.

REFVARS Reference results file variables [string]

DESCRIPTION

The REFVARS parameter lists the names of the variables that the user wishes to read from the results file, and can optionally be used to re-name these variables as well. Please see the *User's Guide* for details on the results file facility.

REPNETFLAG Social program repayments reduce net income flag

ROUNDFLAG Round disposable and consumable income

DESCRIPTION

ROUNDFLAG is normally activated, so that consumable and disposable income are rounded to the nearest dollar before being used for reporting or output purposes. Because SPSM results files always contain rounded data, this action ensures that base/variant comparisons that use disposable or consumable income will be identical whether BASMETH is 1 (read results file) or 2 (create base variables through simulation). When ROUNDFLAG is set to 0, this action is turned off. This action is useful in conjunction with the turning point facility, because otherwise the rounding of consumable income produces a large number of spurious turning points in the household tax function.

RRSPEINC Increment to rrsp if conditions & rpp>0

DESCRIPTION

This parameter, defined in the database adjustment parameter file, is one of a group of parameters which allow the user to modify (generally increase) base year database values for RRSP contributions. RRSPEINC will be added to the RRSP contributions of all persons covered by a registered pension plan whose current RRSP contributions fall between RRSPEMIN and RRSPEMAX.

RRSPEMAX Maximum (rpp+rrsp) for increment if rpp>0

DESCRIPTION

This parameter, defined in the database adjustment parameter file, is one of a group of parameters which allow the user to modify (generally increase) base year database values for RRSP contributions. Please see the description of RRSPEINC.

RRSPEMIN Minimum (rpp+rrsp) for increment if rpp>0

DESCRIPTION

This parameter, defined in the database adjustment parameter file, is one of a group of parameters which allow the user to modify (generally increase) base year database values for RRSP contributions. Please see the description of RRSPEINC.

RRSPIFLAG RRSP increment activation flag

DESCRIPTION

This parameter, defined in the database adjustment parameter file, activates a group of parameters which allow the user to modify (generally increase) base year database values for RRSP contributions. Please see the description of RRSPEINC and RRSPSINC.

RRSPSINC Increment to rrsp if conditions & rpp=0

DESCRIPTION

This parameter, defined in the database adjustment parameter file, is one of a group of parameters which allow the user to modify (generally increase) base year database values for RRSP contributions. RRSPSINC will be added to the RRSP contributions of all persons not covered by a registered pension plan whose current RRSP contributions fall between RRSPSMIN and RRSPSMAX.

RRSPSMAX Maximum (rrsp) for increment if rpp=0

DESCRIPTION

This parameter, defined in the database adjustment parameter file, is one of a group of parameters which allow the user to modify (generally increase) base year database values for RRSP contributions. Please see the description of RRSPSINC.

RRSPSMIN Minimum (rrsp) for increment if rpp=0

DESCRIPTION

This parameter, defined in the database adjustment parameter file, is one of a group of parameters which allow the user to modify (generally increase) base year database values for RRSP contributions. Please see the description of RRSPSINC.

SAELDOPT SA for elderly calculation method [1=~SA,2=GIST->~SA,3=diff]

DESCRIPTION

When the value of SAFLAG is set to 1, this parameter determines the way in which Social Assistance Payments (imisa) will be calculated for the elderly. There are three valid values for SAELDOPT:

1. Social Assistance is set to zero for all persons over age 65
2. Social Assistance (imisa) is set to zero for individuals age 65 and over receiving simulated GIS Supplementation Benefits (imigist), otherwise it is set equal to Reported Social Assistance (idisa).
3. Social Assistance is set equal to the positive difference between reported social assistance and simulated GIS supplements

$imisa = idisa - imigist$

SAFLAG

Social assistance flag

DESCRIPTION

When SAFLAG is set to 1, social assistance is calculated, otherwise Modelled Social Assistance (imisa) is set to zero. See also SAELDOPT and the samod function description.

SAFS Federal share of social assistance [prov]

DESCRIPTION

In version 5.0 and earlier, this parameter was a single proportion used to determine the proportional splitting of Social Assistance payments between federal and provincial governments. It is now implemented as a vector of ten individual provincial proportions to correctly account for the modified limits to the growth of CAP payments by the federal government.

This vector parameter is used to determine the proportional splitting of Social Assistance payments between individual provinces and the federal government. This splitting is performed inside the samod function and corresponds to the federal/provincial cost sharing agreements in the Canada Assistance Plan. The value of SAFS is the proportion of reported social assistance which is paid by provincial governments.

SAMPLE Size of sample obtained

DESCRIPTION

This parameter reports the proportion of sample used for processing. Valid values range from 0 to 1. Should the user interrupt a model run in progress the correct sampling ratio will be calculated and output in the control parameter (.cpr) file.

SAMPLEREQ Size of sample requested

DESCRIPTION

This control parameter allows the user to indicate the size of the sample requested for processing. The size of the sample actually obtained will be recorded in SAMPLE, and may differ from SAMPLE for a number of reasons among which are:

- The input database file given by INPSPD had fewer records than required to generate the requested sample.
- The input results file given by INPBASMRS had fewer records than required because it was generated with a sample smaller than SAMPLEREQ.
- An SPSM execution always occurs with an integral number of households, therefore the resulting sample may deviate slightly from that requested.

SAMTOPT Sask. alternative minimum tax option (1=none, 2=% fed, 3=fed adj inc, 4=% min amt)

DESCRIPTION

When Saskatchewan tax on taxable income is calculated (STXFLG = 1), there are four options as to how to calculate the provincial minimum tax.

When SAMTOPT is set to 1, then no provincial alternative minimum tax or minimum tax carryover is calculated.

When SAMTOPT is set to 2, then a percentage (SAMTPCTF) of the additional federal tax triggered by the federal minimum tax (imamtrv) is added to the basic provincial tax (imbpt). The definition of imamtrv is determined by the provincial vector AMTPRVDF. The provincial minimum tax carryover credit (impminco) is calculated using SAMTPCTF.

When SAMTOPT is set to 3, the income used in the provincial tax calculation is replaced by the net income used for alternative tax purposes (imamtinc) for people who triggered the federal minimum tax. Then the SAMTTX rate, usually set to the smallest non-zero tax rate, is applied in order to get the provincial tax before the non-refundable tax credits. The provincial minimum tax carryover credit (impminco) is calculated using SAMTTX.

When SAMTOPT is set to 4, then a percentage (SAMTPCTM) of the minimum tax triggered by the federal minimum tax calculations represents the basic provincial tax (imbpt). Provincial surtaxes are then calculated using this amount. The provincial minimum tax carryover credit (impminco) is calculated using SAMTPCTM.

SAMTPCTM Sask. amt rate as pct of federal minimum tax amount

DESCRIPTION

When Saskatchewan tax on taxable income is calculated (STXFLG=1) and SAMTOPT is set to 4, then a percentage (SAMTPCTM) of the minimum federal tax due to the minimum tax is used as basic provincial tax (imbpt). This calculated value is used in the determination of the provincial surtax.

SAPFLAG Social assistance predicted value flag

DESCRIPTION

When SAPFLAG is set to 1, predicted values of social assistance are used. Predicted values are equal to idisa when SATARGET is set to 0.5. Users can increase or decrease the number of families receiving SA by increasing or decreasing SATARGET.

Interval between 0.5 and 0.95 allows for a maximum increase of 3% in the number of families receiving SA. Interval between 0.05 and 0.5 allows for a maximum decrease of 3% in the number of families receiving SA. Individuals are selected and get idsapred when idsarank/1000 is lower than SATARGET.

See idsapred, idsarank.

SASFLAG SAS output facility activation flag

DESCRIPTION

This control parameter is used to activate the SAS native file output facility. A self-documenting file with name OUTSAS in SAS Version 6.03 format is produced containing variables given by SASVARS rolled up to the level specified by SASUNIT. To produce a SAS data file in the user's SAS version, a PROC COPY into an empty directory should do it. Please see the *User's Guide* for more information.

SASTITLE SAS file label [string]

DESCRIPTION

This control parameter, when activated by SASFLAG, gives the internal label which will be written into the header of the native SAS file given by OUTSAS. This label is used by the SAS system by certain procedures, in particular PROC CONTENTS.

SASUNIT SAS output family level

DESCRIPTION

When the SAS file output facility is activated using the SASFLAG parameter, this control parameter is used to specify the family level of analysis of the resulting file. Each record on the output file will correspond to an entity given by SASUNIT. Valid values and their meanings are given below.

0	Individual
---	------------

1	Nuclear Family
2	Census Family
3	Economic Family
4	Household

The default value of SASUNIT is 0.

SASVARS Variables selected for SAS output [string]

DESCRIPTION

This control parameter, when activated by SASFLAG, gives a list of all variables to be written to each record of the resulting SAS native file. Any SPSD/M variable, including base and variant values, may be included.

SATARGET Social assistance target for predicted SA

DESCRIPTION

When SAPFLAG is set to 1, predicted values of social assistance are used. Predicted values are equal to idisa when SATARGET is set to 0.5. Users can increase or decrease the number of families receiving SA by increasing or decreasing SATARGET.

Interval between 0.5 and 0.95 allows for a maximum increase of 75% in the number of families receiving SA. Interval between 0.05 and 0.5 allows for a maximum decrease of 75% in the number of families receiving SA. Individuals are selected and get idsapred when idsarank/1000 is lower than SATARGET. Maximum variation may vary by province.

See SAPFLAG, idsapred, idsarank.

For more information on how to change the number of SA recipients, see the [User's Guide](#) under Miscellaneous Facilities.

SAXPI Sask. Age Amount phase in rate for 1994 and beyond

DESCRIPTION

This value is used to scale the amount of the reduction which will be applied to the provincial age tax credit. The parameter is only used when the Saskatchewan provincial tax on taxable income is calculated (STXFLG = 1).

See also `impatxc`, `SAXM`, `SAXRR`, and `SAXTD`.

SAXRR Sask. Age Amount credit reduction rate

DESCRIPTION

This parameter is the proportion of net income above a given threshold (SAXTD) which will be deducted from the provincial non-refundable age tax credit amount (SAXM). The parameter is only used when the Saskatchewan provincial tax on taxable income is calculated (STXFLG = 1).

See also impatxc, SAXTD, SAXPI.

SCBRR1 Sask Child Benefit 1st reduction rate [number of kids]

DESCRIPTION

The Saskatchewan Child Benefit is reduced in two stages. Net family income greater than SCBTD1 and less than SCBTD2 is reduced at a rate of SCBRR1. This is a vector parameter which depends on the number of children. The benefit is further reduced at a rate of SCBRR2 for income over SCBTD2.

SCGTCFLG Sask. Caregiver Tax Credit activation flag

DESCRIPTION

The calculation of the Saskatchewan Caregiver Tax Credit (impcgtc) is activated by the flag SCGTCFLG.

The Caregiver Tax Credit (impcgtc) provides additional tax assistance to individuals who provide in-home care for relatives. Eligible recipients include individuals residing with and providing in-home care for a parent or grandparent over 65 years of age, or for an infirm dependent relative.

The parameter SCGTCOPT provides users with the option to use the greenbook value of the Caregiver amount (idcgtc from Line 315 and Schedule 12 in the General Tax Guide) or to give the maximum (SCGTC) if idcgtc is greater than 0.

This non-refundable tax credit is only calculated when the provincial tax on taxable income is calculated (STXFLG = 1).

SCGTCOPT Sask. Caregiver Tax Credit Option (1=max, 2=greenbook)

DESCRIPTION

This parameter provides users with the option of how to calculate the provincial Caregivers Tax Credit (impcgtc). A value of 1 results in applying the maximum value (SCGTC) if the filer had an amount in idcgtc (from Line 315 and Schedule 12 in the General Tax Guide). To use the greenbook value of the Caregiver amount (idcgtc), this parameter must be set to 2. This non-refundable tax credit is only calculated when the provincial tax on taxable income is calculated (STXFLG = 1) and the provincial caregivers tax credit is activated (SCGTCFLG = 1).

SEED Random number generator seeds

DESCRIPTION

This vector control parameter is used to start the streams of pseudo-random numbers used in the model. Up to 20 independent random numbers are generated for each individual and are stored in the variables idrand0 through idrand19. A different sequence of numbers for each activated stream can be generated by changing SEED. The number of streams activated is determined by the number of elements in SEED. Random numbers are be used to apply social program or demographic take-up rates.

Users should normally avoid reducing the number of random number streams since by default the SPSM uses that number of streams when modeling the tax and transfer system. The default value of SEED can be found in the control parameter file (e.g. c:/spsd/ba04.cpr).

SELFLAG Selection facility activation flag

DESCRIPTION

The SELFLAG control parameter is used to activate the SPSM selection facility. When SELFLAG is set to 1, the expression in SELSPEC is evaluated for each individual and the result (if true) is propagated to families at the SELUNIT level of analysis. Only individuals (or families) marked as selected will be included in any generated files or reports.

SELMAX Selection facility maximum # of households

DESCRIPTION

SELMAX has been added as an enhancement to the SPSM selection facility. If SELMAX is left at its default value of 0, the selection facility operates as described in the *User's Guide*. If it is set to a positive integer, SPSM will stop reading the database as soon as SELMAX households have been read. This is useful if the user wished to select just one or a few households for detailed analysis, for example with the turning point facility, or using the detailed reporting capabilities of the text file output facility.

SELSPEC Selection specification [string]

DESCRIPTION

This control parameter, when activated by SELFLAG, is used to specify whether an individual is to be marked as selected or not for the purposes of output and reporting. The expression is evaluated for each individual and is considered true if the result is non-zero. Any SPSD/M variables, including base and variant tax/transfer variables, may be used in SELSPEC. Please see the *User's Guide* for more information.

SELUNIT Selection facility family level

DESCRIPTION

This control parameter, when activated by SELFLAG, is used to specify the level to which individual selection (computed by applying the expression in SELSPEC) is to be propagated. If SELUNIT is 0, selection remains at the level of individual. If SELUNIT is 1, 2, 3, or 4, then selection of any individual in the family unit implies selection of all members in the unit. Valid values of SELUNIT and their meanings are given below.

0. Individual
1. Nuclear Family
2. Census Family
3. Economic Family
4. Household

The default value of SELUNIT is 0.

DESCRIPTION

This parameter represents the equivalent to married tax credit when Saskatchewan tax is calculated as a tax on taxable income. It is only calculated when STXFLG is set to 1.

SEMXMT Sask. equivalent to married turndown level

DESCRIPTION

This parameter represents the provincial equivalent to married exemption turndown when Saskatchewan tax is calculated as a tax on taxable income. It is only used when STXFLG is set to 1. The reduction is calculated as the dependant's net income less the turndown SEMXMT.

SHEATFLG Saskatchewan Home Heating Assistance Rebate activation flag

DESCRIPTION

When SHEATFLG is turned on, persons will receive a direct cash rebate (impheatr) from the Saskatchewan government for assistance with heating expenses. In order to receive it, a person has to have received a GST credit (imfstc). Qualifying persons who live with a spouse or children receive SHEATFAM and others receive SHEATSNG.

SLVCMAX Maximum Sask. labour-sponsored funds tax credit allowed

DESCRIPTION

This is the maximum value for the Saskatchewan labour sponsored funds tax credit (implvctc). The credit is derived as a proportion SLVCRT of the cost of the funds bought (idlabtvg) up to a maximum value SLVCMAX.

In some years, there is a difference in rates between provincially registered funds and federally registered funds. The model assumes that all funds are federally registered.

SMEDALL Sask. Medical allowance maximum lower limit

DESCRIPTION

Saskatchewan allowable medical expenses are calculated as actual expenses (idmedgro) less either SMEDANF percent of net income, or SMEDALL, whichever is less. The calculated allowable expense is saved in impmeda. The provincial non-refundable medical expense tax credit (impmedtc) represents impmeda multiplied by SPNTCR. It is only calculated when STXFLG is set to 1.

SODISTC Sask. Maximum infirm dependent 18 or older tax credit

DESCRIPTION

This parameter is the amount which can be claimed for the Saskatchewan non-refundable tax credit for infirm dependents aged 18 and over if the filer has already claimed an amount for disabled dependents (idothpe). Note that the model assumes that there is only one disabled dependent. The parameter is only used when a provincial tax on taxable income is calculated (STXFLG = 1).

SPAXO Benefit Cross-over GIS/SPA vs GIS one pensioner couple

DESCRIPTION

SPAXO represents the level of family income at which the dollar benefits for GIS to a single pensioner married to a non-pensioner spouse exactly equal the combined GIS/SPA dollar benefits payable to a GIS/SPA married couple. The figure is calculated as a fixed relationship to other input parameters as follows. This is a derived parameter calculated in mpc.c.

$$\text{SPAXO} = 2 * \text{MP.GISBE2} - \text{MP.GISBE1};$$

SPNTCR Sask. provincial non-refundable tax credit rate

DESCRIPTION

This single parameter sets the tax credit rate for all of the non-refundable tax credits in Saskatchewan. Each tax credit is calculated separately and summed for a total credit. The parameter is only used when a provincial tax on taxable income is calculated (STXFLG = 1).

CROSS REFERENCE

SPTC Saskatchewan political contribution table [total donations,donation allowed]

DESCRIPTION

This table contains the figures necessary to calculate the Saskatchewan Political Contribution Tax Credit. The first column represents the dollar amount of total Saskatchewan political contributions to which the corresponding percentages of the third column are applied to calculate the total Allowable Saskatchewan Political Contribution Tax Credit. Only the first and third columns of the table need to be specified.

Note that the database variable (idprvpol) required for this program is zero for Saskatchewan until the 2001 database is implemented.

SPTX Sask. tax table [taxable income,basic provincial tax]

DESCRIPTION

This table represents the Saskatchewan tax curve used when calculating the tax on taxable income (STXFLG = 1). The first column represents Taxable Income, the second represents the amount of Basic Provincial Tax payable at that level of taxable income, the third column represents the marginal tax rate for the interval between this and the next value in the table.

Only the first and third columns of the tax table need be specified. The second column is computed by the standard algorithm.

SSTC1KIDTD Sask. sales tax credit child amount turndown if only 1 child

DESCRIPTION

This represents the income level at which the child component of the Saskatchewan Sales Tax Credit is to be reduced at the rate of SSTCRR for families with one qualifying child.

The Saskatchewan Sales Tax Credit (imsstc) was introduced in 2000 to offset the effect of sales taxes on lower income earners. The Saskatchewan Sales Tax Credit will consist of an adult component and a child component. This credit will be fully refundable. The program is activated when SSTCFLAG is set to 1.

See also SSTCBAS, SSTCSP, SSTCKID.

SSTCBAS Sask. sales tax credit base amount

DESCRIPTION

This parameter represents the maximum amount for the adult component of the Saskatchewan Sales Tax Credit (imsstc). The adult component of the Saskatchewan Sales Tax Credit will rise at a rate of SSTCBASPIR of individual net income up to this maximum. It will be reduced at a rate of SSTCRR as family net income increases above SSTCBASTD.

SSTCBASPIR Sask. sales tax credit base amount phase in rate

DESCRIPTION

This parameter represents the income phase in rate for the Saskatchewan Sales Tax Credit base amount for the adult component. The adult component will rise at this rate of individual

net income up to a maximum (SSTCBAS). The Saskatchewan Sales Tax Credit is activated when SSTCFLAG is set to 1.

The Saskatchewan Sales Tax Credit (imsstc) was introduced in 2000 to offset the effect of sales taxes on lower income earners. The Saskatchewan Sales Tax Credit will consist of an adult component and a child component. This credit will be fully refundable.

SSTCFLAG Sask. sales tax credit activation flag

DESCRIPTION

The Saskatchewan Sales Tax Credit is activated when this parameter is set to 1.

The Saskatchewan Sales Tax Credit was introduced in 2000 to offset the effect of sales taxes on lower income earners. The Saskatchewan Sales Tax Credit (imsstc) will consist of an adult component and a child component. This credit will be fully refundable and is assigned to the spouse with the higher income.

The adult component of the Saskatchewan Sales Tax Credit will rise at a rate of SSTCBASPIR of individual net income up to a maximum (SSTCBAS). It will be reduced at a rate of SSTCRR as family net income increases above SSTCBASTD. An individual will also be eligible for SSTCSP in additional benefits for a dependent spouse or equivalent. This amount will be reduced at a rate of SSTCRR as family net income rises over SSTCSPTD.

The child component of the Saskatchewan Sales Tax Credit will provide an additional SSTCKID per child. For two-parent families, the maximum child component will be SSTCKID + SSTCKID. For single parent families, the first child will be eligible for the adult benefit of SSTCSP and the maximum child component will be SSTCKID. The child component of the Credit will be reduced at a rate of SSTCRR as family net income rises over SSTC1KIDTD for families with one qualifying child. For families with more than one

qualifying child, the Credit will be reduced at a rate of SSTCRR as family net income rises over SSTC2KIDTD.

DESCRIPTION

This is the maximum amount of the child component of the Saskatchewan Sales Tax Credit (imsstc). For two-parent families, the maximum child component will be SSTCKID + SSTCKID. For single parent families, the first child will be eligible for the adult benefit of SSTCSP and the maximum child component will be SSTCKID. The child component of the Credit will be reduced at a rate of SSTCRR as family net income rises over SSTC1KIDTD for families with one qualifying child. For families with more than one qualifying child, the Credit will be reduced at a rate of SSTCRR as family net income rises over SSTC2KIDTD.

The Saskatchewan Sales Tax Credit was introduced in 2000 to offset the effect of sales taxes on lower income earners. The Saskatchewan Sales Tax Credit will consist of an adult component and a child component. This credit will be fully refundable. The program is activated when SSTCFLAG is set to 1.

SSTCPI Sask. sales tax credit phase in

DESCRIPTION

This parameter provides the phase in rate for the Saskatchewan Sales Tax Credit (imsstc) was introduced in the 2000 Saskatchewan Budget. This credit is effective as of April 1, 2000, and is designed to offset the effect of sales taxes on lower income earners. The Saskatchewan Sales Tax Credit will consist of an adult component and a child component. This credit will be fully refundable. The program is activated when SSTCFLAG is set to 1.

SSTCRR Sask. sales tax credit reduction rate

DESCRIPTION

This parameter represents the rate at which the Saskatchewan Sales Tax Credit (imsstc) amount is to be reduced. The basic adult component (SSTCBAS) will be reduced at this rate when family net income exceeds SSTCBASTD. The spousal equivalent credit (SSTCSP) will be reduced at this rate when family net income rises over SSTCSPTD.

The child component of the Credit will be reduced at this rate as family net income rises over SSTC1KIDTD for families with one qualifying child. For families with more than one

qualifying child, the Credit will be reduced at this rate as family net income rises over SSTC2KIDTD.

See also SSTCKID.

SSTCSP Sask. sales tax credit spousal amount

DESCRIPTION

This is the maximum value of the spousal equivalent amount of the Saskatchewan Sales Tax Credit. An individual will be eligible for this amount in additional benefits for a dependent spouse or equivalent. This amount will be reduced at a rate of SSTCRR as family net income rises over SSTCSPTD.

In the case of a single parent family, the first child will be eligible for this amount.

The Saskatchewan Sales Tax Credit (imsstc) was introduced in 2000 to offset the effect of sales taxes on lower income earners. The Saskatchewan Sales Tax Credit will consist of an adult component and a child component. This credit will be fully refundable. The program is activated when SSTCFLAG is set to 1.

STRBR Saskatchewan basic provincial tax reduction

DESCRIPTION

A reduction in Basic Saskatchewan Provincial Income Tax of this amount is allowed for all Saskatchewan filers. This tax reduction is augmented for senior citizens and filers with children. It is reduced by a proportion of Saskatchewan Tax Payable (STRRR) exceeding the total tax reductions.

T0AFLAG Canada totals table flag (Units)

DESCRIPTION

This control parameter, when set to 1, activates hard-wired Table 0A, which contains counts of units having non-zero values for various variables. The level of analysis is specified by the TABUNIT parameter.

The default value of T0AFLAG is 0.

T0FLAG Canada totals table flag (Dollars)

DESCRIPTION

This control parameter, when set to 1, activates hard-wired Table 0, which contains counts and sums of various variables. The level of analysis is specified by the TABUNIT parameter.

The default value of T0FLAG is 1.

T1AFLAG Provincial totals table flag (Units)

DESCRIPTION

This control parameter, when set to 1, activates hard-wired Table 1A, which contains counts of units having non-zero values for various variables by province. The level of analysis is specified by the TABUNIT parameter.

The default value of T1AFLAG is 0.

T1FLAG Provincial totals table flag (Dollars)

DESCRIPTION

This control parameter, when set to 1, activates hard-wired Table 1, which contains counts and sums of various variables by province. The level of analysis is specified by the TABUNIT parameter.

The default value of T1FLAG is 1.

T2AFLAG Income group totals table flag (Units)

DESCRIPTION

This control parameter, when set to 1, activates hard-wired Table 2A, which contains counts of units having non-zero values for various variables by income classes as determined by the breakpoints specified in the INCGP parameter. The level of analysis is specified by the TABUNIT parameter.

The default value for T2AFLAG is 0.

T2FLAG Income group totals table flag (Dollars)

DESCRIPTION

This control parameter, when set to 1, activates hard-wired Table 2, which contains counts and sums of various variables by income classes as determined by the breakpoints specified in the parameter INCGP. The level of analysis is specified by the TABUNIT parameter.

The default value of T2FLAG is 0.

T3AFLAG Family type totals table flag (Units)

DESCRIPTION

This control parameter, when set to 1, activates hard-wired Table 3A, which contains counts of units having non-zero values by family type. The level of analysis is specified by the TABUNIT parameter.

The default value for T3AFLAG is 0.

T3FLAG Family type totals table flag (Dollars)

DESCRIPTION

This control parameter, when set to 1, activates hard-wired Table 3, which contains counts and sums of various variables by family type. The level of analysis is specified by the TABUNIT parameter.

The default value for T3FLAG is 0.

T4AFLAG LICO ratio group totals table flag (Units)

DESCRIPTION

This control parameter, when set to 1, activates hard-wired Table 4A, which contains counts of units having non-zero values by poverty threshold ratio classes given by PVRAT and PTF. The level of analysis is specified by the TABUNIT parameter.

The default value for T4AFLAG is 0.

T4FLAG LICO ratio group totals table flag (Dollars)

DESCRIPTION

This control parameter, when set to 1, activates hard-wired Table 4A, which contains counts and sums of various variables by poverty threshold ratio classes given by PVRAT and PTF. The level of analysis is specified by the TABUNIT parameter.

The default value for T4FLAG is 0.

TABDELTA Built-in tables winner/loser threshold

DESCRIPTION

This is the dollar amount used to determine winners and losers for purposes of producing certain rows of the hard-wired tables. The difference in consumable income between base and variant is compared to TABDELTA at the TABUNIT level of analysis to determine a winner or loser.

The default value of TABDELTA is 10.00.

TABUNIT Built-in tables family level

DESCRIPTION

Reporting variables are summed over the family unit specified by TABUNIT in order to produce the hard-wired tables. Valid values and their meanings are given below.

0. Individual
1. Nuclear Family
2. Census Family
3. Economic Family
4. Household

The default value of TABUNIT is 2.

TARGETYEAR Year of analysis

DESCRIPTION

This parameter controls the phasing in of certain social support programs. Valid values include all 4 digit integers listed below (e.g. 1994 is a valid value).

TPFLAG Turning point facility activation flag

DESCRIPTION

TPFLAG is used to activate the turning point facility.

TPLL Lower limit for modified variables

DESCRIPTION

TPLL specifies the lower limit of the independent variable for use in the turning point facility.

TPMETH Method for modifying variables [1=additive, 2=multiplicative]

DESCRIPTION

TPMETH indicates which of two methods the turning point facility will use to modify the independent variables in TPVARS for the persons identified by TPSPEC, in order to compute the household tax function. Method 1 changes the variables in TPVARS between the limits given by TPLL and TPUL. Method 2 scales the variables relative to their original database values between the limits given by TPLL and TPUL.

TPSPEC Expression identifying individuals to change [string]

DESCRIPTION

TPSPEC, used in the turning point facility, is a logical expression in SPSM variables that identifies which persons in the household are to have incomes modified as independent variables in computing the tax function.

TPUL Upper limit for modified variables

DESCRIPTION

TPUL specifies the upper limit of the independent variable for use in the turning point facility.

TPVARS Variables to modify [string]

DESCRIPTION

TPVARS, used in the turning point facility, indicates which variable or variables are to be modified as independent variables to compute the household tax function.

UIBAF

UI benefit recovery base amount factor (UI and EI)

DESCRIPTION

The UI benefit recovery base amount (UIBRA) is calculated as the annual maximum insurable earnings (UIERNMAX * 52) times UIBAF.

This parameter applies to UI and EI programs.

UIBAFNR UI EI benefit recovery base amount factor for non-repeaters (EI only)

DESCRIPTION

This parameter is used to calculate UIBRANR. $UIBRANR = UIBRA * UIBAFNR$.

See UIBRANR and UIEIREPOPT for more information.

This parameter applies only if UIEIOPT is set to 2 (December 1995 reform implemented in 1997).

UIBASEYRMAX Maximum insurable earnings for base year

DESCRIPTION

Dollar value of maximum insurable earnings.

UIBASFLAG Basic phase calculation flag (UI and EI)

DESCRIPTION

Flag which determines whether the initial phase benefits are to be computed (value 1), or not (value 0). This feature of the model permits the program structure to be varied, by deleting a phase.

This parameters applies to UI and EI programs.

UIBASOPT UI reform option [1=normal, 2=Apr'89] (UI and EI)

DESCRIPTION

When UIBASOPT is set to 1 then unemployment insurance benefits will be calculated using the UI system as legislated from 1984 through 1989. When UIBASOPT is set to 2 then the

proposed reform UI system announced in April 1989 by the Minister of Employment and Immigration, will be used to calculate benefits. The reform involved switching from a regional extended phase to a new schedule of maximum weeks of benefits by regional unemployment rate and number of qualifying weeks. This reform remained in place as part of the EI reforms announced in December 1995.

This parameter applies to UI and EI programs.

UIBRA UI repayment base amount (UI and EI)

DESCRIPTION

This parameter is used to calculate the UI benefit recovery.

When UIEIOPT is equal to 1, a proportion (UIBRP) of net income in excess of this amount or of total benefits is repayable.

When UIEIOPT is equal to 2 and UIEIREPOPT is equal to 1, persons who had more than UIEINRT weeks of previous EI receipt repaid either a proportion of net income in excess of this amount or a proportion of total benefits. Others repaid a proportion of net income in excess of UIBRANR.

When UIEIREPOPT is equal to 2, this parameter is calculated but not used in the program.

This is a derived parameter calculated in mpc.cpp. UIBRA is equal to $52 * \text{UIERNMAX} * \text{UIBAF}$.

This parameter applies to UI and EI programs.

CROSS REFERENCE

Function	Description
mpc	Calculate derived model parameters and do edits
txinet	Compute net income

UIBRANR EI repayment base amount for non-repeaters (EI only)

DESCRIPTION

This parameter is used to calculate the EI benefit recovery (clawback). When UIEIREPOPT is set to 1, the recovery depends on previous receipt of EI. For persons who have less than

UIEINRT weeks of EI (or who had sickness, maternity, or parental benefits), a proportion of net income in excess of this amount or a proportion of total benefits is repayable. Others repaid a proportion of net income in excess of UIBRA.

When UIEIREPOPT is set to 2, sickness, maternity and parental benefits are exempt from the benefit recovery and UIBRANR is always used in the calculation no matter how many weeks of EI a person has accumulated.

This is a derived parameter calculated in mpc. It is equal to UIBRA times UIBAFNR.

This parameter applies only if UIEIOPT is set to 2 (December 1995 reform implemented in 1997).

CROSS REFERENCE

Function	Description
mpc	Calculate derived model parameters and do edits
txinet	Compute net income

UIBRP	UI benefit recovery portion (UI only)
--------------	---------------------------------------

DESCRIPTION

If unemployment insurance benefits (imiuib) have been received and net income is in excess of the base amount (UIBRA), this proportion is applied to the lower of (a) total UI benefits and (b) the excess net income, to calculate the repayment which is also a deduction from net income.

This parameter applies only if UIEIOPT is set to 1 (Before the December 1995 reform implemented in 1997)

UIDEPOPT UI dependency option [1=normal, 2=Feb'94] (UI only)

DESCRIPTION

When this parameter has a value of 2 then both the income of the UI recipient as well as the number of their dependants will be used to calculate the benefit rate applied to earnings.

Under this option the model calculates a variable (imuidpfg) which indicates if the UI applicant has low income and dependants. If the individual has a value of one for this variable then their benefit rate is calculated as follows.

If an individual claimant's earnings are below a given proportion (UIENSRTCO) of UI maximum earnings (UIERNMAX) then the rate used to calculate weekly benefits is taken from the UIENSRATE parameter. If their earnings are above UIENSRTCO proportion of UIERNMAX then the weekly dollar rate of benefits is the higher of

1) The benefit rate for the basic phase (UIBASRATE) times average weekly earnings ubern

or

2) The enhanced rate cutoff (UIENSRTCO) proportion of UI maximum earnings (UIERNMAX) times the enhanced rate for the basic phase (UIENSRATE).

The option corresponds to measures introduced in the 1994 Federal Budget.

With this parameter set to 1 imuidpfg is initialized to zero and the benefit rate applied to earnings is taken from the UIBASRATE parameters.

This parameter applies only in UI programs.

UIEFFFLAG Observed effective weekly benefit rate flag (UI and EI)

DESCRIPTION

Flag determines that UI benefits are computed from the average benefit per week observed in sample claims. The effective benefit rate may be higher than the regular proportion if special programs were in effect (e.g., job creation) or lower if the sampled claimant reported earnings while on claim.

When the flag is set to 1, the effective weekly benefit rate is used in the calculation of UI benefits. When the flag is set to 0, the modeled weekly benefit rate is used.

This parameter applies in UI and EI program.

UIEIBRP Maximum clawback under EI reform [Past Wks ben][Rate] (EI only)

DESCRIPTION

If employment insurance benefits (imiuib) have been received and net income is in excess of the base amounts (UIBRA) for persons with previous EI receipt or (UIBRANR) for persons with little previous benefits or for persons not on regular EI claims, the repayment is calculated at a rate (UIEIRPR) up to a maximum proportion of total benefit received (UIEIBRP). The rate depends on the previous number of weeks of EI received in the past.

This parameter applies only if UIEIOPT is set to 2 (December 1995 reform implemented in 1997) and if UIEIREPOPT is set to 1.

UIEIDIV EI minimum divisor [uer][divisor] (EI only)

DESCRIPTION

Under the minimum divisor rule in EI, the earnings in the past 26 weeks are divided by either the weeks worked in the past 26 weeks or the minimum divisor, whichever is larger.

UIEIDIV gives the minimum divisor which relates to the local unemployment rate. It is a lookup table with the local unemployment rate in the left most column and the minimum divisor in the middle column.

Note that ucdiwnk has been imputed in such a way that the minimum divisor of the base year has already been incorporated. In other words, the variable ucdiwnk is already the maximum of the weeks worked in the past 26 weeks and the minimum divisor of the base year. This means that there should be little or no change when this flag is turned on if the value of UIEIDIV is the same as the base year. Furthermore, since the value of ucdiwnk is already at the maximum, changing UIEIDIV to make the program more generous will not have an impact without first modifying the database. See the section on the Reference Value Facility in the User's Guide for more information on how to modify the database.

This parameter applies only if UIEIOPT is set to 2 (December 1995 reform implemented in 1997)

UIEIDIVFLG EI minimum divisor flag (EI only)

DESCRIPTION

When this parameter is flagged on, the EI minimum divisor rule is applied. This means that weekly earnings are adjusted by multiplying them by the ratio of weeks worked in the past 26 weeks, `ucdivwk`, over the maximum of the weeks worked over the past 26 weeks and the minimum divisor, `UIEIDIV`, which varies according to the local unemployment rate.

Note that `ucdivwk` has been imputed in such a way that the minimum divisor of the base year has already been incorporated. In other words, the variable is already the maximum of the weeks worked in the past 26 weeks and the minimum divisor of the base year. This means that there should be little or no change when this flag is turned on if the value of `UIEIDIV` is the same as the base year. Furthermore, since the value of `ucdivwk` is already at the maximum, changing `UIEIDIV` to make the program more generous will not have an impact without first modifying the database. See the section on the Reference Value Facility in the [User's Guide](#) for more information on how to modify the database.

This parameter applies only if `UIEIOPT` is set to 2 (December 1995 reform implemented in 1997)

UIEIFIFLG EI intensity rule exemption for family supplement receivers (EI only)

DESCRIPTION

When UIEIFIFLG is set to 1, claimants receiving a Family Income Supplement are exempt from the Intensity rule.

This parameter applies only if UIEIOPT is set to 2 (December 1995 reform implemented in 1997)

For more information on the family supplement, see UIEIFSFLG.

UIEIFS1 Max fam supplement 1 child (EI only)

DESCRIPTION

When UIEIFSOPT is set to 2, this is the base amount of the family supplement for families with one child. The amount depends on the family's previous year's net income.

For more information on the family supplement, see UIEIFSFLG.

This parameter only applies if UIEIOPT is set to 2 (December 1995 reform implemented in 1997).

UIEIFSFLG UI EI calculate family supplement flag (EI only)

DESCRIPTION

When UIEIFSFLG is set to 1, the Family supplement is calculated. The total amount of the family supplement paid on a claim is ubclmfs. The total amount of family supplement paid on a claim in the calendar year is ubcalfs.

The Family Supplement was introduced as part of the Employment Insurance system reform introduced in 1995. It increases the basic benefit of families with low income. It replaces the older program which gave an enhanced rate for individuals with low income (in the SPSD/M this older program was controlled by UIENSRATE, UIDEPOPT, UIENSRTCO).

There are two methods of calculating the Family Supplement. When UIEIFSOPT is set to 1, then family supplement is directly tied into the Canada Child Tax Benefit (imfcben). Families which are eligible for the Child Tax Benefit receive the weekly amount of the benefit in addition to their regular Employment Insurance. It is reduced at a rate (UIEIFSRR) over incomes greater than UIEIFSRL.

Some simplifications were made in order to implement this program in the SPSM. The calculation of the Canada Child Tax Benefit is done after the calculation of EI in the model since it requires net income. But it requires the previous year's net income which is estimated as PYINC times the current year's net income.

When the Family Supplement is activated, the tax/transfer driver (drv) is run through twice per eligible household. The first time, no one will get a family supplement since the child tax benefit is equal to zero. The value of the benefit is saved (in cceopt) and drv is called again. This time, the previously saved value for the child tax benefit is used to calculate the family supplement. The family supplement will be slightly inconsistent with the child tax benefit since the latter will be recalculated and may be slightly smaller than the one used for deriving the family supplement since family net income will increase due to the family supplement.

Another simplification in deriving the family supplement derives from the fact that the SPSM assumes that the Child Tax Benefit is given in one lump sum amount in July. Therefore in the case of the Family supplement, the rules governing the Child Tax Benefit may be a year off if the benefit is received in the first half of the year.

When UIEIFSOPT is set to 2, the family supplement is calculated independently of the child tax benefit. First the number of children under the age of 7 is calculated (imuiydep). By going through the drv twice, the family's net income (prior to the addition of the family supplement) is available and the previous year's income is derived by multiplying it by PYINC. The family supplement is then derived by looking up the base value (UIEIFS1 for families with 1 child, UIEIFS2 for families with 2 children, and UIEIFS3 for families with 3 or more children). A supplement for each child over and above the third is added (UIEIFSTOPUP) as is a supplement for each child under the age of 7 (UIEIFSYNG).

The Family supplement rules changed on July 1999. Since the methodology under UIEIFSOPT = 1 would be off by a year, it was decided to treat all of 1999 under the methodology introduced in July 1999 (UIEIFSOPT = 2).

Under both options, EI weekly benefits including the family supplement cannot exceed a proportion (UIEIMFSP) of the claimant's weekly earnings (ubern). Nor can EI benefits, including the family supplement exceed the base rate (UIEIRATE) times the maximum weekly earnings (UIERNMAX).

Also, under both programs, when the UIEIFIFLG is turned on, people who receive the family supplement are exempted from the intensity rule.

This parameter applies only if UIEIOPT is set to 2 (December 1995 reform implemented in 1997).

UIEIFSRL UI EI family supplement reduction level(EI only)

DESCRIPTION

The level of family net income above which the Family Income Supplement is reduced at a rate UIEIFSRR. It is only used when UIEIFSFLG is set to 1, UIEIFSOPT is set to 1, and UIEIOPT is set to 2 (December 1995 reform implemented in 1997).

For more information on the family supplement, see UIEIFSFLG.

UIEIFSRR UI EI family supplement reduction rate (EI only)

DESCRIPTION

This is the reduction rate which is used to reduce the Family Income Supplement when income is over UIEIFSRL. It is only used when UIEIFSFLG is set to 1, UIEIFSOPT is set to 1, and UIEIOPT is set to 2 (December 1995 reform implemented in 1997).

For more information on the family supplement, see UIEIFSFLG.

UIEIFSTOPUP Max fam supplement top up for more than 3 kids (EI only)

DESCRIPTION

When UIEIFSOPT is set to 2, the base amount of the family supplement is increased by this amount for each child over and above the first three. The amount depends on the family's previous year's net income.

For more information on the family supplement, see UIEIFSFLG.

This parameter only applies if UIEIOPT is set to 2 (December 1995 reform implemented in 1997).

UIEIFSYNG Max fam supplement top up for young children (EI only)

DESCRIPTION

When UIEIFSOPT is set to 2, the base amount of the family supplement is increased by this amount for each child under the age of seven (imuiydep). The amount depends on the family's previous year's net income.

For more information on the family supplement, see UIEIFSFLG.

This parameter only applies if UIEIOPT is set to 2 (December 1995 reform implemented in 1997).

UIEIMTYPFLG Flag to model main benefit type (UI and EI)

DESCRIPTION

When UIEIMTYPFLG is turned on, instead of calculating the benefit eligibility and amount using the original claim type (ucbtyp), the main type of claim is used (ucmtyp). Note that when a claim starts with sickness, maternity, or parental benefits and also includes regular benefits (uctpcng), a regular claim is modelled.

UIEINERFLG Flag to check for hours for new entrants and re-entrants (EI only)

DESCRIPTION

When this parameter is flagged on, the minimum hours of employment in the qualifying period needed for a new entrant or re-entrant (ucnere) to be eligible for EI is UINEREHRMIN. Otherwise the regular test, UIREGHRMIN, is used.

This parameter applies only if UIEIOPT is set to 2 (December 1995 reform implemented in 1997).

UIEINRT UI EI Non repeater level for higher clawback turndown (EI only)

DESCRIPTION

When UIEIREPOPT is equal to 1, the number of weeks of previous EI receipt which makes a recipient qualify for the intensity rule. If a person has less than UIEINRT weeks of EI in the past, then the intensity rule does not apply and UIBRANR is used to calculate the amount of EI which is repayable. Otherwise, the intensity rule is applied and UIBRA is used in the calculations.

This parameter applies only if UIEIOPT is set to 2 (December 1995 reform implemented in 1997) and if UIEIREPOPT is set to 1.

UIEIREF EI contribution refund cut-in (EI only)

DESCRIPTION

If employment income is less than this amount, persons get their EI contributions (imuic) refunded (imuicrf).

Note that in order to get a refund, individuals need to apply for one. In the SPSPD/M model, a take up rate is supplied (UIEIREFTK) and users may adjust the proportion who apply for the refund.

This parameter applies only if UIEIOPT is set to 2 (December 1995 reform implemented in 1997).

UIEIREFTK EI contribution refund take up

DESCRIPTION

This is a take-up rate for the Employment Insurance Contributions Refund (imuicrf) which is available to individuals with employment income less than UIEIREF who apply for the refund. A take up of 1.000 denotes that all eligible recipients (based on employment income) would still receive the refund. A value less than 1.000 would result in only that proportion still getting the refund and the remainder would not.

UIEIREPOPT EI Benefit repayment option (1=repeaters have higher rate,2=one rate)(EI only)

DESCRIPTION

When UIEIOPT is equal to 2, then there are two options for calculating the EI benefit recovery (clawback).

When UIEIREPOPT is set to 1, the benefit recovery depends on previous receipt of UI. For persons who had more than UIEINRT weeks of past EI receipt (ubeiwbp): their recovery was equal to the lesser of :

UIEIBRP * their benefits
and
UIEIRPR * (their net income (iminet) – UIBRA).

For the rest of the population, and for persons with maternity, sickness, and parental benefits, the recovery was equal to the lesser of:

UIEIBRP * their benefits
and
UIEIRPR * (their net income (iminet) – UIBRANR).

When UIEIREPOPT is set to 2, persons receiving maternity, sickness, and parental benefits are exempt from the benefit recovery. First time claimants of EI are also exempt. The rest of EI claimants all have the same rules. Their recovery is equal to UIEIRPR times the lesser of their benefits and the amount by which their net income (iminet) exceeds UIBRANR.

UIEIRPR UI EI benefit clawback rate (EI only)

DESCRIPTION

When UIEIREPOPT is set to 1, this rate is used to calculate the EI benefit recovery in the following way. The recovery is equal to the minimum of a person's benefit times a rate (which varies depending on their previous receipt of EI), and this rate (UIEIRPR) times the amount by which a person's net income (iminet) exceeds a turndown (which varies depending on their previous receipt of EI).

When UIEIREPOPT is set to 2, the benefit recovery is equal to this rate (UIEIRPR) times the minimum of the person's benefit and the amount by which a person's net income (iminet) exceeds a turndown (UIBRANR).

This parameter applies only if UIEIOPT is set to 2.

For more explanation, see UIEIREPOPT.

DESCRIPTION

UIEITKP is used to randomly reduce the number of UI/EI beneficiaries by province. An observation with calculated UI/EI benefits has all its UI/EI calculated variables set to zero if a random number is lower than the value set to UIEITKP. It means all the observations are selected in the years where UIEITKP is set to zero. UIEITKP is set to zero for all the years.

UIEIYRS Number of years of previous EI benefits calculated (EI only)

DESCRIPTION

In Employment Insurance, in order to implement the intensity rule and the clawback, the number of weeks of EI benefits received in the past is needed. UIEIYRS is the number of years included in this calculation. If UIEIYRS is equal to 1, only the weeks of benefits in the past year are included. If UIEIYRS is equal to 4, the weeks in the past four years are included. The maximum number of years which can be calculated is 5.

This parameter applies only if UIEIOPT is set to 2 (December 1995 reform implemented in 1997).

UIENSRATE Enhanced rate for basic phase (UI only)

DESCRIPTION

UI claimants may be eligible for a higher benefit rate (UIENSRATE) to be applied to average insured earnings (ubern) if their insured earnings are at or below a set proportion (UIENSRTCO) of maximum insurable earnings (UIERNMAX) and they have dependants.

This measure, introduced in the 1994 Federal budget initially provided for an enhanced rate of 60% compared to a basic rate of 55%.

See also UIDEPOPT, imuidpfg.

This parameter applies only if UIEIOPT is set to 1 (Before December 1995 reform implemented in 1997).

UIENSRTCO Enhanced rate cutoff (UI only)

DESCRIPTION

UI claimants may be eligible for a higher benefit rate (UIENSRATE) to be applied to average insured earnings (ubern) if their insured earnings are at or below a set proportion (UIENSRTCO) of maximum insurable earnings (UIERNMAX) and they have dependants.

This measure, introduced in the 1994 Federal budget initially set qualification requirements that the claimant have insured earnings at or below **half** the Maximum Insurable Earnings.

See also UIDEPOPT, imuidpfg.

This parameter applies only if UIEIOPT is set to 1 (Before December 1995 reform implemented in 1997).

UIENTFLAG Basic entrance requirements flag (UI and EI)

DESCRIPTION

When this flag is set to 0 the execution of the uient sub-function in ui.c is suppressed and all UI claimants are deemed to have a valid claim. When set to 1, eligibility entrance requirement tests in uient (weeks of work by claim type) are applied.

This parameter applies to UI and EI programs.

UIEWK Entitlement (weeks) [wkwrk, uer] (UI and EI)

DESCRIPTION

This array parameter gives maximum number of weeks of entitlement for the UI and EI systems.

Under the UI system, subsequent to the April '89 UI reform, weeks of entitlement depend on the local unemployment rate and the number of weeks worked. The array has 43 row and 12 columns. Columns represent ranges of local unemployment rate, starting at 6% and increasing to 17%. Rows represent the number of weeks worked prior to claim, starting at 10 weeks and increasing to 52 weeks.

Under the EI system introduced in 1997 weeks of entitlement depend on the local unemployment rate and the number of hours worked. The array has 43 row and 12 columns. Columns represent ranges of local unemployment rate, starting at 6% and increasing to 17%. Rows represent the number of hours worked prior to claim, starting at 350 hours and increasing to 1820 by increments of 35 hours.

This parameter applies to UI and EI programs.

UIFSHERMIN Min. earnings to qualify for fish. benefits [unempl. rate] (EI only)

DESCRIPTION

This parameter represents the minimum earnings in the past 31 weeks which are required to qualify for fishing benefits. They depend on the local unemployment rate (ucuer).

This parameter applies only if UIEIOPT is set to 2 (December 1995 reform implemented in 1997).

UILFEFLAG Labour force extended phase calculation flag (UI only)

DESCRIPTION

Flag which determines whether the labour force extended phase benefits are to be computed (value 1), or not (value 0). This feature of the model permits the program structure to be varied, by deleting a phase.

This parameter applies only if UIEIOPT is set to 1 (Before December 1995 reform implemented in 1997).

UILFEMIN Weeks worked in qualifying period [UILFEWKS index] (UI only)

DESCRIPTION

The second phase of regular benefits is the Labour Force Extended phase. Additional weeks of benefit entitlement (UILFEWKS) are determined by the weeks of work in the qualifying period (UILFEMIN). These two vectors must always have 14 elements corresponding exactly to each other.

This parameter applies only if UIEIOPT is set to 1 (Before December 1995 reform implemented in 1997).

UIMATMINWK Minimum weeks to qualify for maternity benefits (UI only)

DESCRIPTION

This parameter represents the minimum weeks of insurable employment in the qualifying period that are required for eligibility for UI maternity benefits.

This parameter applies only if UIEIOPT is set to 1 (Before December 1995 reform implemented in 1997).

UIMAXMATWKS Maximum number of weeks - maternity (UI and EI)

DESCRIPTION

The maximum weeks of entitlement to maternity benefits. When a person also receives parental benefits (ucgotpa = 1), then UIMAXPARWKS is also added to the maximum. When a person also receives regular benefits, the claim modeled may be changed to regular claims.

This parameter applies to UI and EI programs.

UIMINPCT Exemption limit (percent of maximum insurable earnings) (UI only)

DESCRIPTION

Determines the level of earnings below which UI contributions are not payable. If average weekly earnings are less than UIMINPCT * UIERNMAX, no UI contributions are made.

This parameter applies only if UIEIOPT is set to 1 (Before December 1995 reform implemented in 1997).

UINEREHRMIN Minimum hours to qualify for new entrant or re-entrant (EI only)

DESCRIPTION

This parameter represents the minimum hours of employment in the qualifying period needed for a new entrant or re-entrant (ucnere) to be eligible for EI. The new entrant/re-entrant qualification test is only applied when UIEINEREFLG is set to 1. Otherwise the regular test, UIREGHRMIN, is used.

This parameter applies only if UIEIOPT is set to 2 (December 1995 reform implemented in 1997).

UIOTHBNFCT UI other benefits per week adjustment factor (EI and EI)

DESCRIPTION

This parameter allows the user to increase the dollar amount of other benefits for all recipients of other benefits by up to twice the actual amount. Other types of benefits will include everything not included in regular, sickness, maternity, parental, fishing or training. The list of other benefits included will vary depending on the year of the program. But they may include such items as job creation benefits, work sharing benefits, and self-employed assistance.

The actual other benefit (ucothbr) is multiplied by the factor UIOTHBNFCT plus one(1). For example, setting UIOTHWNFCT to one will result in the amount of other benefits to be multiplied by 2; a factor of .5 would result in benefits being multiplied by 1.5.

This parameter applies to UI and EI programs.

UIOTHWKFCT UI other benefits weeks adjustment factor (UI and EI)

DESCRIPTION

This parameter allows the user to increase the claim duration of other benefits for all recipients of other benefits by up to twice the actual number of weeks on other benefits.

Other types of benefits will include everything not included in regular, sickness, maternity, parental, fishing or training. The list of other benefits included will vary depending on the year of the program. But they may include such items as job creation benefits, work sharing benefits, and self-employed assistance.

The actual other benefit weeks (ucothwk) are multiplied by the factor UIOTHWKFCT plus one (1). For example, setting UIOTHWKFCT to one will result in the number of weeks of other benefits to be multiplied by 2; a factor of .5 would result in weeks being multiplied by 1.5.

This parameter applies to UI and EI programs.

UIREGHRMIN Min. hours to qualify for reg. benefits [unempl. rate] (EI only)

DESCRIPTION

This parameter represents the minimum hours of employment in the qualifying periods that are required for eligibility for EI regular benefits. The number of hours depend on the regional unemployment rate.

This parameter applies only if UIEIOPT is set to 2 (December 1995 reform implemented in 1997).

UIREGMINWK Minimum weeks to qualify for regular benefits (UI only)

DESCRIPTION

This parameter represents the minimum weeks of insurable employment in the qualifying period that are required for eligibility for UI regular benefits.

This parameter applies only if UIEIOPT is set to 1 (Before December 1995 reform implemented in 1997).

UIREGWKFCT UI regular benefit weeks adjustment factor (UI and EI)

DESCRIPTION

This parameter allows the user to increase the claim duration of regular benefits up to the maximum number of eligible weeks. UIREGWKFCT is the proportion of the unused weeks (maximum weeks eligible - actual weeks claimed) that an individual's claim will be extended by. For example, setting UIREGWKFCT to one will set the claim length to the maximum number of eligible weeks.

UIREPPREV Weeks of insurable employment [weeks] (UI only)

DESCRIPTION

The number of weeks of insurable employment required for repeaters to be eligible for benefits increases with the number of weeks of benefits received in the qualifying period (see also UIREPUER and UIREPWWKD). The vector UIREPPREV must always have 11 elements corresponding to the columns of UIREPWWKD.

This parameter applies only if UIEIOPT is set to 1 (Before December 1995 reform implemented in 1997).

UIREPUER Regional unemployment rate [rates] (UI only)

DESCRIPTION

The number of weeks of insurable employment required for repeaters to be eligible for benefits decreases at progressively higher regional unemployment rates (see also

UIREPPREV and UIREPWWKD). The vector UIREPUER must always have 5 elements corresponding to the rows of UIREPWWKD.

This parameter applies only if UIEIOPT is set to 1 (Before December 1995 reform implemented in 1997).

UIREPWWKD Repeater eligibility requirements [weeks x rates] (UI only)

DESCRIPTION

The number of weeks of insurable employment required for repeaters to be eligible for benefits increases with the number of weeks of benefits received in the qualifying period (UIREPPREV) and decreases at progressively higher regional unemployment rates (UIREPUER). UIREPWWKD represents a two dimensional (11 by 5) lookup table of the weeks of work required for repeater eligibility.

This parameter applies only if UIEIOPT is set to 1 (Before December 1995 reform implemented in 1997).

UIRGEFLAG Regional extended phase calculation flag (UI only)

DESCRIPTION

Flag which determines whether the regional extended phase benefits are to be computed (value 1), or not (value 0). This feature of the model permits the program structure to be varied, by deleting a phase.

This parameter applies only if UIEIOPT is set to 1 (Before December 1995 reform implemented in 1997).

UIRGEMIN Unemployment rate for Regional Extended entitlement [UIRGEWKS index] (UI only)

DESCRIPTION

The third phase of regular benefits is the Regional Extended phase. Additional weeks of benefit entitlement are determined by the regional unemployment rate (see UIRGEWKS). Cut-points represent the lower bound of class intervals (the lowest possible unemployment rate is coded as -1.0). The vectors UIRGEMIN and UIRGEWKS must always have 17 elements corresponding exactly to each other.

This parameter applies only if UIEIOPT is set to 1 (Before December 1995 reform implemented in 1997).

UIRGWKS Weeks Regional Extended entitlement [UIRGEMIN] (UI only)

DESCRIPTION

The third phase of regular benefits is the Regional Extended phase. Maximum additional weeks of benefit entitlement (UIRGWKS) are determined by the regional unemployment rate (UIRGEMIN). Cut-points represent the lower bound of class intervals (the lowest possible unemployment rate is coded as -1.0). These two vectors must always have 17 elements corresponding exactly to each other.

This parameter applies only if UIEIOPT is set to 1 (Before December 1995 reform implemented in 1997).

UIRGNMIN Regional unemployment rate (UI only)

DESCRIPTION

The UIRGNWKS parameter represents the number weeks of insurable employment in the qualifying period that are required for regular benefits in relation to the unemployment rate of UI economic regions.

Eligibility is finally determined by comparing weeks of insurable employment in the qualifying period (UIRGNWKS) to the level required in relation to local (UI Economic Region) unemployment rates. Cut points for unemployment rates are given as lower bounds (the minimum possible unemployment rate is coded as -1.0). The vectors UIRGNMIN and UIRGNWKS must always have 5 elements corresponding exactly to each other.

This parameter applies only if UIEIOPT is set to 1 (Before December 1995 reform implemented in 1997).

UIRGNWKS Weeks required for eligibility (UI only)

DESCRIPTION

This parameter represents the number weeks of insurable employment in the qualifying period that are required for regular benefits in relation to the regional unemployment rates. The vectors UIRGNMIN and UIRGNWKS must always have 5 elements corresponding exactly to each other.

This parameter applies only if UIEIOPT is set to 1 (Before December 1995 reform implemented in 1997).

UIRPTFLAG Repeater requirements flag (UI only)

DESCRIPTION

This flag determines whether UI repeater rules are applied (value 1) in testing eligibility or not applied (value 0).

This parameter applies only if UIEIOPT is set to 1 (Before December 1995 reform implemented in 1997).

UITARGET UI/EI target for the number of cases (UI and EI)

DESCRIPTION

Users can increase or decrease the number of Unemployment/Employment Insurance (UI) by increasing or decreasing UITARGET.

Interval between 0.5 and 0.95 allows for a maximum increase of 75% in the number of UI recipients. Interval between 0.05 and 0.5 allows for a maximum decrease of 75% in the number of UI recipients. Individuals are selected and get UI history when iduirank/1000 is lower than UITARGET. Maximum variation may vary by province.

See iduipred, iduirank.

For more information on using this facility, see the *User's Guide* under Miscellaneous Facilities.

UITARGYRMAX Maximum insurable earnings for target year

DESCRIPTION

The maximum weekly earnings insurable under the provisions of the UI program for the target year. The value defined by the UI ACT is updated annually in relation to a moving average of earnings determined from Revenue Canada data.

This parameter applies to UI and EI programs.

UITRBNBFACT UI training benefit per week adjustment factor (EI and EI)

DESCRIPTION

This parameter allows the user to increase the dollar amount of training benefits for all recipients of training benefits by up to twice the actual amount. The actual training benefit (uctrnbr) is multiplied by the factor UITRBNBFACT plus one(1). For example, setting UITRBNBFACT to one will result in the amount of training benefits to be multiplied by 2; a factor of .5 would result in benefits being multiplied by 1.5.

This parameter applies to UI and EI programs.

UITRNWKFCT UI training benefit weeks adjustment factor (UI and EI)

DESCRIPTION

This parameter allows the user to increase the claim duration of training benefits for all recipients of training benefits by up to twice the actual number of weeks on training. The actual training weeks (uctrnwk) are multiplied by the factor UITRNWKFCT plus one (1). For example, setting UITRNWKFCT to one will result in the number of weeks of training benefits to be multiplied by 2; a factor of .5 would result in weeks being multiplied by 1.5.

This parameter applies to UI and EI programs.

UPDATEINT Interval between screen updates (hhlds)

DESCRIPTION

The UPDATEINT parameter controls how often SPSM will update its progress display during the simulation phase. Specifically, it specifies the number of households to simulate between updates of the SPSM progress indicator. If UPDATEINT is set to 0, an appropriate default value will be assigned to UPDATEINT. If UPDATEINT is set to a low value, considerable time may be spent updating the display in the Windows version of SPSM.

The default value for UPDATEINT is 1000.

UVAR User statements [string]

DESCRIPTION

The UVAR control parameter contains a list (string) of SPSM statements that create and assign the user variables. See the *User's Guide* for details.

UVARFLAG Activate UVAR parameter for expressions

DESCRIPTION

This control parameter, when set to 1, activates the UVAR parameter of the user variable facility. The User Variable Facility allows the creation of new user-defined variables, whose values are created through SPSM statements. See the *User's Guide* for details.

VAMTOPT N.S. alternative minimum tax option (1=none, 2=% fed, 3=fed adj inc, 4=% min amt)

DESCRIPTION

When Nova Scotia tax on taxable income is calculated (VTXFLG = 1), there are four options as to how to calculate the provincial minimum tax.

When VAMTOPT is set to 1, then no provincial alternative minimum tax or minimum tax carryover is calculated.

When VAMTOPT is set to 2, then a percentage (VAMTPCTF) of the additional federal tax triggered by the minimum tax (imamtprv) is added to the basic provincial tax (imbpt). The definition of imamtprv is determined by the provincial vector AMTPRVDF. The provincial minimum tax carryover credit (impminco) is calculated using VAMTPCTF.

When VAMTOPT is set to 3, the income used in the provincial tax calculation is replaced by the net income used for alternative tax purposes (imamtinc) for people who triggered the federal minimum tax. Then the VAMTTX rate, usually set to the smallest non-zero tax rate, is applied in order to get the provincial tax before the non-refundable tax credits. The provincial minimum tax carryover credit (impminco) is calculated using VAMTTX.

When VAMTOPT is set to 4, then a percentage (VAMTPCTM) of the minimum tax triggered by the federal minimum tax calculations represents the basic provincial tax (imbpt). Provincial surtaxes are then calculated using this amount. The provincial minimum tax carryover credit (impminco) is calculated using VAMTPCTM.

VAMTPCTF N.S. amt rate as pct of additional fed tax due to minimum tax

DESCRIPTION

When Nova Scotia tax on taxable income is calculated (VTXFLG=1) and VAMTOPT is set to 2, then a percentage (VAMTPCTF) of the additional federal tax due to the minimum tax is added to the basic provincial tax (imbpt).

VAMTPCTM N.S. amt rate as pct of federal minimum tax amount

DESCRIPTION

When Nova Scotia tax on taxable income is calculated (VTXFLG=1) and VAMTOPT is set to 4, then a percentage (VAMTPCTM) of the minimum federal tax due to the minimum tax is used as basic provincial tax (imbpt). This calculated value is used in the determination of the provincial surtax.

VAMTTX N.S. amt rate as tax on adjusted income

DESCRIPTION

When Nova Scotia tax on taxable income is calculated (VTXFLG=1) and VAMTOPT is set to 3, the income used in the provincial tax calculation is replaced by the net income used for alternative tax purposes (imamtinc) for people who triggered the federal minimum tax. Then the VAMTTX rate, usually set to the smallest non-zero tax rate, is applied in order to get the provincial tax before the non-refundable tax credits.

VARALG Name of variant algorithm [string]

DESCRIPTION

This control parameter is automatically generated by SPSM, and records the overall name of the tax/transfer algorithm used to generate variant results.

VARDESC Description of variant parameters [string]

DESCRIPTION

This control parameter is automatically generated by SPSM, and is simply a copy of the MPRDESC parameter of the variant. The value will appear in the page header of the output table file.

VARMETH Method of creating variant variables

DESCRIPTION

This parameter specifies one of three methods for producing variant results. Valid values are:

0. No variant results will be calculated
2. Results will be calculated using the standard algorithm with tax/transfer parameters as specified in the INPVARMPR file.
3. Results will be calculated using the alternate algorithm with tax/transfer parameters specified in the INPVARMPR file.

The default value for VARMETH is 2.

DESCRIPTION

This is the maximum value of the Nova Scotia age non-refundable tax credit before any reductions are applied. The parameter is only used when a provincial tax on taxable income is calculated (VTXFLG = 1).

VAXPI N.S. Age Amount phase in rate for 1994 and beyond

DESCRIPTION

This value is used to scale the amount of the reduction which will be applied to the provincial age tax credit. The parameter is only used when the Nova Scotia provincial tax on taxable income is calculated (VTXFLG = 1).

See also impatxc, VAXM, VAXRR, and VAXTD.

VAXRR N.S. Age Amount credit reduction rate

DESCRIPTION

This parameter is the proportion of net income above a given threshold (VAXTD) which will be deducted from the provincial non-refundable age tax credit amount (VAXM). The parameter is only used when the Nova Scotia provincial tax on taxable income is calculated (VTXFLG = 1).

See also impatxc, VAXTD, VAXPI.

VAXTD N.S. Age Amount net income turndown

DESCRIPTION

Individual seniors will have their non-refundable age tax credit reduced if their net income is above the value of this parameter. The parameter is only used when the Nova Scotia provincial tax on taxable income is calculated (VTXFLG = 1).

VCBBAS1 NS child benefit for first child

DESCRIPTION

This is the amount of Nova Scotia Child Benefit received for the first child. The benefit is turned on by the flag VCBFLG, and families whose net income is less than VCBTD are eligible. They receive VCBBAS1 for their first child, VCBBAS2 for their second child, and VCBBAS3 for their third and each additional child. The benefit is assigned to the mother if present.

VCBFLG NS child benefit activation flag

DESCRIPTION

This parameter turns on or off the Nova Scotia Child Benefit (imnscb) announced in the 1998 Budget. The benefit is given to families whose net incomes are less than VCBPO. They receive VCBBAS1 for their first child, VCBBAS2 for their second child, and VCBBAS3 for their third and each additional child. The benefit is assigned to the mother if present.

DESCRIPTION

The level of family net income (head plus spouse) above which the Nova Scotia Child Benefit begins to be paid at a lower rate. The benefit is reduced when net family income is greater than this parameter and less than VCBPO. The benefit is turned on by the flag VCBFLG. They receive VCBBAS1 for their first child, VCBBAS2 for their second child, and VCBBAS3 for their third and each additional child. The benefit is assigned to the mother if present.

VCGTC N.S. Caregiver Tax Credit

DESCRIPTION

VCGTC multiplied by VPNTCR is the maximum amount of the Nova Scotia Caregiver Tax Credit (impcgtc). The parameter is only used when the provincial tax on taxable income is calculated (VTXFLG = 1).

For more explanation see VCGTCFLG.

VCGTCFLG N.S. Caregiver Tax Credit activation flag

DESCRIPTION

The calculation of the Nova Scotia Caregiver Tax Credit (impcgtc) is activated by the flag VCGTCFLG.

The Caregiver Tax Credit (impcgtc) provides additional tax assistance to individuals who provide in-home care for relatives. Eligible recipients include individuals residing with and providing in-home care for a parent or grandparent over 65 years of age, or for an infirm dependent relative.

The parameter VCGTCOPT provides users with the option to use the greenbook value of the Caregiver amount (idcgtc from Line 315 and Schedule 12 in the General Tax Guide) or to give the maximum (VCGTC) if idcgtc is greater than 0.

This non-refundable tax credit is only calculated when the provincial tax on taxable income is calculated (VTXFLG = 1).

VCGTCOPT N.S. Caregiver Tax Credit Option (1=max, 2=greenbook)

DESCRIPTION

This parameter provides users with the option of how to calculate the provincial Caregivers Tax Credit (impcgtc). A value of 1 results in applying the maximum value (VCGTC) if the filer had an amount in idcgtc (from Line 315 and Schedule 12 in the General Tax Guide). To use the greenbook value of the Caregiver amount (idcgtc), this parameter must be set to 2. This non-refundable tax credit is only calculated when the provincial tax on taxable income is calculated (VTXFLG = 1) and the provincial caregivers tax credit is activated (VCGTCFLG = 1).

VDAFWC NS Direct assistance benefit for families with children flag

DESCRIPTION

When this parameter is set to 1, the Nova Scotia Direct Assistance Benefit is only granted to families with children. This amendment to the Direct Assistance Program was announced in the Nova Scotia 2000 Budget. When this flag is activated, the benefit is targeted to low-income working families whose income is below VDASI for lone parent families and VDABI for couples with children. The maximum benefit per family is VDACB.

DESCRIPTION

This parameter is the amount of Direct Assistance (iminsda) an individual with income less than VDASI would receive.

Beginning in 2000, the Nova Scotia Direct Assistance benefit (VDACB) will be granted to families with children when VDAFWC is activated.

VHEATFLG Nova Scotia Home Heating Assistance Rebate activation flag

DESCRIPTION

When VHEATFLG is turned on, families and individuals who heat their homes with oil or propane may receive a home heating fuel rebate from the Nova Scotia government for

assistance with heating fuel expenses. The maximum value of the rebate (VHEATREB) will go to families with a net income of VHEATFTD or less, or if single, an income of VHEATSTD or less. Seniors who receive the Guaranteed Income Supplement or Spouse's Allowance and persons receiving social assistance will be eligible for the maximum rebate. The value of the rebate is held in impheatr.

VHEATFTD Nova Scotia home heating fuel rebate income turndown for families

DESCRIPTION

This parameter represents the previous year's net income turndown for families who may be eligible for the home heating fuel rebate when VHEATFLG is activated. Families may receive a reduced rebate if their income is above this amount. The rebate will be reduced by VHEATFRR for families with net income in excess of this amount. Seniors who receive the Guaranteed Income Supplement or Spouse's Allowance and families receiving social assistance will be eligible for the maximum rebate.

VHEATSTD Nova Scotia home heating fuel rebate income turndown for singles

DESCRIPTION

This parameter represents the previous year's net income turndown for individuals who may be eligible for the home heating fuel rebate when VHEATFLG is activated. Seniors who receive the Guaranteed Income Supplement or Spouse's Allowance and persons receiving social assistance will be eligible for the maximum rebate.

VMEDALL N.S. Medical allowance maximum lower limit

DESCRIPTION

Nova Scotia allowable medical expenses are calculated as actual expenses (idmedgro) less either VMEDANF percent of net income, or VMEDALL, whichever is less. The calculated allowable expense is saved in impmeda. The provincial non-refundable medical expense tax credit (impmedtc) represents impmeda multiplied by VPNTCR. It is only calculated when VTXFLG is set to 1.

VODISTC N.S. Maximum infirm dependent 18 or older tax credit

DESCRIPTION

This parameter is the amount which can be claimed for the Nova Scotia non-refundable tax credit for infirm dependents aged 18 and over if the filer has already claimed an amount for disabled dependents (idothpe). Note that the model assumes that there is only one disabled dependent. The parameter is only used when a provincial tax on taxable income is calculated (VTXFLG = 1).

DESCRIPTION

When this parameter is set to 1, the Pharmacare tax credit is available to all seniors age 65 and over who are in receipt of GIS. When it is set to 2, the credit is available to all seniors but is reduced when family income is greater than VPHTD for singles and VPHTDC for couples. The refundable tax credit was introduced in the 1995 Nova Scotia budget, and was modified in 1996.

Changes were made to the Nova Scotia Pharmacare program in 1999. The premium is waived for seniors on Guaranteed Income Supplement and may be reduced for other seniors with low-income. The refundable tax credit was also eliminated.

VPHRR Nova Scotia pharmacare tax credit reduction rate

DESCRIPTION

This parameter gives the amount of the Nova Scotia Pharmacare premium tax credit reduction rate. This is the proportion of income (imgisinc) above the turndown (VPHTD or VPHTDC) which will be subtracted from the Maximum Pharmacare Tax Credit (VPHTC) to determine the allowable amount of the tax credit. The refundable tax credit was introduced in the 1995 Nova Scotia budget.

Changes were made to the Nova Scotia Pharmacare program in 1999. The premium is waived for seniors on Guaranteed Income Supplement and may be reduced for other seniors with low-income. The refundable tax credit was also eliminated.

DESCRIPTION

When VPHOPT is set to 1, this parameter gives the amount of the Nova Scotia Pharmacare premium tax credit turndown. When VPHOPT is set to 2, this is the turndown for singles (for couples it is VPHTDC). The turndown represents the level of income above which the Nova Scotia Pharmacare refundable tax credit begins to be reduced. The income used is imgisinc when VPHOPT is set to 1, and family income (imitot + imisa + imigis + imispa) otherwise. The refundable tax credit was introduced in the 1995 Nova Scotia budget.

Changes were made to the Nova Scotia Pharmacare program in 1999. The premium is waived for seniors on Guaranteed Income Supplement and may be reduced for other seniors with low-income. The refundable tax credit was also eliminated.

VPHTDC Nova Scotia pharmacare tax credit turndown for couples

DESCRIPTION

When VPHOPT is set to 2, this is the turndown for couple (for singles it is VPHTD). The turndown represents the level of income above which the Nova Scotia Pharmacare refundable tax credit begins to be reduced. The income used is imitot + imisa + imigis + imispa.

Changes were made to the Nova Scotia Pharmacare program in 1999. The premium is waived for seniors on Guaranteed Income Supplement and may be reduced for other seniors with low-income. The refundable tax credit was also eliminated.

VPNTCR N.S. provincial non-refundable tax credit rate

DESCRIPTION

This single parameter sets the tax credit rate for all of the non-refundable tax credits in Nova Scotia. Each tax credit is calculated separately and summed for a total credit. The parameter is only used when a provincial tax on taxable income is calculated (VTXFLG = 1).

VPTC Nova Scotia political contribution table [total donations,donation allowed]

DESCRIPTION

This table contains the figures necessary to calculate the Nova Scotia Political Contribution Tax Credit. The first column represents the dollar amount of total Nova Scotia political contributions to which the corresponding percentages of the third column are applied to calculate the total Allowable Nova Scotia Political Contribution Tax Credit. Only the first and third columns of the table need to be specified.

VPTX N.S. tax table [taxable income,basic provincial tax]

DESCRIPTION

This table represents the Nova Scotia tax curve used when calculating the tax on taxable income (VTXFLG = 1). The first column represents Taxable Income, the second represents the amount of Basic Provincial Tax payable at that level of taxable income, the third column represents the marginal tax rate for the interval between this and the next value in the table.

Only the first and third columns of the tax table need be specified. The second column is computed by the standard algorithm.

VSCI Nova Scotia provincial tax above which surtax applies

DESCRIPTION

This is the level of provincial tax payable (imtxp) above which a surtax at the rate of VSF applies.

For Nova Scotia, the SPSM calculates provincial surtax (impsur) as VSF percent of provincial taxes (imtxp) above the level VSCI plus VSF2 percent of provincial taxes above the level VSCI2.

VTXFLG N.S. tax on taxable income activation flag

DESCRIPTION

When this flag is turned on, Nova Scotia taxes get calculated as a tax on taxable income instead of as a percentage of federal taxes.

CROSS REFERENCE

Function	Description
txns	Compute provincial taxes for Nova Scotia

WGTFLAG Read weight file

DESCRIPTION

This parameter is usually left at 1. If de-activated, the weight file specified in the parameter INPWGT (if any) will not be read, and all weights will instead be set to the value 1.0. This facility can be used to produce unweighted tabulations of SPSPD, and is also useful if 'hypothetical households' generated using the bldspd utility are being used instead of the supplied SPSPD.

WGTTOT Sum of weights on tax file

DESCRIPTION

This control parameter specifies the total sum of weights on the input weight file. This value is generated by SPSM automatically and is reproduced here for informational purposes.

WSCF CPP/QPP contribution rate on employment earnings

DESCRIPTION

In the calculation of CPP contributions, this is the rate applied to earnings from employment.

XTCOLS X-tab desired print width

DESCRIPTION

This control parameter, when activated by XTFLAG, specifies the width desired for table reports. It is used to improve the appearance of tables, but does not guarantee that the table will fit within the bounds specified. Please see the *User's Guide* for more information.

The default value for XTCOLS is 132.

XTDBLFLAG X-tab double precision activation flag

DESCRIPTION

This control parameter, when set to 1 and activated by XTFLAG, specifies that calculations for table reports will be performed with double precision, otherwise single precision will be used. Please see the *User's Guide* for more information.

The default value for XTDBLFLAG is 1.

XTFLAG X-tab facility activation flag

DESCRIPTION

This control parameter activates the SPSM cross tabulation facility. The cross-tabulation facility allows the user to generate multidimensional tables of his or her own design. Please see the *User's Guide* for more information.

XTLINES X-tab desired lines per page

DESCRIPTION

This control parameter, when activated by XTFLAG, specifies the number of lines per page available on the user's output device. It is used to pack tables onto pages efficiently, but cannot be used to split tables with many lines across pages in a sensibly formatted fashion. Please see the *User's Guide* for more information.

The default value for XTLINES is 66.

XTSPEC X-tab specification [string]

DESCRIPTION

This control parameter, when activated by XTFLAG, specifies the tables requested by the user. As the syntax of table specification is rather complicated, please see the *User's Guide* for more information.

DESCRIPTION

This parameter contains the amount for dependent children for the first child under the age of 18. This amount is reduced if the child's net income is greater than YCXMT.
