SPSD/M

Parameter Guide

This guide contains an encyclopedic reference to SPSD/M parameters. An overview of parameters and a description of each of the three kinds of parameters (control, adjustment, and tax/transfer) is given.

August 28, 2000

Canada

Introduction

The Social Policy Simulation Model may be customized in two ways. The first is to modify the actual "C++" language source code.   This requires knowledge of the programming language as well as knowledge about the actual structure and implementation of the model.

A far simpler but less flexible and less powerful means of changing the function of the model is to turn the knobs and flip the switches provided by the model designers. These knobs and switches are known as parameters.

The purpose of this document is to provide an explanation of all parameters provided with the model. This introduction provides an overview of the parameter files and types of parameters which control the model, methods available for their examination and the source of the individual parameter's values.

Section 2, organized by program, provides an overview of the parameters. For example, all parameters related to calculating Social Assistance (SAFLAG, SAELDOPT, SAFS, SFAOUT, and IMPSAOPT) are listed together and each has a one line description.

In Section 3, the parameters are described in fuller detail. The alphabetic organization of this section will allow the user to locate a specific parameter more easily. References to the program function are given in this section to provide a cross reference to the *Algorithm Guide*.

Parameter Files

The files containing the parameter values have names which are given the extensions ".`cpr`" (control parameters), ".`apr`" (database adjustment parameters), and ".`mpr`" (tax/transfer model parameters). The values assigned may be changed by editing these files; interactively, during the running of the model; or by external models which generate these parameter files as output. Users should consult the *SPSD/M User's Guide* for a full description of modifying parameter values. The parameters in the commodity tax section of the model are generated by an external Input/Output model and should be altered only through that model. See the *COMTAX User's Guide* for more details.

The SPSM is designed to provide a great deal of flexibility through changing parameter values. Parameters are used for controlling the function of the model, its reporting facilities, adjusting the data and to provide values and options for the tax/transfer simulations.

As distributed, the standard model algorithm uses over 850 parameters which are provided with default values for eighteen alternative variants, or distinct simulations:

1984 actual tax/transfer parameter values, projected database
1985 actual tax/transfer parameter values, projected database
1986 actual tax/transfer parameter values, projected database
1987 actual tax/transfer parameter values, projected database

1988 actual tax/transfer parameter values, projected database
1989 actual tax/transfer parameter values, projected database
1990 actual tax/transfer parameter values, projected database
1991 actual tax/transfer parameter values, projected database
1992 actual tax/transfer parameter values, projected database
1993 actual tax/transfer parameter values, projected database
1994 actual tax/transfer parameter values, projected database
1995 actual tax/transfer parameter values, projected database
1996 actual tax/transfer parameter values, 1996 database
1997 actual tax/transfer parameter values, projected database
1998 actual tax/transfer parameter values, projected database
1999 actual tax/transfer parameter values, projected database
2000 projected tax/transfer parameter values, projected database
2001 projected tax/transfer parameter values, projected database
2002 projected tax/transfer parameter values, projected database
2003 projected tax/transfer parameter values, projected database

Each of these variants is defined by a set of parameter files, as described above. For example, the 1988 variant is specified in the parameter files: `ba88.cpr, ba88.mpr` and `ba96_88.apr`.

The database adjustment parameters supplied with the full SPSD/M are based on differences between SPSD per capita base year (1996) figures and per capita national accounts data for available years. This method is also used for projected the value of tax/transfer parameters where necessary.

The following is a list of the parameter files included with the release of SPSD/M version 8.0. These files supercede all parameter files included with the version 7.0 release.

CONTROL   ADJUSTMENT   TAX/TRANSFER

BA84.CPR	BA96_84.APR	BA84.MPR
BA85.CPR	BA96_85.APR	BA85.MPR

The numeric portion of the file names refers to the calendar year which will be simulated.

Within these files, the SPSM uses several types of parameters. Different types are checked for validity using different rules. The following is a description of the parameter types currently defined:

FLAG   A flag controls whether or not an algorithm (or program or calculation) is
               performed. With a value of one the algorithm is executed, with a value of zero it
               is not. Flag parameters always have the word "FLAG" as the last four letters in
               their name.
               A flag must take the value 0 or 1.
OPTION   An option parameter allows the choice of two or more algorithms (or programs
               or calculations). Values range from 1 to the number of options allowed. Option
               parameters always end in "OPT".
               A valid option value is an integer between 1 and the highest number allowed in
               the parameter definition.
SCALAR   Scalar parameters take a single numeric value with or without a decimal point.
STRING   A string parameter is a short single line of text.
VECTOR   A vector is a single column of numbers. The first value is the number of values
               to follow. The program checks that the correct number of values are included.
LOOKUP   A lookup table contains a single value followed by a set of three columns. The
TABLE   initial single value indicates the number of rows which are to follow. The tables
               are used in a similar manner as a tax table. A value, such as taxable income, is
               provided as a parameter to a look up program and the amount of tax payable is
               returned. In a lookup table, the first column represents the input value, such as
               taxable income. The second column represents the output value corresponding
               to the input value in the same column. The third column represents the marginal
               change in the output value for the next increment (or tax bracket).
TABLE   A table is a numeric array with an arbitrary number or rows and columns. The
               array is preceded by a number indicating the number of rows to follow.

Users should note that some parameters have been estimated and the user is encouraged to
inform us of the existence of more refined estimates or more appropriate values.

Examining Parameter Values

To review the values of the parameters for each variant, users may consult two sources. The
actual parameter files included with the model are the primary source and are the definitive
source to be consulted. In addition, as part of the online help guide, the *SPSD/M Parameter
Guide* contains all the default values for the parameters.

Two tools have been provided to assist you in reviewing the parameter files directly:

compparm: This utility will compare any two parameter files and produce a report detailing
their differences. Please refer to the *SPSD/M Tool User's Guide* for a detailed description of
its use.

grep: This utility searches all specified files for a given string and displays lines in which the
string is found. This allows for the comparison of the values of specific parameters across
multiple parameter files. Please refer to the *SPSD/M Tool User's Guide* for a detailed
description of its use.

Users may also use a text editor to actually scan the parameter files directly. This method

allows one to review all associated comments in context. Glass box users, and others, may wish to take this one step further and review the use of the parameters of interest in the C++ language source code provided with the model. For a detailed discussion of working with parameters and the parameter files please see the *SPSD/M User's Guide*.

Source of Parameter Values

The values used in the model have been drawn from a number of official publications associated with the tax/transfer system. For individual parameters, parameter values and sources organized by parameter may be found in the online parameter guide.

1   Parameter by Program

1.1   Model Control Parameters

1.1.1   General Information

CPRDESC   Description of SPSM run [string]
LICENSEE   SPSD/M licensee [string]
AUTHOR   Name of person doing simulation [string]
OUTCPR   Name of control parameter file (out) [string]
ALGDESC   Names of standard and alternate algorithms
BRKFLAG   Activate interception of `Break' key
BEEPFLAG   Beep on completion
CLOSEFLAG   Close window on completion
UPDATEINT   Interval between screen updates (hhlds)
ETAFLAG   Activate fraction completed display
ROUNDFLAG   Round disposable and consumable income
LOGFLAG   Produce a .log file for this run
OUTLOG   Name of log file (out) [string]

1.1.2   SPSD Input Files

INPSPD   Name of SPSD file (in) [string]
FXVFLAG   Read FAMEX expenditure vector file
INPFXV   Name of FAMEX vector file (in) [string]
WGTFLAG   Read weight file
INPWGT   Name of weight file (in) [string]
REFFLAG   Read reference results file
INPREF   Name of reference results file (in) [string]
REFVARS   Reference results file variables [string]

1.1.3   Database Adjustment

AGENAME   Name of database adjustment algorithm [string]
INPAPR   Name of database adjustment parameter file (in)
                  [string]
OUTAPR   Name of database adjustment parameter file (out)
                  [string]

1.1.4   Variant Information

VARALG   Name of variant algorithm [string]
VARMETH   Method of creating variant variables
VARDESC   Description of variant parameters [string]
INPVARMPR   Name of variant tax/transfer parameter file (in)

	[string]
OUTVARMPR	Name of variant tax/transfer parameter file (out)
	[string]
OUTMRSFLAG	Variant results file creation flag
OUTVARMRS	Name of variant results file (out) [string]
OUTMRSVARS	Variant results file variables [string]
OUTMRSFRAC	Variant results file preserves fractional part

1.1.5 Base Information

BASALG	Name of base algorithm [string]
BASMETH	Method of creating base variables
BASDESC	Description of base parameters [string]
INPBASMPR	Name of base tax/transfer parameter file (in)
	[string]
INPBASMRS	Name of base results file (in) [string]
INPMRSVARS	Base results file variables [string]

1.1.6 Subsampling, Random Number Seed

SAMPLEREQ	Size of sample requested
SAMPLE	Size of sample obtained
WGTTOT	Sum of weights on tax file
SEED	Random number generator seeds

1.1.7 Record Selection Facility

SELFLAG	Selection facility activation flag
SELUNIT	Selection facility family level
SELSPEC	Selection specification [string]
SELMAX	Selection facility maximum # of households

1.1.8 Marginal Tax Rate Facility

MARFLAG	Marginal tax rate facility activation flag
MARAMT	Amount to be added to variable for marginal
	calculation
MARVAR	Variable to add MARAMT to [string]
MARSPEC	Expression identifying recipients [string]
MARBASEFLAG	Save marginal results as base run flag

1.1.9 Turning Point Facility

TPFLAG	Turning point facility activation flag
TPSPEC	Expression identifying individuals to change
	[string]
TPVARS	Variables to modify [string]

TPMETH	Method for modifying variables [1=additive, 2=multiplicative]
TPLL	Lower limit for modified variables
TPUL	Upper limit for modified variables

1.1.10 User-defined Variables

UVARFLAG	Activate UVAR parameter for expressions
UVAR	User statements [string]

1.1.11 Text Output Facility

ASCFLAG	Text output facility activation flag
OUTASC	Name of text output file (out) [string]
ASCUNIT	Text output family level
ASCSTYLE	Style of text output
ASCDELIM	Field delimiter
ASCEXTPRC	Number of digits of extra precision
ASCVARS	Variables selected for text output [string]

1.1.12 SAS Output Facility

SASFLAG	SAS output facility activation flag
OUTSAS	Name of SAS output file (out) [string]
SASUNIT	SAS output family level
SASVARS	Variables selected for SAS output [string]
SASTITLE	SAS file label [string]

1.1.13 Reports

OUTTBL	Name of report file (out) [string]

1.1.14 Parameter Reporting

PRDFFLAG	Parameter difference report activation flag

1.1.15 Tabular Reporting

1.1.15.1   Built-in Tables

T0FLAG	Canada totals table flag (Dollars)
T0AFLAG	Canada totals table flag (Units)
T1FLAG	Provincial totals table flag (Dollars)
T1AFLAG	Provincial totals table flag (Units)
T2FLAG	Income group totals table flag (Dollars)
T2AFLAG	Income group totals table flag (Units)
T3FLAG	Family type totals table flag (Dollars)
T3AFLAG	Family type totals table flag (Units)

T4FLAG	LICO ratio group totals table flag (Dollars)
T4AFLAG	LICO ratio group totals table flag (Units)
TABUNIT	Built-in tables family level
TABDELTA	Built-in tables winner/loser threshold
INCVAR	Variable to use for table 2 [string]
INCGP	Income cutpoints for table 2 [array]
PVRAT	Family poverty ratio fractions for table 4 [array]

1.1.15.2 User-specified Tabulation Facility

XTFLAG	X-tab facility activation flag
XTSPEC	X-tab specification [string]
XTDBLFLAG	X-tab double precision activation flag
XTCOLS	X-tab desired print width
XTLINES	X-tab desired lines per page

1.1.15.3 Distributional Analysis Facility

DISTFLAG	Distribution facility activation flag
DISTUNIT	Distribution facility family level
DISTVAR	Distribution facility variable [string]
DISTSAMP	Distribution facility sample size
DISTZERO	Distribution facility zero inclusion flag
DISTP	Breakpoints for histogram plot [array]
DISTPWID	Width of histogram plot
DISTPHGT	Height of histogram plot
INEQFLAG	Inequality measures facility activation flag
INEQMEASURE	Type of inequality measure [social preference, center of weight distribution]

1.2 Database Adjustment Parameters

1.2.1 File Description Parameters

| APRDESC | Description of database adjustment parameter file |

1.2.2 Structural Parameters

1.2.2.1 Provincial Mapping

| PROVMAP | Provincial remapping [prov] |

1.2.2.2 Imputation Method

IMPUIBOPT	Imputation method, UI [1=none 2=rank]
IMPSAOPT	Imputation method, SA [1=none 2=rank]
IMPCQPOPT	Imputation method, CQP [1=none 2=rank]
IMPINTOPT	Imputation method, Interest [1=none 2=imputed]

1.2.2.3 Calculation Options

DNINCFLAG   Disable no income flag for calculation

1.2.2.4 FAMEX Adjustments

CTTXRM   Base year commodity tax removal factor [com x prov]

CTCFALC   FAMEX reporting error adjustment: Alcohol [prov]

CTCFTOB   FAMEX reporting error adjustment: Tobacco [prov]

CTCFGAS   FAMEX reporting error adjustment: Gasoline [prov]

CTFAMSNA   FAMEX->SNA conceptual conversion factor [com]

KEEPNEGEXP   Retain negative expenditures in FAMEX

1.2.2.5 Classification Variable Parameters

EARNMIN   Earnings threshold to be an earner

1.2.2.6 Low Income Cut-off Parameters

PTF   Low income cut-off [size, urban]
PVRAT   Family poverty ratio fractions for table 4 [array]

1.2.2.7 RRSP Adjustment Parameters

RRSPIFLAG   RRSP increment activation flag
RRSPEMIN   Minimum (rpp+rrsp) for increment if rpp>0
RRSPEMAX   Maximum (rpp+rrsp) for increment if rpp>0
RRSPEINC   Increment to rrsp if conditions & rpp>0
RRSPSMIN   Minimum (rrsp) for increment if rpp=0
RRSPSMAX   Maximum (rrsp) for increment if rpp=0
RRSPSINC   Increment to rrsp if conditions & rpp=0

1.2.3 Database Adjustment Factors

1.2.3.1 UI Growth Parameters

UIBASEYRMAX   Maximum insurable earnings for base year
UITARGYRMAX   Maximum insurable earnings for target year
PURB   Base year unemployment rate [prov]
PURC   Current year unemployment rate [prov]
PURR   Ratio current:base unemployment rate [prov]

1.2.3.2 Income, Expenditure and Deduction Items

All dollar denominated variables from the SCF, FAMEX and Greenbook have a corresponding growth parameter. The database value is always scaled by the corresponding parameter value. Minimally, all these parameters are vectors by province. In some cases parameters will have an extra

dimension (i.e.GFIEMP is grown by province and sex).

1.2.3.2.1   Market Income

GFIEMP	Growth Factor: Employment income [province,sex]
IEMPADJ	Adjustment Factor: Employment income [employment income breaks,province]
IEMPBRK	Adjustment Factor: Income breaks for income adjustment[employment income breaks]
GFISEFM	Growth Factor: Self-employed income - farming
GFISENF	Growth Factor: Self-employed income - non-farming
GFICAPG	Growth Factor: Capital gains (actual) (127 * 1.5)
GFIDIV	Growth Factor: Dividend income (actual) (120 / 1.5)
GFIINT	Growth Factor: Interest income (121)
GFILOSS	Growth Factor: Business investment losses (217)
GFIOINV	Growth Factor: Other investment income with net rental
GFIPENS	Growth Factor: Pension income (115)
GFIALIMO	Growth Factor: Alimony Income
GFITRRSP	Growth Factor: Taxable RRSP withdrawls
GFITOTH	Growth Factor: Other non-government income (taxable)
GFINOTH	Growth Factor: Other money income (non-taxable)

1.2.3.2.2   Government Income

GFISA	Growth Factor: Social assistance income
GFSAPRED	Growth Factor: Predicted benefits from Social Assistance
GFIVETP	Growth Factor: Veterans Pensions
GFIWORKC	Growth Factor: Worker's compensation
GFITOGV	Growth Factor: Other government income (taxable)
GFINOGV	Growth Factor: Other government income (non-taxable)
GFCPPL65	Growth Factor: CPP for age < 65
GFCPP65	Growth Factor: CPP for age 65
GFCPP66	Growth Factor: CPP for age 66
GFCPP67	Growth Factor: CPP for age 67
GFCPP68	Growth Factor: CPP for age 68
GFCPP69	Growth Factor: CPP for age 69
GFCPP70	Growth Factor: CPP for age 70
GFCPP71	Growth Factor: CPP for age 71
GFCPP72	Growth Factor: CPP for age 72
GFCPP73	Growth Factor: CPP for age 73
GFCPP74	Growth Factor: CPP for age 74

| GFCPP75 | Growth Factor: CPP for age 75 |
| GFCPPG75 | Growth Factor: CPP for age > 75 |

1.2.3.2.3 Deductions

GFADDDED	Growth Factor: Additional deductions from net income (256)
GFALEXP	Growth Factor: Other allowable employment expenses (229)
GFCAPGEX	Growth Factor: Capital gains exemptions (254)
GFCARRY	Growth Factor: Carrying charges (221)
GFCCET	Growth Factor: Child care expenses associated with child
GFCCETT	Growth Factor: Child care expenses (Limit A, Form T778)
GFCHARIT	Growth Factor: Charitable donations (340)
GFCLOSS	Growth Factor: Allowable other years capital loss (253)
GFDALIMO	Growth Factor: Alimony paid (220)
GFDISOTH	Growth Factor: Disability amount for dependants (318)
GFDISSLF	Growth Factor: Disability amount for self (316)
GFDUES	Growth Factor: Union and professional dues (212)
GFEMPLO	Growth Factor: Employee home relocation loan dedn (248)
GFEXPLOR	Growth Factor: Exploration and development expenses (224)
GFFDSFT	Growth Factor: Foreign tax credit applied to surtax (511)
GFFORAVG	Growth Factor: Forward averaging amount withdrawal (237)
GFFORINC	Growth Factor: Net foreign income (508)
GFFORTX	Growth Factor: Foreign tax paid (507)
GFGIFTS	Growth Factor: Gifts to Canada/provinces/culture (342)
GFGSTREB	Growth Factor: GST rebate (457)
GFHOMSTU	Growth Factor: College residence/resident homeowner assistance (558)
GFHOSSLF	Growth Factor: Ontario HOSP contributions - self (598)
GFHOSSPO	Growth Factor: Ontario HOSP contributions - spouse (599)
GFMEDGRO	Growth Factor: Medical expenses, gross (330)
GFMINCAR	Growth Factor: Minimum tax carryover (504)
GFMOVEXP	Growth Factor: Imputed moving expenses (219)
GFMSCHPD	Growth Factor: Manitoba school taxes paid
GFNCLOS	Growth Factor: Allowable other years non-capital

	loss (252)
GFNORTH	Growth Factor: Northern deductions (255)
GFOTHDED	Growth Factor: Other deductions from total income (232)
GFOTHPE	Growth Factor: Other dependant exemptions (305)
GFPARTLO	Growth Factor: Limited partnership losses (251)
GFPOLCON	Growth Factor: Federal political contributions (409)
GFPROPTX	Growth Factor: Net property taxes paid (556)
GFPRVPOL	Growth Factor: Provincial political contributions (565)
GFRENTPD	Growth Factor: Total rental payments (555)
GFRPP	Growth Factor: Registered pension plan contributions (207)
GFRRSP	Growth Factor: RRSP contributions (208)
GFSTKDED	Growth Factor: Stock option deduction (249)
GFTUITN	Growth Factor: Tuition fees (320)

1.2.3.2.4   Tax Credits

GFITC	Growth Factor: Federal investment tax credits (412)
GFLABTXG	Growth Factor: Labour funds tax credit (414)
GFPRVFTC	Growth Factor: Provincial foreign tax credit (Form T2036)
GFVENCAP	Growth Factor: Venture capital tax credit (564)

1.2.3.2.5   Family Expenditure Items

GFFMX	Adjustment Factor: consumer expenditure categories [commodity]
GFRECOM	Adjustment Factor: Real estate commissions
GFINTPL	Adjustment Factor: Interest on personal loans
GFIPAC	Adjustment Factor: Life insurance premiums and annuity contributions
GFGVPEN	Adjustment Factor: Government pension plan contributions
GFPVPEN	Adjustment Factor: Private pension plan contributions
GFCQP	Adjustment Factor: CPP/QPP contributions
GFUIC	Adjustment Factor: UI contributions
GFINTAX	Adjustment Factor: Income taxes
GFPRTAX	Adjustment Factor: Property tax
GFTPTAX	Adjustment Factor: Transfer of property taxes
GFRFEES	Adjustment Factor: Registration and license fees
GFNES	Adjustment Factor: Not elsewhere stated
GFNCAL	Adjustment Factor: Net change in assets and liabilities
GFRRSPT	Adjustment Factor: Total RRSP contributions

	(FAMEX)
GFFABD	Adjustment Factor: Account balancing difference
GFFOMR	Adjustment Factor: Other money receipts
GFMORTI	Adjustment Factor: Mortgage interest paid
GFHMKT	Adjustment Factor: Market value of home
GFHMORT	Adjustment Factor: Mortgage value outstanding

1.2.3.2.6   Employment Income Adjustment

IEMPADJ	Adjustment Factor: Employment income [employment income breaks,province]
IEMPBRK	Adjustment Factor: Income breaks for income adjustment[employment income breaks]

1.2.3.2.7   SCF Variables

GFSCFCTC	Growth Factor: Child tax credit
GFSCFCQP	Growth Factor: SCF CPP
GFSCFFTC	Growth Factor: Federal tax credit
GFSCFINT	Growth Factor: SCF interest income
GFSCFOAS	Growth Factor: Old age security
GFSCFPTC	Growth Factor: SCF provincial tax credits
GFSCFSA	Growth Factor: SCF social assistance
GFSCFUIB	Growth Factor: Unemployment insurance benefits
GFUIPRED	Growth Factor: Predicted benefits from UI

1.3   Government Transfers and Personal Income Taxes

1.3.1   Parameter File Description

MPRDESC	Description of tax/transfer parameter file
TARGETYEAR	Year of analysis

1.3.2   Database Variable Activation

A number of deductions and tax credits are imputed from the Geenbook. Only those deductions and tax credits included on the tax forms for the year of the database can be imputed. These parameters are used to 'turn off' certain programs in years for which they do not apply. Even when these parameters are set to zero, the variables to which they apply will contain values but those values will not affect consummable income.

ADDDEDFLAG	Database variable(addded) activation flag
EMPLOFLAG	Database variable(emplo) activation flag
FDSFTFLAG	Database variable(fdsft) activation flag
MINCARFLAG	Database variable(mincar) activation flag
NORTHFLAG	Database variable(north) activation flag

PARTLOFLAG	Database variable(partlo) activation flag
FORAVGFLAG	Database variable(foravg) activation flag
GSTREBFLAG	Database variable(gstreb) activation flag

1.3.3 Government Transfers

1.3.3.1   Unemployment Insurance\Employment Insurance

UIFLAG	UI/EI Activation flag (UI and EI)
UIERNMAX	Maximum insurable earnings (UI and EI)
UIMINPCT	Exemption limit (percent of maximum insurable earnings) (UI only)
UIPF	UI contribution rate on earnings (UI and EI)
UIEIREF	EI contribution refund cut-in (EI only)
UITARGET	UI/EI target for the number of cases

1.3.3.1.1   Minimum Weeks to Qualify

UIREGMINWK	Minimum weeks to qualify for regular benefits (UI only)
UIMATMINWK	Minimum weeks to qualify for maternity benefits (UI only)
UISICMINWK	Minimum weeks to qualify for sickness benefits (UI only)
UIRETMINWK	Minimum weeks to qualify for retirement benefits (UI only)
UIFSHMINWK	Minimum weeks to qualify for fishing benefits (UI only)

1.3.3.1.2   Minimum Hours or Earnings to Qualify

UIREGHRMIN	Min. hours to qualify for reg. benefits [unempl. rate] (EI only)
UIMATHRMIN	Minimum hours to qualify for maternity benefits (EI only)
UISICHRMIN	Minimum hours to qualify for sickness benefits (EI only)
UIFSHERMIN	Min. earnings to qualify for fish. benefits [unempl. rate] (EI only)

1.3.3.1.3   Regional Qualification

| UIRGNMIN | Regional unemployment rate (UI only) |
| UIRGNWKS | Weeks required for eligibility (UI only) |

1.3.3.1.4   Repeater Qualification

UIREPUER	Regional unemployment rate [rates] (UI only)
UIREPPREV	Weeks of insurable employment [weeks] (UI only)
UIREPWWKD	Repeater eligibility requirements [weeks x rates] (UI only)

1.3.3.1.5   Basic Parameters

UIWAITWKS	Minimum waiting period all claims (UI and EI)
UIQPWKS	Additional waiting period for quitters (UI and EI)
UIMAXBASEWKS	Maximum number of weeks - regular (UI and EI)
UIMAXMATWKS	Maximum number of weeks - maternity (UI and EI)
UIEXTMATWKS	Additional weeks for maternity - behavioural response (UI and EI)
UIMAXSICWKS	Maximum number of weeks - sickness (UI and EI)
UIMAXRETWKS	Maximum number of weeks - retirement (UI only)
UIMAXFSHWKS	Maximum number of weeks - fishing (UI and EI)
UIMAXPARWKS	Maximum number of weeks - parental (UI and EI)
UIMAXDUR	Maximum duration of a UI claim (UI and EI)
UIBASOPT	UI reform option [1=normal, 2=Apr'89] (UI and EI)
UIDEPOPT	UI dependency option [1=normal, 2=Feb'94] (UI and EI)
UIREGWKFCT	UI regular benefit weeks adjustment factor (UI and EI)
UITRNWKFCT	UI training benefit weeks adjustment factor (UI and EI)
UITRNBNFCT	UI training benefit per week adjustment factor (EI and EI)
UIEITRNFLAG	Modeling of UI training benefits flag (UI and EI)
UIEITRNREGFLG	UI training benefits turned into regular benefits (UI and EI)
UIEWK	Entitlement (weeks) [wkwrk, uer] (UI and EI)
UIEIOPT	UI Employment Insurance reform option [1=UI, 2=EI Dec'95]

UIEIFSRR	UI EI family supplement reduction rate (EI only)
UIEIFSRL	UI EI family supplement reduction level(EI only)
UIEIFIFLG	EI intensity rule exemption for family supplement receivers (EI only)
UIEIMFSP	EI Maximum family supplement percent of earnings (EI only)
UIEIYRS	Number of years of previous EI benefits calculated (EI only)
UIEIDIVOPT	EI miminum divisor options (EI only)
UIEIDIV	EI minimum divisor [uer][divisor] (EI only)
UIBXWK	User define behavioral response to minimum divisor [uer][rate] (EI only)
UIWK26	Conversion rate of weeks worked (52 to 26

weeks) [prob][rate] (EI only)

UIEITKP   UI EI takeup rate [index] : index based on prov, sex, age, weeks

UIEIMTYPFLG   Flag to model main benefit type (UI and EI)

1.3.3.1.6   Benefit Duration

UIMAXBASEWKS   Maximum number of weeks - regular (UI and EI)

UIMAXMATWKS   Maximum number of weeks - maternity (UI and EI)

UIEXTMATWKS   Additional weeks for maternity - behavioural response (UI and EI)

UIMAXSICWKS   Maximum number of weeks - sickness (UI and EI)

UIMAXRETWKS   Maximum number of weeks - retirement (UI only)

UIMAXFSHWKS   Maximum number of weeks - fishing (UI and EI)

UIMAXDUR   Maximum duration of a UI claim (UI and EI)

UIEWK   Entitlement (weeks) [wkwrk, uer] (UI and EI)

UIEIHWCF   EI hours to weeks conversion factor (hours/week) (EI only)

1.3.3.1.7   Labour Force Extended Benefits

UILFEMIN   Weeks worked in qualifying period [UILFEWKS index] (UI only)

UILFEWKS   Weeks LFE entitlement [UILFEMIN] (UI only)

1.3.3.1.8   Regional Extended Benefits

UIRGEMIN   Unemployment rate for Regional Extended entitlement [UIRGEWKS index] (UI only)

UIRGEWKS   Weeks Regional Extended entitlement [UIRGEMIN] (UI only)

1.3.3.1.9   Benefit Rates

UIBASRATE   Benefit rate for basic phase (UI only)

UIENSRATE   Enhanced rate for basic phase (UI only)

UIENSRTCO   Enhanced rate cutoff (UI only)

UIQUIRATE   Benefit rate for quitters in basic phase (UI and EI)

UILFERATE   Benefit rate for labor force extended phase (UI only)

UIRGERATE   Benefit rate for regional extended phase (UI only)

UIEIRATE   Benefit rate under EI reform [Past Wks ben][Rate] (EI only)

1.3.3.1.10   Option Activation

UIENTFLAG   Basic entrance requirements flag (UI and EI)

UIRGNFLAG   Regional requirements flag (UI only)

UIRPTFLAG   Repeater requirements flag (UI only)

UIBASFLAG   Basic phase calculation flag (UI and EI)

UILFEFLAG   Labour force extended phase calculation flag (UI

only)

| UIRGEFLAG | Regional extended phase calculation flag (UI only) |
| UIEFFFLAG | Observed effective weekly benefit rate flag (UI and EI) |

1.3.3.1.11 Repayment (through tax system)

UIBAF	UI benefit recovery base amount factor (UI and EI)
UIBRP	UI benefit recovery portion (UI only)
UIBRA	UI repayment base amount (UI and EI)
UIBAFNR	UI EI benefit recovery base amount factor for non-repeaters (EI only)
UIEIRPR	UI EI benefit clawback rate (EI only)
UIEIBRP	Maximum clawback under EI reform [Past Wks ben][Rate] (EI only)
UIEINRT	UI EI Non repeater level for higher clawback turndown (EI only)

1.3.3.1.12 UI Growth Parameters

UIBASEYRMAX	Maximum insurable earnings for base year
UITARGYRMAX	Maximum insurable earnings for target year
PURB	Base year unemployment rate [prov]
PURC	Current year unemployment rate [prov]
PURR	Ratio current:base unemployment rate [prov]

1.3.3.1.13 Additional Employment Insurance Parameters

UIBAFNR	UI EI benefit recovery base amount factor for non-repeaters (EI only)
UIBRANR	EI repayment base amount for non-repeaters (EI only)
UIBXWK	User define behavioral response to minimum divisor [uer][rate] (EI only)
UIEIBRP	Maximum clawback under EI reform [Past Wks ben][Rate] (EI only)
UIEIDIV	EI minimum divisor [uer][divisor] (EI only)
UIEIDIVOPT	EI miminum divisor options (EI only)
UIEIFIFLG	EI intensity rule exemption for family supplement receivers (EI only)
UIEIFSFLG	UI EI calculate family supplement flag (EI only)
UIEIHWCF	EI hours to weeks conversion factor (hours/week) (EI only)
UIEIMFSP	EI Maximum family supplement percent of earnings (EI only)
UIEINRT	UI EI Non repeater level for higher clawback turndown (EI only)
UIEIOPT	UI Employment Insurance reform option [1=UI, 2=EI Dec'95]
UIEIRATE	Benefit rate under EI reform [Past Wks

	ben][Rate] (EI only)
UIEIREF	EI contribution refund cut-in (EI only)
UIEIRPR	UI EI benefit clawback rate (EI only)
UIEIYRS	Number of years of previous EI benefits calculated (EI only)
UIFLAG	UI/EI Activation flag (UI and EI)
UIMATHRMIN	Minimum hours to qualify for maternity benefits (EI only)
UIREGHRMIN	Min. hours to qualify for reg. benefits [unempl. rate] (EI only)
UISICHRMIN	Minimum hours to qualify for sickness benefits (EI only)
UIFSHERMIN	Min. earnings to qualify for fish. benefits [unempl. rate] (EI only)
UIWK26	Conversion rate of weeks worked (52 to 26 weeks) [prob][rate] (EI only)

1.3.3.2 Family Allowance

FAFLAG	Family allowance flag
PFACFLAG	Use provincial configuration flag

1.3.3.2.1 All Provinces Except Alberta and Quebec

STDFA	Standard federal family allowance per child

1.3.3.2.2 Alberta

AFAC1	Alberta FA benefit per child aged 0 - 6
AFAC2	Alberta FA benefit per child aged 7 - 11
AFAC3	Alberta FA benefit per child aged 12- 15
AFAC4	Alberta FA benefit per child aged 16- 17

1.3.3.2.3 Quebec

QAAFA	Quebec availability allowance (supplement) [parity,$]
QAAFAFLAG	Availability Allowance: Supplement to Quebec FA
QAARCFLAG	Availability Allowance: Refundable Tax Credit
QAARC	Quebec availability allowance (refundable credit) [parity,$]
QFATCOPT	Quebec Family Allowance Tax Credit Option tranfer=1, tax credit=2
QFATFLAG	Make Provincial FA to 16 & 17 year olds taxable
QFAIFLAG	Quebec inclusion of federal family allowance in income flag
QFFSL	Federal family allowance: Quebec Configuration[parity,$]
QFPSL	Quebec provincial family allowance [parity,$]
QFS	Federal supplement per child 12-17 in Quebec configuration
QNBFA	Quebec newborn family allowance [parity,age]

QNBFAFLAG	Quebec newborn family allowance flag
QNBRFLAG	Quebec newborn family random increase of child rank
QNBPOFLAG	Quebec newborn family allowance phase out flag
QNBPOPYR	Quebec newborn family allowance phase-out year proportion
QNBPOYR	Quebec newborn family allowance phase out year

1.3.3.2.4   Repayment (through tax system)

FATBPI	Family allowance take-back phase in
FATD	Family allowance turndown income
FARR	Family allowance repayment rate

1.3.3.3   Old Age Security (OAS)

| OASFLAG | Old age security flag |
| BOAS | Basic OAS |

1.3.3.3.1   Repayment (through tax system)

OASTBPI	OAS take-back phase in
OASTD	OAS turndown income
OASRR	OAS reduction rate
NETOASFLG	Net the clawback from Old Age Security

1.3.3.4   Guaranteed Income Supplement

GISFLAG	Federal GIS/SPA/ESPA flag
GISOASFLAG	1984 GIS top-up to OAS residence shortfall flag
GISPTDFLAG	GIS income: Payroll tax deduction flag

1.3.3.4.1   Supplement Rates

BGISS	Basic GIS - single
BGISM	Basic GIS - married
BESPA	Basic GIS portion of extended SPA
PYINC	Deflator to calculate previous year income
GISRLS	Basic GIS reduction level: single pensioners
GISRLM	Basic GIS reduction level: married pensioners
SPARL	SPA reduction point: one married/ widowed
GISRRS	Basic GIS reduction rate: single pensioners
GISRRM	Basic GIS reduction rate: married pensioners
GISBE1	Breakeven for GIS one pensioner couple
GISBE2	Breakeven for GIS/SPA couple
SPAOASRR	OAS portion of SPA taxback rate
SPAXO	Benefit Cross-over GIS/SPA vs GIS one pensioner couple

1.3.3.4.2   Take-up Rates

GISTURFLAG	GIS take-up flag: apply 5 take-up tables
GISST	GIS take-up rate: single pensioner by benefit level [benefit,rate]
GISCT	GIS take-up rate: pensioner couple by benefit level [benefit,rate]
GISOT	GIS take-up rate: one pensioner couple by benefit

	level [benefit,rate]
SPAT	SPA take-up rate by benefit level [benefit,rate]
ESPAT	Extended SPA take-up rate by benefit level [benefit,rate]
SPAEFLAG	Extended SPA eligibility probabilities flag
SPAFE	SPA take-up rate: eligible female widow [age,probability]
SPAME	SPA take-up rate: eligible male widower [age,probability]

1.3.3.5 Federal Senior's Benefits

SBFLAG	Activate calculation of Seniors Benefit
SBOPTFLG	Optimize Seniors benefit with OAS/GIS

1.3.3.5.1 Supplement Rates

SBBENS	Seniors Benefit maximum rate for singles
SBBENM	Seniors Benefit maximum rate for couples
SBSPA	Seniors Benefit maximum rate for SPA
SBPREM	Seniors Benefit premium over GIS

1.3.3.5.2 Needs Testing Parameters

SBRL1	Seniors Benefit first benefit reduction plateau
SBRL2	Seniors Benefit Second reduction level
SBRR1	Seniors Benefit First reduction rate
SBRR2	Seniors Benefit Second Reduction Rate
PYINC	Deflator to calculate previous year income
GISRLS	Basic GIS reduction level: single pensioners
GISRLM	Basic GIS reduction level: married pensioners

1.3.3.6 Provincial Elderly Programs

GISTFLAG	Provincial GIS top-up flag

1.3.3.6.1 Newfoundland

NFSBBAS	NFLD Low-Income Seniors' Benefit base amount
NFSBTD	NFLD Low-Income Seniors' Benefit turndown
NFSBRR	NFLD Low-Income Seniors' Benefit reduction rate

1.3.3.6.2 Nova Scotia

NSMAX	Nova Scotia maximum GIS supplement level
NS23	Nova Scotia GIS supplement for 2/3 GIS
NS13	Nova Scotia GIS supplement for 1/3 GIS
NSLT13	Nova Scotia GIS supplement for less than 1/3 GIS

1.3.3.6.3 New Brunswick

NBSB	New Brunswick Low-Income Seniors' Benefit

1.3.3.6.4 Ontario

ONTS	Ontario GIS supplement: single pensioners
ONTC	Ontario GIS supplement: married pensioners
ONTSTG	Ontario sales tax grant for seniors

ONTPTG	Ontario property tax grant for seniors
ONTFPTG	Ontario property tax grant (fraction of rent)

1.3.3.6.5 Manitoba

MANS	Manitoba GIS supplement: single pensioners
MANC	Manitoba GIS supplement: married pensioners
MANSNPF	Manitoba GIS supplement reduction point: single
MANCNPF	Manitoba GIS supplement reduction point: married

1.3.3.6.6 Saskatchewan

SASKS	Saskatchewan GIS supplement: single pensioners
SASKC	Saskatchewan GIS supplement: married pensioners
SASKMINS	Saskatchewan GIS supplement minimum benefits: single
SASKMINC	Saskatchewan GIS supplement minimum benefits: married
SASKRR1	Saskatchewan GIS supplement reduction rate: regular
SASKRR2	Saskatchewan GIS supplement reduction rate: 1 GIS
SASKRR3	Saskatchewan GIS supplement reduction rate: SPA

1.3.3.6.7 Alberta

ALTAMIN	Alberta GIS supplement minimum annual benefit
ALTASC	Alberta GIS supplement maximum annual benefit
ALTAWP	Alberta widow's pension maximum annual benefit
ALTASOPT	Alberta seniors option [1=GIST,2=new seniors benefit 1994]
ASBBASIC	Alberta seniors benefit annual basic benefit
ASBSS	Alberta seniors benefit senior spouse supplement
ASBNSS	Alberta seniors benefit non-senior spouse supplement
ASBRENT	Alberta seniors benefit renter supplement
ASBNOAS	Alberta seniors benefit reduction if no OAS [senior type]
ASBEMP	Alberta seniors benefit employment inclusion rate
ASBRR	Alberta seniors benefit reduction rate [senior type]
ASBSSOPT	Alberta seniors benefit 1 senior couple option [1=model separately,2=model as senior couples]

1.3.3.6.8 British Columbia

BCS	British Columbia GIS supplement: single pensioners
BCC	British Columbia GIS supplement: married pensioners

1.3.3.7 Federal Sales Tax Credit

FSTCFLAG	Federal sales tax credit flag
FSTCF	Federal sales tax credit amount for filer
FSTCS	Federal sales tax credit amount for spouse
FSTCC	Federal sales tax credit amount for dependant
FSTCL	Federal sales tax credit reduction level
FSTCR	Federal sales tax credit reduction rate
FSTCREF	Federal sales tax credit reform - age
CTCIFLAG	Refundable tax credits social assistance income inclusion flag
GSTFLAG	GST credit activation flag
GSTAC	GST additional credit amount
GSTAR	GST additional credit rate of net income
GSTAXM	GST additional credit exemption
GSTASPFLAG	Maximum GST additional credit for single parents flag
GSTCTUNC	GST credit take up by number of children

1.3.3.8 Federal Child Tax Credit

CTCOPT	Child tax credit option
CTCPC	Child tax credit per child
CTCTD	Family income child tax credit turndown
CTCRR	Child tax credit reduction rate
CTCIFLAG	Refundable tax credits social assistance income inclusion flag
CTCREF	CTC post-reform rules flag
CTCSUP	CTC young child supplement
CTCERF	CTC child care expense reduction fraction
CTCTUR	CTC take up rate table [benefit,rate]
CTCINC	CTC family income scaling factor

1.3.3.9 Federal Child Tax Benefit

FCBBAS	Basic child benefit (per child)
FCBYNG	Supplement for children under age 7
FCBYNGR	Child care expense reduction rate
FCBLRG	Supplement for 3rd and subsequent kids
FCBTD	Federal child benefits family income turndown
FCBRR	Multi-children family income reduction rate
FCBRRS	Single-child family income reduction rate
FCBESR	Child benefits earned income supplement rate
FCBERR	Child benefits earning supplement reduction rate
FCBEIS	Child benefits earned income supplement
FCBECI	Child benefits earning supplement cut-in level
FCBETD	Child benefits earning supplement turndown level
FCBEIE	Flag for WIS dependent on number of children

FCBEMX	Earnings where WIS phase-in is at maximum
FCBEIS1	Enriched WIS for first child
FCBEIS2	Enriched WIS for second child
FCBEIS3	Enriched WIS for each additional child
FCBERR1	WIS reduction rate for families with 1 child
FCBERR2	WIS reduction rate for families with 2 children
FCBERR3	WIS reduction rate for families with 3+ children
ACBC1	Alberta Child benefit per child aged 0 - 6
ACBC2	Alberta Child benefit per child aged 7 - 11
ACBC3	Alberta Child benefit per child aged 12- 15
ACBC4	Alberta Child benefit per child aged 16- 17
QCBCFLG	Quebec Child benefit flag for Quebec calculation methodology
QCBC1	Quebec Child benefit for 1st child
QCBC2	Quebec Child benefit for 2nd child
QCBC3	Quebec Child benefit for 3rd child
QCBCS	Quebec Child benefit supplement child aged 12-17
PYINC	Deflator to calculate previous year income

1.3.3.10 Provincial Children Programs

1.3.3.10.1 Newfoundland

NCBFLG	Newfoundland child benefit activation flag
NCB1	Nfld. child benefit for first child
NCB2	Nfld. child benefit for second child
NCB3	Nfld. child benefit for third child
NCB4	Nfld. child benefit for 4th and subsequent child
NCBTD	Nfld. child benefit family income turndown
NCBPO	Nfld. child benefit family income phase out
NCBPI	Nfld. child benefit program phase in

1.3.3.10.2 New Brunswick

NBCTBFLG	NB child benefit activation flag
NBCBBAS	NB Basic child benefit (per child)
NBCBTD	NB child benefits family income turndown
NBCBRR	NB Multi-children family income reduction rate
NBCBRRS	NB Single-child family income reduction rate
NBCBESR	NB Child benefits earned income supplement rate
NBCBERR	NB Child benefits earning supplement reduction rate
NBCBEIS	NB Child benefits earned income supplement
NBCBECI	NB Child benefits earning supplement cut-in level
NBCBETD	NB Child benefits earning supplement turndown level
NBCBPI	NB Child benefits phase-in rate

1.3.3.10.3 Nova Scotia

VCBFLG	NS child benefit activation flag

VCBTD	NS child benefit turndown
VCBBAS1	NS child benefit for first child
VCBBAS2	NS child benefit for second child
VCBBAS3	NS child benefit for third or additional child
VCBPO	NS child benefit family income phase out

1.3.3.10.4 Ontario

OCCEAFLG	Ont. Child Care Expense Credit activation flag
OCCEAPCT	Ont. Child Care Expense Credit qualifying percentage
OCCEAYNG	Ont. Child Care Expense Credit allowance per child
OCCEATD	Ont. Child Care Expense Credit family income turndown
OCCEARR	Ont. Child Care Expense Credit benefit reduction rate
OCWISFLG	Ont. Child Care Working Income Supplement activation flag
OCWISTD	Ont. Child Care Working Income Supplement minimum earnings
OCWISRR	Ont. Child Care Working Income Supplement Rate [children][rr]
OCWISSP	Ont. Child Care Working Income Supplement maximum benefit for single parents

1.3.3.10.5 Saskatchewan

SCBFLG	Sask Child Benefit activation flag
SCB1	Sask Child Benefit max for 1st child
SCB2	Sask Child Benefit max for 2nd child
SCB3	Sask Child Benefit max for 3rd and additional child
SCBTD1	Sask Child Benefit 1st turndown
SCBTD2	Sask Child Benefit 2nd turndown
SCBRR1	Sask Child Benefit 1st reduction rate [number of kids]
SCBRR2	Sask Child Benefit 2nd reduction rate [number of kids]
SESCI	Sask Employment Supplement cut in level
SESMXIP	Sask Employment Supplement maximum benefit income point
SESTD	Sask Employment Supplement turndown level
SESR	Sask Employment Supplement benefit rate [number of kids]
SESRR	Sask Employment Supplement reduction rate
SESPI	Sask Employment Supplement phase-in

1.3.3.10.6 Alberta

| AFETCFLAG | Alberta Family Employment Tax Credit Activation Flag |

AFETCBPC	Alberta Family Employment Tax Credit Benefit Per Child
AFETCNC	Alberta Family Employment Tax Credit Maximum Number of Children
AFETCCI	Alberta Family Employment Tax Credit Benefit Cut-in Level
AFETCBR	Alberta Family Employment Tax Credit Benefit Rate

BCFBNCS1	B.C. Family Bonus National Child Supplement for first child
BCFBNCS2	B.C. Family Bonus National Child Supplement for second child
BCFBNCS3	B.C. Family Bonus National Child Supplement for each additional child
BCFBNCSRR1	B.C. Family Bonus NCS reduction rate for families with 1 child
BCFBNCSRR2	B.C. Family Bonus NCS reduction rate for families with 2 children
BCFBNCSRR3	B.C. Family Bonus NCS reduction rate for

families with 3+ children

BCFBNCSTD   B.C. Family Bonus National Child Supplement Turndown

1.3.3.11   Social Assistance Parameters

SAFLAG	Social assistance flag
SAELDOPT	SA for elderly calculation method [1=~SA,2=GIST->~SA,3=diff]
SAFS	Federal share of social assistance [prov]
SFAOUT	Proportion of social assistance to eliminate
IMPSAOPT	Imputation method, SA [1=none 2=rank]
SAPFLAG	Social assistance predicted value flag
SATARGET	Social assistance target for predicted SA

1.3.3.12   Federal Refundable Medical Expense Supplement

MEDREMIN	Minimum earnings for refundable medical expense supplement
MEDRRATE	Proportion of expenses allowed for medical expense supplement
MEDRMAX	Maximum expenses allowed for medical expense supplement
MEDRTD	Turndown level for medical expense supplement
MEDRRR	Reduction rate for the medical expense supplement

1.3.3.13   Nova Scotia Direct Assistance Program

VDAFLAG	NS Direct assistance benefit flag
VDASB	NS Direct assistance benefit for singles
VDACB	NS Direct assistance benefit for couples
VDASI	NS Direct assistance maximum income for singles
VDACI	NS Direct assistance maximum income for couples
VDAFWC	NS Direct assistance benefit for families with children flag

1.3.4   Calculation of Total Income

CAPGIR	Capital gains inclusion rate
FDGUR	Federal dividend gross-up rate

1.3.5   Personal Taxes

1.3.5.1   Deductions from Total Income

REPNETFLAG	Social program repayments reduce net income flag

1.3.5.1.1   Employment Expense Deduction

EAOPT	Employment expense calculation option [1=deduction,2=none]
ALEXPP	Proportion of other allowable employment expenses to use as deduction
EAMAX	Maximum employment expenses
EAPRP	Employment expenses allowed - percent
ALEXDEDFLG	Other employment expenses deducted after total income calculation
FACTISENF	Scale-up factor for non-farm self-employment income

1.3.5.1.2 CPP/QPP Contributions

CPPOPT	CPP/QPP contribution deduction/credit option [1=deduction,2=credit]
CPPXM	CPP/QPP exemptible earnings
YMPE	CPP/QPP maximum pensionable earnings
SECF	CPP/QPP contribution rate on self-employment earnings
WSCF	CPP/QPP contribution rate on employment earnings
WSCM	Ratio of self-employed to employed contribution fraction
CPPLT60	CPP/QPP Contributions Take up (under 60) by earnings with CPP income
CPP60T64	CPP/QPP Contributions Take up (60 - 64) by earnings with CPP income
CPPGT64	CPP/QPP Contributions Take up (over 64) by earnings with CPP income

1.3.5.1.3 UI Contributions

| UICOPT | UI contributions deduction/credit option [1=deduction,2=credit] |

1.3.5.1.4 Child Care Expense Deduction

CCEATFLG	CCEA eligible->claimable transformation activation flag
CCEATLL	CCEA eligible->claimable lower limit
CCEATFR	CCEA eligible->claimable fraction
CCEALIM	CCEA overall limit
CCEAOAGE	CCEA Maximum eligible age for oldest child
CCEAYNG	CCEA young child limit
CCEAOLD	CCEA old child limit
CCEAEMPF	CCEA fraction of employment income (Limit `B')
CCESFLAG	CCE full-time student flag
CCESYNG	CCEA young child limit for full-time students
CCESOLD	CCEA old child limit for full-time students
CCEROPT	Child care expense deduction recipient

| | [1=mother,2=lower income] |
| CCEZOPT | CCE young kid optimization rules [1=use, 2=zero, 3=optimize] |

1.3.5.1.5 Tuition Deduction

| TUITOPT | Tuition deduction/credit option [1=deduction,2=credit] |

1.3.5.2 Personal Exemptions

| PEROPT | Personal exemption/credit option [1=deduction,2=credit] |
| DEPNIFG | Include SA, etc. in dependant's net income |

1.3.5.2.1 Basic Exemption / Amount

BXM	Basic personal exemption/amount
BXMS	Basic personal exemption supplement
BXMSRR	Basic personal exemption supplement reduction rate
BXMSPI	Basic personal exemption supplement phase in

1.3.5.2.2 Age Exemption / Amount

AOPT	Age exemption/credit option [1=deduction,2=credit]
AXM	Age amount
AXTD	Age amount net income turndown
AXRR	Age amount credit reduction rate
AXPI	Age amount phase in rate for 1994 and beyond

1.3.5.2.3 Married Exemption / Amount

| MXM | Married exemption/amount |
| MXMT | Married exemption/amount turndown level |

1.3.5.2.4 Married Equivalent Exemption / Amount

| EMXM | Married equivalent exemption/amount |
| EMXMT | Married equivalent exemption/amount turndown level |

1.3.5.2.5 Exemption for Old Dependent Children

OCXM	Exemption for old dependent child
OCXMT	Exemption turndown for old dependent child
OCXMR	Exemption reduction rate for old dependent child

1.3.5.2.6 Exemption / Amount for Dependent Children

YCXM	Dependent child exemption
YCXM1	Dependent child amount (1st child)
YCXM2	Dependent child amount (2nd child)
YCXM3	Dependent child amount (3rd ,etc.)
YCXMT	Dependent child exemption/amount turndown level
YCXMR	Dependent child exemption reduction rate

1.3.5.3 Other Deductions from Net Income

1.3.5.3.1 Capital Gains Deduction

CAPGFLAG	Capital gains deduction flag

1.3.5.3.2   Interest and Dividend Income Deduction

YINDL	Maximum interest and dividend income deduction
CGIFLAG	Capital gains inclusion in interest income deduction flag

1.3.5.3.3   Pension Income Deduction / Amount

YPNOPT	Pension income deduction/credit option [1=deduction,2=credit]
YPNDL	Maximum pension income deduction/amount

1.3.5.3.4   Medical Expense Deduction / Amount

MDCROPT	Medical and charitable deduction/credit option [1=deduction,2=credit]

1.3.5.3.5   Charitable Donation Deduction / Amount

STDED	Standard deduction from net income
MEDANF	Medical allowance lower limit net income fraction
MEDALL	Medical allowance maximum lower limit
CHATNF	Charitable donations maximum net income fraction
CHATL1	Charitable donations amount level 1
CHATR1	Charitable donations tax credit rate 1
CHATR2	Charitable donations tax credit rate 2

1.3.5.3.6   Disability Deduction / Amount

DISOPT	Disability deduction/credit option [1=deduction,2=credit]
MAXDX	Maximum disability deduction/amount

1.3.5.3.7   Education Deduction / Amount

EDUCOPT	Education deduction/credit option [1=deduction,2=credit]
EDXPM	Education amount per month
MAXET	Maximum on transfer of education and tuition amount

1.3.5.3.8   Caregiver Tax Credit

CGTC	Caregiver Tax Credit
CGTCFLG	Caregiver Tax Credit activation flag
CGTCTC	Caregiver tax credit take-up rate by age of elderly [age,rate]
CGTCTD	Caregiver Tax Credit Turn Down Income
CGTCTK	Caregiver tax credit take-up rate by income level [employment income,rate]

1.3.5.4   Federal Taxes

1.3.5.4.1   Basic Federal Tax

FTX	Federal tax table [taxable income,basic federal tax]
FNTCR	Federal non-refundable tax credit rate

FDTCR	Federal dividend tax credit rate

1.3.5.4.2 Federal Surtax

FSURL1	Federal surtax level 1
FSURR1	Federal surtax rate 1
FSURL2	Federal surtax level 2
FSURR2	Federal surtax rate 2
FSURL3	Federal surtax level 3
FSURR3	Federal surtax rate 3

1.3.5.4.3 Federal Surtax Reduction

FSURTRMX	Maximum federal surtax reduction
FSURTRRR	Federal surtax reduction reduction rate
FSURTRRL	Federal surtax reduction reduction level

1.3.5.4.4 Federal Tax Reduction

MXFTR	Maximum federal tax reduction
FTRRL	Federal tax reduction reduction level
FTRRR	Federal tax reduction reduction rate
FPTC	Federal political contribution table [total donations,donation allowed]
FPTCBEN	Maximum federal political tax credit allowed
FLVCRT	Percent of labour-sponsored funds cost allowed as credit [prov]
FLVCMAX	Maximum labour-sponsored funds tax credit allowed

1.3.5.4.5 Federal Alternate Minimum Tax

AMTEX	Alternate minimum tax: exemption level
AMTTX	Alternate minimum tax rate
AMTRPFLG	RRSP/RPP included in Alternate minimum tax (1=included)

1.3.5.4.6 Québec Tax Abatement

QTAP	Quebec tax abatement proportion of basic federal tax

1.3.5.5 Provincial Taxes

IMSHTOPT	Paid rent and property tax imputation option

1.3.5.5.1 Newfoundland

NPTF	Newfoundland provincial tax fraction
NTCMAX	Newfoundland maximum stock and venture tax credit
NPTC	Newfoundland political contribution table [total donations,donation allowed]
NPTCBEN	Maximum Newfoundland political tax credit allowed
NSCI	Newfoundland provincial tax above which surtax applies
NSF	Newfoundland provincial surtax rate
NSTCFLAG	NFLD sales tax credit activation flag

NSTCA	NFLD sales tax credit amount for adults
NSTCC	NFLD sales tax credit amount for children
NSTCR	NFLD sales tax credit reduction rate
NSTCL	NFLD sales tax credit reduction level
CTCIFLAG	Refundable tax credits social assistance income inclusion flag

1.3.5.5.1.1   Newfoundland Tax on taxable income

NTXFLG	NFLD tax on taxable income activation flag
NMXM	NFLD married amount
NMXMT	NFLD married amount turndown level

1.3.5.5.5   Québec

1.3.5.5.5.1   Net income

When possible the parameters are grouped by type of credits, deductions, or exemptions. The following parameters are parameters that could not be grouped by type, or options and flags that activate specific sections of the code.

QALEXP	Quebec proportion of other allowable employment expenses to use
QCAPGIR	Quebec capital gains inclusion rate
QCPPOPT	Quebec CPP/QPP contribution deduction/credit option [1=deduction,2=credit]
QDGUR	Quebec dividend gross-up rate
QDUESOPT	Quebec Dues Tax Credit option
QEAMAX	Quebec maximum employment allowance deduction
QEEXPDED	Quebec employment expenses deduction application flag
QEAP	Proportion of earnings for Quebec employment allowance deduction
QNTCR	Quebec nominal tax credit rate
QTUIOPT	Quebec tuition tax credit option
QUICOPT	Quebec UI contributions deduction/credit option [1=deduction,2=credit]

1.3.5.5.5.1.1   Child Care Expenditures

CCEATFLG	CCEA eligible->claimable transformation activation flag
CCEATFR	CCEA eligible->claimable fraction
CCEATLL	CCEA eligible->claimable lower limit
QCCEAC1	Quebec CCEA earned income fraction (1 child)
QCCEAC2	Quebec CCEA earned income fraction (2 children)
QCCEAC3	Quebec CCEA earned income fraction (3+ children)
QCCEAOLD	Quebec CCEA old child limit
QCCEAYNG	Quebec CCEA young child limit
QCCEOPT	Quebec CCE calculation option [1=deduction,2=refundable credit]

1.3.5.5.5.2   Taxable Income and Individual Exemptions

When possible the parameters are grouped by type of credits, deductions, or exemptions. The following parameters are parameters that could not be grouped by type or options and flags that activate specific sections of the code.

QBXM	Quebec basic personal exemption/amount
QCAPGFLAG	Capital gains deduction flag
QCHATNF	Quebec charitable donations maximum % net income

QGIFTOPT	Quebec gifts as tax credit
QGIFTFLG	Quebec max to gifts to Federal/Province/Crown activation flag
QGIFTHCR	Quebec higher tax credit on large gifts activation flag
QGIFTL1	Quebec minimum gift limit subject to higher credit rate
QGFTCR	Quebec credit rate for gifts over upper limit
QEMPLOFLAG	Database variable(emplo) activation flag
QMAXDX	Quebec maximum disability deduction/amount
QSFDISFLAG	Quebec Simplified Form Disability tax credit inclusion flag
QNORTHFLAG	Database variable(north) activation flag
QNTCR	Quebec nominal tax credit rate
QPARTLOFLAG	Database variable(partlo) activation flag
QREFOPT	Quebec deduction/credit option [1=deduction,2=credit]
QREPNETFG	Social program repayments reduce Quebec net income flag
QSTD	Quebec standard deduction from net income
QYIDL	Quebec deduction limit for investment income
QCALRFLG	Quebec combined age, living alone retirement credit

1.3.5.5.5.2.1   Age tax credit

QAXM	Quebec age exemption/amount
QAXPI	Quebec age exemption reduction phase in
QAXRR	Quebec age exemption reduction rate
QAXTD	Quebec age exemption income turn down

1.3.5.5.5.2.2   Health Services Fund

QHSC	Quebec Health Services Fund Contribution table
QHSCDIR	Quebec Health Services Fund Contribution Dividend incluion rate
QHSCFLAG	Quebec Health Services Fund Contribution calculation flag
QHSOASFG	Quebec Health Services Fund Contribution OAS Deduction flag

1.3.5.5.5.2.3   Medical Expenses

QMEDALL	Quebec medical allowance maximum lower limit
QMEDANF	Quebec medical allowance lower limit net

	income fraction
QMEDOPT	Quebec Medical Tax Credit option

1.3.5.5.5.2.4 Retirement income credit

QYPDL	Quebec deduction limit for pension income
QYPPI	Quebec deduction phase-in for pension income
QYPRR	Quebec deduction reduction rate for pension income
QYPTD	Quebec deduction turn down for pension income

<u>1.3.5.5.5.3 Family related deductions or credits</u>

When possible the parameters are grouped by type of credits, deductions, or exemptions. The following parameters are parameters that could not be grouped by type or options and flags that activate specific sections of the code.

QBXM	Quebec basic personal exemption/amount
QDEPNIFG	Quebec include SA, etc. in dependant's net income
QNTCR	Quebec nominal tax credit rate
QPSXM	Quebec post-secondary exemption/amount
QREFOPT	Quebec deduction/credit option [1=deduction,2=credit]
QCALRFLG	Quebec combined age, living alone retirement credit

1.3.5.5.5.3.1 Dependant exemption/credit

QCXMOPT	Quebec child exemption method option (1=pre-86 2=86+)
QOCT	Quebec exemption turndown for children 18 and over
QOCX	Quebec exemption for children 18 and over
QYCT	Quebec exemption turndown for children 16 or 17
QYCX	Quebec exemption for children 16 or 17
QYCXM1	Quebec dependent child #1 amount
QYCXM2	Quebec dependent child #2 amount

1.3.5.5.5.3.2 Living alone exemption/credit

QLAXM	Quebec living alone exemption/amount
QLAXPI	Quebec living alone phase-in
QLAXRR	Quebec living alone reduction rate
QLAXTD	Quebec living alone turn down
QLPXM	Quebec lone parent exemption/amount

1.3.5.5.5.3.3 Married exemption/credit

QMXM	Quebec married exemption/amount
QMXT	Quebec married exemption turndown

1.3.5.5.5.3.4 Medical exemption/credit

QMEDANF	Quebec medical allowance lower limit net income fraction
QMEDOPT	Quebec Medical Tax Credit option

1.3.5.5.5.4   Taxable income and non-refundable credits

When possible the parameters are grouped by type of credits, deductions, or exemptions. The following parameters are parameters that could not be grouped by type or options and flags that activate specific sections of the code.

QBXM   Quebec basic personal exemption/amount

QCRDFLG   Quebec income credit flag [1=if social contribution are deducted]

QDTCR   Quebec dividend tax credit rate

QDUESOPT   Quebec Dues Tax Credit option

QNTCR   Quebec nominal tax credit rate

QREFOPT   Quebec deduction/credit option [1=deduction,2=credit]

QTUIOPT   Quebec tuition tax credit option

QTX   Quebec income tax table [taxable income,basic provincial tax]

QITSFSEW   Quebec improved tax system for self-employed worker activation flag

QITSSEF   Quebec percentage of self-employ CPP/QPP contributions to convert to deduction

1.3.5.5.5.4.1   Alternative minimum tax

QAMTTX   QAMTX tax rate
QAMTX   QAMTX exemption level
QAMTXFLG   Quebec alternative minimum tax, QAMTX, activation flag
QAMTXREF   Quebec alternative minimum tax 1995 reform indicator (flag)
QAMTXSTKFLG   QAMTX stock option deduction inclusion (1=stk can be deducted)
QCAPAMTX   QAMTX taxable capital ratio
QCAPGIR   Quebec capital gains inclusion rate
QCAPRAT   QAMTX capital gains ratio
QDGUR   Quebec dividend gross-up rate
QDIVRAT   QAMTX dividends ratio
QEMPLOFLAG   Database variable(emplo) activation flag
QPARTLOFLAG   Database variable(partlo) activation flag

1.3.5.5.5.4.2   Child care credit

CCEATFLG   CCEA eligible->claimable transformation activation flag
CCEATFR   CCEA eligible->claimable fraction
CCEATLL   CCEA eligible->claimable lower limit
QCCEAOLD   Quebec CCEA old child limit

QCCEAYNG	Quebec CCEA young child limit
QCCEOPT	Quebec CCE calculation option [1=deduction,2=refundable credit]
QCCETCR	Refundable CCE credit rate [net income, % cce claimable]

1.3.5.5.5.4.3   Family Allowances
| QFARFLAG | Quebec family allowance repayment flag |

1.3.5.5.5.4.4   Family Tax Reduction
QFTRA1	Quebec family tax reduction family type #1
QFTRA2	Quebec family tax reduction family type #2
QFTRA3	Quebec family tax reduction family type #3
QFTRA4	Quebec family tax reduction family type #4
QFTRFLAG	Quebec family tax reduction activation flag
QFTRRR	Quebec family tax reduction reduction rate

1.3.5.5.5.4.5   Political Contribution
QPTC	Quebec political contribution table [total donations,donation allowed]
QPTCBEN	Maximum Quebec political tax credit allowed
QPCOPT	Quebec political contribution option
QPCTR	Quebec political contribution tax rates

1.3.5.5.5.4.6   Labour sponsored funds tax credit
| QLVCMAX | Maximum Quebec labour-sponsored funds tax credit allowed |

1.3.5.5.5.4.7   Surtax and Anti-Poverty Fund
QHSCI	Quebec surtax first cut-in level
QHSCI2	Quebec surtax second cut-in level
QHSF	Quebec surtax first level rate
QHSF2	Quebec surtax second level rate
QAPFFLG	Quebec anti-poverty fund activation flag
QAPFRAT	Quebec anti-poverty fund rate

1.3.5.5.5.4.8   Tax reduction
QTRBE	Quebec Tax Reduction Breakeven
QTROPT	Quebec Tax Reduction calcualtion option 1=universal 2=income tested
QTRP	Quebec tax Reduction proportion

1.3.5.5.5.4.9   Simplified Tax System
QSFOPT	Quebec Simplified Form Option (1=general 2=simplified 3=optimized)
QSFTC	Quebec Simplified Form tax credit
QSFSMXI	Quebec simplified form spouse maximum income for work sheet
QSFDISFLAG	Quebec Simplified Form Disability tax credit inclusion flag

1.3.5.5.5.5   Refundable Tax Credits

The following parameter applies in many groups of parameters.

PYINC   Deflator to calculate previous year income

1.3.5.5.5.5.1   *Child care credit*
CCEATFLG   CCEA eligible->claimable transformation
                        activation flag
CCEATFR   CCEA eligible->claimable fraction
CCEATLL   CCEA eligible->claimable lower limit
QCCEAOLD   Quebec CCEA old child limit
QCCEAYNG   Quebec CCEA young child limit
QCCEOPT   Quebec CCE calculation option
                        [1=deduction,2=refundable credit]
QCCETCR   Refundable CCE credit rate [net income, % cce
                        claimable]

1.3.5.5.5.5.2   *Consumer tax credit*
QCTCDEPA   Quebec consumer tax credit dependant amount
QCTCFLAG   Quebec consumer tax credit activation flag
QFAMDED   Quebec Family related deduction on income in
                        refundable credits
QSTRBCRD   Quebec sales tax rebate base credit
QSTRCHILD   Quebec sales tax rebate children dependent credit
QSTRFLAG   Quebec sales tax rebate activation flag
QSTRFTP3   Quebec sales tax rebate family type 3 credit
QSTRFTP4   Quebec sales tax rebate family type 4 credit
QSTROPT   Quebec sales tax rebate option=1 based on imigis,
                        =2 otherwise
QSTRRR   Quebec sales tax rebate reduction rate

1.3.5.5.5.5.3   *Family allowance tax credit*
QFATCMIN   QFATC minimum benefit paid
QFATCMNK   QFATC Minimum benefits by kid rank
QFATCMRR   QFATC turn down income levels and reduction
                        rate for married parents
QFATCMXK   QFATC Maximum benefits by kid rank
QFATCOPT   Quebec Family Allowance Tax Credit Option
                        tranfer=1, tax credit=2
QFATCSRR   QFATC turn down income levels and reduction
                        rate for single parent
QFATCSUP   Quebec Family Allowance Tax Credit
                        Supplement for single parent
QFATCTK   QFATC Take-up rates by total income
QFATD4K   QFATC turn down income for 4 children and
                        more
QFATD4KI   QFATC turn down income increase by child for 4
                        children and more

QFATCK6	QFATC Supplement for kids under 6 in large families [#kids][#kids<6]
QFATCHIRR	QFATC High income reduction rate
QFATCHITD	QFATC High income turndown
QFATCK6PYR	QFATC supplement for kids under 6 phase out year proportion
QFATCK6YR	QFATC Supplement for kids under 6 phase out year

1.3.5.5.5.5.4   Housing parent tax credit

QHPTC	Quebec Housing Parent Tax Credit
QHPTCFLG	Quebec Housing Parent Tax Credit activation flag
QHPTCTC	QHPTC take-up rate by age of elderly [age,rate]
QHPTCTK	QHPTC take-up rate by income level [employment income,rate]

1.3.5.5.5.5.5   Income definition

QEIA1	Quebec eligible income family type #1
QEIA2	Quebec eligible income family type #2
QEIA3	Quebec eligible income family type #3
QEIA4	Quebec eligible income family type #4
QEIA5	Quebec eligible income family type #5
QEIAA	Quebec eligible income aged amount
QMEDINC	Income definition for Que. refundable tax credit for medical expenses
QFAMDED	Quebec Family related deduction on income in refundable credits
QFAMFLG	Quebec family income deduction activation flag
QFAMRAT	Quebec family income rate

1.3.5.5.5.5.6   Property tax credit

QFAMDED	Quebec Family related deduction on income in refundable credits
QPTRGISB	Quebec property tax rebate GIS bonus
QPTRMTP	Quebec property tax minimum tax per person
QPTRMTR	Quebec property tax maximum tax for reduction
QPTRRR	Quebec property tax rebate reduction rate
QPTRTF	Quebec property tax fraction
QRTRFLAG	Quebec real estate rebate activation flag

1.3.5.5.5.5.7   Tax credit for medical expenses

QMRTCFLG	Quebec refundable tax credits for medical expenses activation flag
QMEDRMIN	Minimum earnings for Quebec refundable tax credit for medical expenses
QMEDRATE	Proportion of expenses allowed for refundable tax credit for medical expenses
QMEDRMAX	Maximum expenses allowed for Que. refundable tax credit for medical expenses
QMEDINC	Income definition for Que. refundable tax credit

	for medical expenses
QMEDRTD	Turndown level for Que. refundable tax credit for medical expenses
QMEDRRR	Reduction rate for the Que. refundable tax credit for medical expenses

1.3.5.5.6   Ontario

OPTF	Ontario provincial tax fraction
ORDOPT	Ontario tax reduction calculation option
OTRBPA	Ontario tax reduction basic personal amount
OTRDCA	Ontario tax reduction dependant child amount
OTRDDA	Ontario tax reduction disabled dependant amount
OTRFP	Ontario tax reduction personal amount multiplier
OTRF	Ontario tax reduction Ontario tax multiplier
OMTY	Ontario tax reduction limit
OSSML	Ontario surtax first cut-in level
OSSML2	Ontario surtax second cut-in level
OSSMR	Ontario surtax first level rate

OAMTPCTF	Ont. amt rate as pct of additional fed tax due to minimum tax
OCGIRFLG	Ont. Capital Gains Inclusion Rate Activation Flag
OCAPGIR	Ont. Capital Gains Inclusion Rate

1.3.5.5.7 Manitoba

MPTF	Manitoba provincial tax fraction
MNITR	Manitoba net income tax rate
MPTC	Manitoba political contribution table [total donations,donation allowed]
MPTCBEN	Maximum Manitoba political tax credit allowed
MANLTCF	Manitoba learning tax credit factor
MANLTMAX	Manitoba learning tax credit maximum amount per student
MLVCMAX	Maximum Man. labour-sponsored funds tax credit allowed
MLVCRT	Percent of Man. labour-sponsored funds cost allowed as credit

1.3.5.5.7.1   Manitoba Cost of Living Tax Credit

MCOLOPT	Manitoba cost-of-living tax credit calculation option
MCBXM	Manitoba cost-of-living basic credit
MCMXM	Manitoba cost-of-living married credit
MCEMXM	Manitoba cost-of-living married equivalent credit
MCAXM	Manitoba cost-of-living age credit
MCSAXM	Manitoba cost-of-living spouse age credit
MCDISEX	Manitoba cost-of-living disability credit
MCSDISEX	Manitoba cost-of-living spouse disabled credit
MCODISEX	Manitoba cost-of-living old disabled dependant credit
MCYCXM	Manitoba cost-of-living young dependants credit
MCFINCRR	Manitoba cost-of-living family income reduction rate
MCBCR	Manitoba cost-of-living basic credit rate

1.3.5.5.7.2   Manitoba Tax Reduction

MNRDOPT	Manitoba tax reduction calculation option
MTRBR	Manitoba tax reduction basic amount
MTRF	Manitoba tax reduction fraction
MTRSF	Manitoba tax reduction spousal factor
MANRD	Manitoba tax reduction table (MNRDOPT=1) [federal reduction, net income]
MRBXM	Manitoba tax reduction basic credit
MRMXM	Manitoba tax reduction married credit
MREMXM	Manitoba tax reduction married equivalent credit
MRAXM	Manitoba tax reduction age credit

MRSAXM	Manitoba tax reduction spouse age credit
MRDISEX	Manitoba tax reduction disability credit
MRODISEX	Manitoba tax reduction old disabled dependant credit
MRYCXM	Manitoba tax reduction young dependants credit
MTRNIOS	Manitoba tax reduction net income offset

1.3.5.5.7.3   Manitoba Surtax

MSTC	Manitoba surtax cut-in
MSTR	Manitoba surtax rate
MNSUROPT	Manitoba surtax calculation option
MSBXM	Manitoba surtax basic credit
MSMXM	Manitoba surtax married credit
MSEMXM	Manitoba surtax married equivalent credit
MSAXM	Manitoba surtax age credit
MSSAXM	Manitoba surtax spouse age credit
MSDISEX	Manitoba surtax disability credit
MSODISEX	Manitoba surtax old disabled dependant credit
MSYCXM	Manitoba surtax young dependants credit

1.3.5.5.7.4   Manitoba Property Taxes

MPRIR	Manitoba property tax credit rental inclusion rate
MPBXM	Manitoba property tax credit basic credit
MTCINCFL	Manitoba tax credit income definition flag
MPAXM	Manitoba property tax credit senior citizen credit
MPFINCRR	Manitoba property tax credit family income reduction rate
MPMINC	Manitoba property tax credit minimum credit
MPMNTH	Manitoba property tax minimum threshold
MHMASOPT	Manitoba homeowner assistance option (1=Model 2=database)
MSCHFLAG	Manitoba school tax assistance activation flag
MSCHAGE	Manitoba school tax minimum age
MSCHMNTH	Manitoba school tax minimum threshold
MSCHTD	Manitoba school tax turndown
MSCHRND	Manitoba school tax assistance rounding unit
MSCHBXM	Manitoba school tax basic amount
MSCHRR	Manitoba school tax reduction rate

1.3.5.5.7.5   Manitoba Tax on taxable income

MTXFLG	Man. tax on taxable income activation flag
MMXM	Man. married amount
MMXMT	Man. married amount turndown level
MEMXM	Man. equivalent to married amount
MEMXMT	Man. equivalent to married turndown level
MPNTCR	Man. provincial non-refundable tax credit rate
MBXM	Man. Basic Personal Exemption/amount
MAXM	Man. Age Amount

MAXRR	Man. Age Amount credit reduction rate
MAXTD	Man. Age Amount net income turndown
MAXPI	Man. Age Amount phase in rate for 1994 and beyond
MYPNDL	Man. Pension Income Deduction Amount
MCHATL1	Man. Charitable Donations amount level 1
MCHATR1	Man. Charitable Donations tax credit rate 1
MCHATR2	Man. Charitable Donations tax credit rate 2
MMAXDX	Man. Maximum Disability deduction/amount
MEDXPM	Man. Education Amount per month
MPTX	Man. tax table [taxable income,basic provincial tax]
MMAXET	Man. maximum on transfer of education and tuition amount
MCGTC	Man. Caregiver Tax Credit
MCGTCFLG	Man. Caregiver Tax Credit activation flag
MCGTCTC	Man. Caregiver tax credit take-up rate by age of elderly [age,rate]
MCGTCTD	Man. Caregiver Tax Credit Turn Down Income
MCGTCTK	Man. Caregiver tax credit take-up rate by income level [employment income,rate]
MDTCR	Man. dividend tax credit rate
MAMTOPT	Man. alternative minimum tax option (1=none, 2=% fed, 3=fed adjusted net income)
MAMTTX	Man. amt rate as tax on adjusted income
MAMTPCTF	Man. amt rate as pct of additional fed tax due to minimum tax

1.3.5.5.8   Saskatchewan

SPTF	Saskatchewan provincial tax fraction
SFTAX	Saskatchewan provincial flat surtax rate on net income
SDSRA	Saskatchewan deficit surtax reduction rate
SDSF	Saskatchewan provincial deficit surtax fraction

CTNES	Expenditures NES
CTSAVE	All positive savings
CTFTOT	federal total retail tax equivalent
CTPTOT	provincial total retail tax equivalent

AAMTOPT   Alta alternative minimum tax option (1=none, 2=% fed, 3=fed adjusted net income)

DESCRIPTION

When Alberta tax on taxable income is calculated (ATXFLG = 1), there are three options as to how to calculate the provincial minimum tax.

When AAMTOPT is set to 1, then no provincial alternative minimum tax is calculated.

When AAMTOPT is set to 2, then a percentage (AAMTPCTF) of the additional federal tax due to the minimum tax is added to the basic provincial tax (imbpt).

When AAMTOPT is set to 3, the income used in the provincial tax calculation is replaced by the net income used for alternative tax purposes (imamtinc) for people who triggered the federal minimum tax. Then the AAMTTX rate, usually set to the smallest non-zero tax rate, is applied in order to get the provincial tax before the non-refundable tax credits.

AAXRR   Alta Age Amount credit reduction rate

DESCRIPTION

This parameter is the proportion of net income above a given threshold (AAXTD) which will
be deducted from the provincial non-refundable age tax credit amount (AAXM). The
parameter is only used when the Alberta provincial tax on taxable income is calculated
(ATXFLG = 1).

See also impatxc, AAXTD, AAXPI.

ACGTCFLG   Alta Caregiver Tax Credit activation flag

DESCRIPTION

The calculation of the Alberta Caregiver Tax Credit (impcgtc) is activated by the flag ACGTCFLG.

The Caregiver Tax Credit (impcgtc) provides additional tax assistance to individuals who provide in-home care for relatives. Eligible recipients include individuals residing with and providing in-home care for a parent or grandparent over 65 years of age, or for an infirm dependent relative.

This variable is the sum of modelled Caregiver Tax Credits for all dependants other than spouse. (Line 315 and Schedule 12 in the General Tax Guide)

The base level of the credit is ACGTC. Based on the results of a study pertaining to the presence of elderly parents within the economic family, a take-up rate ACGTCTC was determined. The take up rate is based on the age of a potential parent, assigned to individuals with idefrh = 3, according to SCF data. Users have access to a take-up rate ACGTCTK based on employment income to select the appropriate number of beneficiaries.

The benefit, impcgtc, is reduced for each dollar of net income, iminet, in excess of ACGTCTD.

This non-refundable tax credit is only calculated when the provincial tax on taxable income is calculated (ATXFLG = 1).

ACGTCTC   Alta Caregiver tax credit take-up rate by age of elderly [age,rate]

DESCRIPTION

This is the first take-up rate used in the calculation of Alberta's impcgtc. It selects an individual with idefrh = 3 and assign him/her as a parent according to observed probability in SCF. The probability is also based on idage.

The parameter is only used when the provincial tax on taxable income is calculated (ATXFLG = 1).

AFETCNC   Alberta Family Employment Tax Credit Maximum Number of Children

DESCRIPTION

The maximum number of children in a family for whom the basic Alberta Employment Tax Credit benefit amount (AFETCBPC) may be claimed. The maximum family benefit is determined by multiplying the basic benefit amount (AFETCBPC) times the number of children in the nuclear family to a maximum of AFETCNC.

AGENAME   Name of database adjustment algorithm [string]

DESCRIPTION

This control parameter describes the method and algorithms by which the database will be adjusted. The algorithm is always "standard adjustment" unless the algorithm is changed by the user in glass box mode. The AGENAME parameter cannot be changed by the user in black box mode. Its value is associated with the adjustment algorithm contained in the adj function. If a descriptive label for the complete set of adjustment parameters is required use APRDESC.

ALEXDEDFLG   Other employment expenses deducted after total income calculation

DESCRIPTION

When this flag is turned on, other employment expenses (imalexp) are included in the deductions from total income (imdedft) and are therefore deducted in the calculation of net income (iminet). When it is turned off, they are deducted in the calculation of total income (imitot).

ALEXPP   Proportion of other allowable employment expenses to use as deduction

DESCRIPTION

The standard algorithm allows the imputed value for Other Allowable Employment Expenses
to be reduced or grown using this factor. This may be used to simulate an increase or
decrease in the amounts allowed for these expenses.

ALGDESC   Names of standard and alternate algorithms

DESCRIPTION

This control parameter is produced by SPSM and cannot be modified by the user. It is intended for use in `glass box' mode and displays the names of the tax/transfer modules used in the standard and alternate algorithms.

ALTAMIN   Alberta GIS supplement minimum annual benefit

DESCRIPTION

Minimum annual Alberta Assured Income Plan benefits for single persons, or each eligible spouse in a married couple. Calculated as a sum of monthly minimums.

AMAXDX   Alta Maximum Disability deduction/amount

DESCRIPTION

This value represents the maximum Alberta non-refundable disability tax credit. It is given
to all individuals with a positive value for imputed Disability Deduction (imdisex). The
parameter is only used when the provincial tax on taxable income is calculated (ATXFLG =
1).

APNTCR   Alta provincial non-refundable tax credit rate

DESCRIPTION

This single parameter sets the tax credit rate for all of the non-refundable tax credits in
Alberta. Each tax credit is calculated separately and summed for a total credit. The
parameter is only used when a provincial tax on taxable income is calculated (ATXFLG = 1).

CROSS REFERENCE

APRDESC   Description of database adjustment parameter file

DESCRIPTION

This database adjustment parameter can be used to provide a description of a particular set of database adjustment parameters found in a given database adjustment parameter file. This descriptive text is reproduced in the page headers of any requested output reports.

APTC   Alberta political contribution table [total donations,donation allowed]

DESCRIPTION

This table contains the figures necessary to calculate the Alberta Political Contribution Tax Credit. The first column represents the dollar amount of total Alberta political contributions to which the corresponding percentages of the third column are applied to calculate the total Allowable Alberta Political Contribution Tax Credit. Only the first and third columns of the table need to be specified.

DESCRIPTION

This table represents the Alberta tax curve used when calculating the tax on taxable income (ATXFLG = 1). The first column represents Taxable Income, the second represents the amount of Basic Provincial Tax payable at that level of taxable income, the third column represents the marginal tax rate for the interval between this and the next value in the table.

Only the first and third columns of the tax table need be specified. The second column is computed by the standard algorithm.

ASBBASIC   Alberta seniors benefit annual basic benefit

DESCRIPTION

This parameter represents the basic annual benefit of Alberta's seniors for the years in which the Alberta Seniors Benefit system is active. This transfer payment scheme replaced the earlier Alberta Assured Income Plan. The resulting modelled benefit to Alberta seniors is stored in the imiasb variable.

ASBNOAS   Alberta seniors benefit reduction if no OAS [senior type]

DESCRIPTION

This parameter represents the proportion of total Alberta Seniors Benefit which a person who is not eligible for OAS is entitled to receive. It is an array parameter and depends on the tenure and marital status. The order is as follows:

0 = single senior who is renting
1 = single senior who owns a home
2 = senior married to a non senior who is renting
3 = senior married to a non senior who owns a home
4 = married senior couple who rent
5 = married senior couple who owns their home

ASBRENT   Alberta seniors benefit renter supplement

DESCRIPTION

This parameter represents the additional benefit received by an elderly individual or couple
under the Alberta Senior's Benefit program who are renting their principle residence. The
modelled benefit is stored in the imiasb variable.

ASBRR — Alberta seniors benefit reduction rate [senior type]

DESCRIPTION

This parameter represents the phase out rate of the Alberta Seniors Benefit program. All non-deductible income greater than $0 is phased out using this rate which depends on tenure

and marital status. The order of the array is as follows:

0 = single senior who is renting
1 = single senior who owns a home
2 = senior married to a non senior who is renting
3 = senior married to a non senior who owns a home
4 = married senior couple who rent
5 = married senior couple who owns their home

ASBSSOPT   Alberta seniors benefit 1 senior couple option [1=model separately,2=model as senior couples]

DESCRIPTION

When this parameter is equal to 1, seniors who are married to non-seniors are treated separately in the Alberta Seniors Benefit program. When it is equal to 2, these seniors are treated in the same manner as a two senior couple.

ASCDELIM   Field delimiter

DESCRIPTION

As noted in the description of the ASCSTYLE parameter, setting ASCSTYLE to 3 or 4 produces a database-style output file. ASCDELIM allows the user to control the delimiter used to separate variable values when these styles of output are used. If ASCDELIM is empty, a space is used as the delimiter. If any other character is used (such as a comma), that character is used as the delimiter. As a special case, the string consisting of the three letters TAB will use a tab character as the output delimiter.

ASCEXTPRC Number of digits of extra precision

DESCRIPTION

If ASCEXTPRC is left at zero, the text file output facility will operate as described in the
User's Guide. Otherwise, ASCEXTPRC extra digits of precision will be used when
outputting variables using the facility. This extra precision is useful to accurately compute
marginal tax rates when using the turning point facility.

ASCFLAG   Text output facility activation flag

DESCRIPTION

This control parameter flag, when set to a value of 1, enables the text file output facility.
When enabled, a file with the file name extension ".prn" will be written using ASCSTYLE
format for ASCUNIT level of analysis and ASCVARS variables. The text file output facility
provides a method for examining detailed SPSD/M microdata.

ASCI   Alberta surtax cut-in

DESCRIPTION

In Alberta, provincial surtax (impsur) is calculated as ASF percent of provincial taxes above
the level ASCI plus AFTAX percent of taxable income (imitax).

CROSS REFERENCE

ASCSTYLE   Style of text output

DESCRIPTION

When enabled by ASCFLAG, this control parameter controls the formatting of the resulting text file output report. Users should refer to the _User's Guide_ for a detailed explanation of the text output facility that this parameter controls. Five different styles of report can be produced, as given below.

1. Each household is output as a group of output lines, one household per page and one variable is output per line. Both the variable's name and label are printed and values for each unit are shown in aligned columns.

2. Produces a report designed to be read using a spreadsheet import function. The layout is very similar to that for an style of 1, but variable labels and all superfluous spaces have been eliminated, and the printer page break character has been replace by and empty literal string.

3. Produces a report designed to read by a spreadsheet or database system. Each unit is recorded on a single line, with a single space between each variable value. The first line of the file contains a list of the variable names in the order in which they are written in the line.

4. Produces a report identical to style 3, but the first line is eliminated.

5. This style produces a fixed format which contains all variables, is blank delimited, and contains all records per case beginning with a household record which is followed by individual records. This style is intended for input to the bldspd program. Please refer to the _Tools User's Guide_ for more details on the use of this style.

The default value of ASCSTYLE is 1.

ASCUNIT   Text output family level

DESCRIPTION

When the text file output facility is activated using the ASCFLAG parameter, this control parameter is used to specify the family level of analysis of the resulting report. Valid values and their meanings are given below.

0	Individual
1	Nuclear Family
2	Census Family
3	Economic Family
4	Household

The default value for ASCUNIT is 0.

ASCVARS   Variables selected for text output [string]

DESCRIPTION

When the text file output facility is activated using the ASCFLAG parameter, this control parameter is used to specify which variables are to be output in the resulting report. Analysis variables are rolled up to the family level specified by ASCUNIT, and class variables at lower levels refer to characteristics of the reference person of the family unit. Please see the *User's Guide* for a fuller discussion of family level in SPSD/M.

ASF   Alberta surtax fraction

DESCRIPTION

In Alberta, provincial surtax(impsur) is calculated as ASF percent of provincial taxes above the level ASCI plus AFTAX percent of taxable income (imitax).

AUTHOR   Name of person doing simulation [string]

DESCRIPTION

This control parameter is designed to be filled in by the user for documentation purposes.

AXM   Age amount

DESCRIPTION

This is the maximum value of the age exemption/tax credit before any reductions are applied. If the parameter AOPT is set to 1, all filers age 65 and over receive the value of AXM as an age exemption. With AOPT set to 2, elderly filers receive the value of AXM as a non-refundable tax credit.

ba03.mpr:	3728.79	1.8%	Grown from ba02.mpr using CPI=1.018

DESCRIPTION

This value is used to scale the amount of the reduction which will be applied to the age tax credit. It is used in 1994 to simulate the phase-in of the income testing of the age credit.

Legislation relating to this parameter was introduced in the 1994 Federal Budget which proposed that the non-refundable age tax credit "be subject to an income test which would target the assistance to seniors with low or modest incomes." This reduction for higher income seniors was to be phased in over two years, with half the reduction applied in 1994 and the full reduction in 1995 and subsequent years.

AXRR   Age amount credit reduction rate

DESCRIPTION

This parameter is the proportion of net income above a given threshold (AXTD) which will
be deducted from the non-refundable age tax credit amount (AXM).

Legislation relating to this parameter was introduced in the 1994 Federal Budget which
proposed that the non-refundable age tax credit "be subject to an income test which would
target the assistance to seniors with low or modest incomes." Individual seniors with
incomes above the threshold of AXTD would have the amount of the age credit reduced by
AXRR proportion of income above that threshold. This reduction for higher income seniors
was to be phased in over two years, with half the reduction applied in 1994 and the full
reduction in 1995 and subsequent years.

AXTD　　　　Age amount net income turndown

DESCRIPTION

Individual seniors will have their non-refundable age tax credit reduced if their net income is above the value of this parameter.

Legislation relating to this parameter was introduced in the 1994 Federal Budget which proposed that the non-refundable age tax credit "be subject to an income test which would target the assistance to seniors with low or modest incomes." Individual seniors with incomes above the threshold of AXTD would have the amount of the age credit reduced by

AXRR proportion of income above that threshold. This reduction for higher income seniors was to be phased in over two years, with half the reduction applied in 1994 and the full reduction in 1995 and subsequent years.

AYPNDL   Alta Pension Income Deduction Amount

DESCRIPTION

This is the maximum dollar amount of pension income which may be claimed as a Alberta
non-refundable tax credit. The parameter is only used when the provincial tax on taxable
income is calculated (ATXFLG = 1).

BAMTOPT   N.B. alternative minimum tax option (1=none, 2=% fed, 3=fed adjusted net income)

DESCRIPTION

When New Brunswick tax on taxable income is calculated (BTXFLG = 1), there are three options as to how to calculate the provincial minimum tax.

When BAMTOPT is set to 1, then no provincial alternative minimum tax is calculated.

When BAMTOPT is set to 2, then a percentage (BAMTPCTF) of the additional federal tax due to the minimum tax is added to the basic provincial tax (imbpt).

When BAMTOPT is set to 3, the income used in the provincial tax calculation is replaced by the net income used for alternative tax purposes (imamtinc) for people who triggered the federal minimum tax. Then the BAMTTX rate, usually set to the smallest non-zero tax rate, is applied in order to get the provincial tax before the non-refundable tax credits.

BAMTPCTF   N.B. amt rate as pct of additional fed tax due to minimum tax

DESCRIPTION

When New Brunswick tax on taxable income is calculated (BTXFLG=1) and BAMTOPT is
set to 2, then a percentage (BAMTPCTF) of the additional federal tax due to the minimum
tax is added to the basic provincial tax (imbpt).

BAMTTX   N.B. amt rate as tax on adjusted income

DESCRIPTION

When New Brunswick tax on taxable income is calculated (BTXFLG=1) and BAMTOPT is set to 3, the income used in the provincial tax calculation is replaced by the net income used for alternative tax purposes (imamtinc) for people who triggered the federal minimum tax. Then the BAMTTX rate, usually set to the smallest non-zero tax rate, is applied in order to get the provincial tax before the non-refundable tax credits.

BASALG   Name of base algorithm [string]

DESCRIPTION

This control parameter contains a label associated with the tax/transfer algorithm requested
by the user through the BASMETH parameter. It is informational and cannot be directly
modified by the user.

BASDESC   Description of base parameters [string]

DESCRIPTION

This control parameter contains the descriptive label associated with the input parameter file
or results file used to produce base variables. It is informational and cannot be directly
modified by the user. It is a copy of the MPRDESC parameter associated with the file in
question.

BASMETH   Method of creating base variables

DESCRIPTION

This control parameter specifies the method of determining base results. May be one of 4

values:

0. No base results will be used during the current program run
1. Results will be read from an SPSM results file (.MRS) specified in INPBASMRS
2. Results will be calculated using the standard algorithm with tax/transfer parameters specified in INPBASMPR.
3. Results will be calculated using the alternate algorithm with tax/transfer parameters specified in INPBASMPR.

The default value for BASMETH is 0.

BAXM N.B. Age Amount

DESCRIPTION

This is the maximum value of the New Brunswick age non-refundable tax credit before any reductions are applied. The parameter is only used when a provincial tax on taxable income is calculated (BTXFLG = 1).

BAXPI   N.B. Age Amount phase in rate for 1994 and beyond

DESCRIPTION

This value is used to scale the amount of the reduction which will be applied to the provincial age tax credit. The parameter is only used when the New Brunswick provincial tax on taxable income is calculated (BTXFLG = 1).

BAXRR   N.B. Age Amount credit reduction rate

DESCRIPTION

This parameter is the proportion of net income above a given threshold (BAXTD) which will
be deducted from the provincial non-refundable age tax credit amount (BAXM). The
parameter is only used when the New Brunswick provincial tax on taxable income is
calculated (BTXFLG = 1).

BCBEMX   B.C. Earned Income Benefit Income Reduction

DESCRIPTION

When BCEIBFLG is equal to 1, the British Columbia Earned Income Benefit (imibceib) is
calculated depending on the number of children in the family. For families with lower
incomes, the benefit starts to be phased in at BCEIBPI, and reaches its maximum at incomes
of BCBEMX. The slope of the phase in is therefore calculated as the maximum working
income supplement a family can receive divided by (BCBEMX – BCEIBPI).

BCEIBFLG   Activate B.C. Earned Income Benefit Program

DESCRIPTION

When BCEIBFLG is assigned a value of 1, the calculation of the British Columbia Earned
Income Benefit is activated, depending on the presence of children in the family. For
families with lower incomes, the benefit starts to be phased in at BCEIBPI, and reaches its
maximum at incomes of BCBEMX. The slope of the phase in is therefore calculated as the
maximum working income supplement a family can receive divided by (BCBEMX –
BCEIBPI).

With a value of 0, calculation of the British Columbia Earned Income Benefit is suppressed.

BCFBFLAG   Activate B.C. Family Bonus Program

DESCRIPTION

The activation flag of the BC Family Bonus (imibcfb). The calculation is activated when the value is set to 1, no calculation if the value is zero.

The basic amount of benefits is related to the number of children in the family. This amount is reduced according to the net family income. A different reduction rate is used if the family include only one child.

BCFBIFS   Activate B.C. Family Bonus to include Federal NCS

DESCRIPTION

When this parameter is assigned a value of 1, the British Columbia Basic Family Bonus
(imibcfb) is calculated to include the National Child Supplement. With a value of 0, the
British Columbia Basic Family Bonus does not include the National Child Supplement.

BCFBNCS1   B.C. Family Bonus National Child Supplement for first child

DESCRIPTION

When BCFBIFS is flagged on, the Basic B.C. Family Bonus is reduced by the amount, if any, of the National Child Benefit Supplement received. This parameter represents the basic amount of the combined B.C. Family Bonus and National Child Supplement allowed for the first child in the family to be used in the calculation of the B.C. Family Bonus (imibcfb).

BCFBNCSTD B.C. Family Bonus National Child Supplement Turndown

DESCRIPTION

When BCFBIFS is flagged on, the Basic B.C. Family Bonus is reduced by the amount, if
any, of the National Child Benefit Supplement received. This parameter represents the
family net income turndown level used to calculate the combined Family Bonus and National
Child Benefit Supplement. When family net income exceeds this amount, the calculated
bonus is reduced by BCFBNCSRR1 for families with one child, BCFBNCSRR2 for families
with two children and by BCFBNCSRR3 for families with three or more children.

See also BCFBNCS1, BCFBNCS2, BCFBNCS3.

BCFBPI   B.C. Family Bonus phase-in

DESCRIPTION

When the parameter BCFBFLAG is set to one, the value of this parameter is always multiplied by the calculated amount of the B.C. Family Bonus (imibcfb). The parameter was designed to simulate the mid-year commencement of the program in July 1996.

BCFBTD   B.C. Family Bonus Turndown

DESCRIPTION

The level of family net income (head plus spouse) above which the British Columbia Family
Bonus (imibcfb) begins to be paid at a lower rate. If family income exceeds this amount, the
Family Bonus will be reduced by a proportion (BCFBRR) of net income for families with
two or more children or by (BCFBRRS) for families with one child.

BCGTC   N.B. Caregiver Tax Credit

DESCRIPTION

BCGTC multiplied by BPNTCR is the maximum amount of the New Brunswick Caregiver Tax Credit (impcgtc). The parameter is only used when the provincial tax on taxable income is calculated (BTXFLG = 1).

For more explanation see BCGTCFLG.

BCGTCFLG   N.B. Caregiver Tax Credit activation flag

DESCRIPTION

The calculation of the New Brunswick Caregiver Tax Credit (impcgtc) is activated by the flag BCGTCFLG.

The Caregiver Tax Credit (impcgtc) provides additional tax assistance to individuals who provide in-home care for relatives. Eligible recipients include individuals residing with and providing in-home care for a parent or grandparent over 65 years of age, or for an infirm dependent relative.

This variable is the sum of modelled Caregiver Tax Credits for all dependants other than spouse. (Line 315 and Schedule 12 in the General Tax Guide)

The base level of the credit is BCGTC. Based on the results of a study pertaining to the presence of elderly parents within the economic family, a take-up rate BCGTCTC was determined. The take up rate is based on the age of a potential parent, assigned to individuals with idefrh=3, according to SCF data. Users have access to a take-up rate BCGTCTK based on employment income to select the appropriate number of beneficiaries.

The benefit, impcgtc, is reduced for each dollar of net income, iminet, in excess of BCGTCTD.

This non-refundable tax credit is only calculated when the provincial tax on taxable income

is calculated (BTXFLG = 1).

BCGTCTC   N.B. Caregiver tax credit take-up rate by age of elderly [age,rate]

DESCRIPTION

This is the first take-up rate used in the calculation of New Brunswick's impcgtc. It selects an individual with idefrh = 3 and assign him/her as a parent according to observed

probability in SCF. The probability is also based on idage.

The parameter is only used when the provincial tax on taxable income is calculated
(BTXFLG = 1).

BEEPFLAG   Beep on completion

DESCRIPTION

The BEEPFLAG parameter, if activated by setting its value to 1, will produce a beeping

sound when SPSM execution is complete. Users may find this facility convenient if operating on multiple machines, or if busy on other tasks.

The default value is 0.

BEMXM   N.B. equivalent to married amount

DESCRIPTION

This parameter represents the equivalent to married tax credit when New Brunswick tax is calculated as a tax on taxable income. It is only calculated when BTXFLG is set to 1.

BEMXMT   N.B. equivalent to married turndown level

DESCRIPTION

This parameter represents the provincial equivalent to married exemption turndown when
New Brunswick tax is calculated as a tax on taxable income. It is only used when BTXFLG
is set to 1. The reduction is calculated as the dependant's net income less the turndown
BEMXMT.

BPTC   New Brunsw. political contribution table [total donations,donation allowed]

DESCRIPTION

This table contains the figures necessary to calculate the New Brunswick Political Contribution Tax Credit. The first column represents the dollar amount of total New Brunswick political contributions to which the corresponding percentages of the third column are applied to calculate the total Allowable New Brunswick Political Contribution Tax Credit. Only the first and third columns of the table need to be specified.

BPTX   N.B. tax table [taxable income,basic provincial tax]

DESCRIPTION

This table represents the New Brunswick tax curve used when calculating the tax on taxable
income (BTXFLG = 1). The first column represents Taxable Income, the second represents
the amount of Basic Provincial Tax payable at that level of taxable income, the third column
represents the marginal tax rate for the interval between this and the next value in the table.

Only the first and third columns of the tax table need be specified. The second column is
computed by the standard algorithm.

BXMS   Basic personal exemption supplement

DESCRIPTION

This is the maximum value per person for the personal amount supplement available to low income Canadians. This measure was introduced in the Federal Budget in 1998 and cancelled in the 1999 budget. If the parameter PEROPT is set to 2 (for tax credits) all filers are income tested (based on taxable income imdepni) for receipt of the supplement to the basic exemption.

Note that in the federal tax forms, only persons whose incomes are over the personal tax amount (BXM) claimed this credit. By giving it to persons with very low incomes there is no effect on taxes or applied tax credits. But when comparing the SPSM results with those of the Greenbook, the SPSM results may seem high.

BXMSPI   Basic personal exemption supplement phase in

DESCRIPTION

This is the phase-in and phase-out of the personal amount supplement available to low
income Canadians. This measure was introduced in the Federal Budget in 1998 and
cancelled in the 1999 budget. If the parameter PEROPT is set to 2 (for tax credits) all filers
are income tested (based on taxable income imdepni) for receipt of the supplement to the
basic exemption.

BXMSRR   Basic personal exemption supplement reduction rate

DESCRIPTION

This is the proportion of net income above the level of the basic exemption (BXM) plus the maximum supplement (BXMS) used to reduce the maximum supplement to the federal basic

personal tax credit (BXMS). This measure was introduced in the Federal Budget in 1998 and cancelled in the 1999 Federal Budget. If the parameter PEROPT is set to 2 (for tax credits) all filers are income tested (based on net income imdepni) for receipt of the supplement to the basic exemption.

CAMTOPT   B.C. alternative minimum tax option (1=none, 2=% fed, 3=fed adjusted net income)

DESCRIPTION

When British Columbia tax on taxable income is calculated (CTXFLG = 1), there are three options as to how to calculate the provincial minimum tax.

When CAMTOPT is set to 1, then no provincial alternative minimum tax is calculated.

When CAMTOPT is set to 2, then a percentage (CAMTPCTF) of the additional federal tax due to the minimum tax is added to the basic provincial tax (imbpt).

When CAMTOPT is set to 3, the income used in the provincial tax calculation is replaced by the net income used for alternative tax purposes (imamtinc) for people who triggered the federal minimum tax. Then the CAMTTX rate, usually set to the smallest non-zero tax rate, is applied in order to get the provincial tax before the non-refundable tax credits.

CAXM   B.C. Age Amount

DESCRIPTION

This is the maximum value of the British Columbia age non-refundable tax credit before any
reductions are applied. The parameter is only used when a provincial tax on taxable income
is calculated (CTXFLG = 1).

CROSS REFERENCE

Function   **Description**

CCEALIM   CCEA overall limit

DESCRIPTION

Upper limit to the amount of child care expenses that may be claimed. In the model, set to
$8000 from 1982-87. Changed as part of 1988 tax reform, the limit is expressed as a
maximum per child and therefore is determined solely by the number of children.

CCEAOAGE CCEA Maximum eligible age for oldest child

DESCRIPTION

The child care expense allowance has two different levels of deductions depending on the child's age. This parameter sets the age of children above which child care expenses may not be claimed. Children below CCEAOAGE but above age 6 have their child care expense allowance imccea calculated with 'Limit C' set to CCEAOLD.

CCEAOLD   CCEA old child limit

DESCRIPTION

Upper limit of the amount that can be claimed for older children. Used when applying limit
"C" on the amount of CCE to be claimed. This dollar amount is applied to children between
the ages of 7 and CCEAOAGE, or over CCEAOAGE with a severe and prolonged mental or
physical imparement.

CCEATFLG   CCEA eligible->claimable transformation activation flag

DESCRIPTION

Activates the child orientated expense variable in txccea. This redistributes expenses allowed
back to the children by reducing the amount claimed for each child. When set to "1", actual
expenses in FAMEX data (idccet) are used and subjected to Limits "A", "B" and "C". When
set to "0", value is determined by idccett.

CCESFLAG   CCE full-time student flag

DESCRIPTION

When this flag is set to 1, for full-time students who are single parents or where both parents are students, the Child Care Expense deduction is applied to all income (iminet) as opposed to earned income.   CCEAEMPF is then applied to total income in these cases. The deduction must be smaller than the number of weeks in school full-time times the sum of CCESOLD times the number of eligible children 7 and over and CCESYNG times the number of children under 7.

CCESYNG   CCEA young child limit for full-time students

DESCRIPTION

When CCESFLAG is set to 1, full-time students can deduct child care expenses, up to a certain limit. The deduction must be smaller than the number of weeks in school full-time times the sum of CCESOLD times the number of eligible children 7 and over and CCESYNG times the number of children under 7.

CCEZOPT   CCE young kid optimization rules [1=use, 2=zero, 3=optimize]

DESCRIPTION

This parameter is used to control the method by which child care expenses are handled for
the calculation of the child tax credit/federal child benefits and child care exemption. When
CCEZOPT is set to 1 then the family will always claim their child care expenses. When
CCEZOPT is set to 2 then a family's child care expenses will never be claimed. When
CCEZOPT is set to 3 then the function cceopt will be invoked to maximize the value of
combined child care expense credits and the child tax credit/federal child benefits.

CCGTC   B.C. Caregiver Tax Credit

DESCRIPTION

CCGTC multiplied by CPNTCR is the maximum amount of the British Columbia Caregiver Tax Credit (impcgtc). The parameter is only used when the provincial tax on taxable income is calculated (CTXFLG = 1).

For more explanation see CCGTCFLG.

CCGTCFLG B.C. Caregiver Tax Credit activation flag

DESCRIPTION

The calculation of the British Columbia Caregiver Tax Credit (impcgtc) is activated by the flag CCGTCFLG.

The Caregiver Tax Credit (impcgtc) provides additional tax assistance to individuals who provide in-home care for relatives. Eligible recipients include individuals residing with and providing in-home care for a parent or grandparent over 65 years of age, or for an infirm dependent relative.

This variable is the sum of modelled Caregiver Tax Credits for all dependants other than spouse. (Line 315 and Schedule 12 in the General Tax Guide)

The base level of the credit is CCGTC. Based on the results of a study pertaining to the presence of elderly parents within the economic family, a take-up rate CCGTCTC was determined. The take up rate is based on the age of a potential parent, assigned to individuals with idefrh=3, according to SCF data. Users have access to a take-up rate CCGTCTK based on employment income to select the appropriate number of beneficiaries.

The benefit, impcgtc, is reduced for each dollar of net income, iminet, in excess of CCGTCTD.

This non-refundable tax credit is only calculated when the provincial tax on taxable income is calculated (CTXFLG = 1).

CCGTCTC   B.C. Caregiver tax credit take-up rate by age of elderly [age,rate]

DESCRIPTION

This is the first take-up rate used in the calculation of British Columbia's impcgtc. It selects an individual with idefrh = 3 and assign him/her as a parent according to observed probability in SCF. The probability is also based on idage.

The parameter is only used when the provincial tax on taxable income is calculated (CTXFLG = 1).

CGIFLAG Capital gains inclusion in interest income deduction flag

DESCRIPTION

This parameter controls the inclusion of Taxable Capital Gains (imicapgt) in the calculation of income eligible for the Interest and Dividend Income Deduction. If GCIFLAG is assigned a value of 1, imicapgt is included. Given a value of 0, it is not included.

ba03.mpr:	2519.64	1.8%	Grown from ba02.mpr using CPI=1.018

DESCRIPTION

The calculation of the Caregiver Tax Credit (imcgtc) is activated by the flag CGTCFLG.

Beginning in 1998, the Caregiver Tax Credit (imcgtc) was introduced to provide additional tax assistance to individuals who provide in-home care for relatives. Eligible recipients include individuals residing with and providing in-home care for a parent or grandparent over 65 years of age, or for an infirm dependent relative.

This variable is the sum of modelled Caregiver Tax Credits for all dependants other than spouse. (Line 315 and Schedule 12 in the General Tax Guide)

The base level of the credit is CGTC. Based on the results of a study pertaining to the presence of elderly parents within the economic family, a take-up rate CGTCTC was determined. The take up rate is based on the age of a potential parent, assigned to individuals with idefrh=3, according to SCF data. Users have access to a take-up rate CGTCTK based on employment income to select the appropriate number of beneficiaries.

The benefit, imcgtc, is reduced for each dollar of net income, iminet, in excess of CGTCTD.

CGTCTC Caregiver tax credit take-up rate by age of elderly [age,rate]

DESCRIPTION

This is the first take-up rate used in the calculation of imcgtc. It selects an individual with idefrh = 3 and assigns him/her as a parent according to observed probability in SCF. The probability is also based on idage.

CHATNF   Charitable donations maximum net income fraction

DESCRIPTION

Net income is multiplied by this parameter to give the maximum amount of charitable
contributions which may be used in calculating the non-refundable charitable donations tax
credit or the charitable donation deduction. The value is stored in the variable imchara.

CLOSEFLAG Close window on completion

DESCRIPTION

The CLOSEFLAG parameter is used to control the behaviour of the windows version of SPSM when a simulation has been completed. If CLOSEFLAG is 1, SPSM will close the display window when the simulation has been completed. If CLOSEFLAG is 0, SPSM will leave its progress reporting window activated on completion, allowing the user to examine the summary statistics. Once the user has examined the summary statistics, he or she can close SPSM using the Close button. This parameter has no effect in the console version of SPSM.

The default value for CLOSEFLAG is 0.

CLVCMAX   Maximum B.C. labour-sponsored funds tax credit allowed

DESCRIPTION

This is the maximum value for the British Columbia labour sponsored funds tax credit (implvctc). The credit is derived as a proportion CLVCRT of the cost of the funds bought (idlabtxg) up to a maximum value CLVCMAX.

CMXMT   B.C. married amount turndown level

DESCRIPTION

This parameter represents the provincial married exemption turndown when British
Columbia tax is calculated as a tax on taxable income. It is only used when CTXFLG is set
to 1. The reduction is calculated as the dependant's net income less the turndown CMXMT.

CPP60T64   CPP/QPP Contributions Take up (60 - 64) by earnings with CPP income

DESCRIPTION

This is a take-up rate for contributions to CPP/QPP for individuals in the 60 to 64 age range

who have received some CPP income (idicqp) as well as earned income (idiemp, idisenf, idisefm). The take up is based on employment income and represent the proportion who should still contribute to CPP/QPP based on their earnings. Special tabulations using the Green Book data were used to determine the proportions.

CPPOPT   CPP/QPP contribution deduction/credit option [1=deduction,2=credit]

DESCRIPTION

This parameter controls the tax treatment of CPP/QPP contributions. With a value of 1,
CPP/QPP contributions are treated as a deduction from net income and with a value of 2 as a
tax credit.

CPPXM   CPP/QPP exemptible earnings

DESCRIPTION

The CPP/QPP yearly basic exemption used to calculate yearly maximum contributory
earnings. The exemption is applied to idiemp to calculate contributions on earnings from
employment and to the sum of idisenf and idisefm to calculate contributions on earnings
from self-employment.

CPRDESC   Description of SPSM run [string]

DESCRIPTION

This control parameter can be used to provide a descriptive title to a specific SPSM run.

DESCRIPTION

The British Columbia Tax reduction was discontinued after 1985. In 1985 and earlier if net income was lower than this amount the British Columbia provincial tax was reduced to equal federal tax payable.

CPTCT   B.C. political contribution table [total donations,donation allowed]

DESCRIPTION

This table contains the figures necessary to calculate the British Columbia Political
Contribution Tax Credit. The first column represents the dollar amount of total British
Columbia political contributions to which the corresponding percentages of the third column
are applied to calculate the total Allowable British Columbia Political Contribution Tax
Credit. Only the first and third columns of the table need to be specified.

CPTX B.C. tax table [taxable income,basic provincial tax]

DESCRIPTION

This table represents the British Columbia tax curve used when calculating the tax on taxable income (CTXFLG = 1). The first column represents Taxable Income, the second represents the amount of Basic Provincial Tax payable at that level of taxable income, the third column represents the marginal tax rate for the interval between this and the next value in the table.

Only the first and third columns of the tax table need be specified. The second column is computed by the standard algorithm.

CSCI   British Columbia surtax first cut-in level

DESCRIPTION

This is the first level of provincial tax payable above which a surtax at the rate of CSF applies.

For British Columbia, the SPSM calculates provincial surtax (impsur) as CSF percent of provincial taxes (imtxp) above the level CSCI plus CSF2 percent of provincial taxes above the level CSCI2 less an allowance of CSDC for each dependant child (imchclm).

CSF   British Columbia surtax first level rate

DESCRIPTION

This is the surtax rate payable on provincial tax payable above the level CSCI.

For British Columbia, the SPSM calculates provincial surtax (impsur) as CSF percent of
provincial taxes (imtxp) above the level CSCI plus CSF2 percent of provincial taxes above
the level CSCI2 less an allowance of CSDC for each dependant child (imchclm).

CSF2   British Columbia surtax second level rate

DESCRIPTION

The rate which is applied to Provincial Income Tax (imtxp) exceeding CSCI2 to calculate the
BC surtax. Thus the total rate of surtax above the second tier cut-in CSCI2 would be the sum
of this parameter and CSF.

For British Columbia, the SPSM calculates provincial surtax (impsur) as CSF percent of
provincial taxes (imtxp) above the level CSCI plus CSF2 percent of provincial taxes above
the level CSCI2 less an allowance of CSDC for each dependant child (imchclm).

CTCFALC   FAMEX reporting error adjustment: Alcohol [prov]

DESCRIPTION

The sum of the alcohol expenditures on the SPSD/M are known to be well below the provincial control totals. The role of this parameter is to scale the model expenditures to conform with these control totals. This is necessary as alcohol is amongst the most heavily taxed commodities.

CTCFGAS   FAMEX reporting error adjustment: Gasoline [prov]

DESCRIPTION

The sum of the gasoline expenditures on the SPSD/M are not in alignment with the provincial control totals. This parameter is used to scale the gasoline expenditures to conform with provincial control totals. Like alcohol, gasoline is a heavily taxed commodity.

CTCFTOB   FAMEX reporting error adjustment: Tobacco [prov]

DESCRIPTION

The sum of the tobacco expenditures on the SPSD/M fall short of provincial control totals. This parameter scales the model expenditures to conform with these control totals. Tobacco is the most heavily taxed commodity.

CTCIFLAG   Refundable tax credits social assistance income inclusion flag

DESCRIPTION

This parameter controls the inclusion of Social Assistance Income (Federal Social Assistance, Provincial Social Assistance, the Guaranteed Income Supplement and the Provincial GIS Supplement) in the calculation of net income for the purpose of reducing the Child Tax Credit and the Federal Sales Tax Credit. With a value of 0, Social Assistance income is excluded from net income, with a value of 1, it is included.

CTCTD   Family income child tax credit turndown

DESCRIPTION

The level of family net income (head plus spouse) above which the Federal Child Tax Credit begins to be paid at a lower rate. If family income (the sum of the net income of the head and spouse) exceeds this amount the total Child Tax Credit is reduced by a proportion (CTCRR) of income exceeding the turndown CTCTD.

See CTCIFLAG for a description of the options to include Social Assistance income in the calculation of net income for the purpose of reducing the Child Tax Credit.

CTFAMSNA   FAMEX->SNA conceptual conversion factor [com]

DESCRIPTION

There exist some conceptual differences between the expenditures of the input-output model
which computes the effective commodity tax parameters and the SPSD/M observation
stemming from survey data. This parameter is used to adjust the SPSD/M expenditures
before applying the input-output commodity tax rates. For additional information on this
issue, consult the *Commodity Tax User's Guide*.

CTFCID   Federal custom import duties [com]

DESCRIPTION

This parameter represents the effective tax rates of one of six detailed federal commodity tax
types. Custom import duties are levied on imported goods used for both manufacture and
final demand consumption. They are ad-valorem based. Their impact is being diminished as
the General Agreement on Tariffs and Trade (GATT) discussions lead to rate reductions.
These levies are incorporated into the producer's price of a good such that revenues from the
federal manufacturer's sales tax and other excise taxes are subject to their levels.

CTFEXD   Federal excise duties [com]

DESCRIPTION

This parameter represents the effective tax rates of one of six detailed federal commodity tax types. Under the excise act duties are levied on tobacco products and alcoholic beverages (other than wines) made in Canada. These commodities are under the control of the crown until these duties are paid. They are then stamped accordingly. These duties, like custom import duties, are included in the producer's price of the commodity. They typically take the form of specific quantity rates; they are not ad-valorem taxes. Revenues generated by the manufacturers sales tax and federal excise takes are conditioned on these levels.

CTFEXT   Federal excise taxes [com]

DESCRIPTION

This parameter represents the effective tax rates of one of six detailed federal commodity tax types. Some commodities are additionally taxed on the producer price base through provisions in the Excise Tax Act. Taxes under this heading include: Gasoline, Diesel, and Aviation Fuel excise taxes; Tobacco and Alcohol excise taxes; Air transportation tax; Telecommunications programming tax; other excise taxes levied on heavy cars, air conditioners, jewelry, clocks, watches, lighters, playing cards etc.

CTFMFG   Federal manufacturer's sales [com]

DESCRIPTION

This parameter represents the effective tax rates of one of six detailed federal commodity tax types. It is levied on all finished manufactured goods at the producer's sales price irrespective of whether wholesalers, retailers, or individual consumers are the purchasers. It is levied upon the customs value of imported goods, including any applicable duty. For a list of exemptions see the *COMTAX Users Guide*.

CTFOEN   Federal other energy taxes [com]

DESCRIPTION

This parameter represents the effective tax rates of one of six detailed federal commodity tax types. These are taxes which were brought in under the 1981 National Energy Program. They had significant impacts on Federal Government revenues through the early 1980s but by 1986 they have been phased out. They are as follows: Natural Gas & Gas Liquids Excise Tax; Oil Export Charges; Canadian Ownership Special Charge.

CTPGAS   Provincial gasoline tax [prov]

DESCRIPTION

This parameter represents the effective tax rates of one of six detailed provincial commodity
tax types. This tax is applied to gasoline and diesel fuel use independent of whether the use
occurs in goods producing or final demand sectors.

CROSS REFERENCE

Function   **Description**

ctmod   Compute commodity taxes for individuals and households
mpc   Calculate derived model parameters and do edits

VALUES

File/Year   Value   Growth Source

```
CTPGAS Please see actual parameter files or /spsd/parmvals.prn
                        for values
```

DESCRIPTION

This parameter represents the effective tax rates of one of six detailed provincial commodity tax types. This fee applies to domestic beer producers in only four of the provinces: British Columbia; Ontario; Quebec; and Newfoundland.

CROSS REFERENCE

Function	Description
ctmod	Compute commodity taxes for individuals and households

CTPPLQ   Provincial profits on liquor commissions [prov]

DESCRIPTION

This parameter represents the effective tax rates of one of six detailed provincial commodity
tax types. These profits are defined as the value of gross sales less administrative and general
expenses. The value of gross sales is, in part, a function of the markups over costs the
provincial government applies. These changes do not require statutory revisions.

CTPRST   Provincial retail sales tax [com x prov]

DESCRIPTION

This parameter represents the effective provincial sales tax rates, by expenditure category
and province, on consumer's expenditure. Note that retail sales taxes associated with the
business sector have been "pushed through" and are incorporated into CTPRST. Note also
that effective tax rates are expressed with a "tax-free" consumption denominator. Please see
the *Consumer Tax User's Guide* for a more complete exposition on effective tax rates.

CTPTOB   Provincial tobacco tax [prov]

DESCRIPTION

This parameter represents the effective tax rates of one of six detailed provincial commodity tax types. This tax is applied to cigarettes and cut tobacco. In both cases it is a specific rate tax either by cigarette or by the gram.

CTPTOT   provincial total retail tax equivalent

DESCRIPTION

This is a derived parameter calculated in mpc.c parameter controls the way in which
commodity taxes are calculated. It is a total across all commodities of retail sales tax,
provincial industrial commodity taxes, and rates for other specific commodity taxes.

CROSS REFERENCE

Function   **Description**

ctmod   Compute commodity taxes for individuals and households
mpc   Calculate derived model parameters and do edits
txhhexp   Compute and pro-rate household taxes, rent, etc.

DESCRIPTION

This parameter is the scaling factor supplied by the user to allow for adjustments to household savings.

CTTXRM   Base year commodity tax removal factor [com x prov]

DESCRIPTION

The Input - Output based effective tax rates are generated with a denominator net of taxes to facilitate direct interpretation of alternate commodity tax regimes. Since the household expenditure observations on the SPSD are inclusive of survey year taxes, this factor must first be applied to the data before alternate effective rates can be properly used.

CTXFLG   B.C. tax on taxable income activation flag

DESCRIPTION

When this flag is turned on, British Columbia taxes get calculated as a tax on taxable income instead of as a percentage of federal taxes.

CYPNDL   B.C. Pension Income Deduction Amount

DESCRIPTION

This is the maximum dollar amount of pension income which may be claimed as a British
Columbia non-refundable tax credit. The parameter is only used when the provincial tax on
taxable income is calculated (CTXFLG = 1).

CROSS REFERENCE

DESCRIPTION

If this parameter is assigned a value of 1, the value MAXDX is assigned to the modeled disability exemption variable imdisex for all individuals with a reported disability exemption (i.e. a non-zero value for iddisslf). When DISOPT has a value of 2, MAXDX is assigned as a tax credit to the variable imdisatc.

DISTFLAG   Distribution facility activation flag

DESCRIPTION

This control parameter activates the distributional analysis facility of SPSM, which allows the user to produce certain distributional reports on an SPSD/M variable.

DISTP   Breakpoints for histogram plot [array]

DESCRIPTION

This control parameter, when activated by DISTFLAG, is a vector of decile cutpoints used on the horizontal axis of the histogram frequency plot. Only values which fall between the first and last values of DISTP are used to produce the plot, so that DISTP also functions to truncate tails of the distribution for display purposes.

DISTPHGT   Height of histogram plot

DESCRIPTION

This control parameter, when activated by DISTFLAG, controls the number of vertical print positions used to produce the histogram plot. If this number is increased, the histogram plot can show a greater amount of detail.

The default value of DISTPHGT is 17.

DISTPWID   Width of histogram plot

DESCRIPTION

This control parameter, when activated by DISTFLAG, controls the number of horizontal print positions used to produce the histogram plot. If this number is increased, the plot can show a greater amount of detail.

The default value of DISTPWID is 70.

DISTSAMP   Distribution facility sample size

DESCRIPTION

This control parameter, when activated by DISTFLAG, controls how many sample observations are maintained in memory for computing deciles and the histogram plot. If this number is increased, the deciles can be computed more accurately, but at the cost of increased use of the computer memory.

The default value of DISTSAMP is 3000.

DISTUNIT   Distribution facility family level

DESCRIPTION

When the distribution facility report is activated using the DISTFLAG parameter, this control parameter is used to specify the family level of analysis of the resulting report. Valid values and their meanings are given below.

0. Individual
1. Nuclear Family
2. Census Family
3. Economic Family
4. Household

The default value for DISTUNIT is 0.

DISTVAR   Distribution facility variable [string]

DESCRIPTION

The value of the DISTVAR control parameter is any valid class or analysis variable name for which a histogram plot and distributional statistics are desired. The value of DISTFLAG must be set to 1 or this parameter will be ignored.

DISTZERO   Distribution facility zero inclusion flag

DESCRIPTION

This control parameter, when activated by DISTFLAG, controls whether or not observations of the variable specified by DISTVAR with value zero are to be included when producing the distribution reports.

The default value of DISTZERO is 1.

DNINCFLAG Disable no income flag for calculation

DESCRIPTION

For efficency purposes the SPSM sets a flag when an individual has no income and skips several calculations as a result. If an individual receives income in the course of a simulation the flag is turned. If DNINCFLAG is set to one then the income flag will be set to one for all individuals. This will result in no difference in model results but the model will take approximately 30% longer to execute.

EAMAX   Maximum employment expenses

DESCRIPTION

The General Employment Expense Deduction is calculated by taking a proportion (EAPRP) of earnings from employment (idiemp). If the result exceeds EAMAX is set to this amount. This parameter is used only if EAOPT is set to 1 (for deductions).

EAOPT   Employment expense calculation option [1=deduction,2=none]

DESCRIPTION

This parameter controls the treatment of employment expenses. With a value of 1, employment expenses are treated as a deduction and with a value of 2 as a tax credit. This parameter is used only if EAOPT is set to 1 (for deductions).

EARNMIN   Earnings threshold to be an earner

DESCRIPTION

This parameter, found in the database adjustment (.apr) parameter file, is used to specify the minimum employment and self-employment income an individual must have in order to be considered an "earner". This value is used to produce the class variables nfnearn, cfnearn, efnearn, and hdnearn.

EDUCOPT   Education deduction/credit option [1=deduction,2=credit]

DESCRIPTION

This parameter controls the tax treatment of the Education Deduction. With a value of 1, the Education Deduction is treated as a deduction from net income and with a value of 2 as a tax credit.

EMPLOFLAG   Database variable(emplo) activation flag

DESCRIPTION

When this parameter is set to 1, the imputed variable for the employee home relocation deduction (idemplo) is included in the calculation of all deductions from net income (imdedfn) as well as being a deduction from net income (iminet) when calculating the federal foreign tax credit (imfortxc). With a value of zero the employee home relocation deduction variable is not used.

EMXM   Married equivalent exemption/amount

DESCRIPTION

If the parameter PEROPT is set to 1 (for personal exemptions), a head with no spouse may claim a dependent child for this amount for the Married Equivalent Exemption. The exemption is reduced by the child's net income exceeding the turndown level (EMXMT).

ETAFLAG   Activate fraction completed display

DESCRIPTION

When activated, ETAFLAG will cause SPSM to generate a horizontal histogram which indicates an estimate of what percentage of the requested simulation has been completed. Note that the estimate will not be particularly accurate when selecting small samples.

The default value for ETAFLAG is 1.

FACTISENF   Scale-up factor for non-farm self-employment income

DESCRIPTION

This parameter can be used to "gross-up" non-farm self-employment income before applying the federal tax algorithm. It does not increase the real income received by an individual, but rather increases the amount of income used when calculating taxes. It is intended to be used to simulate the effect of reducing the deductibility of employment expenses. If this kind of simulation is not desired, FACTISENF should be set to the value 1.0.

FARR   Family allowance repayment rate

DESCRIPTION

This parameter allows the repayment of Family Allowance based on net family income. If set
to 0, Family Allowances are not repaid. If set to 1, the amount repaid is calculated as the
lesser of Taxable Family Allowances (imtfa) or a proportion FARR of family net income
exceeding the reduction level FATD. The repayment amount is added to the variable
imrepay and is not considered a deduction from net income.

FCBEIE   Flag for WIS dependent on number of children

DESCRIPTION

This parameter controls whether the original earned income supplement (also known as the working income supplement) is used, or whether the enriched version, with different amounts depending on the number of children in the family, is used. When FCBEIE is set to 0, the original earned income supplement is used. When it is set to 1, the enriched working income supplement proposed in the 1997 budget is calculated.

FCBEIS   Child benefits earned income supplement

DESCRIPTION

This parameter represents the amount of the federal earned-income supplement which
increases the Federal Child Benefit for low-income working families. When FCBEIE is set
to 1, the benefit depends on the number of children. FCBEIS is replaced by FCBEIS1,
FCBEIS2, and FCBEIS3.

FCBEIS3   Enriched WIS for each additional child

DESCRIPTION

This parameter represents the amount received for the third and additional children in a family from the proposed enriched federal earned-income supplement which increases the Federal Child Benefit for low-income working families (1997 Budget).

FCBEMX   Earnings where WIS phase-in is at maximum

DESCRIPTION

When FCBEIE is equal to 1, the Working Income supplement depends on the number of
children in the family. For families with lower incomes, the benefit starts to be phased in at
FCBECI, and reaches its maximum at incomes of FCBEMX. The slope of the phase in is
therefore calculated as the maximum working income supplement a family can receive
divided by (FCBEMX – FCBECI).

FCBERR   Child benefits earning supplement reduction rate

DESCRIPTION

This parameter represents the rate at which the earned income supplement (FCBEIS) will be reduced by when family net income exceeds the (FCBETD) turn down level. When FCBEIE is set to 1, the reduction rate depends on the number of children and FCBERR1, FCBERR2, and FCBERR3 replace FCBERR.

FCBESR   Child benefits earned income supplement rate

DESCRIPTION

This parameter represents the rate at which the earned income supplement (FCBEIS) will be increased when family net income exceeds the (FCBECI) cut-in level. When FCBEIE is set to1, this parameter is replaced by FCBEMX since the rate of increase will depend on the number of children in the household.

FCBTD Federal child benefits family income turndown

DESCRIPTION

The level of family net income (head plus spouse) above which the Federal Child Benefit
begins to be paid at a lower rate. If family income exceeds this amount, the Child Benefit
will be reduced by a proportion (FCBRR) for families with two or more children or by
(FCBRRS) for families with one child.

FDSFTFLAG Database variable(fdsft) activation flag

DESCRIPTION

When this parameter is set to 1, the imputed variable for the additional foreign tax credit
applied to surtax (idfdsft) is used to reduce the federal surtax (imfsur). With a value of zero
the variable is not used.

FLVCMAX   Maximum labour-sponsored funds tax credit allowed

DESCRIPTION

This is the maximum value for the federal labour sponsored funds tax credit (imlabtxc). The credit is derived as a proportion FLVCRT[prov] of the cost of the funds bought (idlabtxg) up to a maximum value FLVCMAX.

Note that in 1996, people who bought shares prior to March 6 could claim a 20% rate whereas shares bought afterwards had a 15% rate. In the model we simply use a 15% rate.

FLVCRT   Percent of labour-sponsored funds cost allowed as credit [prov]

DESCRIPTION

This is the rate for the federal labour sponsored funds tax credit (imlabtxc). The credit is derived as a proportion FLVCRT[prov] of the cost of the funds bought (idlabtxg) up to a maximum value FLVCMAX.

Prior to 1988, the federal government provided a credit only if the province already such a program in place.

Note that in 1996, people who bought shares prior to March 6 could claim a 20% rate whereas shares bought afterwards had a 15% rate. In the model we simply use a 15% rate.

FNTCR   Federal non-refundable tax credit rate

DESCRIPTION

This single parameter sets the tax credit rate for all of the non-refundable tax credits. They are calculated separately and summed for a total credit.

FORAVGFLAG Database variable(foravg) activation flag

DESCRIPTION

When this parameter is set to 1, the imputed variable for Forward Averaging Amount
(idforavg) is included in the calculation of Taxable Income (imitax). With a value of zero the
variable is not included.

FPTC   Federal political contribution table [total donations,donation allowed]

DESCRIPTION

This table contains the figures necessary to calculate the Federal Political Contribution Tax Credit. The first column represents the dollar amount of total federal political contributions to which the designated percentages of the third column are applied to calculate the total Allowable Federal Political Contribution Tax Credit. Only the first and third columns of the table need to be specified.

FSTCF — Federal sales tax credit amount for filer

DESCRIPTION

This parameter represents the basic Federal Sales Tax Credit claimable for the filer. The total family sales tax credit (on behalf of the head, spouse and dependants) is reduced by a fraction (FSTCR) of family net income (head and spouse) exceeding the turndown level (FSTCL).

FSTCL   Federal sales tax credit reduction level

DESCRIPTION

The level of family net income above which the total family Federal Sales Tax Credit is reduced.

Note that non-taxable Social Assistance income may or may not be included in the

calculation of net income for this reduction depending upon the status of CTCIFLAG. Social Assistance income includes federal and provincial Social Assistance, the Guaranteed Income Supplement, Spouses Allowance and income from Provincial GIS supplementation programs.

This parameter is used only if FSTCFLAG is set to 1.

FSTCREF   Federal sales tax credit reform - age

DESCRIPTION

When FSTCREF is set to 1, only people 19 years and over can apply for the federal sales tax credit. Parents can claim FSTCC for each child 18 and younger.

Otherwise, if FSTCREF is set to 0, the credit can be received at the age of 18, and only children 17 and younger can be claimed by their parents.

FSURTRMX Maximum federal surtax reduction

DESCRIPTION

This represents the maximum value of the Federal Surtax Reduction.

Note that when the surtax reduction is being phased in or out at 50%, the maximum value as well as the reduction rate (FSURTRRR) should be half the value as printed on the tax form.

FTX   Federal tax table [taxable income,basic federal tax]

DESCRIPTION

This table represents the Federal tax curve. The first column represents Taxable Income, the second represents the amount of Basic Federal Tax payable at that level of taxable income, the third column represents the marginal tax rate for the interval between this and the next value in the table.

Only the first and third columns of the tax table need be specified. The second column is computed by the standard algorithm.

FXVFLAG   Read FAMEX expenditure vector file

DESCRIPTION

When this flag is set to 1, expenditure totals and commodity tax simulations are performed.

The default value for FXVFLAG is 1.

GFADDDED   Growth Factor: Additional deductions from net income (256)

DESCRIPTION

The value for Additional Deductions from Net Income (idaddded) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFALEXP   Growth Factor: Other allowable employment expenses (229)

DESCRIPTION

During database adjustment, the database value for Other Allowable Employment Expenses (idalexp) is always multiplied by this value.

GFCAPGEX   Growth Factor: Capital gains exemptions (254)

DESCRIPTION

The value for Capital Gains Exemptions (idcapgex) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFCARRY   Growth Factor: Carrying charges (221)

DESCRIPTION

During database adjustment, the database value for Carrying Charges (idcarry) is always multiplied by this value.

GFCCET   Growth Factor: Child care expenses associated with child

DESCRIPTION

When CTFLAG are set to 1, the database value of household expenditure on Child Care (idccet) is always multiplied by this factor.

GFCCETT   Growth Factor: Child care expenses (Limit A, Form T778)

DESCRIPTION

The value for Child Care Expenses (idccett) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFCHARIT   Growth Factor: Charitable donations (340)

DESCRIPTION

During database adjustment, the database value for Charitable Donations (idcharit) is always multiplied by this value. This, combined with new weights, allows data from the base year to represent current year values.

GFCLOSS   Growth Factor: Allowable other years capital loss (253)

DESCRIPTION

During database adjustment, the database value for Previous Years Capital Losses (idcloss) is always multiplied by this value.

GFCPP65   Growth Factor: CPP for age 65

DESCRIPTION

This parameter allows the growth of CPP/QPP benefits for recipients aged 65 years. During database adjustment, the database value for CPP/QPP Benefits for individuals aged 65 years (idicqp) is always multiplied by this value. Separate growth factors by age allow for the phasing in of the program.

GFCPP66   Growth Factor: CPP for age 66

DESCRIPTION

This parameter allows the growth of CPP/QPP benefits for recipients aged 66 years. During

database adjustment, the database value for CPP/QPP Benefits for individuals aged 66 years (idicqp) is always multiplied by this value. Separate growth factors by age allow for the phasing in of the program.

GFCPP67   Growth Factor: CPP for age 67

DESCRIPTION

This parameter allows the growth of CPP/QPP benefits for recipients aged 67 years. During database adjustment, the database value for CPP/QPP Benefits for individuals aged 67 years (idicqp) is always multiplied by this value. Separate growth factors by age allow for the phasing in of the program.

GFCPP68   Growth Factor: CPP for age 68

DESCRIPTION

This parameter allows the growth of CPP/QPP benefits for recipients aged 68 years. During database adjustment, the database value for CPP/QPP Benefits for individuals aged 68 years (idicqp) is always multiplied by this value. Separate growth factors by age allow for the phasing in of the program.

GFCPP69   Growth Factor: CPP for age 69

DESCRIPTION

This parameter allows the growth of CPP/QPP benefits for recipients aged 69 years. During database adjustment, the database value for CPP/QPP Benefits for individuals aged 69 years (idicqp) is always multiplied by this value. Separate growth factors by age allow for the phasing in of the program.

GFCPP70   Growth Factor: CPP for age 70

DESCRIPTION

This parameter allows the growth of CPP/QPP benefits for recipients aged 70 years. During database adjustment, the database value for CPP/QPP Benefits for individuals aged 70 years (idicqp) is always multiplied by this value. Separate growth factors by age allow for the

phasing in of the program.

GFCPP71   Growth Factor: CPP for age 71

DESCRIPTION

This parameter allows the growth of CPP/QPP benefits for recipients aged 71 years. During database adjustment, the database value for CPP/QPP Benefits for individuals aged 71 years (idicqp) is always multiplied by this value. Separate growth factors by age allow for the phasing in of the program.

GFCPP72   Growth Factor: CPP for age 72

DESCRIPTION

This parameter allows the growth of CPP/QPP benefits for recipients aged 72 years. During database adjustment, the database value for CPP/QPP Benefits for individuals aged 72 years (idicqp) is always multiplied by this value. Separate growth factors by age allow for the phasing in of the program.

GFCPP73   Growth Factor: CPP for age 73

DESCRIPTION

This parameter allows the growth of CPP/QPP benefits for recipients aged 73 years. During database adjustment, the database value for CPP/QPP Benefits for individuals aged 73 years (idicqp) is always multiplied by this value. Separate growth factors by age allow for the phasing in of the program.

GFCPP74   Growth Factor: CPP for age 74

DESCRIPTION

This parameter allows the growth of CPP/QPP benefits for recipients aged 74 years. During database adjustment, the database value for CPP/QPP Benefits for individuals aged 74 years (idicqp) is always multiplied by this value. Separate growth factors by age allow for the phasing in of the program.

GFCPP75   Growth Factor: CPP for age 75

DESCRIPTION

This parameter allows the growth of CPP/QPP benefits for recipients aged 75 years. During database adjustment, the database value for CPP/QPP Benefits for individuals aged 75 years (idicqp) is always multiplied by this value. Separate growth factors by age allow for the phasing in of the program.

GFCPPG75   Growth Factor: CPP for age > 75

DESCRIPTION

This parameter allows the growth of CPP/QPP benefits for recipients aged 76 or over. During database adjustment, the database value for CPP/QPP Benefits for individuals over age 75 (idicqp) is always multiplied by this value. Separate growth factors by age allow for the phasing in of the program.

GFCPPL65   Growth Factor: CPP for age < 65

DESCRIPTION

This parameter allows the growth of CPP/QPP benefits for recipients aged 64 or younger. During database adjustment, the database value for CPP/QPP Benefits for individuals under age 65 (idicqp) is always multiplied by this value. Separate growth factors by age allow for the phasing in of the program.

GFCQP   Adjustment Factor: CPP/QPP contributions

DESCRIPTION

When CTFLAG is set to 1, the database value of household CPP/QPP Contributions (fxcqp) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFDALIMO   Growth Factor: Alimony paid (220)

DESCRIPTION

The value for Alimony Paid (iddalimo) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFDISOTH   Growth Factor: Disability amount for dependants (318)

DESCRIPTION

The value for Disability Amount for Dependants (iddisoth) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFDISSLF   Growth Factor: Disability amount for self (316)

DESCRIPTION

The value for Disability Amount for Self (iddisslf) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFDUES   Growth Factor: Union and professional dues (212)

DESCRIPTION

During database adjustment, the database value for the Deduction for Professional and Union Dues (imputed from T1 records, iddues) is always multiplied by this value.

GFEMPLO   Growth Factor: Employee home relocation loan dedn (248)

DESCRIPTION

The value for Employee Home Relocation Loan Deduction (idemplo) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFEXPLOR Growth Factor: Exploration and development expenses (224)

DESCRIPTION

The value for Exploration and Development Expenses (idexplor) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFFABD Adjustment Factor: Account balancing difference

DESCRIPTION

When CTFLAG is set to 1, the database value of household Account Balancing Difference (fxfabd) is always multiplied by this factor.

GFFDSFT Growth Factor: Foreign tax credit applied to surtax (511)

DESCRIPTION

This growth factor is used to adjust the new database variable idfdsft.

GFFMX Adjustment Factor: consumer expenditure categories [commodity]

DESCRIPTION

This factor is used in conjunction with commodity tax modeling. There exist some known discrepancies in consumer expenditure categories between the FAMEX and other reliable data sources. This factor has been provided to adjust the FAMEX levels up or down to reduce the differences in the following important commodity tax areas:

0. Food and Non-alcoholic Beverages
1. Alcoholic Beverages
2. Tobacco products
3. Men's & Boy's Clothing
4. Men's and boy's clothing repair & alteration
5. Women's and children's clothing
6. Women's clothing, repair & alteration
7. Footwear
8. Shoe repair
9. Gross imputed rent

10. Gross rent paid
11. Other shelter expenses
12. Electricity
13. Natural gas
14. Other fuels
15. Furniture and floor covering
16. Upholstery and furniture repairs
17. Household appliances
18. Household equipment repairs
19. Semi-durable household furnishings
20. Non-durable household supplies
21. Domestic and child care services
22. Other household services
23. Medical care
24. Hospital care and the like
25. Accident and sickness insurance
26. Drugs and pharmaceutical products
27. New and used (net) motor vehicles
28. Motor vehicles parts and accessories
29. Motor vehicle repairs
30. Motor fuels and lubricants
31. Other motor vehicle related services
32. Purchased transportation
33. Communications
34. Recreation, sporting and camping equip.
35. Recreation equipment repair and rentals
36. Reading and entertainment supplies
37. Recreational services
38. Educational and cultural services
39. Jewelry and watches
40. Jewelry and watch repair
41. Leather goods & other personal effects
42. Toilet articles and cosmetics
43. Personal care
44. Restaurants and accommodation services
45. Financial, legal & other services
46. Operating expenditures of non-profit org.
47. Net expenditure abroad

GFFOMR   Adjustment Factor: Other money receipts

DESCRIPTION

When CTFLAG is set to 1, the database value of household Other Money Receipts (fxfomr) is always multiplied by this factor.

GFFORAVG   Growth Factor: Forward averaging amount withdrawal (237)

DESCRIPTION

The value for Forward Averaging Amount Withdrawal (idforavg) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFFORINC   Growth Factor: Net foreign income (508)

DESCRIPTION

The value for Net Foreign Income (idforinc) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFFORTX   Growth Factor: Foreign tax paid (507)

DESCRIPTION

The value for Foreign Tax Paid (idfortx) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFGIFTS   Growth Factor: Gifts to Canada/provinces/culture (342)

DESCRIPTION

The value for Gifts to Canada/Provinces/Culture (idgifts) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFGSTREB   Growth Factor: GST rebate (457)

DESCRIPTION

The value for GST rebate (457) (idgstreb) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFGVPEN   Adjustment Factor: Government pension plan contributions

DESCRIPTION

When CTFLAG is set to 1, the database value of household Government Pension Plan Contributions (fxgvpen) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFHMKT   Adjustment Factor: Market value of home

DESCRIPTION

When CTFLAG is set to 1, the database value of household Market value of home, fxhmkt, is always multiplied by this value.

GFHMORT   Adjustment Factor: Mortgage value outstanding

DESCRIPTION

When CTFLAG is set to 1, the database value of household Mortgage value outstanding, fxhmort is always multiplied by this value.

GFHOMSTU   Growth Factor: College residence/resident homeowner assistance (558)

DESCRIPTION

The value for College Residence/Resident Homeowner Assistance (idhomstu) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFHOSSLF   Growth Factor: Ontario HOSP contributions - self (598)

DESCRIPTION

The value for Ontario HOSP Contributions - Self (idhosslf) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFHOSSPO   Growth Factor: Ontario HOSP contributions - spouse (599)

DESCRIPTION

The value for Ontario HOSP Contributions (idhosspo) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFIALIMO   Growth Factor: Alimony Income

DESCRIPTION

The value for Alimony income received (idialimo) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFICAPG   Growth Factor: Capital gains (actual) (127 * 1.5)

DESCRIPTION

During database adjustment, the database value for Capital Gains/Losses (idicapg) is always multiplied by this value.

GFIDIV   Growth Factor: Dividend income (actual) (120 / 1.5)

DESCRIPTION

During database adjustment, the database value for Dividends (ididiv) is always multiplied by this value.

GFIEMP   Growth Factor: Employment income [province,sex]

DESCRIPTION

This Vector allows the growth of Employment Income (idiemp). This is a two dimensional parameter indexed by province and sex of worker.

Users should note that when using the UI and TX standard algorithms together the values of GFIEMP are applied using different algorithms.

GFIINT   Growth Factor: Interest income (121)

DESCRIPTION

During database adjustment, the database value for Interest Income (idiint) is always multiplied by this value.

GFILOSS   Growth Factor: Business investment losses (217)

DESCRIPTION

During database adjustment, the database value for Investment Losses (idiloss) is always multiplied by this value.

GFINOGV   Growth Factor: Other government income (non-taxable)

DESCRIPTION

During database adjustment, the database value for Non-taxable Other Government Income (idinogv) is always multiplied by this value.

GFINOTH   Growth Factor: Other money income (non-taxable)

DESCRIPTION

During database adjustment, the database value for Non-taxable Other Income (idinoth) is always multiplied by this value.

GFINTAX   Adjustment Factor: Income taxes

DESCRIPTION

When CTFLAG is set to 1, the database value of household Income Taxes (fxintax) is always

multiplied by this value. This allows for the growth from a base year to represent current year values.

GFINTPL   Adjustment Factor: Interest on personal loans

DESCRIPTION

When CTFLAG is set to 1, the database value of household expenditure on Interest on Personal Loans (fxintpl) is always multiplied by this factor.

GFIOINV   Growth Factor: Other investment income with net rental

DESCRIPTION

During database adjustment, the database value for Other Investment Income (idioinv) is always multiplied by this value.

GFIPAC   Adjustment Factor: Life insurance premiums and annuity contributions

DESCRIPTION

The value for Life Insurance Premiums and Annuity Contributions (fxipac) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFIPENS   Growth Factor: Pension income (115)

DESCRIPTION

During database adjustment, the database value for Pension Income (idipens) is always multiplied by this value.

GFISA   Growth Factor: Social assistance income

DESCRIPTION

During database adjustment, the database value for Social Assistance (idisa) is always multiplied by this value.

GFISEFM   Growth Factor: Self-employed income - farming

DESCRIPTION

During database adjustment, the database value for Self-employed Farm Income (idisefm) is always multiplied by this value.

GFISENF   Growth Factor: Self-employed income - non-farming

DESCRIPTION

During database adjustment, the database value for Self-employed Non-farm Income (idisenf) is always multiplied by this growth factor.

GFITC   Growth Factor: Federal investment tax credits (412)

DESCRIPTION

During database adjustment, the database value for Federal Investment Tax Credit (iditc) is always multiplied by this value.

GFITOGV   Growth Factor: Other government income (taxable)

DESCRIPTION

During database adjustment, the database value for Taxable Other Government Income (iditogv) is always multiplied by this value.

GFITOTH   Growth Factor: Other non-government income (taxable)

DESCRIPTION

During database adjustment, the database value for Taxable Other Income (iditoth) is always multiplied by this value.

GFITRRSP   Growth Factor: Taxable RRSP withdrawls

DESCRIPTION

The value for Taxable RRSP withdrawals (iditrrsp) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFIVETP   Growth Factor: Veterans Pensions

DESCRIPTION

The value for Veterans pensions and allowances (idivetp) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFIWORKC   Growth Factor: Worker's compensation

DESCRIPTION

The value for Workers compensation benefits (idiworkc) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFLABTXG   Growth Factor: Labour funds tax credit (414)

DESCRIPTION

The value for the Labour Funds Tax Credit (idlabtxc) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFMEDGRO Growth Factor: Medical expenses, gross (330)

DESCRIPTION

The value for Gross Medical Expenses (idmedgro) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFMINCAR   Growth Factor: Minimum tax carryover (504)

DESCRIPTION

The value for Minimum Tax Carryover (idmincar) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFMORTI   Adjustment Factor: Mortgage interest paid

DESCRIPTION

When CTFLAG is set to 1, the database value of household Mortgage interest paid, fxmorti, is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFMOVEXP Growth Factor: Imputed moving expenses (219)

DESCRIPTION

The value for Imputed Moving Expenses (idmovexp) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFMSCHPD Growth Factor: Manitoba school taxes paid

DESCRIPTION

The value for Manitoba school taxes paid (idmschpd) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFNCAL   Adjustment Factor: Net change in assets and liabilities

DESCRIPTION

When CTFLAG is set to 1, the database value of Net Change in Assets and Liabilities (Savings) (fxncal) is always multiplied by this factor. This allows for the growth from a base year to represent current year values.

GFNCLOS   Growth Factor: Allowable other years non-capital loss (252)

DESCRIPTION

During database adjustment, the database value for Other Years Non-Capital Losses (idnclos) is always multiplied by this value.

GFNES   Adjustment Factor: Not elsewhere stated

DESCRIPTION

When CTFLAG is set to 1, the database value of household expenditures not included in other defined expenditure Categories (fxnes) is always multiplied by this factor. This allows for the growth from a base year to represent current year values.

GFNORTH   Growth Factor: Northern deductions (255)

DESCRIPTION

The value for Northern Deductions (idnorth) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFOTHDED   Growth Factor: Other deductions from total income (232)

DESCRIPTION

The value for Other Deductions from Total Income (idothded) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFOTHPE   Growth Factor: Other dependant exemptions (305)

DESCRIPTION

During database adjustment, the database value for Other Personal Exemptions (idothpe) is always multiplied by this value.

GFPARTLO   Growth Factor: Limited partnership losses (251)

DESCRIPTION

The value for Limited Partnership Losses (idpartlo) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFPOLCON   Growth Factor: Federal political contributions (409)

DESCRIPTION

The value for Federal Political Contributions (idpolcon) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFPROPTX   Growth Factor: Net property taxes paid (556)

DESCRIPTION

The value Net Property Taxes Paid (idproptx) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFPRTAX   Adjustment Factor: Property tax

DESCRIPTION

When CTFLAG is set to 1, the database value of household Property Tax (fxprtax) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFPRVFTC   Growth Factor: Provincial foreign tax credit (Form T2036)

DESCRIPTION

The value for the Provincial Foreign Tax Credit (idprvftc) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFPRVPOL   Growth Factor: Provincial political contributions (565)

DESCRIPTION

The value for Provincial Political Contributions (idprvpol) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFPVPEN   Adjustment Factor: Private pension plan contributions

DESCRIPTION

When CTFLAG is set to 1, the database value of household Private Pension Plan Contributions (fxpvpen) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFRECOM   Adjustment Factor: Real estate commissions

DESCRIPTION

When CTFLAG is set to 1, the database value of household Real Estate Commissions (fxrecom) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFRENTPD   Growth Factor: Total rental payments (555)

DESCRIPTION

The value for Total Rental Payments (idrentpd) is always multiplied by this value. This

allows for the growth from a base year to represent current year values.

GFRFEES   Adjustment Factor: Registration and license fees

DESCRIPTION

When CTFLAG is set to 1, the database value of household Registration and License Fees (fxrfees) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFRPP   Growth Factor: Registered pension plan contributions (207)

DESCRIPTION

During database adjustment, the database value for RPP Contributions (idrpp) is always multiplied by this value.

GFRRSP   Growth Factor: RRSP contributions (208)

DESCRIPTION

During database adjustment, the database T1 imputed value for RRSP Contributions (idrrsp) is always multiplied by this value.

GFRRSPT   Adjustment Factor: Total RRSP contributions (FAMEX)

DESCRIPTION

When CTFLAG is set to 1, the database value of household expenditure on Registered Retirement Savings Plans as reported in the FAMEX survey (fxrrspt) is always multiplied by this factor. This allows for the growth from a base year to represent current year values.

GFSAPRED   Growth Factor: Predicted benefits from Social Assistance

DESCRIPTION

The value for Predicted amount of SA received (idsapred) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFSCFCQP   Growth Factor: SCF CPP

DESCRIPTION

The value for SCF Canada and Quebec pension plans (idscfcqp) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFSCFCTC   Growth Factor: Child tax credit

DESCRIPTION

The value for Child Tax Credits (idscfctc) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFSCFFTC   Growth Factor: Federal tax credit

DESCRIPTION

The value for the Federal Tax Credit (idscfftc) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFSCFINT   Growth Factor: SCF interest income

DESCRIPTION

The value for SCF interest income (idscfint) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFSCFOAS   Growth Factor: Old age security

DESCRIPTION

The value for Old Age Security (idscfoas) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFSCFPTC   Growth Factor: SCF provincial tax credits

DESCRIPTION

The value for Provincial tax credits as reported on SCF (idscfptc) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFSCFSA   Growth Factor: SCF social assistance

DESCRIPTION

The value for SCF social assistance (idscfsa) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFSCFUIB   Growth Factor: Unemployment insurance benefits

DESCRIPTION

The value for Unemployment Insurance Benefits (idscfuib) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFSTKDED   Growth Factor: Stock option deduction (249)

DESCRIPTION

The value for the Stock Option Deduction (idstkded) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFTPTAX   Adjustment Factor: Transfer of property taxes

DESCRIPTION

When CTFLAG is set to 1, the database value of household Transfer of Property Taxes (fxtptax) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFTUITN   Growth Factor: Tuition fees (320)

DESCRIPTION

During database adjustment, the database value for Tuition Fees (idtuitn) is always multiplied by this value.

GFUIC   Adjustment Factor: UI contributions

DESCRIPTION

When CTFLAG is set to 1, the database value of household expenditure on Unemployment Insurance Contributions (fxuic) is always multiplied by this factor.

GFUIPRED   Growth Factor: Predicted benefits from UI

DESCRIPTION

The value for Predicted amount of UI received (iduipred) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GFVENCAP   Growth Factor: Venture capital tax credit (564)

DESCRIPTION

The value for the Venture Capital Tax Credit (idvencap) is always multiplied by this value. This allows for the growth from a base year to represent current year values.

GISBE1   Breakeven for GIS one pensioner couple

DESCRIPTION

GISBE1 represents the level of family income at which the GIS benefits of a pensioner married to a non-pensioner have been reduced to exactly zero. This is a derived parameter calculated in mpc.c. The figure is calculated as a fixed relationship to other input parameters as follows.

GISBE1 = MP.BGISS/MP.GISRRM+MP.BOAS+MP.GISRLS;

CROSS REFERENCE

Function	Description
mpc	Calculate derived model parameters and do edits

GISBE2   Breakeven for GIS/SPA couple

DESCRIPTION

This is a derived parameter calculated in mpc.c. GISBE2 represents the level of family income at which the combined GIS and SPA benefits of a pensioner married to a SPA recipient have been reduced to exactly zero.

GISBE2 = (MP.BGISM*2) / (MP.GISRRM*2) + MP.BOAS / MP.SPAOASRR + MP.GISRLM

CROSS REFERENCE

Function	Description
gis	Compute GIS/SPA for elderly
mpc	Calculate derived model parameters and do edits

DESCRIPTION

Probability by GIS benefit level group of a married two OAS pensioner family applying for the Guaranteed Income Supplement. These probabilities are applied only when the parameter GISTURFLAG is set to 1.

CROSS REFERENCE

Function   **Description**

gis   Compute GIS/SPA for elderly

GISFLAG   Federal GIS/SPA/ESPA flag

DESCRIPTION

When this parameter is assigned a value of 1, the GIS function is executed and Federal
Guaranteed Income Supplement (imigis), Spouses Allowance and Extended Spouses
Allowance (imispa) are calculated. With a value of 0, they are not. This parameter will
automatically be set to 0 if the OASFLAG parameter is not set to 1.

GISOASFLAG   1984 GIS top-up to OAS residence shortfall flag

DESCRIPTION

When GISOASFLAG is set to one the maximum GIS benefit for recipients of partial OAS
will be increased by the difference between actual and maximum OAS benefits. This
corresponds to the change in the OAS/GIS system of October 1984. (Note: While the
meaning of this parameter has not changed the detailed description of it was left out of the
original documentation)

GISOT   GIS take-up rate: one pensioner couple by benefit level [benefit,rate]

DESCRIPTION

The probability by GIS benefit level group of applying for the Guaranteed Income
Supplement for a married OAS pensioner whose spouse is not eligible for OAS, GIS or SPA.
These probabilities are applied only when GISTURFLAG is set to 1.

GISPTDFLAG   GIS income: Payroll tax deduction flag

DESCRIPTION

When GISPTDFLAG is set to one the income used to income test GIS benefits will not have payroll taxes (imcqppc, imuic) or allowable employment expenses (idalexp) deducted from income. When this parameter is set to zero these quantities will be subtracted from other sources of income prior to the calculation of GIS benefits.

This parameter was introduced to model the initiative of the 1998 Federal budget to make the definition of income more consistent between programs such as the child tax benefit. The proposed changes were later withdrawn.

GSTCTUNC   GST credit take up by number of children

DESCRIPTION

This is a take-up rate for the GST Credit based on the number of eligible children in the
family. A take up of 1.000 denotes that all eligible recipients (based on family net income)
would still receive the credit. A value less than 1.000 would result in only that proportion
still getting the credit and the remainder would not. The first column denotes the number of
eligible children in the family where 3 represent 3 or more children. The second column
represents the proportion that will receive the credit.

IEMPADJ   Adjustment Factor: Employment income [employment income breaks,province]

DESCRIPTION

This parameter adjusts Employment Income (idiemp) to represent administrative values in the data base year. The value for the parameter remains constant for all model years and is applied prior to GFIEMP.   This is a two dimensional parameter indexed by employment income breakpoints (IEMPBRK) and province (hdprov).

This parameter should be set to 1 when outputting data in order to build a new database (bldspd). Otherwise the parameter will be applied twice.

IEMPBRK   Adjustment Factor: Income breaks for income adjustment[employment income breaks]

DESCRIPTION

This Vector determines the employment income breakpoints to be used in the growth of

idiemp using IEMPADJ.

IMPCQPOPT Imputation method, CQP [1=none 2=rank]

DESCRIPTION

CPP/QPP benefits are under-reported on the SCF, as compared to administrative data. In the process of SPSD creation, a statistical method of correcting this problem has been made. This option has been provided to select between using this correction [default] or to disable CPP/QPP imputation altogether.

IMPINTOPT Imputation method, Interest [1=none 2=imputed]

DESCRIPTION

Interest income is under-reported on the SCF, as compared to administrative data. In the process of SPSD creation, a statistical method of correcting this problem was made. This option has been provided to select this method, or to disable interest income imputation altogether if desired.

IMPSAOPT Imputation method, SA [1=none 2=rank]

DESCRIPTION

Social assistance benefits are under-reported on the SCF, as compared to administrative data. In the process of SPSD creation, a statistical method of correcting this problem has been made. This option has been provided to select between using this correction [default] or to disable social assistance imputation altogether.

IMPUIBOPT Imputation method, UI [1=none 2=rank]

DESCRIPTION

UI benefits are under-reported on the SCF, as compared to administrative data. In the process of SPSD creation, two distinct statistical methods of correcting this problem were made. This option has been provided to select between these two methods, or to disable UI imputation altogether if desired.

IMSHTOPT   Paid rent and property tax imputation option

DESCRIPTION

When this parameter is set to 1, imputation of provincial paid rents and property taxes are calculated based on Greenbook data, when set to .2 they are based on FAMEX data.

INCGP   Income cutpoints for table 2 [array]

DESCRIPTION

This control parameter is a vector of values used to provide the income cutpoints which
define the columns of the hard-wired Tables 2 and 2A. Tables 2 and 2A can be activated
using T2FLAG and T2AFLAG.

INCVAR   Variable to use for table 2 [string]

DESCRIPTION

This string control parameter specifies the variable (usually an income variable) that is used
to determine the column dimension of tables 2, 2A, 4, and 4A. Please see the *User's Guide*
for more information.

The default value for INCVAR is _immicons.

INEQFLAG   Inequality measures facility activation flag

DESCRIPTION

This parameter activates the calculation of inequality measures. Up to 10 different inequality
measures can be produced.

The underlying function used to produce the measures is developed by Duclos, Jean-Yves
and Martin, Tabi (1996), "*Linear Inequality Measures and the Redistribution of Income*",
Cahier de recherche 96-08,CRÉFA, Université Laval. It is a two parameter class of linear
inequality measure, the Generalized GINI. If v is the social preference and q produce
symmetric weights around its value, for $0<q<1$ then the weights $k(p)$ are:

$$k(p) = \frac{v\,(v+1)\,|q-p|^{(v-1)}}{q^{(v+1)} + (v+q)(1-q)^{v}},$$

Those weights are applied to the difference between an equal cumulative income distribution
and the actual cumulative income distribution for p, the cumulative population distribution.

The interesting aspect of this measure is its ability to reproduce the GINI when v is set to 1,
the S-GINI index when q is set to 1.

In this measure, all the weights are symmetric around q. When v is lower than one, the

weights structure is more like a pyramid centered at q, and is a V or U shape centered at q when v is greater than one. For more information, see the <u>User's Guide</u>.

INEQMEASURE Type of inequality measure [social preference, center of weight distribution]

DESCRIPTION

The calculation of an Inequality Measure is activated by setting INEQFLAG to 1.

The underlying function used to produce the measures is developed by Duclos, Jean-Yves and Martin, Tabi (1996), "*Linear Inequality Measures and the Redistribution of Income*", Cahier de recherche 96-08,CRÉFA, Université Laval. It is a two parameters class of linear inequality measures, the Generalized GINI. If v is the social preference and q produce symmetric weights around its value, for 0<q<1 then the weights k(p) are:

$$k(p) = \frac{v\ (v+1)\ |q\text{-}p|^{(v\text{-}1)}}{q^{(v+1)} + (v+q)(1\text{-}q)^{v}}\ ,$$

Those weights are applied to the difference between an equal cumulative income distribution and the actual cumulative income distribution for p, the cumulative population distribution.

The interesting aspect of this measure is its ability to reproduce the GINI when v is set to 1, the S-GINI index when q is set to 1.

In this measure, all the weights are symmetric around q. When v is lower than one, the weights structure is more like a pyramid centered at q, and is a V or U shape centered at q when v is greater than one.

Up to 10 different inequality measures can be computed with INEQMEASURE. The first parameter is v, the second q. As a special case when q is set to 99.0 the inequality measure is centered at the population share of the median income.

For more information, see the <u>User's Guide</u>.

INPAPR   Name of database adjustment parameter file (in) [string]

DESCRIPTION

This control parameter gives the name of the file (using the conventions of the host operating system) which contains the database adjustment parameters to be used when executing SPSM. Note that under MS-DOS, names without a drive specifier or any slashes refer to the

current directory.

INPBASMPR Name of base tax/transfer parameter file (in) [string]

DESCRIPTION

This control parameter gives the name of the file (using the conventions of the host operating
system) which contains the tax/transfer parameters to be used to produce base result
variables. Note that under MS-DOS, names without a drive specifier or any slashes refer to
the current directory. BASMETH must be either 2 or 3 for INPBASMPR to have any effect.

INPBASMRS Name of base results file (in) [string]

DESCRIPTION

The value of this control parameter is a binary SPSD/M results file filename. If the full path
name of the file is omitted, the path will default to the current directory. When the value of
BASMETH is set to 1, this file is used for determining base results.

INPFXV   Name of FAMEX vector file (in) [string]

DESCRIPTION

This control parameter gives the name of the file (using the conventions of the host operating
system) which contains the FAMEX expenditure vector binary database. Note that under
MS-DOS, names without a drive specifier or any slashes refer to the current directory.

INPMRSVARS   Base results file variables [string]

DESCRIPTION

The value of this control parameter is generated during an SPSM program run. The
parameter is set to a string of variable names of variables found in the input base results file
specified in INPBASMRS. The user is not able to edit this parameter interactively in the
SPSM dialogue.

INPREF   Name of reference results file (in) [string]

DESCRIPTION

This control parameter gives the name of the file (using the conventions of the host operating system) which contains the household and individual binary database to be used as an input reference file when executing SPSM. Note that under MS-DOS, names without a drive specifier or any slashes refer to the current directory.

INPSPD   Name of SPSD file (in) [string]

DESCRIPTION

This control parameter gives the name of the file (using the conventions of the host operating system) which contains the household and individual binary database to be used when executing SPSM. Note that under MS-DOS, names without a drive specifier or any slashes refer to the current directory.

INPVARMPR Name of variant tax/transfer parameter file (in) [string]

DESCRIPTION

This control parameter gives the name of the file (using the conventions of the host operating system) which contains the tax/transfer parameters to be used to produce variant result variables. Note that under MS-DOS, names without a drive specifier or any slashes refer to the current directory.

INPWGT   Name of weight file (in) [string]

DESCRIPTION

This control parameter gives the name of the file (using the conventions of the host operating system) which contains the household weight binary database to be used when executing SPSM. Note that under MS-DOS, names without a drive specifier or any slashes refer to the current directory.

KEEPNEGEXP   Retain negative expenditures in FAMEX

DESCRIPTION

Certain expenditure items (sale of cars and RV's) are permitted to be negative expenditures on the FAMEX database. For commodity tax modeling purposes these expenditures must be treated as receipts. This adjustment parameter controls the treatment of negative expenditure items on the FAMEX database. With a value of zero Negative expenditures are treated as income in the calculation of commodity taxes. For Tax/Transfer simulations the setting must be zero. With a value of 1 the user can recover the original FAMEX data for output or tabulation.

LICENSEE   SPSD/M licensee [string]

DESCRIPTION

This control parameter is produced by SPSM and contains the name of the person or organization licensed to use this particular copy of SPSD/M.

LOGFLAG   Produce a .log file for this run

DESCRIPTION

The LOGFLAG parameter allows the user to control whether or not a log file of the SPSM run will be written. If LOGFLAG is 1, a file recording all the output normally displayed on the screen in the console version is written to the file specified by the OUTLOG parameter. If LOGFLAG is 0, no such file is written. The LOGFLAG parameter is particularly useful in the Windows version of SPSM, since it allows later examination of the details of the simulation run. It is also useful for documentation of any SPSM run.

The default value for LOGFLAG is 0.

MAMTOPT   Man. alternative minimum tax option (1=none, 2=% fed, 3=fed adjusted net income)

DESCRIPTION

When Manitoba tax on taxable income is calculated (MTXFLG = 1), there are three options

as to how to calculate the provincial minimum tax.

When MAMTOPT is set to 1, then no provincial alternative minimum tax is calculated.

When MAMTOPT is set to 2, then a percentage (MAMTPCTF) of the additional federal tax due to the minimum tax is added to the basic provincial tax (imbpt).

When MAMTOPT is set to 3, the income used in the provincial tax calculation is replaced by the net income used for alternative tax purposes (imamtinc) for people who triggered the federal minimum tax. Then the MAMTTX rate, usually set to the smallest non-zero tax rate, is applied in order to get the provincial tax before the non-refundable tax credits.

MANC — Manitoba GIS supplement: married pensioners

DESCRIPTION

Maximum annual Manitoba Supplement for Pensioners (MSP) benefits for married couples
where both spouses are receiving OAS/GIS or where one spouse is an OAS/GIS pensioner
and the other is receiving SPA. Calculated as a sum of individual quarterly maximums.

MANCNPF   Manitoba GIS supplement reduction point: married

DESCRIPTION

The level of previous year combined annual income above which the Manitoba Supplement
for Pensioners (MSP) begins to be paid at a reduced rate to eligible married persons who are
non-GIS/SPA pensioners age 55 and over. Calculated as the arithmetic average of the 1983
reduction point and the 1985 reduction point for runs with the TARGETYEAR 1984.

MANLTMAX Manitoba learning tax credit maximum amount per student

DESCRIPTION

This represents the maximum amount of education costs (tuition and education) per student which can be used to derive the Manitoba Learning Tax Credit. In order to calculate the Manitoba Learning Tax Credit, a factor (MANLTCF) is multiplied to the education and tuition tax credits (imedtxc and imtutxc) minus the education credits transferred to parents or spouse (imedtrf) plus the education credits transferred from children or spouse (imedrcv).

MANRD   Manitoba tax reduction table (MNRDOPT=1) [federal reduction, net income]

DESCRIPTION

In 1982, the Manitoba tax reduction was calculated using the Federal Tax Reduction and Taxable Income. This method of calculating the Manitoba Tax Reduction was replaced in 1983. This table is used only if the parameter MNRDOPT is set to 1.

MARAMT   Amount to be added to variable for marginal calculation

DESCRIPTION

This control parameter gives the amount of money to be added to income when the marginal tax rate facility has been activated through MARFLAG. Please refer to the *User's Guide* for more information.

MARBASEFLAG   Save marginal results as base run flag

DESCRIPTION

This control parameter tells the SPSM marginal tax rate facility (activated using MARFLAG) to store additional information in the variables normally used to store base run results. If this parameter is 1, SPSM first checks to see that no base run has been requested (if a base run has been requested, an error message is produced). Then the marginal tax rate calculations are carried out normally, except that the results of the 'delta' run are saved as the 'base' results, allowing various calculations to be performed after the fact by the analyst interested in marginal tax rate analysis. Please refer to the *User's Guide* for more information.

MARFLAG   Marginal tax rate facility activation flag

DESCRIPTION

This control parameter activates the SPSM marginal tax rate facility. This facility can be used to calculate marginal tax rates by income source, amount, recipient, and family level. Please refer to the *User's Guide* for more information.

MARSPEC   Expression identifying recipients [string]

DESCRIPTION

This control parameter allows the user to specify which individuals are to receive MARAMT when the marginal tax rate facility has been activated through MARFLAG. Please refer to the *User's Guide* for more information.

MARVAR   Variable to add MARAMT to [string]

DESCRIPTION

This control parameter gives the income source to be incremented when the marginal tax rate facility has been activated through MARFLAG. It must be the name of a valid SPSD "id" income variable. Please refer to the *User's Guide* for more information.

DESCRIPTION

This value represents the maximum Disability Deduction and is given either as an exemption or credit (depending on the value of DISOPT) to all individuals with a positive value for imputed Disability Deduction (imdisex).

MAXRR   Man. Age Amount credit reduction rate

DESCRIPTION

This parameter is the proportion of net income above a given threshold (MAXTD) which will
be deducted from the provincial non-refundable age tax credit amount (MAXM). The
parameter is only used when the Manitoba provincial tax on taxable income is calculated
(MTXFLG = 1).

See also impatxc, MAXTD, MAXPI.

MAXTD   Man. Age Amount net income turndown

DESCRIPTION

Individual seniors will have their non-refundable age tax credit reduced if their net income is above the value of this parameter. The parameter is only used when the Manitoba provincial tax on taxable income is calculated (MTXFLG = 1).

MCGTC   Man. Caregiver Tax Credit

DESCRIPTION

MCGTC multiplied by MPNTCR is the maximum amount of the Manitoba Caregiver Tax
Credit (impcgtc). The parameter is only used when the provincial tax on taxable income is
calculated (MTXFLG = 1).

For more explanation see MCGTCFLG.

MCGTCFLG Man. Caregiver Tax Credit activation flag

DESCRIPTION

The calculation of the Manitoba Caregiver Tax Credit (impcgtc) is activated by the flag
MCGTCFLG.

The Caregiver Tax Credit (impcgtc) provides additional tax assistance to individuals who
provide in-home care for relatives. Eligible recipients include individuals residing with and
providing in-home care for a parent or grandparent over 65 years of age, or for an infirm
dependent relative.

This variable is the sum of modelled Caregiver Tax Credits for all dependants other than
spouse. (Line 315 and Schedule 12 in the General Tax Guide)

The base level of the credit is MCGTC. Based on the results of a study pertaining to the
presence of elderly parents within the economic family, a take-up rate MCGTCTC was
determined. The take up rate is based on the age of a potential parent, assigned to individuals
with idefrh = 3, according to SCF data. Users have access to a take-up rate MCGTCTK
based on employment income to select the appropriate number of beneficiaries.

The benefit, impcgtc, is reduced for each dollar of net income, iminet, in excess of
MCGTCTD.

This non-refundable tax credit is only calculated when the provincial tax on taxable income

is calculated (MTXFLG = 1).

 ba03.mpr:    1              --    Copied from ba02.mpr
```

DESCRIPTION

This is the first take-up rate used in the calculation of Manitoba's impcgtc. It selects an individual with idefrh = 3 and assign him/her as a parent according to observed probability in SCF. The probability is also based on idage.

The parameter is only used when the provincial tax on taxable income is calculated (MTXFLG = 1).

MCOLOPT   Manitoba cost-of-living tax credit calculation option

DESCRIPTION

When MCOLOPT is set to 1, provincial cost-of-living is calculated based on Manitoba tax
payable. When the value is 2, Manitoba cost-of-living is calculated based on a series of
family based credits.

MEDREMIN   Minimum earnings for refundable medical expense supplement

DESCRIPTION

If earnings are less than this parameter, then a person is eligible to apply for the refundable medical expense supplement (immedref). Earnings are calculated as employment income (idiemp) plus self-employment income (idisenf + idisefm) minus registered pension plan deduction (idrpp) minus annual union, professional, or like dues (iddues) minus other employment expenses (idalexp).

MEMXMT   Man. equivalent to married turndown level

DESCRIPTION

This parameter represents the provincial equivalent to married exemption turndown when
Manitoba tax is calculated as a tax on taxable income. It is only used when MTXFLG is set
to 1. The reduction is calculated as the dependant's net income less the turndown
MEMXMT.

MHMASOPT Manitoba homeowner assistance option (1=Model 2=database)

DESCRIPTION

When this parameter is set to 1, the Manitoba Homeowners Assistance (immhmas) is modelled. Any family with non-zero property taxes (improptx) is assumed to have had the minimum amount of assistance (MPMINC) taken off as a deduction from their municipal property tax statement.

When the option is set to 2, immhmas is set to the database variable (idhomstu).

MMAXDX   Man. Maximum Disability deduction/amount

DESCRIPTION

This value represents the maximum Manitoba non-refundable disability tax credit. It is given
to all individuals with a positive value for imputed Disability Deduction (imdisex). The
parameter is only used when the provincial tax on taxable income is calculated (MTXFLG =
1).

MNRDOPT Manitoba tax reduction calculation option

DESCRIPTION

This parameter controls the calculation of the Manitoba Tax Reduction. With a value of 1, the tax reduction is calculated based on the Federal Tax Reduction and taxable income using MANRD. With a value of 2, it is calculated as a basic amount (MTRBR) reduced by a proportion (MTRF) of taxable income after allowing for an adjustment for the federal tax reduction transferred from spouse (see MTRSF). With a value of 3 it is calculated as an exemption, and as a tax credit with a value of 4.

MPNTCR   Man. provincial non-refundable tax credit rate

DESCRIPTION

This single parameter sets the tax credit rate for all of the non-refundable tax credits in
Manitoba. Each tax credit is calculated separately and summed for a total credit. The
parameter is only used when a provincial tax on taxable income is calculated (MTXFLG =
1).

MPRDESC   Description of tax/transfer parameter file

DESCRIPTION

This parameter can be used to provide an overall title to the set of tax/transfer parameters
contained in a given tax/transfer parameter file. This description is used by the SPSM output
facilities to produce page titles.

MPTC   Manitoba political contribution table [total donations,donation allowed]

DESCRIPTION

This table contains the figures necessary to calculate the Manitoba Political Contribution Tax Credit. The first column represents the dollar amount of total Manitoba political contributions to which the corresponding percentages of the third column are applied to calculate the total Allowable Manitoba Political Contribution Tax Credit. Only the first and third columns of the table need to be specified.

DESCRIPTION

This table represents the Manitoba tax curve used when calculating the tax on taxable income (MTXFLG = 1). The first column represents Taxable Income, the second represents the amount of Basic Provincial Tax payable at that level of taxable income, the third column represents the marginal tax rate for the interval between this and the next value in the table.

Only the first and third columns of the tax table need be specified. The second column is computed by the standard algorithm.

DESCRIPTION

When MNRDOPT is set to 4, then an individual who claimed an amount for disabled
dependents aged 18 and over (idothpe) may claim this amount as a disability credit in
determining the Manitoba Tax Reduction (imptr). Note that the model assumes that there is
only 1 disabled dependent.

MSCHBXM   Manitoba school tax basic amount

DESCRIPTION

This is the basic value of the Manitoba homeowners' school tax assistance. It is reduced by income over the turndown MSCHTD by a rate MSCHRR. The value of the benefit is also

rounded (see MSCHRND). The benefit may not exceed school taxes paid (idmschpd) less the minimum threshold of MSCHMNTH. The school tax assistance is added to the basic property tax credit and applied against occupancy costs in order to derive the total property tax credit (impptxtc).

MSCHFLAG   Manitoba school tax assistance activation flag

DESCRIPTION

The Manitoba homeowners' school tax assistance was implemented in 1993 and is part of the total property tax credit (impptxtc). MSCHFLAG turns it on or off. In order to qualify for assistance, Manitoba residents must be homeowners and be older than MSCHAGE. The basic credit is MSCHBXM which is reduced by income over the turndown MSCHTD by a rate MSCHRR. The value of the benefit is also rounded (see MSCHRND). The benefit may not exceed school taxes paid (idmschpd) less the minimum threshold of MSCHMNTH. The school tax assistance is added to the basic property tax credit and applied against occupancy costs in order to derive the total property tax credit (impptxtc).

MSCHRND   Manitoba school tax assistance rounding unit

DESCRIPTION

This is the rounding factor of the Manitoba homeowners' school tax assistance. The basic credit MSCHBXM is reduced by income over the turndown MSCHTD by a rate MSCHRR.

The value of the benefit is also rounded. The formula used is the following:

MSCHBXM – (MSCHRND * int((income – MSCHTD)*MSCHRR/MSCHRND))

*Note that this formula in the code also protects against negative values.

The benefit may not exceed school taxes paid (idmschpd) less the minimum threshold of MSCHMNTH. The school tax assistance is added to the basic property tax credit and applied against occupancy costs in order to derive the total property tax credit (impptxtc).

MSCHTD   Manitoba school tax turndown

DESCRIPTION

This is the turndown for the Manitoba homeowner' school tax assistance. The basic credit
MSCHBXM is reduced by income over the turndown MSCHTD by a rate MSCHRR. The
value of the benefit is also rounded (see MSCHRND). The benefit may not exceed school
taxes paid (idmschpd) less the minimum threshold of MSCHMNTH. The school tax
assistance is added to the basic property tax credit and applied against occupancy costs in
order to derive the total property tax credit (impptxtc).

MTRBR   Manitoba tax reduction basic amount

DESCRIPTION

This is the basic amount of the Manitoba Tax Reduction. Its actual definition depends on the method used to calculate the reduction. If MNRDOPT is set to 1, this parameter is not used. If MNRDOPT is set to 2, this amount is reduced by a proportion (MTRF) of taxable income.

MXMM   Married exemption/amount turndown level

DESCRIPTION

The level of spousal net income above which the filer's married exemption begins to be
reduced. The reduction is calculated as the dependant's net income less the turndown
MXMT.

When the value of PEROPT is set to 1, this parameter is used in the calculation of immarex.
When PEROPT is set to 2, this parameter is used in the calculation of immartxc.

NAMTOPT   NFLD alternative minimum tax option (1=none, 2=% fed, 3=fed adjusted net income)

DESCRIPTION

When Newfoundland tax on taxable income is calculated (NTXFLG = 1), there are three options as to how to calculate the provincial minimum tax.

When NAMTOPT is set to 1, then no provincial alternative minimum tax is calculated.

When NAMTOPT is set to 2, then a percentage (NAMTPCTF) of the additional federal tax due to the minimum tax is added to the basic provincial tax (imbpt).

When NAMTOPT is set to 3, the income used in the provincial tax calculation is replaced by the net income used for alternative tax purposes (imamtinc) for people who triggered the federal minimum tax. Then the NAMTTX rate, usually set to the smallest non-zero tax rate, is applied in order to get the provincial tax before the non-refundable tax credits.

NAXTD   NFLD Age Amount net income turndown

DESCRIPTION

Individual seniors will have their non-refundable age tax credit reduced if their net income is above the value of this parameter. The parameter is only used when the Newfoundland provincial tax on taxable income is calculated (NTXFLG = 1).

NBCBPI   NB Child benefits phase-in rate

DESCRIPTION

When the parameter NBCTBFLG is set to one, the value of this parameter is always
multiplied times the calculated amount of the New Brunswick Child tax benefit (imnbcben).
The parameter was designed to simulate the partial year benefits due to the commencement
of the program in April 1997.

NBCBTD   NB child benefits family income turndown

DESCRIPTION

The level of family net income (head plus spouse) above which the New Brunswick Child
Benefit begins to be paid at a lower rate. If family income exceeds this amount, the Child
Benefit will be reduced by a proportion (NBCBRR) for families with two or more children or
by (NBCBRRS) for families with one child.

NBSB   New Brunswick Low-Income Seniors' Benefit

DESCRIPTION

This is the value of the Low-Income Seniors' Benefit. People who received the federal
Guaranteed Income Supplement (GIS) are eligible to receive this benefit (imigist) for New
Brunswick. When both spouses receive GIS, only one spouse may receive the Low-Income
Seniors' Benefit. In the SPSD/M, the spouse with the lowest net income receives the benefit
(or the oldest spouse when both spouses have the same net income).

NCBFLG   Newfoundland child benefit activation flag

DESCRIPTION

This flag turns on or off the Newfoundland and Labrador Child Benefit. The Newfoundland and Labrador Child Benefit (imncb) is a tax-free monthly payment to help low-income families with the cost of raising children under age 18. Benefits from this program are combined with the Canada Child Tax Benefit into a single monthly payment. The program was implemented in July 1999.

Under the Newfoundland and Labrador Child Benefit program, you may be entitled to receive a benefit of NCB1 for the first child, NCB2 for the second child, NCB3 for the third child, and NCB4 for each additional child. The benefit is reduced when net family income is greater than NCBTD and is completely phased out when net family income is at least NCBPO.

NCBTD   Nfld. child benefit family income turndown

DESCRIPTION

The level of family net income (head plus spouse) above which the Newfoundland and Labrador Child Benefit begins to be paid at a lower rate. The benefit is reduced when net family income is greater than this parameter and less than NCBPO.

DESCRIPTION

NCGTC multiplied by NPNTCR is the maximum amount of the Newfoundland Caregiver Tax Credit (impcgtc). The parameter is only used when the provincial tax on taxable income is calculated (NTXFLG = 1).

For more explanation see NCGTCFLG.

NCGTCFLG   NFLD Caregiver Tax Credit activation flag

DESCRIPTION

The calculation of the Newfoundland Caregiver Tax Credit (impcgtc) is activated by the flag NCGTCFLG.

The Caregiver Tax Credit (impcgtc) provides additional tax assistance to individuals who provide in-home care for relatives. Eligible recipients include individuals residing with and providing in-home care for a parent or grandparent over 65 years of age, or for an infirm dependent relative.

This variable is the sum of modelled Caregiver Tax Credits for all dependants other than spouse. (Line 315 and Schedule 12 in the General Tax Guide)

The base level of the credit is NCGTC. Based on the results of a study pertaining to the presence of elderly parents within the economic family, a take-up rate NCGTCTC was determined. The take up rate is based on the age of a potential parent, assigned to individuals with idefrh=3, according to SCF data. Users have access to a take-up rate NCGTCTK based on employment income to select the appropriate number of beneficiaries.

The benefit, impcgtc, is reduced for each dollar of net income, iminet, in excess of NCGTCTD.

This non-refundable tax credit is only calculated when the provincial tax on taxable income is calculated (NTXFLG = 1).

NCGTCTC   NFLD Caregiver tax credit take-up rate by age of elderly [age,rate]

DESCRIPTION

This is the first take-up rate used in the calculation of Newfoundland's impcgtc. It selects an individual with idefrh = 3 and assign him/her as a parent according to observed probability in SCF. The probability is also based on idage.

The parameter is only used when the provincial tax on taxable income is calculated (NTXFLG = 1).

NEDXPM   NFLD Education Amount per month

DESCRIPTION

Dollar amount multiplied by number of eligible months to determine the Newfoundland
education tax credit. The parameter is only used when the provincial tax on taxable income is
calculated (NTXFLG = 1).

CROSS REFERENCE

NETOASFLG Net the clawback from Old Age Security

DESCRIPTION

When this parameter is assigned a value of 1, the Old Age Security clawback (imoasr) is netted from OAS (imioas). It thus appears as a lower transfer and lower tax – government and household balance variables are unaffected. With a value of 0, the OAS clawback is reported as a tax.

NFSBBAS   NFLD Low-Income Seniors' Benefit base amount

DESCRIPTION

This is the base value of the Newfoundland Low-Income Seniors' Benefit which was
introduced in 1999. All seniors aged 65 and over, with annual family income less than
NFSBTD are eligible to receive the maximum benefit NFSBBAS. This benefit will be
reduced by NFSBRR for each dollar of family income over NFSBTD.

NMXMT   NFLD married amount turndown level

DESCRIPTION

This parameter represents the provincial married exemption turndown when Newfoundland
tax is calculated as a tax on taxable income. It is only used when NTXFLG is set to 1. The
reduction is calculated as the dependant's net income less the turndown NMXMT.

NORTHFLAG   Database variable(north) activation flag

DESCRIPTION

When this parameter is set to 1, the imputed variable for the northern deduction (idnorth) is included in the calculation of all deductions from net income (imdedfn). With a value of zero the northern deduction variable is not used.

NPNTCR   NFLD provincial non-refundable tax credit rate

DESCRIPTION

This single parameter sets the tax credit rate for all of the non-refundable tax credits in Newfoundland. Each tax credit is calculated separately and summed for a total credit. The parameter is only used when a provincial tax on taxable income is calculated (NTXFLG = 1).

NPTC   Newfoundland political contribution table [total donations,donation allowed]

DESCRIPTION

This table contains the figures necessary to calculate the Newfoundland Political Contribution Tax Credit. The first column represents the dollar amount of total Newfoundland political contributions (idprvpol) to which the corresponding percentages of the third column are applied in calculating the total allowable Newfoundland Political Contribution Tax Credit. Only the first and third columns of the table need to be specified.

NPTX   NFLD tax table [taxable income,basic provincial tax]

DESCRIPTION

This table represents the Newfoundland tax curve used when calculating the tax on taxable
income (NTXFLG = 1). The first column represents Taxable Income, the second represents
the amount of Basic Provincial Tax payable at that level of taxable income, the third column
represents the marginal tax rate for the interval between this and the next value in the table.

Only the first and third columns of the tax table need be specified. The second column is

computed by the standard algorithm.

NSCI Newfoundland provincial tax above which surtax applies

DESCRIPTION

This is the level of provincial tax payable (imtxp) above which a surtax at the rate of NSF
applies.

For Newfoundland, the SPSM calculates provincial surtax (impsur) as NSF percent of
provincial taxes (imtxp) above the level NSCI.

NSTCA   NFLD sales tax credit amount for adults

DESCRIPTION

This parameter represents the basic Newfoundland Sales Tax Credit for adults. The total
family sales tax credit (on behalf of the head, spouse and dependants) is reduced by a fraction
(NSTCR) of family net income (head and spouse) exceeding the turndown level (NSTCL).
This parameter is used only if NSTCFLAG is set to 1.

DESCRIPTION

The level of family net income above which the total family Newfoundland Sales Tax Credit is reduced.

Note that non-taxable Social Assistance income may or may not be included in the calculation of net income for this reduction depending upon the status of CTCIFLAG. Social Assistance income includes federal and provincial Social Assistance, the Guaranteed Income Supplement, Spouses Allowance and income from Provincial GIS supplementation programs.

This parameter is used only if NSTCFLAG is set to 1.

OAMTOPT   Ont. alternative minimum tax option (1=none, 2=% fed, 3=fed adjusted net income)

DESCRIPTION

When Ontario tax on taxable income is calculated (OTXFLG = 1), there are three options as to how to calculate the provincial minimum tax.

When OAMTOPT is set to 1, then no provincial alternative minimum tax is calculated.

When OAMTOPT is set to 2, then a percentage (OAMTPCTF) of the additional federal tax due to the minimum tax is added to the basic provincial tax (imbpt).

When OAMTOPT is set to 3, the income used in the provincial tax calculation is replaced by the net income used for alternative tax purposes (imamtinc) for people who triggered the

federal minimum tax. Then the OAMTTX rate, usually set to the smallest non-zero tax rate, is applied in order to get the provincial tax before the non-refundable tax credits.

OASRR   OAS reduction rate

DESCRIPTION

This parameter is available for testing the effects of repaying OAS benefits based on a proportion of net income. The OAS repayment is calculated as the lesser of OAS Benefits (imios) and a proportion OASRR of family net income (head plus spouse) exceeding the reduction level OASTD. The calculated OAS repayment is added to imrepay, All Repayments. If OASRR is set to 0, no repayment is calculated.

OASTBPI   OAS take-back phase in

DESCRIPTION

This parameter is used to scale the amount of the Old Age Security clawback which will be paid in additional taxes. The Old Age Security clawback was introduced in the 1989 budget. The purpose is to simulate the phase-in of the clawback.

OASTD   OAS turndown income

DESCRIPTION

The OAS repayment is calculated as the lesser of OAS Benefits (imioas) and a proportion OASRR of family net income (head plus spouse) exceeding the reduction level OASTD.

The calculated OAS repayment is added to imrepay, All Repayments. If OASRR is set to 0, no repayment is calculated.

OCAPGIR   Ont. Capital Gains Inclusion Rate

DESCRIPTION

The proportion of gross capital gains (idicapg) that are treated as taxable in Ontario.

When OCGIRFLG is activated (set to 1), the Ontario taxable income for the purpose of Ontario taxes is reduced by amount of gross capital gains times the difference in the federal capital gains inclusion rate (CAPGIR) and the Ontario capital gains inclusion rate. (idicapg * (CAPGIR – OCAPGIR). The resulting value for the taxable income is imiotax. This is only used when OTXFLG is set to 1.

The Ontario Capital Gains Inclusion Rate was announced in the Ontario 2000 Budget to be implemented in 2001. However, legislation regarding the actual implementation was not complete at the time of this release.

OCCEATD   Ont. Child Care Expense Credit family income turndown

DESCRIPTION

The level of family net income (head plus spouse) above which the refundable Ontario child care expense tax credit (imoccea) begins to be paid at a lower rate. If family income exceeds this amount, the maximum family benefit will be reduced by a proportion (OCCEARR) of net income.

OCGIRFLG   Ont. Capital Gains Inclusion Rate Activation Flag

DESCRIPTION

When this flag is activated (set to 1), the Ontario taxable income for the purpose of Ontario taxes is reduced by amount of gross capital gains times the difference in the federal capital gains inclusion rate (CAPGIR) and the Ontario capital gains inclusion rate. (idicapg * (CAPGIR – OCAPGIR). The resulting value for the taxable income is imiotax. This is only used when OTXFLG is set to 1.

The Ontario Capital Gains Inclusion Rate was announced in the Ontario 2000 Budget to be implemented in 2001. However, legislation regarding the actual implementation was not complete at the time of this release.

OCGTC Ont. Caregiver Tax Credit

DESCRIPTION

OCGTC multiplied by OPNTCR is the maximum amount of the Ontario Caregiver Tax Credit (impcgtc). The parameter is only used when the provincial tax on taxable income is calculated (OTXFLG = 1).

For more explanation see OCGTCFLG.

DESCRIPTION

The calculation of the Ontario Caregiver Tax Credit (impcgtc) is activated by the flag OCGTCFLG.

The Caregiver Tax Credit (impcgtc) provides additional tax assistance to individuals who provide in-home care for relatives. Eligible recipients include individuals residing with and providing in-home care for a parent or grandparent over 65 years of age, or for an infirm dependent relative.

This variable is the sum of modelled Caregiver Tax Credits for all dependants other than spouse. (Line 315 and Schedule 12 in the General Tax Guide)

The base level of the credit is OCGTC. Based on the results of a study pertaining to the presence of elderly parents within the economic family, a take-up rate OCGTCTC was determined. The take up rate is based on the age of a potential parent, assigned to individuals with idefrh = 3, according to SCF data. Users have access to a take-up rate OCGTCTK based on employment income to select the appropriate number of beneficiaries.

The benefit, impcgtc, is reduced for each dollar of net income, iminet, in excess of OCGTCTD.

This non-refundable tax credit is only calculated when the provincial tax on taxable income is calculated (OTXFLG = 1).

OCGTCTC   Ont. Caregiver tax credit take-up rate by age of elderly [age,rate]

DESCRIPTION

This is the first take-up rate used in the calculation of Ontario's impcgtc. It selects an individual with idefrh = 3 and assign him/her as a parent according to observed probability in SCF. The probability is also based on idage.

The parameter is only used when the provincial tax on taxable income is calculated (OTXFLG = 1).

OCWISFLG   Ont. Child Care Working Income Supplement activation flag

DESCRIPTION

This parameter controls the activation of the Ontario Child Care Supplement for Working
Families introduced in the Ontario Budget of May 1998. When set to 1 benefits under this
program will be calculated. The Ontario Budget of May 2000 announced a higher annual
maximum for single parents of OCWISSP.

OCWISRR   Ont. Child Care Working Income Supplement Rate [children][rr]

DESCRIPTION

For families with earnings from work, this parameter is used to calculate the maximum
Ontario Child Care Supplement for Working Families. The parameter represents the benefit
rate as a proportion which is applied to family earnings above the threshold OCWISTD. This
lookup parameter is indexed by the number of children under the age of 7 in the census
family.

OCWISTD   Ont. Child Care Working Income Supplement minimum earnings

---

DESCRIPTION

For families with earnings from work, this parameter is used in the calculation of the maximum Ontario Child Care Supplement for Working Families. The parameter represents the threshold of family earnings above which maximum benefits are calculated as a proportion (OCWISRR) of family earnings up to a ceiling of OCCEAYNG times the number of children under the age of 7 in the census family.

ODTCR   Ont. dividend tax credit rate

DESCRIPTION

This is the proportion of taxable dividends received (imidivt) which will be given for the
Ontario dividend tax credit (impdtxc). The parameter is only used when the provincial tax on
taxable income is calculated (OTXFLG = 1).

OEHTDRR   OEHT - Income Tax Deduction Rate

DESCRIPTION

When OEHTFLAG is set to 1, the Ontario Employer Health Tax is calculated. It is reduced using a deduction which is calculated as OEHTDRR times the total tax due. The total tax minus the deduction is the tax due (imonteht).

OEHTRR1   OEHT - Rate 1

DESCRIPTION

This is the first tax rate for the Ontario Employer Health Tax. When a person's income from self-employment is less than OEHTTD1, the Employer Health Tax is calculated as the rate times any self-employment earnings greater than the exemption OEHTEX.

The Ontario Employer Health Tax is only calculated when OEHTFLAG is equal to 1. The Tax is then reduced by a tax deduction calculated using OEHTDRR.

OEHTRR2   OEHT - Rate 2

DESCRIPTION

This is the second rate for the Ontario Employer Health Tax. When a person's income from self-employment is less than OEHTTD2, but greater than OEHTTD1, the Employer Health Tax is calculated by adding OEHTRR1 times the difference between the first turndown (OEHTTD1) and the exemption rate (OEHTEX) and OEHTRR2 times the difference between earnings from self-employment and OEHTTD1.

The Ontario Employer Health Tax is only calculated when OEHTFLAG is equal to 1. The Tax is then reduced by a tax deduction calculated using OEHTDRR.

OEHTRR3   OEHT - Rate 3

DESCRIPTION

When self-employment earnings are greater than OEHTTD2, the Ontario Employer Health Tax is calculated as OEHTRR3 times earnings from self-employment which are greater than the exemption OEHTEX.

The Ontario Employer Health Tax is only calculated when OEHTFLAG is equal to 1. The Tax is then reduced by a tax deduction calculated using OEHTDRR.

OEHTTD2   OEHT - Turndown 2

DESCRIPTION

This is the second turndown for the Ontario Employer Health Tax. When a person's income
from self-employment is less than this value, but greater than OEHTTD1, the Employer
Health Tax is calculated by adding OEHTRR1 times the difference between the first
turndown (OEHTTD1) and the exemption rate (OEHTEX) and OEHTRR2 times the
difference between earnings from self-employment and OEHTTD1. The Ontario Employer
Health Tax is only calculated when OEHTFLAG is equal to 1.

OEMXMT   Ont. equivalent to married turndown level

DESCRIPTION

This parameter represents the provincial equivalent to married exemption turndown when
Ontario tax is calculated as a tax on taxable income. It is only used when OTXFLG is set to
1. The reduction is calculated as the dependant's net income less the turndown OEMXMT.

OMTY   Ontario tax reduction limit

DESCRIPTION

Ontario Provincial Income Tax may be reduced for filers with taxable income below OMTY.

Below OPTC, provincial tax is zero. Between OPTC and OMTY, provincial tax is multiplied by a fraction (OTRF).

ONTC   Ontario GIS supplement: married pensioners

DESCRIPTION

Maximum annual Ontario Guaranteed Annual Income System (GAINS-A) benefits for each
eligible pensioner in a married couple. Calculated as a sum of monthly maximums as
illustrated in the calculation of the annual value for 1984:

Jan -Mar ($82.12)
Apr -Jun ($82.12 x OAS/GIS April Indexation rate (.008)=82.77)
Jul -Dec ($83)

OPNTCR   Ont. provincial non-refundable tax credit rate

DESCRIPTION

This single parameter sets the tax credit rate for all of the non-refundable tax credits in
Ontario. Each tax credit is calculated separately and summed for a total credit. The
parameter is only used when a provincial tax on taxable income is calculated (OTXFLG = 1).

OPTC   Ontario political contribution table [total donations,donation allowed]

DESCRIPTION

This table contains the figures necessary to calculate the Ontario Political Contribution Tax
Credit. The first column represents the dollar amount of total Ontario political contributions
to which the corresponding percentages of the third column are applied to calculate the total
Allowable Ontario Political Contribution Tax Credit. Only the first and third columns of the
table need to be specified.

OPTX   Ont. tax table [taxable income,basic provincial tax]

DESCRIPTION

This table represents the Ontario tax curve used when calculating the tax on taxable income
(OTXFLG = 1). The first column represents Taxable Income, the second represents the
amount of Basic Provincial Tax payable at that level of taxable income, the third column
represents the marginal tax rate for the interval between this and the next value in the table.

Only the first and third columns of the tax table need be specified. The second column is

computed by the standard algorithm.

OPYTAX   Estimate of previous year's Ontario taxes

DESCRIPTION

This parameter estimates the previous year's taxes. The taxpayer dividend (imotxdv) is equal
to taxes paid in the previous year up to a maximum (OTXDVMAX). People who paid over
0$ in taxes would get a minimum rebate of OTXDVMIN. The benefit is included in
refundable tax credits. Since it is based on the previous year's taxes, the taxes are multiplied
by OPYTAX in order to estimate the lagged effect.

ORDOPT   Ontario tax reduction calculation option

DESCRIPTION

If ORDOPT has a value of 1 then the Ontario Tax reduction is calculated based on taxable income; with a value of 2 it is calculated based on Ontario Tax; with a value of 3 it is based on Ontario Tax as well as the number of dependants. The switch in calculation method from taxable income to Ontario tax occurred in 1988 and then expanded to include dependants in 1990.

OSSML   Ontario surtax first cut-in level

DESCRIPTION

The amount of Ontario Provincial Income Tax above which the surtax rate (OSSMR) is applied. In 1984, the Ontario Social Services Maintenance Tax is simulated using this rate. This parameter is also used, where appropriate, to simulate the Ontario Fair Share Health Care Levy which is a basic surtax calculation.

OSSMR2   Ontario surtax second level rate

DESCRIPTION

The rate which is applied to Provincial Income Tax (imtxp) exceeding OSSML2 to
calculate the Ontario surtax. The total rate of surtax above the second tier cut-in OSSML2
would be the sum of this parameter and OSSMR.

For Ontario, the SPSM calculates provincial surtax (impsur) as OSSMR percent of provincial

taxes (imtxp) above the level OSSML plus OSSMR2 percent of provincial taxes above the level OSSML2.

This parameter is used, where appropriate, to simulate the Ontario Fair Share Health Care Levy which is a basic surtax calculation.

OTRDCA   Ontario tax reduction dependant child amount

DESCRIPTION

When the parameter ORDOPT is set to 3, the Ontario tax reduction will be calculated making
use of the number of dependants and the parameter OTRDCA is used to indicate the dollar
value of the amount of the tax reduction allowed for each dependant child.

OTRDDA   Ontario tax reduction disabled dependant amount

DESCRIPTION

When the parameter ORDOPT is set to 3, the Ontario tax reduction will be calculated making use of the number of dependants and the parameter OTRDDA is used to indicate the dollar value of the amount of the tax reduction allowed for each disabled dependant. This parameter is not currently in use pending improved information on disability status of family members.

OTRF   Ontario tax reduction Ontario tax multiplier

DESCRIPTION

Ontario Provincial Income Tax may be reduced for filers with taxable income below OMTY.
Below OPTC, provincial tax is zero. Between OPTC and OMTY, provincial tax is multiplied
by a fraction (OTRF).

DESCRIPTION

When the parameter ORDOPT is set to 3, the Ontario tax reduction will be calculated making use of the number of dependants. The parameter OTRFP is used to multiply the dollar value of all basic and dependant credits. The resulting value is used to compare to Ontario income tax multiplied by OTRF.

OTXDVMAX Maximum taxpayer dividend

DESCRIPTION

The taxpayer dividend (imotxdv) is equal to taxes paid in the previous year up to a maximum
(OTXDVMAX). People who paid over 0$ in taxes would get a minimum rebate of
OTXDVMIN. The benefit is included in refundable tax credits. Since it is based on the
previous year's taxes, the taxes are multiplied by OPYTAX in order to estimate the lagged
effect.

OTXDVMIN   Minimum taxpayer dividend for people with non-zero taxes

DESCRIPTION

This represents the minimum amount of the taxpayer dividend for people who paid over 0$
in taxes. The taxpayer dividend (imotxdv) is equal to taxes paid in the previous year up to a
maximum (OTXDVMAX). The benefit is included in refundable tax credits. Since it is
based on the previous year's taxes, the taxes are multiplied by OPYTAX in order to estimate
the lagged effect.

OUTAPR   Name of database adjustment parameter file (out) [string]

DESCRIPTION

This control parameter gives the name of the file (using the conventions of the host operating system) which will contain the database adjustment parameters which were used to adjust SPSD variables. SPSM writes out such a file only if the user changed one or more database adjustment parameters from the values in the corresponding input file INPAPR. Note that under MS-DOS, names without a drive specifier or any slashes refer to the current directory.

OUTASC   Name of text output file (out) [string]

DESCRIPTION

This control parameter gives the name of the file (using the conventions of the host operating system) which will contain the output report generated by the text output facility. The text output facility must be activated using ASCFLAG for OUTASC to have any effect. Note that under MS-DOS, names without a drive specifier or any slashes refer to the current directory.

OUTCPR   Name of control parameter file (out) [string]

DESCRIPTION

This control parameter gives the name of the file (using the conventions of the host operating system) which will contain the output control parameter file. An output control parameter file is always created, and includes any changes the user made to the input control parameter file. In addition, certain "read-only" parameters which are created by SPSM for informational purposes may have changed values. Note that under MS-DOS, names without a drive specifier or any slashes refer to the current directory.

OUTLOG   Name of log file (out) [string]

DESCRIPTION

The OUTLOG parameter gives the name of the output file that will contain a log of the SPSM run, provided that this facility has been activated using the LOGFLAG parameter. See the description of the LOGFLAG parameter for more information. A default value for OUTLOG will be generated by adding an extension of .log to the SPSM run name, but can be overridden.

OUTMRSFLAG   Variant results file creation flag

DESCRIPTION

If the value of the control parameter OUTMRSFLAG is set to 1, a results file (with name given by OUTVARMRS) will be created containing variant results for variables specified in OUTMRSVARS. Results are always saved at the individual (not family or household) level.

OUTMRSFRAC   Variant results file preserves fractional part

DESCRIPTION

This control parameter can be used to preserve the fractional part (if present) of all variables written to the model results (MRS) file. If this flag is off, all output values are converted to integers before being written to the results file. If this flag is turned on, the fractional part of the output variables will be retained, and there will be no differences between base MRS variables and modelled variables for an identical run. This flag may result in a significant

increase in the size of the model results file.

OUTMRSVARS Variant results file variables [string]

DESCRIPTION

This control parameter contains a list of tax/transfer calculated variables whose variant values will be recorded in the file named OUTVARMRS if the variant results file facility has been activated by OUTMRSFLAG. Only variant tax/transfer variables (that is, those that begin with "ct" or "im") or user variables can be recorded in a results file.

OUTSAS   Name of SAS output file (out) [string]

DESCRIPTION

If the SAS results file facility has been activated using SASFLAG, then the control parameter OUTSAS contains the name of the resulting SAS file. Because SAS files contain an encrypted header structure, SPSM must use the header of an identically-named existing SAS file to create a new SAS file named OUTSAS. The existing SAS file must have been created using the 6.03 library engine. If such file does not exist, SPSD/M will create "spsmtemp.ssd" because SPSD/M already know how to create such file. The user can then change "spsmtemp.ssd" to some other name if desired by using the PROC DATASETS procedure in SAS. Because SAS native files contain a generated key in their header, SPSM can only write over existing SAS files (using the existing generated key in their header), or else produce a file with the name "spsmtemp.ssd", whose header key is already known.

An associated file, with the same stem as OUTSAS but with extension ".sfm", is also produced when the SAS output facility is activated. It is a text file which contains SAS source code (PROC FORMAT and associated statements) which will define the formats for any class variables given in SASVARS. It (or equivalent statements) should be included in any SAS job which reads the SAS file named by OUTSAS.

See User's Guide, SAS Output Facility.

OUTTBL   Name of report file (out) [string]

DESCRIPTION

This control parameter gives the name of the file (using the conventions of the host operating system) which will contain all summary reports generated by SPSM output facilities,

including the cross tabulation facility and distributional analysis facility. Note that under MS-DOS, names without a drive specifier or any slashes refer to the current directory.

OUTVARMPR   Name of variant tax/transfer parameter file (out) [string]

DESCRIPTION

This control parameter gives the name of the file (using the conventions of the host operating system) which will contain the output variant tax/transfer parameters. SPSM writes out such a file only if the user changed one or more variant tax/transfer parameters from the values in the corresponding input file INPVARMPR. Note that under MS-DOS, names without a drive specifier or any slashes refer to the current directory.

OUTVARMRS   Name of variant results file (out) [string]

DESCRIPTION

This control parameter gives the name of the file (using the conventions of the host operating system) which will contain the output variant results. Such a file is generated only if the user activates the variant result file facility using OUTMRSFLAG. Note that under MS-DOS, names without a drive specifier or any slashes refer to the current directory.

OYPNDL   Ont. Pension Income Deduction Amount

DESCRIPTION

This is the maximum dollar amount of pension income which may be claimed as an Ontario non-refundable tax credit. The parameter is only used when the provincial tax on taxable income is calculated (OTXFLG = 1).

PAMTOPT   P.E.I. alternative minimum tax option (1=none, 2=% fed, 3=fed adjusted net income)

DESCRIPTION

When Prince Edward Island tax on taxable income is calculated (PTXFLG = 1), there are three options as to how to calculate the provincial minimum tax.

When PAMTOPT is set to 1, then no provincial alternative minimum tax is calculated.

When PAMTOPT is set to 2, then a percentage (PAMTPCTF) of the additional federal tax due to the minimum tax is added to the basic provincial tax (imbpt).

When PAMTOPT is set to 3, the income used in the provincial tax calculation is replaced by

the net income used for alternative tax purposes (imamtinc) for people who triggered the federal minimum tax. Then the PAMTTX rate, usually set to the smallest non-zero tax rate, is applied in order to get the provincial tax before the non-refundable tax credits.

PCGTC   P.E.I. Caregiver Tax Credit

DESCRIPTION

PCGTC multiplied by PPNTCR is the maximum amount of the Prince Edward Island
Caregiver Tax Credit (impcgtc). The parameter is only used when the provincial tax on
taxable income is calculated (PTXFLG = 1).

For more explanation see PCGTCFLG.

PCGTCFLG   P.E.I. Caregiver Tax Credit activation flag

DESCRIPTION

The calculation of the Prince Edward Island Caregiver Tax Credit (impcgtc) is activated by the flag PCGTCFLG.

The Caregiver Tax Credit (impcgtc) provides additional tax assistance to individuals who provide in-home care for relatives. Eligible recipients include individuals residing with and providing in-home care for a parent or grandparent over 65 years of age, or for an infirm dependent relative.

This variable is the sum of modelled Caregiver Tax Credits for all dependants other than spouse. (Line 315 and Schedule 12 in the General Tax Guide)

The base level of the credit is PCGTC. Based on the results of a study pertaining to the presence of elderly parents within the economic family, a take-up rate PCGTCTC was determined. The take up rate is based on the age of a potential parent, assigned to individuals with idefrh=3, according to SCF data. Users have access to a take-up rate PCGTCTK based on employment income to select the appropriate number of beneficiaries.

The benefit, impcgtc, is reduced for each dollar of net income, iminet, in excess of PCGTCTD.

This non-refundable tax credit is only calculated when the provincial tax on taxable income is calculated (PTXFLG = 1).

PCGTCTC   P.E.I. Caregiver tax credit take-up rate by age of elderly [age,rate]

DESCRIPTION

This is the first take-up rate used in the calculation of Prince Edward Island's impcgtc. It selects an individual with idefrh = 3 and assign him/her as a parent according to observed probability in SCF. The probability is also based on idage.

The parameter is only used when the provincial tax on taxable income is calculated (PTXFLG = 1).

PPNTCR   P.E.I. provincial non-refundable tax credit rate

DESCRIPTION

This single parameter sets the tax credit rate for all of the non-refundable tax credits in Prince Edward Island. Each tax credit is calculated separately and summed for a total credit. The parameter is only used when a provincial tax on taxable income is calculated (PTXFLG = 1).

CROSS REFERENCE

Function	Description
txpei	Compute provincial taxes for P.E.I.

PPTC P.E.I. political contribution table [total donations,donation allowed]

DESCRIPTION

This table contains the figures necessary to calculate the Prince Edward Island Contribution
Tax Credit. The first column represents the dollar amount of total Prince Edward Island
political contributions to which the corresponding percentages of the third column are
applied to calculate the total Allowable Prince Edward Island Political Contribution Tax
Credit. Only the first and third columns of the table need to be specified.

PPTX   P.E.I. tax table [taxable income,basic provincial tax]

DESCRIPTION

This table represents the Prince Edward Island tax curve used when calculating the tax on
taxable income (PTXFLG = 1). The first column represents Taxable Income, the second
represents the amount of Basic Provincial Tax payable at that level of taxable income, the
third column represents the marginal tax rate for the interval between this and the next value
in the table.

Only the first and third columns of the tax table need be specified. The second column is
computed by the standard algorithm.

PRDFFLAG   Parameter difference report activation flag

DESCRIPTION

When this control parameter is set to 1, a report is written to the file given by OUTTBL. This report shows tax/transfer parameter differences between base and variant. A more sophisticated parameter difference report can be obtained by using the compparm utility, which is documented in the *Tools User's Guide*.

PROVMAP   Provincial remapping [prov]

DESCRIPTION

Provincial remapping facility to enable the reassignment of province codes. This could be used to assign to one or more provinces another province's tax transfer system.

PSCI   P.E.I. provincial tax above which surtax applies

DESCRIPTION

Provincial surtax in Prince Edward Island is calculated as PSF percent of provincial tax in excess of PSCI.

PTF   Low income cut-off [size, urban]

DESCRIPTION

This parameter, defined in the database adjustment parameter file, is a two dimensional array giving a user-supplied "income threshold" for families by number of persons and urban area, thus allowing the use of Statistics Canada Low Income Cut-offs in SPSM. The ratio of family income to the "income threshold" is used, in conjunction with the PVRAT control parameter, to create the column categories for the hard-wired tables 4 and 4A. These tables must have been activated using T4FLAG or T4AFLAG for this parameter to be used. Please see the *User's Guide* for more information on the hard-wired tables.

PTRBAS   Base PEI low income tax reduction

DESCRIPTION

This is the base amount for the Prince Edward Island Low income tax reduction.

Announced in the 2000 budget, the maximum Low Income Tax Reduction is equal to the sum of a base amount (PTRBAS), an amount for a spouse or equivalent-to-spouse (PTRSP), and an amount for each dependent child (PTRKID). It is then reduced for net income over PTRTD at a rate of PTRRR. The reduction cannot be more than taxes owing. The reduction is calculated at a family level but can be split amongst spouses.

PURB   Base year unemployment rate [prov]

DESCRIPTION

This parameter is the base year unemployment rate by province.

PURC   Current year unemployment rate [prov]

DESCRIPTION

This parameter is the current year unemployment rate by province.

PURR   Ratio current:base unemployment rate [prov]

DESCRIPTION

The parameter is the ratio of PURC over PURB.

PVRAT   Family poverty ratio fractions for table 4 [array]

DESCRIPTION

This control parameter is a vector which defines the ranges of family-specific income
threshold ratios to be used when producing the hard-wired tables 4 or 4A. Please see the
User's Guide for more information on the hard-wired tables.

DESCRIPTION

CPI deflator applied to income to obtain estimate of the previous year's income for needs tested programs. Calculated using the CPI, Canada, All Items annual average January-December.   The CPI for the previous year is divided by the CPI for the current year.

QAAFA   Quebec availability allowance (supplement) [parity,$]

DESCRIPTION

The Quebec Availability allowance is paid as a supplement to Quebec family allowances
starting in 1989. This vector parameter has three elements corresponding to the sequential
position in the family of each child. The value of each element represents the dollar value of
the benefits. The parameter is effective only when QAAFAFLAG is set to 1.

Starting in 1998, the program is replaced by the Quebec Family Allowance Tax Credit which
is activated when QFATCOPT is set to 2.

For more details see QFATCOPT.

DESCRIPTION

The Quebec Availability allowance is paid as a supplement to Quebec family allowances starting in 1989. When QAAFAFLAG is set to one the Quebec Availability allowance will be paid as a supplement to provincial family allowances using amounts specified in the QAAFA parameter.

Starting in 1998, the program is replaced by the Quebec Family Allowance Tax Credit which is activated when QFATCOPT is set to 2.

For more details see QFATCOPT.

QAARC   Quebec availability allowance (refundable credit) [parity,$]

DESCRIPTION

The Quebec Availability allowance is paid as a refundable tax credit for years prior to 1988.
This vector parameter has three elements corresponding to the sequential position of each
child within the family. The value of each element represents the dollar value of the benefits.
The parameter is effective only when QAARCFLAG is set to 1.

Starting in 1998, the program is replaced by the Quebec Family Allowance Tax Credit which
is activated when QFATCOPT is set to 2.

For more details see QFATCOPT.

QAMTXFLG Quebec alternative minimum tax, QAMTX, activation flag

DESCRIPTION

The Alternative Minimum Tax in Quebec started in 1986 and is now fully implemented. The calculation is activated by QAMTXFLG. The calculation of the income considered is slightly different than the Federal Alternative Minimum Tax because of difference in the rates considered for:

.   the inclusion of an amount of capital in the income considered (QCAPAMTX),

.   the dividing factor for the dividends (QDIVRAT), and

.   the dividing factor for the capital gains (QCAPRAT).

The exemption level is QAMTX and the tax rate is QAMTTX. If the calculated value of the Alternative Minimum Tax is higher than the calculated tax using the standard algorithm, the difference is stored in imqamt. A flag, imqamtfg, identifies the individuals with the modified income tax. In 1995, the definition of income was changed and QAMTXREF indicates new components used in the calculation of taxable income.

QAPFFLG   Quebec anti-poverty fund activation flag

DESCRIPTION

In 1997, an Anti-Poverty Fund tax is implemented as a tax on the combined value of income tax and the surtax, at a rate QAPFRAT. The resulting value is added to the income tax to be paid and store in imqapf.

QAXPI   Quebec age exemption reduction phase in

DESCRIPTION

This value is used to scale the amount of the reduction which will be applied to the age tax credit. It is used in 1996 to simulate the phase-in of the income testing of the age credit.

Legislation relating to this parameter was introduced in the 1996 Quebec Budget which proposed that the non-refundable age tax credit "be subject to an income test which would target the assistance to seniors with low or modest incomes." This reduction for higher income seniors was to be phased in over two years, with half the reduction applied in 1996 and the full reduction in 1997 and subsequent years.

See also imqatc, QAXM, QAXRR, and QAXTD.

QAXRR   Quebec age exemption reduction rate

DESCRIPTION

This parameter is the proportion of net income above a given threshold (QAXTD) which will be deducted from the non-refundable age tax credit amount (QAXM).

Legislation relating to this parameter was introduced in the 1996 Quebec Budget which proposed that the non-refundable age tax credit "be subject to an income test which would target the assistance to seniors with low or modest incomes." Individual seniors with incomes above the threshold of $26,000 would have the amount of the age credit reduced by 15% of income above that threshold. This reduction for higher income seniors was to be phased in over two years, with half the reduction applied in 1996 and the full reduction in 1997 and subsequent years.

See also imqatc, QAXTD, QAXPI.

DESCRIPTION

Individual seniors will have their non-refundable age tax credit reduced if their net income is above the value of this parameter.

Legislation relating to this parameter was introduced in the 1996 Provincial Budget which proposed that the non-refundable age tax credit "be subject to an income test which would target the assistance to seniors with low or modest incomes." Individual seniors with incomes above the threshold of $26,000 would have the amount of the age credit reduced by 15% of income above that threshold. This reduction for higher income seniors was to be phased in over two years, with half the reduction applied in 1996 and the full reduction in 1997 and subsequent years.

QCALRFLG   Quebec combined age, living alone retirement credit

DESCRIPTION

When QCALRFLG is set to 1, the combined age, living alone, and retirement credit is activated (imqcalr). This credit replaces the age credit (imqatc), retirement credit (imqritc) and living alone credit (imqlatc).

See imqcalr for a more detailed description.

QCBCFLG   Quebec Child benefit flag for Quebec calculation methodology

DESCRIPTION

When this flag is activated, Quebec has a specialized Child Tax Benefit system in place, which takes into account the number and ages of the children. If this flag is set to 0, the federal basic amount per child is used.

QCCEOPT   Quebec CCE calculation option [1=deduction,2=refundable credit]

DESCRIPTION

In Quebec, provisions for tax relief related to child care expenses have been calculated in two distinct ways; first as a deduction from total income or more recently as a refundable tax credit. When this parameter is set to 1, the Quebec child care expense deduction (imqccea) will be calculated. When it is set to 2 the refundable child care expense tax credit (imqccetc) will be calculated.

DESCRIPTION

This lookup table parameter provides the proportions of allowable child care expenses which may be claimed for the refundable child care expense tax credit (imqccetc). These proportions are determined by looking up the child care expense net income for the family (imqcceni) in the left most column and finding the appropriate proportion in the middle column.

QCPPOPT   Quebec CPP/QPP contribution deduction/credit option
[1=deduction,2=credit]

DESCRIPTION

When this parameter is set to 1 CPP/QPP contributions will be treated as a deduction from
Quebec total income in calculating Quebec provincial taxable income and added to
(imqdedft). When this parameter is set to 2, CPP/QPP contributions will be treated as a tax
credit (imqcpptc).

QCXMOPT   Quebec child exemption method option (1=pre-86 2=86+)

DESCRIPTION

In calculating the dependent children deduction (imqcdeds) for Quebec Provincial Income
Tax, this parameter controls whether the child exemption is based on age and school status or
the number of children in the family. If set to a value of 1, the exemption is based on age and
school status, if set to 2, it is based on the number of children in the family.

QDEPNIFG   Quebec include SA, etc. in dependant's net income

DESCRIPTION

In calculating the dependant's net income (imqdepni) for Quebec Provincial Income Tax, this
parameter controls whether certain transfer payments are included in the dependant's net
income. If QDEPNIFG is set to 1 then income from GIS(imigis), SPA(imispa), and Social
Assistance(imisa) will be added to net income of Quebec residents for purposes of reducing
dependant credits and spouse tax credits.

QEEXPDED   Quebec employment expenses deduction application flag

DESCRIPTION

This parameter denotes the application of employment expenses in the calculation of net income for Quebec provincial taxes. When this parameter is assigned to 1, the employment expenses are added to the total deductions (imqdedft). When this parameter is 0, the employment expenses are used to reduce the total income (imqitot). This represents a change to the Quebec Income Tax forms in 1998.

QEMPLOFLAG Database variable(emplo) activation flag

DESCRIPTION

When this parameter is set to 1, the imputed variable for the employee home relocation deduction (idemplo) is included in the calculation of Quebec all deductions from net income (imqdedfn) as part of the other deductions. With a value of zero the employee home relocation deduction variable is not used.

QFAIFLAG   Quebec inclusion of federal family allowance in income flag

DESCRIPTION

In calculating total income for Quebec Provincial Income Tax, this parameter controls
whether or not Taxable Family Allowances (imtfa) are included in Total Income imqitot. If
set to a value of 1, Taxable Family Allowances are included, if set to 0, they are not.

QFAMDED   Quebec Family related deduction on income in refundable credits

DESCRIPTION

When QFAMFLG is set to 0, persons who lived alone had this value used to reduce their income used for calculating the tax reduction for families (imqei) in order to calculate the real estate tax refund (imqptr) and the refundable QST credit (imqstr).

When QFAMFLG is set to 1, this is the amount which reduces net income in order to calculate the tax reduction for families (imqftr), the amount with respect to age, for a person

living alone, or for retirement income (imqcalr), the real estate tax refund (imqptr) and the refundable QST credit (imqstr).

QFAMFLG   Quebec family income deduction activation flag

DESCRIPTION

The calculation of the family tax credit is modified in 1998. The new calculation is activated by the flag QFAMFLG. The family net income is reduced by the family deduction (the reduced family income), QFAMDED, that is increased to $26,000. A first part of the family credit is associated to a person living alone or with one or more dependant children, QEIA3 and QEIA5, all others (QEIA1, QEIA2, QEIA4) are set to zero. The amount for elderly, QEIAA, and for retirement income remains. The value of the first part of the credit is then the difference between those credits and the reduced family income considered at a rate QFAMRAT.

The second part of the family tax credit remains the same for the family structure with dependant children, the rate applied to the reduced family income, QFTRRR, is increased from 4% to 6%.

See also QFAMRAT.

QFATCHIRR QFATC High income reduction rate

DESCRIPTION

Under the Quebec Family Allowance Tax Credit, this parameter represents the income

reduction rate to be applied to the calculated benefit when the family net income exceeds the high income turndown (QFATCHITD). This is valid only when QFATCOPT = 2.

CROSS REFERENCE

ba02.mpr:	0.05000	0.0%	Copied from ba01.mpr
ba03.mpr:	0.05000	0.0%	Copied from ba02.mpr

DESCRIPTION

Under the Quebec Family Allowance Tax Credit (QFATCOPT=2), this parameter represents the high income turndown level. For families with net income over this amount, the Quebec Family Allowance Tax Credit is equal to the minimum benefit amount (depending on the number of children) less the difference between the family net income and this turndown amount multiplied by the applicable reduction rate (QFATCHIRR).

QFATCK6PYR   QFATC supplement for kids under 6 phase out year proportion

DESCRIPTION

Under the Quebec Family Allowance Tax Credit (QFATCOPT=2), an extra supplement was available for large families with children under the age of 6 who were also born before August 1, 1997. This parameter contains the proportion of the year that is before August 1. For each child in the family under the age of 6, their age is compared to the difference between TARGETYEAR and QFATCK6YR. If this difference is less than their age, they qualify as an eligible child. If the difference is equal to the child's age (meaning that their year of birth would be 1997), then a random number is compared to this parameter to determine if the child was born before August 1.

QFATCK6YR QFATC Supplement for kids under 6 phase out year

DESCRIPTION

Under the Quebec Family Allowance Tax Credit (QFATCOPT=2), an extra supplement was available for large families with children under the age of 6 who were also born before August 1, 1997. This parameter contains the year cutoff point for this program. For each child in the family under the age of 6, their age is compared to the difference between TARGETYEAR and this parameter. If this difference is less than their age, they qualify as an eligible child. If the difference is equal to the child's age (meaning that their year of birth would be 1997), then a random number is compared to QFATCK6PYR to determine if the child was born before August 1.

QFATCOPT   Quebec Family Allowance Tax Credit Option tranfer=1, tax credit=2

DESCRIPTION

When set to 2 it activates the calculation of the Quebec Family Allowance Tax Credit. When set to 1 it activates the calculation of the Quebec family allowance, the Quebec new born allocation and the Quebec availability allowance.

The Quebec Family Allowance Tax Credit started in September 1997 – 1998 in the model. The Quebec Family Allowance Tax Credit is a credit based on previous year net family income and is non-taxable. The maximum credits vary with the number of children (QFATCMXK), and a supplement QFATCSUP is allocated to single parent families. For families with 4 kids and more, a supplement, QFATCK6, is added that varies with the number of kids in the family and the number of kids under 6.The credit is maximum until it reaches the first turn down income level with a specific reduction rate. The sequence of turn down incomes and reduction rates for single parent families are in QFATCSRR and for married couples in QFATCMRR. The turning point at QFATD4K is increased by QFATD4KI for each child over three. The benefits are reduced up to a minimum based on the number of children in the family (QFATCMNK) until the net family income reaches the last turning point in either QFATCSRR or QFATCMRR. At this last turning point the benefits are starting to reduce until they reach a minimum for payments of QFATCMIN. The program is implemented by copying the reduction rate table (QFATCSRR or QFATCMRR) into a temporary table. Then another temporary table assigns benefits and reduction rates to turning point incomes. Finally, the calculated benefits, imqfatc, are assigned to the women in the married couples or to the head of the single parent family. A take-up rate, QFATCTK, selects the assigned individual only if a random number is higher than the level specified by its total income. As a standard, QFATCTK is set to zero and all individuals are selected.

QFPSL Quebec provincial family allowance [parity,$]

DESCRIPTION

In Quebec, the provincial portion of Family Allowances are also based on the number of children in the family. The table is used similarly to QFFSL.

Starting in 1998, the program is replaced by the Quebec Family Allowance Tax Credit which is activated when QFATCOPT is set to 2.

For more details see QFATCOPT.

QFS   Federal supplement per child 12-17 in Quebec configuration

DESCRIPTION

In Quebec, the provincial government pays a Family Allowance Supplement of this amount on behalf of each child aged 12 to 17.

Starting in 1998, this program is replaced by the Quebec Family Allowance tax Credit and is activated when QFATCOPT is set to 2.

See QFATCOPT for more details.

QFTRFLAG   Quebec family tax reduction activation flag

DESCRIPTION

In calculating total tax credits for Quebec Provincial Income Tax, this parameter controls whether or not the Quebec Family Tax Reduction is included in the Provincial Tax Credit (imptc). If set to a value of 1, the Quebec Family Tax Reduction is included, if set to 0, it is not.

QGFTCR — Quebec credit rate for gifts over upper limit

DESCRIPTION

This is the rate used to calculate the Quebec tax credit for gifts and charitable donations that exceed QGIFTL1 when QGIFTHCR is equal to 1. For gifts and charitable donations up to QGIFTL1, the Quebec nominal tax credit rate (QNTCR) is used.

See also QGIFTL1, QGIFTOPT, imqchatc and QNTCR.

QGIFTHCR   Quebec higher tax credit on large gifts activation flag

DESCRIPTION

When this parameter is set to 1, large gifts are subject to a higher tax credit rate. Beginning in 2000, there are two tax credit rates applied to gifts in Quebec. Allowable gifts up to QGIFTL1 use the QNTCR. The higher credit rate QGFTCR is applied to allowable gifts over QGIFTL1. The total value of the tax credit is imqchatc.

QGIFTL1   Quebec minimum gift limit subject to higher credit rate

DESCRIPTION

When QGIFTHCR is equal to 1, different tax credit rates are used depending on the size of
the gift. The Quebec nominal tax credit rate (QNTCR) is used on the amount of gifts and
charitable donations up to this limit. The tax credit rate for gifts and charitable donation

above this amount will be QGFTCR.

See also QGFTCR, QGIFTOPT, imqchatc and QNTCR.

QGIFTOPT   Quebec gifts as tax credit

DESCRIPTION

When this parameter is set to 1, imqchara is calculated as a deduction of net income. Starting in 1993, the parameter is set to 2, and charity and gifts, imqchatc, are now tax credit. When QGIFTFLG is set to zero, before 1998, gifts are not subject to a maximum. Starting in 1998, QGIFTFLG is set to 1 when charity and gifts were subject to the same maximum based on net income.

QHPTCFLG   Quebec Housing Parent Tax Credit activation flag

DESCRIPTION

The calculation of the Quebec Home Parent Tax Credit (imqhptc) is activated by the flag QHTCFLG. The refundable credit started in 1992. The level of refundable credit is based on the duration of parent or grandparent stay in the economic family. The base level of the credit is QHPTC. A take-up rate QHPTCTC based on age of the potential parent assigns individuals with idefrh=3 as a parent according to SCF data. A take-up rate QHPTCTK based on employment income select the appropriate number of beneficiaries according to Portrait de la fiscalité des particuliers au Québec.

QHPTCTC   QHPTC take-up rate by age of elderly [age,rate]

DESCRIPTION

This is the first take-up rate used in the calculation of imqhptc. It selects an individual with idefrh = 3 and assigns him/her as a parent according to observed probability in SCF. The probability is based on idage.

Beginning in 2001, this credit was extended to include aunt, uncle, great-uncle or great-aunt of the taxpayer of the taxpayer's spouse. The definition of "uncle" and "great-uncle" shall

include the spouse of an aunt or great-aunt and vice versa for definition of "aunt" and "great-aunt".

QHSC   Quebec Health Services Fund Contribution table

DESCRIPTION

This table look-up parameter provides the schedule of payments for the Quebec Health
Services Fund Contribution (imqhsfc). The first column of the table gives various levels of
the health services fund net income. The second column gives the amount of the required
contribution. The table is accessed using the lkup1 function which interpolates the lookup in
the second column.

This income used to lookup an individual contribution is defined as:

imqitot	Total Income	
LESS		
idiemp	Wages and salaries	
ididiv * QHSCDIR	QHSDIR proportion of dividends	
imioas * QHSOASFG	Optional exemption of OAS benefits	
imoasr * QHSOASFG	OAS Repayments	
imuibr	UI Repayments	
iddalimo	Alimony Paid	
idcarry	Carrying charges	
imqiloss	Allowable investment losses

QHSCI   Quebec surtax first cut-in level

DESCRIPTION

This is the level of provincial tax payable (imtxp) above which a surtax at the rate of QHSF applies.

For Quebec, the SPSM calculates provincial surtax (impsur) as QHSF percent of provincial taxes (imtxp) above the level QHSCI plus QHSF2 percent of provincial taxes above the level QHSCI2.

QHSF   Quebec surtax first level rate

DESCRIPTION

This is the nominal surtax proportion applied to provincial tax (imtxp) in excess of the level specified in QHSCI.

For Quebec, the SPSM calculates provincial surtax (impsur) as QHSF percent of provincial taxes (imtxp) above the level QHSCI plus QHSF2 percent of provincial taxes above the level QHSCI2.

QITSFSEW   Quebec improved tax system for self-employed worker activation flag

DESCRIPTION

When this parameter is set to 1, the improved tax system for self-employed workers is activated. This improved system was announced in the Quebec 2000 Budget to enable the increasing number of self-employed workers to benefit from the simplified tax form.   When this parameter is set to 0, the difference between the flat amount provided under the simplified tax system and the maximum contribution to the CPP/QPP with respect to pensionable self-employed earnings would exclude a number of self-employed workers from the simplified tax system.

This system will standardize the tax treatment applicable to that part of the contribution paid by a worker in respect of pensionable self-employed earnings that could be equated with an employer's contribution, and refrain from excluding a growing number of self-employed workers from the simplified tax system. When activated, it will result in a conversion of QITSSEF of the tax credit granted in respect of amounts payable as contributions on pensionable self-employed earnings to the CPP/QPP into a deduction in the calculation of income. This new deduction will be applied to the calculation of income under the simplified tax system and to the income used to determine the contribution to the Health Services Fund payable by individuals.

QITSSEF   Quebec percentage of self-employ CPP/QPP contributions to convert to deduction

DESCRIPTION

When QITSFSEW is activated (equal to 1), this parameter represents the proportion of the tax credit granted in respect of amounts payable as contributions on pensionable self-employed earnings to the CPP/QPP that is to be converted into a deduction in the calculation of income. This new deduction will be applied to the calculation of income under the simplified tax system and to the income used to determine the contribution to the Health Services Fund payable by individuals. This system will standardize the tax treatment applicable to that part of the contribution paid by a worker in respect of pensionable self-employed earnings that could be equated with an employer's contribution, and refrain from excluding a growing number of self-employed workers from the simplified tax system.

QLAXPI   Quebec living alone phase-in

DESCRIPTION

This value is used to scale the amount of the reduction which will be applied to the living alone tax credit. It is used in 1996 to simulate the phase-in of the income testing of the living alone credit.

Legislation relating to this parameter was introduced in the 1996 Quebec Budget which proposed that the non-refundable living alone tax credit "be subject to an income test which would target the assistance to low or modest incomes." Individual living alone with incomes above the threshold of $26,000 would have the amount of the living alone credit reduced by 15% of income above that threshold. This reduction for higher income seniors was to be phased in over two years, with half the reduction applied in 1996 and the full reduction in 1997 and subsequent years.

See also imqatc, QLAXM, QLAXRR, and QLAXTD.

QLAXRR Quebec living alone reduction rate

DESCRIPTION

This parameter is the proportion of net income above a given threshold (QLAXTD) which will be deducted from the non-refundable living alone tax credit amount (QLAXM).

Legislation relating to this parameter was introduced in the 1996 Quebec Budget which proposed that the non-refundable living alone tax credit "be subject to an income test which would target the assistance to low or modest incomes." Individual living alone with incomes above the threshold of $26,000 would have the amount of the living alone credit reduced by 15% of income above that threshold. This reduction for higher income seniors was to be phased in over two years, with half the reduction applied in 1996 and the full reduction in 1997 and subsequent years.

DESCRIPTION

Individual living alone will have its non-refundable living alone tax credit reduced if its net income is above the value of this parameter.

Legislation relating to this parameter was introduced in the 1996 Quebec Budget which proposed that the non-refundable living alone tax credit "be subject to an income test which would target the assistance to low or modest incomes." Individual living alone with incomes above the threshold of $26,000 would have the amount of the living alone credit reduced by 15% of income above that threshold. This reduction for higher income seniors was to be phased in over two years, with half the reduction applied in 1996 and the full reduction in 1997 and subsequent years.

QMAXDX   Quebec maximum disability deduction/amount

DESCRIPTION

This value is used to adjust the imputed Disability Exemption (imdisex) value for blind persons or persons confined to a wheelchair. If an individual has a positive value for imdisex, QMAXDX is assigned as a deduction from net income.

This may also be deducted on behalf of a spouse or dependants.

QMEDINC   Income definition for Que. refundable tax credit for medical expenses

DESCRIPTION

This parameter defines the income definition to be used in the calculation of Quebec medical expenses (imqmeda) and refundable tax credit for medical expenses (imqmedrc).

When assigned to 1, the income test is based on the net income of the individual and the net income of the spouse, if applicable. When assigned to 2, the income test is based as the total income (imqitot).

QMEDRMIN   Minimum earnings for Quebec refundable tax credit for medical expenses

DESCRIPTION

If employment earnings are less than this parameter, then a person is eligible to apply for the Quebec refundable tax credit for medical expenses (imqmedrc). Earnings are calculated as employment income (idiemp) plus self-employment income (idisenf + idisefm) minus registered pension plan deduction (idrpp) minus annual union, professional, or like dues (iddues) minus other employment expenses (idalexp).

QMRTCFLG Quebec refundable tax credits for medical expenses activation flag

DESCRIPTION

When QMRTCFLG is assigned to 1, the Quebec refundable tax credit for medical expenses (imqmedrc) is calculated for persons aged 18 and over who had employment related earnings greater than QMEDRMIN. The maximum refundable credit will be the lesser of QMEDRMAX and QMEDRATE percent of eligible medical expenses (imqmeda). It is reduced by QMEDRRR percent of net family income in excess of QMEDRTD.

When QMRTCFLG is assigned to 0, the calculation of the Quebec refundable tax credit for medical expenses is suppressed.

QNBFA   Quebec newborn family allowance [parity,age]

DESCRIPTION

The Quebec Newborn Family Allowance program began in 1988. The rows in this parameter correspond to the rank of the child in the family in increasing order. The columns correspond to the age of the child. The value of each cell represents the dollar value of the benefits. The parameter is effective only when QNBFAFLAG is set to 1.

Starting in 1998, the program is replaced by the Quebec Family Allowance Tax Credit which

is activated when QFATCOPT is set to 2. The Newborn Allowance gradually phases out for those who were already in the program.

For more details see QFATCOPT.

QNBFAFLAG Quebec newborn family allowance flag

DESCRIPTION

When QNBFAFLAG is set to one the Quebec Newborn allowance is implemented. The
benefits are set according to the rank of the newborn in the family, at the birth time.
Observed rank can be different from the allocation rank, the opportunity of increasing the
rank is set with the flag QNBRFLAG.

Starting in 1998, the program is replaced by the Quebec Family Allowance Tax Credit which
is activated when QFATCOPT is set to 2. The Newborn Allowance gradually phases out for
those who were already in the program.

For more details see QFATCOPT.

QNBPOFLAG Quebec newborn family allowance phase out flag

DESCRIPTION

This parameter activates the phase out of the Quebec Newborn Family Allowance. Children born after 30 September 1997 are not eligible to receive the allowance for newborn children. As a result, this program will progressively disappear until the year 2002. Any child whose age is equal to the difference between TARGETYEAR and QNBPOYR, and whose month of birth is greater than September, which is determined by comparing a random number to QNBPOPYR, would not be eligible for the newborn allowance.

See also QNBFAFLAG.

QNBPOPYR   Quebec newborn family allowance phase-out year proportion

DESCRIPTION

This parameter represents the proportion of the phase out year of the Quebec Newborn Family Allowance where children would still be eligible for the allowance. Children born after 30 September 1997 are not eligible to receive the allowance for newborn children. The phase out is activated by QNBPOFLAG. Any child whose age is equal to the difference between TARGETYEAR and QNBPOYR, and whose month of birth is greater than September (if a random number is greater than this parameter), would not be eligible for the newborn allowance.

See also QNBFAFLAG.

QNBRFLAG   Quebec newborn family random increase of child rank

DESCRIPTION

When QNBRFLAG is set to one then rank of children in a family of age 1 and 2 is randomly increase to reflect the rank structure observed by the Régie des rentes du Québec. When the rank is increase, rank of older children is also increased.

Starting in 1998, the program is replaced by the Quebec Family Allowance Tax Credit which is activated when QFATCOPT is set to 2. The Newborn Allowance gradually phases out for those who were already in the program.

For more details see QFATCOPT.

QNORTHFLAG Database variable(north) activation flag

DESCRIPTION

When this parameter is set to 1, the imputed variable for the designated area deduction
(idnorth) is included in the calculation of all Quebec deductions from net income (imqdedfn).
With a value of zero the designated deduction variable is not used.

QOCX   Quebec exemption for children 18 and over

DESCRIPTION

In the calculation of taxable income for the Quebec Provincial Income Tax, children over the
age of 17 years may be claimed for this amount. If the dependant is over age 21 then he/she
must have been either in full time attendance at an educational institution or physically or
mentally infirm.

QREFOPT   Quebec deduction/credit option [1=deduction,2=credit]

DESCRIPTION

In calculating the Quebec deduction/credit, this parameter controls whether the amount is a deduction or a credit(i.e. pre or post reform). If set to a value of 1, it is a deduction, if set to 2, it is a credit.

QRTRFLAG   Quebec real estate rebate activation flag

DESCRIPTION

In calculating total tax credits for Quebec Provincial Income Tax, this parameter controls
whether or not the Quebec Real Estate Rebate is included in the Provincial Tax Credit
(imptc). If set to a value of 1, the Quebec Real Estate Rebate is included, if set to 0, it is not.

QSFDISFLAG Quebec Simplified Form Disability tax credit inclusion flag

DESCRIPTION

When this flag is turned on, people filling out the simplified tax form (imqsfflg = 1) can claim the amount for severe and prolonged mental or physical impairment (imqdistc).

 See QSFOPT for more information on the simplified tax form.

CROSS REFERENCE

VALUES

QSFOPT   Quebec Simplified Form Option (1=general 2=simplified 3=optimized)

DESCRIPTION

This parameter controls whether or not the simplified tax form is used in Quebec. The simplified tax program, which includes a flat tax credit, started in 1998. People were allowed to decide whether it was in their benefit to fill out the simplified or general tax form. A worksheet was provided in order to facilitate the choice.

The SPSM has implemented this tax system in the following way. When QSFOPT is set to 1, everyone in Quebec fills out the general tax form. This is the system which was in place prior to 1998. If QSFOPT is set to 2, then everyone fills in the simplified tax form. And when QSFOPT is set to 3, then an optimization procedure is run. In this scenario, an approximation of the worksheet which was provided with the 1998 tax form is calculated prior to the computation of taxes. People are assigned to either the general tax form (which includes all deductions) or the simplified tax form (which includes few deduction but an additional credit - QSFTC). The variable imqsfflg notes which form was chosen.

A person can transfer all of their extra credits and deductions to their spouse when both spouses fill out the simplified tax form. When using the general form, only a limited number of deductions can be transferred. Because the worksheet does not take into account all the inter-spouse complexities, the optimization procedure will tend to overstate taxes. While it is very accurate for single persons, it tends to maximize the individual's gain which is not necessarily the couple's gain. The model may therefore slightly overstate Quebec taxes.

QSFSMXI   Quebec simplified form spouse maximum income for work sheet

DESCRIPTION

This amount is used in the work sheet to determine which tax form in Quebec can be used
(simplified or general) when QSFOPT = 3. When the spouse's income is less than this
amount, the spouse's QSFTC can be included in the work sheet.

See QSFOPT for more information on the simplified tax form.

QSFTC   Quebec Simplified Form tax credit

DESCRIPTION

This is the value of the flat amount which people who filled the Simplified Tax System were
allowed to add to their Basic Amount (QBXM). Only people who file a simplified tax form
(imqsfflg = 1) get this amount. In a previous version of the model, it was entitled the low
income credit.

See QSFOPT for more information on the simplified tax form.

ba03.mpr:	0.00	--	Grown from ba02.mpr using NONE=1.0000

DESCRIPTION

This amount is the base credit used to calculate the Quebec sales tax refund (imqstr) for
Quebec Provincial Income Tax. The credit is base on family income (QSTROPT = 2) except
for the first year of implementation where it is base on imigis (QSTROPT= 1). The
calculation of the Sales Tax Rebate is activated with QSTRFLAG. A credit (QSTRCHILD)
is added for each child in the family. A second credit is added (QSTRFTP3) when no spouse
is present and at least one dependent child is present, and finally another credit is added
(QSTRFTP4) is for a person living alone or with at least one dependent. The credit is
reduced by the income considered at a rate QSTRRR.

QSTRFLAG   Quebec sales tax rebate activation flag

DESCRIPTION

In calculating total tax credits for Quebec Provincial Income Tax, this parameter controls
whether or not the Quebec Sales Tax Rebate is included in the Provincial Tax Credit (imptc).
If set to a value of 1, the Quebec Sales Tax Rebate is included, if set to 0, it is not.

QTROPT   Quebec Tax Reduction calcualtion option 1=universal 2=income tested

DESCRIPTION

When this parameter has a value of 1 the Quebec provincial tax reduction (imptr) will be calculated as a flat rate (QTRP) proportion of provincial tax payable (imtxp).

With a value of 2, the Quebec income tested provincial tax reduction (imqittr) will be calculated. The amount of this reduction varies with basic provincial tax payable (imbpt) phasing out to zero at the QTRBE level of basic tax payable. The maximum tax reduction possible can be calculated by multiplying QTRBE times QTRP.

QTRP	Quebec tax Reduction proportion

DESCRIPTION

The Quebec Provincial Tax reduction is calculated using this proportion of tax payable. The
tax basis of the reduction and the proportion are handled differently depending on the setting
of QTROPT.

DESCRIPTION

This table represents the Taxable Income/Tax Rate tax curve for Quebec. The first column represents a level of taxable income defining the lower limit of a range. The second column is the amount of Basic Provincial Tax payable at the corresponding taxable income. The third column represents the marginal tax rate for the income range. Only the first and third columns of this table need be specified in the parameter file.

QYPPI   Quebec deduction phase-in for pension income

DESCRIPTION

This value is used to scale the amount of the reduction which will be applied to the pension
income tax credit. It is used in 1996 to simulate the phase-in of the income testing of the

pension income credit.

Legislation relating to this parameter was introduced in the 1996 Quebec Budget. Individual seniors with pension incomes (idipens) above the threshold (QYPTD) of $26,000 would have the amount of the maximum pension income credit (QYPDL) reduced (QYPRR) by 15% of income above that threshold. This reduction for higher income pensions was to be phased in over two years, with half the reduction applied in 1996 and the full reduction in 1997 and subsequent years.

See also imqritc, QYPRR, QYPDL, QYPTD.

QYPRR   Quebec deduction reduction rate for pension income

DESCRIPTION

This parameter is the proportion of net pension income above a given threshold (QYPTD) which will be deducted from the non-refundable pension income tax credit amount (QYPDL).

Legislation relating to this parameter was introduced in the 1996 Quebec Budget. Individual seniors with pension incomes (idipens) above the threshold (QYPTD) of $26,000 would have the amount of the maximum pension income credit (QYPDL) reduced (QYPRR) by 15% of income above that threshold. This reduction for higher income pensions was to be phased in over two years, with half the reduction applied in 1996 and the full reduction in 1997 and subsequent years.

QYPTD   Quebec deduction turn down for pension income

DESCRIPTION

Individual seniors will have their non-refundable pension income tax credit reduced if their net pension income is above the value of this parameter.

Legislation relating to this parameter was introduced in the 1996 Quebec Budget. Individual seniors with pension incomes (idipens) above the threshold (QYPTD) of $26,000 would have the amount of the maximum pension income credit (QYPDL) reduced (QYPRR) by 15% of income above that threshold. This reduction for higher income pensions was to be phased in over two years, with half the reduction applied in 1996 and the full reduction in 1997 and subsequent years.

See also imqritc, QYPRR, QYPPI.

REFFLAG   Read reference results file

DESCRIPTION

This parameter invokes the reference variable facility. When this parameter is set to 1, the model will read a series of variables (REFVARS) from an SPSM results file (INPREF). Please see the *User's Guide* for details on the results file facility.

REFVARS   Reference results file variables [string]

DESCRIPTION

The REFVARS parameter lists the names of the variables that the user wishes to read from
the results file, and can optionally be used to re-name these variables as well. Please see the
User's Guide for details on the results file facility.

REPNETFLAG   Social program repayments reduce net income flag

DESCRIPTION

When set to 1, repayment of social benefits (UI, OAS, FA) are used to reduce net income.

ROUNDFLAG   Round disposable and consumable income

DESCRIPTION

ROUNDFLAG is normally activated, so that consumable and disposable income are rounded
to the nearest dollar before being used for reporting or output purposes. Because SPSM
results files always contain rounded data, this action ensures that base/variant comparisons
that use disposable or consumable income will be identical whether BASMETH is 1 (read
results file) or 2 (create base variables through simulation). When ROUNDFLAG is set to 0,
this action is turned off. This action is useful in conjunction with the turning point facility,
because otherwise the rounding of consumable income produces a large number of spurious
turning points in the household tax function.

RRSPEINC   Increment to rrsp if conditions & rpp>0

DESCRIPTION

This parameter, defined in the database adjustment parameter file, is one of a group of
parameters which allow the user to modify (generally increase) base year database values for
RRSP contributions. RRSPEINC will be added to the RRSP contributions of all persons
covered by a registered pension plan whose current RRSP contributions fall between
RRSPEMIN and RRSPEMAX.

RRSPEMAX   Maximum (rpp+rrsp) for increment if rpp>0

DESCRIPTION

This parameter, defined in the database adjustment parameter file, is one of a group of
parameters which allow the user to modify (generally increase) base year database values for
RRSP contributions. Please see the description of RRSPEINC.

RRSPEMIN   Minimum (rpp+rrsp) for increment if rpp>0

DESCRIPTION

This parameter, defined in the database adjustment parameter file, is one of a group of
parameters which allow the user to modify (generally increase) base year database values for
RRSP contributions. Please see the description of RRSPEINC.

RRSPIFLAG   RRSP increment activation flag

DESCRIPTION

This parameter, defined in the database adjustment parameter file, activates a group of
parameters which allow the user to modify (generally increase) base year database values for
RRSP contributions. Please see the description of RRSPEINC and RRSPSINC.

RRSPSINC   Increment to rrsp if conditions & rpp=0

DESCRIPTION

This parameter, defined in the database adjustment parameter file, is one of a group of
parameters which allow the user to modify (generally increase) base year database values for
RRSP contributions. RRSPSINC will be added to the RRSP contributions of all persons not
covered by a registered pension plan whose current RRSP contributions fall between
RRSPSMIN and RRSPSMAX.

RRSPSMAX   Maximum (rrsp) for increment if rpp=0

DESCRIPTION

This parameter, defined in the database adjustment parameter file, is one of a group of
parameters which allow the user to modify (generally increase) base year database values for
RRSP contributions. Please see the description of RRSPSINC.

RRSPSMIN   Minimum (rrsp) for increment if rpp=0

DESCRIPTION

This parameter, defined in the database adjustment parameter file, is one of a group of parameters which allow the user to modify (generally increase) base year database values for RRSP contributions. Please see the description of RRSPSINC.

SAELDOPT   SA for elderly calculation method [1=~SA,2=GIST->~SA,3=diff]

DESCRIPTION

When the value of SAFLAG is set to 1, this parameter determines the way in which Social Assistance Payments (imisa) will be calculated for the elderly. There are three valid values for SAELDOPT:

1. Social Assistance is set to zero for all persons over age 65
2. Social Assistance (imisa) is set to zero for individuals age 65 and over receiving simulated GIS Supplementation Benefits (imigist), otherwise it is set equal to Reported Social Assistance (idisa).
3. Social Assistance is set equal to the positive difference between reported social assistance and simulated GIS supplements

imisa = idisa - imigist

SAFS   Federal share of social assistance [prov]

DESCRIPTION

In version 5.0 and earlier, this parameter was a single proportion used to determine the proportional splitting of Social Assistance payments between federal and provincial governments. It is now implemented as a vector of ten individual provincial proportions to correctly account for the modified limits to the growth of CAP payments by the federal government.

This vector parameter is used to determine the proportional splitting of Social Assistance payments between individual provinces and the federal government. This splitting is

performed inside the samod function and corresponds to the federal/provincial cost sharing agreements in the Canada Assistance Plan. The value of SAFS is the proportion of reported social assistance which is paid by provincial governments.

SAMPLE   Size of sample obtained

DESCRIPTION

This parameter reports the proportion of sample used for processing. Valid values range
from 0 to 1. Should the user interrupt a model run in progress the correct sampling ratio will
be calculated and output in the control parameter (.cpr) file.

SAMPLEREQ Size of sample requested

DESCRIPTION

This control parameter allows the user to indicate the size of the sample requested for
processing. The size of the sample actually obtained will be recorded in SAMPLE, and may
differ from SAMPLE for a number of reasons among which are:

- The input database file given by INPSPD had fewer records than required to generate the

requested sample.
- The input results file given by INPBASMRS had fewer records than required because it was generated with a sample smaller than SAMPLEREQ.
- An SPSM execution always occurs with an integral number of households, therefore the resulting sample may deviate slightly from that requested.

SAMTOPT   Sask. alternative minimum tax option (1=none, 2=% fed, 3=fed adjusted net income)

DESCRIPTION

When Saskatchewan tax on taxable income is calculated (STXFLG = 1), there are three options as to how to calculate the provincial minimum tax.

When SAMTOPT is set to 1, then no provincial alternative minimum tax is calculated.

When SAMTOPT is set to 2, then a percentage (SAMTPCTF) of the additional federal tax due to the minimum tax is added to the basic provincial tax (imbpt).

When SAMTOPT is set to 3, the income used in the provincial tax calculation is replaced by the net income used for alternative tax purposes (imamtinc) for people who triggered the federal minimum tax. Then the SAMTTX rate, usually set to the smallest non-zero tax rate, is applied in order to get the provincial tax before the non-refundable tax credits.

SAMTPCTF   Sask. amt rate as pct of additional fed tax due to minimum tax

DESCRIPTION

When Saskatchewan tax on taxable income is calculated (STXFLG=1) and SAMTOPT is set
to 2, then a percentage (SAMTPCTF) of the additional federal tax due to the minimum tax is
added to the basic provincial tax (imbpt).

SAMTTX   Sask. amt rate as tax on adjusted income

DESCRIPTION

When Saskatchewan tax on taxable income is calculated (STXFLG=1) and SAMTOPT is set
to 3, the income used in the provincial tax calculation is replaced by the net income used for
alternative tax purposes (imamtinc) for people who triggered the federal minimum tax. Then
the SAMTTX rate, usually set to the smallest non-zero tax rate, is applied in order to get the
provincial tax before the non-refundable tax credits.

SAPFLAG   Social assistance predicted value flag

DESCRIPTION

When SAPFLAG is set to 1, predicted values of social assistance are used. Predicted values are equal to idisa when SATARGET is set to 0.5. Users can increase or decrease the number of families receiving SA by increasing or decreasing SATARGET.

Interval between 0.5 and 0.95 allows for a maximum increase of 3% in the number of families receiving SA. Interval between 0.05 and 0.5 allows for a maximum decrease of 3% in the number of families receiving SA. Individuals are selected and get idsapred when idsarank/1000 is lower than SATARGET.

See idsapred, idsarank.

SASFLAG	SAS output facility activation flag

DESCRIPTION

This control parameter if used to activate the SAS native file output facility. A self-documenting file with name OUTSAS in SAS Version 6.03 format is produced containing variables given by SASVARS rolled up to the level specified by SASUNIT. To produce a SAS data file in the user's SAS version, a PROC COPY into an empty directory should do it. Please see the *User's Guide* for more information.

DESCRIPTION

Maximum annual Saskatchewan Income Plan benefits for each person in a married couple where both receive OAS/GIS. Calculated as a sum of monthly maximums.

SASTITLE   SAS file label [string]

DESCRIPTION

This control parameter, when activated by SASFLAG, gives the internal label which will be
written into the header of the native SAS file given by OUTSAS. This label is used by the
SAS system by certain procedures, in particular PROC CONTENTS.

SASUNIT   SAS output family level

DESCRIPTION

When the SAS file output facility is activated using the SASFLAG parameter, this control parameter is used to specify the family level of analysis of the resulting file. Each record on the output file will correspond to an entity given by SASUNIT. Valid values and their meanings are given below.

0   Individual
1   Nuclear Family
2   Census Family
3   Economic Family
4   Household

The default value of SASUNIT is 0.

SASVARS   Variables selected for SAS output [string]

DESCRIPTION

This control parameter, when activated by SASFLAG, gives a list of all variables to be written to each record of the resulting SAS native file. Any SPSD/M variable, including base and variant values, may be included.

SATARGET   Social assistance target for predicted SA

DESCRIPTION

When SAPFLAG is set to 1, predicted values of social assistance are used. Predicted values are equal to idisa when SATARGET is set to 0.5. Users can increase or decrease the number of families receiving SA by increasing or decreasing SATARGET.

Interval between 0.5 and 0.95 allows for a maximum increase of 3% in the number of families receiving SA. Interval between 0.05 and 0.5 allows for a maximum decrease of 3% in the number of families receiving SA. Individuals are selected and get idsapred when idsarank/1000 is lower than SATARGET.

See SAPFLAG, idsapred, idsarank.

SAXM   Sask. Age Amount

DESCRIPTION

This is the maximum value of the Saskatchewan age non-refundable tax credit before any
reductions are applied. The parameter is only used when a provincial tax on taxable income
is calculated (STXFLG = 1).

CROSS REFERENCE

SAXPI   Sask. Age Amount phase in rate for 1994 and beyond

DESCRIPTION

This value is used to scale the amount of the reduction which will be applied to the
provincial age tax credit. The parameter is only used when the Saskatchewan provincial tax
on taxable income is calculated (STXFLG = 1).

See also impatxc, SAXM, SAXRR, and SAXTD.

SAXRR — Sask. Age Amount credit reduction rate

DESCRIPTION

This parameter is the proportion of net income above a given threshold (SAXTD) which will be deducted from the provincial non-refundable age tax credit amount (SAXM). The parameter is only used when the Saskatchewan provincial tax on taxable income is calculated (STXFLG = 1).

See also impatxc, SAXTD, SAXPI.

SBBENS   Seniors Benefit maximum rate for singles

DESCRIPTION

This is the maximum federal Seniors Benefit payable with respect to single pensioners minus
SBPREM. It is equal to what OAS and GIS would have been in the year.

CROSS REFERENCE

Function   **Description**

senben   Compute Seniors Benefit for elderly

SBOPTFLG   Optimize Seniors benefit with OAS/GIS

DESCRIPTION

When SBOPTFLG has a value of 0, the calculation of the federal Senior's Benefit is always

used. When SBOPTFLG parameter is assigned a value of 1, the Seniors Benefit calculation is optimized for the nuclear family with respect to OAS/GIS. That is, the nuclear family's consumable income is calculated under the rules for both the Seniors Benefit and the rules for OAS/GIS. Whichever program results in the higher consumable income is the program whose benefits which will be assigned to the individual.

SBRL1   Seniors Benefit first benefit reduction plateau

DESCRIPTION

The federal Seniors Benefit is reduced by a proportion (SBRR1) of income (imsbinc) until it
reaches (SBRL1). Beginning at a nuclear family income level (imsbinc) of SBRL2, the
benefit is further reduced by a proportion SBRR2 of additional income (imsbinc). SBRL1 is
equivalent to BOAS that year.

SBSPA   Seniors Benefit maximum rate for SPA

DESCRIPTION

This parameter is used in the calculation of SPA (imisbspa) when the federal Senior's Benefit flag (SBFLAG) is set to one. It is equivalent to what the maximum dollar benefits of the Guaranteed Income Supplement portion of Extended Spouses Allowance for widowed SPA recipients would have been in that year.

SCBRR1   Sask Child Benefit 1st reduction rate [number of kids]

DESCRIPTION

The Saskatchewan Child Benefit is reduced in two stages. Net family income greater than
SCBTD1 and less than SCBTD2 is reduced at a rate of SCBRR1. This is a vector parameter
which depends on the number of children. The benefit is further reduced at a rate of
SCBRR2 for income over SCBTD2

DESCRIPTION

SCGTC multiplied by SPNTCR is the maximum amount of the Saskatchewan Caregiver Tax Credit (impcgtc). The parameter is only used when the provincial tax on taxable income is calculated (STXFLG = 1).

For more explanation see SCGTCFLG.

SCGTCFLG   Sask. Caregiver Tax Credit activation flag

DESCRIPTION

The calculation of the Saskatchewan Caregiver Tax Credit (impcgtc) is activated by the flag
SCGTCFLG.

The Caregiver Tax Credit (impcgtc) provides additional tax assistance to individuals who
provide in-home care for relatives. Eligible recipients include individuals residing with and
providing in-home care for a parent or grandparent over 65 years of age, or for an infirm
dependent relative.

This variable is the sum of modelled Caregiver Tax Credits for all dependants other than
spouse. (Line 315 and Schedule 12 in the General Tax Guide)

The base level of the credit is SCGTC. Based on the results of a study pertaining to the
presence of elderly parents within the economic family, a take-up rate SCGTCTC was
determined. The take up rate is based on the age of a potential parent, assigned to individuals
with idefrh = 3, according to SCF data. Users have access to a take-up rate SCGTCTK based
on employment income to select the appropriate number of beneficiaries.

The benefit, impcgtc, is reduced for each dollar of net income, iminet, in excess of
SCGTCTD.

This non-refundable tax credit is only calculated when the provincial tax on taxable income
is calculated (STXFLG = 1).

SCGTCTC   Sask. Caregiver tax credit take-up rate by age of elderly [age,rate]

DESCRIPTION

This is the first take-up rate used in the calculation of Saskatchewan's impcgtc. It selects an individual with idefrh = 3 and assign him/her as a parent according to observed probability in SCF. The probability is also based on idage.

The parameter is only used when the provincial tax on taxable income is calculated (STXFLG = 1).

SDTCR   Sask. dividend tax credit rate

DESCRIPTION

This is the proportion of taxable dividends received (imidivt) which will be given for the
Saskatchewan dividend tax credit (impdtxc). The parameter is only used when the provincial
tax on taxable income is calculated (STXFLG = 1).

SEED   Random number generator seeds

DESCRIPTION

This vector control parameter is used to start the streams of pseudo-random numbers used in the model. Up to 20 independent random numbers are generated for each individual and are stored in the variables idrand0 through idrand19. A different sequence of numbers for each activated stream can be generated by changing SEED. The number of streams activated is determined by the number of elements in SEED. Random numbers are be used to apply social program or demographic take-up rates.

SELFLAG   Selection facility activation flag

DESCRIPTION

The SELFLAG control parameter is used to activate the SPSM selection facility. When SELFLAG is set to 1, the expression in SELSPEC is evaluated for each individual and the result (if true) is propagated to families at the SELUNIT level of analysis. Only individuals (or families) marked as selected will be included in any generated files or reports.

SELMAX   Selection facility maximum # of households

DESCRIPTION

SELMAX has been added as an enhancement to the SPSM selection facility. If SELMAX is left at its default value of 0, the selection facility operates as described in the *User's Guide*. If it is set to a positive integer, SPSM will stop reading the database as soon as SELMAX households have been read. This is useful if the user wished to select just one or a few households for detailed analysis, for example with the turning point facility, or using the detailed reporting capabilities of the text file output facility.

SELSPEC   Selection specification [string]

DESCRIPTION

This control parameter, when activated by SELFLAG, is used to specify whether an individual is to be marked as selected or not for the purposes of output and reporting. The expression if evaluated for each individual and is considered true if the result is non-zero. Any SPSD/M variables, including base and variant tax/transfer variables, may be used in SELSPEC. Please see the *User's Guide* for more information.

SELUNIT   Selection facility family level

DESCRIPTION

This control parameter, when activated by SELFLAG, is used to specify the level to which individual selection (computed by applying the expression in SELSPEC) is to be propagated. If SELUNIT is 0, selection remains at the level of individual. If SELUNIT is 1, 2, 3, or 4, then selection of any individual in the family unit implies selection of all members in the unit. Valid values of SELUNIT and their meanings are given below.

0. Individual
1. Nuclear Family
2. Census Family
3. Economic Family
4. Household

The default value of SELUNIT is 0.

SEMXM   Sask. equivalent to married amount

DESCRIPTION

This parameter represents the equivalent to married tax credit when Saskatchewan tax is calculated as a tax on taxable income. It is only calculated when STXFLG is set to 1.

SEMXMT   Sask. equivalent to married turndown level

DESCRIPTION

This parameter represents the provincial equivalent to married exemption turndown when
Saskatchewan tax is calculated as a tax on taxable income. It is only used when STXFLG is
set to 1. The reduction is calculated as the dependant's net income less the turndown

SEMXMT.

SLVCMAX   Maximum Sask. labour-sponsored funds tax credit allowed

DESCRIPTION

This is the maximum value for the Saskatchewan labour sponsored funds tax credit
(implvctc). The credit is derived as a proportion SLVCRT of the cost of the funds bought
(idlabtxg) up to a maximum value SLVCMAX.

In some years, there is a difference in rates between provincially registered funds and
federally registered funds. The model assumes that all funds are federally registered.

SPAEFLAG   Extended SPA eligibility probabilities flag

DESCRIPTION

When the value of this parameter is 1, specific probabilities are applied to determine eligible
population for extended SPA (SPAFE & SPAME). Eligibility is determined from the
probability that a widow(er) currently aged 60-64 had a spouse aged 65+ at the time of
his(her) death.

SPAFE   SPA take-up rate: eligible female widow [age,probability]

DESCRIPTION

These are probabilities applied to determine eligible female population for extended SPA. Eligibility is determined from the probability that a widow(er) currently aged 60-64 had a spouse aged 65+ at the time of his(her) death.

For widow(er)s currently aged 60, these probabilities were estimated using 1980-82 mortality rates for the married population and the age distribution of spouses as tabulated from the 1981 Census. This provides a distribution for the age at death of the spouse. The probability of eligibility is the ratio of spouse deaths at ages 65+ to all spouse deaths.

For widow(er)s currently aged 61-64, allowance is made for the possibility that the death took place in a previous year. In that event, age at death distributions are calculated as before and aggregated over the 2-4 year intervals in which the death might have occurred. Aggregation involves adjustment for the mortality of the widowed partner. In this case, the probability of eligibility is the ratio of spouse deaths at age 65+ with surviving partners to all spouse deaths with surviving partners.

SPAXO   Benefit Cross-over GIS/SPA vs GIS one pensioner couple

DESCRIPTION

SPAXO represents the level of family income at which the dollar benefits for GIS to a single
pensioner married to a non-pensioner spouse exactly equal the combined GIS/SPA dollar
benefits payable to a GIS/SPA married couple. The figure is calculated as a fixed
relationship to other input parameters as follows. This is a derived parameter calculated in
mpc.c.

SPAXO = 2*MP.GISBE2-MP.GISBE1;

CROSS REFERENCE

Function   **Description**

gis   Compute GIS/SPA for elderly
mpc   Calculate derived model parameters and do edits

DESCRIPTION

This single parameter sets the tax credit rate for all of the non-refundable tax credits in Saskatchewan. Each tax credit is calculated separately and summed for a total credit. The parameter is only used when a provincial tax on taxable income is calculated (STXFLG = 1).

SPTX   Sask. tax table [taxable income,basic provincial tax]

DESCRIPTION

This table represents the Saskatchewan tax curve used when calculating the tax on taxable
income (STXFLG = 1). The first column represents Taxable Income, the second represents
the amount of Basic Provincial Tax payable at that level of taxable income, the third column
represents the marginal tax rate for the interval between this and the next value in the table.

Only the first and third columns of the tax table need be specified. The second column is
computed by the standard algorithm.

SSTC1KIDTD Sask. sales tax credit child amount turndown if only 1 child

DESCRIPTION

This represents the income level at which the child component of the Saskatchewan Sales Tax Credit is to be reduced at the rate of SSTCRR for families with one qualifying child.

The Saskatchewan Sales Tax Credit (imsstc) was introduced in 2000 to offset the effect of sales taxes on lower income earners. The Saskatchewan Sales Tax Credit will consist of an adult component and a child component. This credit will be fully refundable. The program is activated when SSTCFLAG is set to 1.

See also SSTCBAS, SSTCSP, SSTCKID.

SSTC2KIDTD Sask. sales tax credit child amount turndown if more than 1 child

DESCRIPTION

This represents the income level at which the child component of the Saskatchewan Sales Tax Credit is to be reduced at the rate of SSTCRR for families with more than one qualifying child.

The Saskatchewan Sales Tax Credit (imsstc) was introduced in 2000 to offset the effect of sales taxes on lower income earners. The Saskatchewan Sales Tax Credit will consist of an adult component and a child component. This credit will be fully refundable. The program is activated when SSTCFLAG is set to 1.

SSTCBAS   Sask. sales tax credit base amount

DESCRIPTION

This parameter represents the maximum amount for the adult component of the
Saskatchewan Sales Tax Credit (imsstc). The adult component of the Saskatchewan Sales
Tax Credit will rise at a rate of SSTCBASPIR of individual net income up to this maximum.
It will be reduced at a rate of SSTCRR as family net income increases above SSTCBASTD.

SSTCBASPIR Sask. sales tax credit base amount phase in rate

DESCRIPTION

This parameter represents the income phase in rate for the Saskatchewan Sales Tax Credit
base amount for the adult component. The adult component will rise at this rate of individual
net income up to a maximum (SSTCBAS). The Saskatchewan Sales Tax Credit is activated
when SSTCFLAG is set to 1.

The Saskatchewan Sales Tax Credit (imsstc) was introduced in 2000 to offset the effect of
sales taxes on lower income earners. The Saskatchewan Sales Tax Credit will consist of an
adult component and a child component. This credit will be fully refundable.

See also SSTCSP, SSTCKID.

SSTCFLAG   Sask. sales tax credit activation flag

DESCRIPTION

The Saskatchewan Sales Tax Credit is activated when this parameter is set to 1.

The Saskatchewan Sales Tax Credit was introduced in 2000 to offset the effect of sales taxes on lower income earners. The Saskatchewan Sales Tax Credit (imsstc) will consist of an adult component and a child component. This credit will be fully refundable and is assigned to the spouse with the higher income.

The adult component of the Saskatchewan Sales Tax Credit will rise at a rate of SSTCBASPIR of individual net income up to a maximum (SSTCBAS). It will be reduced at a rate of SSTCRR as family net income increases above SSTCBASTD. An individual will also be eligible for SSTCSP in additional benefits for a dependent spouse or equivalent. This amount will be reduced at a rate of SSTCRR as family net income rises over SSTCSPTD.

The child component of the Saskatchewan Sales Tax Credit will provide an additional SSTCKID per child. For two-parent families, the maximum child component will be SSTCKID + SSTCKID. For single parent families, the first child will be eligible for the adult benefit of SSTCSP and the maximum child component will be SSTCKID. The child component of the Credit will be reduced at a rate of SSTCRR as family net income rises over SSTC1KIDTD for families with one qualifying child. For families with more than one qualifying child, the Credit will be reduced at a rate of SSTCRR as family net income rises over SSTC2KIDTD.

SSTCKID   Sask. sales tax credit child amount

DESCRIPTION

This is the maximum amount of the child component of the Saskatchewan Sales Tax Credit
(imsstc). For two-parent families, the maximum child component will be SSTCKID +
SSTCKID. For single parent families, the first child will be eligible for the adult benefit of
SSTCSP and the maximum child component will be SSTCKID. The child component of the
Credit will be reduced at a rate of SSTCRR as family net income rises over SSTC1KIDTD
for families with one qualifying child. For families with more than one qualifying child, the
Credit will be reduced at a rate of SSTCRR as family net income rises over SSTC2KIDTD.

The Saskatchewan Sales Tax Credit was introduced in 2000 to offset the effect of sales taxes
on lower income earners. The Saskatchewan Sales Tax Credit will consist of an adult
component and a child component. This credit will be fully refundable. The program is
activated when SSTCFLAG is set to 1.

DESCRIPTION

This parameter provides the phase in rate for the Saskatchewan Sales Tax Credit (imsstc) was introduced in the 2000 Saskatchewan Budget. This credit is effective as of April 1, 2000, and is designed to offset the effect of sales taxes on lower income earners. The Saskatchewan Sales Tax Credit will consist of an adult component and a child component. This credit will be fully refundable. The program is activated when SSTCFLAG is set to 1.

SSTCRR   Sask. sales tax credit reduction rate

DESCRIPTION

This parameter represents the rate at which the Saskatchewan Sales Tax Credit (imsstc) amount is to be reduced. The basic adult component (SSTCBAS) will be reduced at this rate when family net income exceeds SSTCBASTD. The spousal equivalent credit (SSTCSP) will be reduced at this rate when family net income rises over SSTCSPTD.

The child component of the Credit will be reduced at this rate as family net income rises over SSTC1KIDTD for families with one qualifying child. For families with more than one qualifying child, the Credit will be reduced at this rate as family net income rises over SSTC2KIDTD.

See also SSTCKID.

SSTCSP   Sask. sales tax credit spousal amount

DESCRIPTION

This is the maximum value of the spousal equivalent amount of the Saskatchewan Sales Tax
Credit. An individual will be eligible for this amount in additional benefits for a dependent
spouse or equivalent. This amount will be reduced at a rate of SSTCRR as family net income
rises over SSTCSPTD.

In the case of a single parent family, the first child will be eligible for this amount.

The Saskatchewan Sales Tax Credit (imsstc) was introduced in 2000 to offset the effect of
sales taxes on lower income earners. The Saskatchewan Sales Tax Credit will consist of an
adult component and a child component. This credit will be fully refundable.   The program
is activated when SSTCFLAG is set to 1.

STRRR   Saskatchewan tax reduction reduction rate

DESCRIPTION

This parameter represents the rate at which total Saskatchewan Provincial Income Tax
reduction is reduced. This is applied to basic Saskatchewan income tax exceeding the total
tax reductions (STRBR, SSCI, and the total tax reduction on behalf of children).

CROSS REFERENCE

Function   **Description**

DESCRIPTION

This is the maximum dollar amount of pension income which may be claimed as a
Saskatchewan non-refundable tax credit. The parameter is only used when the provincial tax
on taxable income is calculated (STXFLG = 1).

T0AFLAG   Canada totals table flag (Units)

DESCRIPTION

This control parameter, when set to 1, activates hard-wired Table 0A, which contains counts of units having non-zero values for various variables. The level of analysis is specified by the TABUNIT parameter.

The default value of T0AFLAG is 0.

T0FLAG   Canada totals table flag (Dollars)

DESCRIPTION

This control parameter, when set to 1, activates hard-wired Table 0, which contains counts and sums of various variables. The level of analysis is specified by the TABUNIT parameter.

The default value of T0FLAG is 1.

T1AFLAG   Provincial totals table flag (Units)

DESCRIPTION

This control parameter, when set to 1, activates hard-wired Table 1A, which contains counts of units having non-zero values for various variables by province. The level of analysis is specified by the TABUNIT parameter.

The default value of T1AFLAG is 0.

T1FLAG   Provincial totals table flag (Dollars)

DESCRIPTION

This control parameter, when set to 1, activates hard-wired Table 1, which contains counts and sums of various variables by province. The level of analysis is specified by the

TABUNIT parameter.

The default value of T1FLAG is 1.

T2AFLAG   Income group totals table flag (Units)

DESCRIPTION

This control parameter, when set to 1, activates hard-wired Table 2A, which contains counts of units having non-zero values for various variables by income classes as determined by the breakpoints specified in the INCGP parameter. The level of analysis is specified by the TABUNIT parameter.

The default value for T2AFLAG is 0.

T2FLAG   Income group totals table flag (Dollars)

DESCRIPTION

This control parameter, when set to 1, activates hard-wired Table 2, which contains counts and sums of various variables by income classes as determined by the breakpoints specified in the parameter INCGP. The level of analysis is specified by the TABUNIT parameter.

The default value of T2FLAG is 0.

T3AFLAG   Family type totals table flag (Units)

DESCRIPTION

This control parameter, when set to 1, activates hard-wired Table 3A, which contains counts of units having non-zero values by family type. The level of analysis is specified by the TABUNIT parameter.

The default value for T3AFLAG is 0.

T3FLAG   Family type totals table flag (Dollars)

DESCRIPTION

This control parameter, when set to 1, activates hard-wired Table 3, which contains counts and sums of various variables by family type. The level of analysis is specified by the TABUNIT parameter.

The default value for T3FLAG is 0.

T4AFLAG   LICO ratio group totals table flag (Units)

DESCRIPTION

This control parameter, when set to 1, activates hard-wired Table 4A, which contains counts of units having non-zero values by poverty threshold ratio classes given by PVRAT and PTF. The level of analysis is specified by the TABUNIT parameter.

The default value for T4AFLAG is 0.

T4FLAG   LICO ratio group totals table flag (Dollars)

DESCRIPTION

This control parameter, when set to 1, activates hard-wired Table 4A, which contains counts and sums of various variables by poverty threshold ratio classes given by PVRAT and PTF. The level of analysis is specified by the TABUNIT parameter.

The default value for T4FLAG is 0.

TABDELTA   Built-in tables winner/loser threshold

DESCRIPTION

This is the dollar amount used to determine winners and losers for purposes of producing certain rows of the hard-wired tables. The difference in consumable income between base and variant is compared to TABDELTA at the TABUNIT level of analysis to determine a winner or loser.

The default value of TABDELTA is 10.00.

TABUNIT   Built-in tables family level

DESCRIPTION

Reporting variables are summed over the family unit specified by TABUNIT in order to produce the hard-wired tables. Valid values and their meanings are given below.

0. Individual
1. Nuclear Family
2. Census Family
3. Economic Family
4. Household

The default value of TABUNIT is 2.

TARGETYEAR   Year of analysis

DESCRIPTION

This parameter controls the phasing in of certain social support programs. Valid values include all 4 digit integers listed below (e.g. 1994 is a valid value).

TPFLAG Turning point facility activation flag

DESCRIPTION

TPFLAG is used to activate the turning point facility.

TPLL Lower limit for modified variables

DESCRIPTION

TPLL specifies the lower limit of the independent variable for use in the turning point facility.

TPMETH   Method for modifying variables [1=additive, 2=multiplicative]

DESCRIPTION

TPMETH indicates which of two methods the turning point facility will use to modify the independent variables in TPVARS for the persons identified by TPSPEC, in order to compute the household tax function. Method 1 changes the variables in TPVARS between the limits given by TPLL and TPUL. Method 2 scales the variables relative to their original database values between the limits given by TPLL and TPUL.

TPSPEC   Expression identifying individuals to change [string]

DESCRIPTION

TPSPEC, used in the turning point facility, is a logical expression in SPSM variables that identifies which persons in the household are to have incomes modified as independent variables in computing the tax function.

TPUL   Upper limit for modified variables

DESCRIPTION

TPUL specifies the upper limit of the independent variable for use in the turning point facility.

TPVARS   Variables to modify [string]

DESCRIPTION

TPVARS, used in the turning point facility, indicates which variable or variables are to be modified as independent variables to compute the household tax function.

DESCRIPTION

This parameter controls the tax treatment of the Tuition Deduction. With a value of 1, the tuition fees (idtuitn) are treated as a deduction from net income and with a value of 2, as a tax credit.

DESCRIPTION

The UI benefit recovery base amount (UIBRA) is calculated as the annual maximum insurable earnings (UIERNMAX * 52) times UIBAF.

This parameter applies to UI and EI programs.

UIBAFNR   UI EI benefit recovery base amount factor for non-repeaters (EI only)

DESCRIPTION

The EI benefit recovery amount for persons who have received less than a set number of
weeks of EI in the past or who are not on a regular EI claim (UIBRANR) is calculated as a
proportion of the base EI benefit recovery amount (UIBRA) times UIBAFNR.

This parameter applies only if UIEIOPT is set to 2 (December 1995 reform implemented in
1997).

UIBASEYRMAX Maximum insurable earnings for base year

DESCRIPTION

Dollar value of maximum insurable earnings.

UIBASFLAG Basic phase calculation flag (UI and EI)

DESCRIPTION

Flag which determines whether the initial phase benefits are to be computed (value 1), or not (value 0). This feature of the model permits the program structure to be varied, by deleting a phase.

This parameters applies to UI and EI programs.

UIBASOPT   UI reform option [1=normal, 2=Apr'89] (UI and EI)

DESCRIPTION

When UIBASOPT is set to 1 then unemployment insurance benefits will be calculated using the UI system as legislated from 1984 through 1989. When UIBASOPT is set to 2 then the proposed reform UI system announced in April 1989 by the Minister of Employment and Immigration, will be used to calculate benefits. The reform involved switching from a regional extended phase to a new schedule of maximum weeks of benefits by regional unemployment rate and number of qualifying weeks. This reform remained in place as part of the EI reforms announced in December 1995.

This parameter applies to UI and EI programs.

UIBASRATE Benefit rate for basic phase (UI only)

DESCRIPTION

Benefit rate as a proportion of weekly insurable earnings. This parameter is not used if the flag UIEFFFLAG is set to 0.

This parameter applies only if UIEIOPT is set to 1 (Before December 1995 reform

implemented in 1997)

UIBRA   UI repayment base amount (UI and EI)

DESCRIPTION

If UI benefits (imiuib) have been received, a proportion (UIBRP) of net income in excess of this amount or of total benefits is repayable. This is a derived parameter calculated in mpc.c.

This parameter applies to UI and EI programs.

CROSS REFERENCE

Function   **Description**

mpc   Calculate derived model parameters and do edits
txinet   Compute net income

UIBRANR   EI repayment base amount for non-repeaters (EI only)

DESCRIPTION

If EI benefits (imiuib) have been received, a proportion of net income in excess of this amount or of total benefits is repayable. The amount can depend on the type of claim and on previous receipt of EI. If the claim is not a regular EI claim or if a person has received less than a certain number of weeks of EI in the past (UIEINRT), then the amount which is repayable is UIBRANR. Otherwise, the amount repayable is (UIBRA). This is a derived parameter calculated in mpc using (UIBAFNR).

This parameter applies only if UIEIOPT is set to 2 (December 1995 reform implemented in 1997).

CROSS REFERENCE

Function   **Description**

mpc   Calculate derived model parameters and do edits
txinet   Compute net income

DESCRIPTION

If unemployment insurance benefits (imiuib) have been received and net income is in excess of the base amount (UIBRA), this proportion is applied to the lower of (a) total UI benefits and (b) the excess net income, to calculate the repayment which is also a deduction from net income.

This parameter applies only if UIEIOPT is set to 1 (Before the December 1995 reform implemented in 1997)

UIBXWK   User define behavioral response to minimum divisor [uer][rate] (EI only)

DESCRIPTION

Probability than a person will make up the extra weeks in order to avoid falling under the minimum divisor rule. It is a user-defined behavioural parameter which depends on the unemployment rate in the region. It is only in effect when UIEIDIVOPT is equal to 3 and UIEIOPT is equal to 2 (December 1995 reform implemented in 1997).

UICOPT   UI contributions deduction/credit option [1=deduction,2=credit]

DESCRIPTION

This parameter controls the tax treatment of Unemployment Insurance contributions, imuic.
With a value of 1, Unemployment Insurance Contributions are treated as deductions from net
income and with a value of 2, a proportion FNTCR of UI contributions are taken as a tax
credit.

This parameter applies in UI and EI programs.

UIDEPOPT UI dependency option [1=normal, 2=Feb'94] (UI and EI)

DESCRIPTION

When this parameter has a value of 1 then both the income of the UI recipient as well as the number of their dependants will be used to calculate the benefit rate applied to earnings. Under this option the model calculates a variable (imuidpfg) which indicates if the UI applicant has low income and dependants. If the individual has a value of one for this variable then their benefit rate is calculated as follows.

If an individual claimant's earnings are below a given proportion (UIENSRTCO) of UI maximum earnings (UIERNMAX) then the rate used to calculate weekly benefits is taken from the UIENSRATE parameter. If their earnings are above UIENSRTCO proportion of UIERNMAX then the weekly dollar rate if benefits is the higher of

1) The benefit rate for the basic phase (UIBASRATE) times average weekly earnings ubern

or

2) The enhanced rate cutoff (UIENSRTCO) proportion of UI maximum earnings (UIERNMAX) times The enhanced rate for the basic phase (UIENSRATE).

The option corresponds to measures introduced in the 1994 Federal Budget.

With this parameter set to 0 imuidpfg is initialized to zero and the benefit rate applied to earnings is taken from the UIQUITRATE or UIBASRATE parameters.

This parameter applies in UI en EI programs.

UIEFFFLAG   Observed effective weekly benefit rate flag (UI and EI)

DESCRIPTION

Flag determines that UI benefits are computed from the average benefit per week observed in sample claims. The effective benefit rate may be higher than 60% of weekly insurable earnings if special programs were in effect (e.g., job creation) or lower if the sampled claimant reported earnings while on claim.

When the flag is set to 1, the effective weekly benefit rate is used in the calculation of UI benefits. When the flag is set to 0, the modeled weekly benefit rate is used.

This parameter applies in UI and EI program.

UIEIBRP   Maximum clawback under EI reform [Past Wks ben][Rate] (EI only)

DESCRIPTION

If employment insurance benefits (imiuib) have been received and net income is in excess of
the base amounts (UIBRA) for persons with previous EI receipt or (UIBRANR) for persons
with little previous benefits or for persons not on regular EI claims, the repayment is
calculated at a rate (UIEIRPR) up to a maximum proportion of total benefit received
(UIEIBRP). The rate depends on the previous number of weeks of EI received in the past.

This parameter applies only if UIEIOPT is set to 2 (December 1995 reform implemented in
1997)

UIEIDIV   EI minimum divisor [uer][divisor] (EI only)

DESCRIPTION

Under the minimum divisor rule in EI, the earnings in the past 26 weeks are divided by either the weeks worked or the minimum divisor. This lookup table has the minimum divisor in the left most column and the unemployment rate in the middle column. It is only implemented when UIEIOPT is equal to 2 and UIEIDIVOPT is equal to 2 or 3.

This parameter applies only if UIEIOPT is set to 2 (December 1995 reform implemented in 1997)

UIEIDIVOPT EI miminum divisor options (EI only)

DESCRIPTION

This parameter allows the user to adjust weekly earnings in order to take into account the minimum devisor rule. If UIEIDIVOPT=1, the minimum divisor rule is not implemented. If UIEIDIVOPT=2 or UIEIDIVOPT=3 the number of weeks worked in the past 26 weeks is estimated to be a proportion (UIWK26) of the number of weeks worked in the past year (ucwwork). The minimum divisor rule is then applied using UIEIDIV. If UIEIDIVOPT=3, a further behavioural response parameter, UIBXWK, allows a proportion of claimants to make up the extra weeks.

This parameter applies only if UIEIOPT is set to 2 (December 1995 reform implemented in 1997)

UIEIHWCF   EI hours to weeks conversion factor (hours/week) (EI only)

DESCRIPTION

In order to calculate the number of weeks of benefits under EI, hours of work are converted to weeks of work using UIEIHWCF, which can then be used in the (UIEWK) array.

This parameter applies only if UIEIOPT is set to 2 (December 1995 reform implemented in 1997)

UIEIMTYPFLG Flag to model main benefit type (UI and EI)

DESCRIPTION

When UIEIMTYPFLG is turned on, instead of calculating the benefit eligibility and amount using the original claim type (ucbtyp), the main type of claim is used (ucmtyp). Note that when a claim starts with sickness, maternity, or parental benefits and also includes regular

benefits (uctpcng), a regular claim is modelled.

UIEINRT   UI EI Non repeater level for higher clawback turndown (EI only)

DESCRIPTION

The number of weeks of previous EI receipt which makes a recipient qualify for the intensity

rule. If a person has less than UIEINRT weeks of EI in the past, then the intensity rule does not apply and UIBRANR is used to calculate the amount of EI which is repayable. Otherwise, the intensity rule is applied and UIBRA is used in the calculations.

This parameter applies only if UIEIOPT is set to 2 (December 1995 reform implemented in 1997).

UIEIREF   EI contribution refund cut-in (EI only)

DESCRIPTION

If employment income is less than this amount, persons get their EI contributions (imuic)
refunded (imuicrf).

This parameter applies only if UIEIOPT is set to 2 (December 1995 reform implemented in
1997).

UIEIRPR   UI EI benefit clawback rate (EI only)

DESCRIPTION

If employment insurance benefits (imiuib) have been received and net income is in excess of
the base amount (UIBRA) for persons with previous EI receipt or (UIBRANR) for persons
with little previous benefits or for persons not on regular EI claims, this proportion is applied
to the lower of (a) total EI benefits and (b) the excess net income up to a maximum percent
of their total benefits (UIEIBRP), to calculate the repayment which is also a deduction from
net income.

This parameter applies only if UIEIOPT is set to 2 (December 1995 reform implemented in
1997).

UIEITKP   UI EI takeup rate [index] : index based on prov, sex, age, weeks

DESCRIPTION

Starting in 1995, the estimation of UI/EI benefits showed an increasing gap between SPSD/M results and Statistics Canada data on UI expenditure (annualized D18397). The number of UI/EI beneficiaries showed also the same trend base on an administrative count of the number of UI beneficiaries without counting multiple spells of unemployment. For this version, the takeup rate, UIEITKP, adjust the SPSD/M number of UI/EI beneficiaries by province to the targets provide by administrative data for 1995 and after. For the previous years (1984 to 1994), UIEITKP is set to zero. The following table shows the result of the implementation of UIEITKP.

	UI/EI benefits ('000 000 000 $)		UI/EI beneficiaries ('000 000)	
	SPSD/M	TARGET	SPSD/M	TARGET
1995	12.6	12.9	2.9	2.9
1996	12.3	12.3	2.8	2.8

	1997	11.2	10.9	2.5	2.5

An observation with calculated UI/EI benefits has all its UI/EI calculated variables set to zero if a random number is lower than the value set to UIEITKP. It means all the observations are selected in the years where UIEITKP is set to zero.

UIEITRNFLAG   Modeling of UI training benefits flag (UI and EI)

DESCRIPTION

When this flag is turned on, training benefits are modelled. Under the EI system, training benefits were replaced by new benefit types.

UIEITRNREGFLG   UI training benefits turned into regular benefits (UI and EI)

DESCRIPTION

When this flag is turned on and UIEITRNFLAG is turned off, the weeks of training benefits imputed on the database convert to weeks of regular benefits.

In this version of the database, the following claim types have been assigned "regular" claim status:

>Self Employment Assistance
>Job Creation Partnerships
>Skills Loans and Grants
>Targeted Wage Subsidies
>Targeted Earnings Supplement

Support Measures

The year 1996 was a transitional year from UI to EI. There was a half year of training benefits and a half year of its replacements imputed on the database. Therefore by simply turning off training benefits not enough weeks would be included on the database. Turning this flag on helps to overcome transitional year issues.

UIEIYRS   Number of years of previous EI benefits calculated (EI only)

DESCRIPTION

In Employment Insurance, in order to implement the intensity rule and the clawback, the number of weeks of EI benefits received in the past is needed. UIEIYRS is the number of years included in this calculation. If UIEIYRS is equal to 1, only the weeks of benefits in the past year are included. If UIEIYRS is equal to 4, the weeks in the past four years are included. The maximum number of years which can be calculated is 5.

This parameter applies only if UIEIOPT is set to 2 (December 1995 reform implemented in 1997).

UIENSRATE Enhanced rate for basic phase (UI only)

DESCRIPTION

UI claimants may be eligible for a higher benefit rate (UIENSRATE) to be applied to average insured earnings (ubern) if their insured earnings are at or below a set proportion (UIENSRTCO) of maximum insurable earnings (UIERNMAX) and they have dependants.

This measure, introduced in the 1994 Federal budget initially provided for an enhanced rate of 60% compared to a basic rate of 55%.

See also UIDEPOPT, imuidpfg.

This parameter applies only if UIEIOPT is set to 1 (Before December 1995 reform implemented in 1997).

UIENSRTCO Enhanced rate cutoff (UI only)

DESCRIPTION

UI claimants may be eligible for a higher benefit rate (UIENSRATE) to be applied to
average insured earnings (ubern) if their insuerd earnings are at or below a set proportion
(UIENSRTCO) of maximum insurable earnings (UIERNMAX) and they have dependants.

This measure, introduced in the 1994 Federal budget initially set qualification requirements
that the claimant have insured earnings at or below **half** the Maximum Insurable Earnings.

See also UIDEPOPT, imuidpfg.

This parameter applies only if UIEIOPT is set to 1 (Before December 1995 reform
implemented in 1997).

UIENTFLAG Basic entrance requirements flag (UI and EI)

DESCRIPTION

When this flag is set to 0 the execution of the uielent sub-function in ui.c is suppressed and all UI claimants are deemed to have a valid claim. When set to 1, eligibility entrance requirement tests in uielent (weeks of work by claim type) are applied.

This parameter applies to UI and EI programs.

DESCRIPTION

This array parameter gives maximum entitlement for the UI system subsequent to the April '89 UI reform. The array has 43 row and 12 columns. Columns represent ranges of local unemployment rate, starting at 6% and increasing to 17%. Rows represent the number of weeks worked prior to claim, starting at 10 weeks and increasing to 52 weeks.

This parameter applies to UI and EI programs.

CROSS REFERENCE

Function	Description
ui	Compute UI benefits

UIFSHERMIN   Min. earnings to qualify for fish. benefits [unempl. rate] (EI only)

DESCRIPTION

This parameter represents the minimum earnings in the past 31 weeks which are required to qualify for fishing benefits. They depend on the local unemployment rate (ucuer).

This parameter applies only if UIEIOPT is set to 2 (December 1995 reform implemented in 1997).

UIFSHMINWK   Minimum weeks to qualify for fishing benefits (UI only)

DESCRIPTION

This parameter represents the minimum weeks of insurable employment in the qualifying
period that are required for eligibility for UI fishing benefits. At present, the standard
algorithm does not subject fishing claims to an eligibility test.

CROSS REFERENCE

UILFEFLAG Labour force extended phase calculation flag (UI only)

DESCRIPTION

Flag which determines whether the labour force extended phase benefits are to be computed (value 1), or not (value 0). This feature of the model permits the program structure to be varied, by deleting a phase.

This parameter applies only if UIEIOPT is set to 1 (Before December 1995 reform implemented in 1997).

UILFEMIN   Weeks worked in qualifying period [UILFEWKS index] (UI only)

DESCRIPTION

The second phase of regular benefits is the Labour Force Extended phase. Additional weeks of benefit entitlement (UILFEWKS) are determined by the weeks of work in the qualifying period (UILFEMIN). These two vectors must always have 14 elements corresponding exactly to each other.

This parameter applies only if UIEIOPT is set to 1 (Before December 1995 reform implemented in 1997).

UILFEWKS   Weeks LFE entitlement [UILFEMIN] (UI only)

DESCRIPTION

The maximum weeks of entitlement in the Labour Force Extended Phase. Additional weeks of benefit entitlement are determined by the weeks of work in the qualifying period (UILFEMIN). The two vectors UILFEMIN and UILFEWKS must always have 14 elements corresponding exactly to each other.

This parameter applies only if UIEIOPT is set to 1 (Before December 1995 reform implemented in 1997)

UIMAXMATWKS   Maximum number of weeks - maternity (UI and EI)

DESCRIPTION

The maximum weeks of entitlement to maternity benefits. When a person also receives
parental benefits (ucgotpa = 1), then UIMAXPARWKS is also added to the maximum. When
a person also receives regular benefits, the claim modeled may be changed to regular claims.

This parameter applies to UI and EI programs.

UIMINPCT   Exemption limit (percent of maximum insurable earnings) (UI only)

DESCRIPTION

Determines the level of earnings below which UI contributions are not payable. If average
weekly earnings are less than UIMINPCT * UIERNMAX, no UI contributions are made.

This parameter applies only if UIEIOPT is set to 1 (Before December 1995 reform
implemented in 1997).

UIQPWKS Additional waiting period for quitters (UI and EI)

DESCRIPTION

This amount is added to the database value of voluntary quit penalty (ucquitp) to extend the waiting period to simulate this provision of the April '89 UI reform.

This parameter applies to UI and EI programs.

UIREGWKFCT   UI regular benefit weeks adjustment factor (UI and EI)

DESCRIPTION

This parameter allows the user to increase the claim duration of regular benefits up to the
maximum number of eligible weeks. UIREGWKFCT is the proportion of the unused weeks
(maximum weeks eligible - actual weeks claimed) that an individual's claim will be extended
by. For example, setting UIREGWKFCT to one will set the claim length to the maximum

number of eligible weeks.

This parameter applies only if UIEIOPT is set to 1 (Before December 1995 reform implemented in 1997).

DESCRIPTION

The number of weeks of insurable employment required for repeaters to be eligible for benefits increases with the number of weeks of benefits received in the qualifying period (see also UIREPUER and UIREPWWKD). The vector UIREPPREV must always have 11 elements corresponding to the columns of UIREPWWKD.

This parameter applies only if UIEIOPT is set to 1 (Before December 1995 reform implemented in 1997).

UIREPUER   Regional unemployment rate [rates] (UI only)

DESCRIPTION

The number of weeks of insurable employment required for repeaters to be eligible for benefits decreases at progressively higher regional unemployment rates (see also UIREPPREV and UIREPWWKD). The vector UIREPUER must always have 5 elements corresponding to the rows of UIREPWWKD.

This parameter applies only if UIEIOPT is set to 1 (Before December 1995 reform implemented in 1997).

ba02.mpr:		[Same]	Copied from ba01.mpr
ba03.mpr:		[Same]	Copied from ba02.mpr

DESCRIPTION

The number of weeks of insurable employment required for repeaters to be eligible for benefits increases with the number of weeks of benefits received in the qualifying period (UIREPPREV) and decreases at progressively higher regional unemployment rates (UIREPUER). UIREPWWKD represents a two dimensional (11 by 5) lookup table of the weeks of work required for repeater eligibility.

This parameter applies only if UIEIOPT is set to 1 (Before December 1995 reform implemented in 1997).

UIRETMINWK   Minimum weeks to qualify for retirement benefits (UI only)

DESCRIPTION

This parameter represents the minimum weeks of insurable employment in the qualifying
period that are required for eligibility for UI retirement benefits.

This parameter applies only if UIEIOPT is set to 1 (Before December 1995 reform
implemented in 1997).

UIRGEFLAG Regional extended phase calculation flag (UI only)

DESCRIPTION

Flag which determines whether the regional extended phase benefits are to be computed (value 1), or not (value 0). This feature of the model permits the program structure to be varied, by deleting a phase.

This parameter applies only if UIEIOPT is set to 1 (Before December 1995 reform implemented in 1997).

UIRGEMIN   Unemployment rate for Regional Extended entitlement [UIRGEWKS index] (UI only)

DESCRIPTION

The third phase of regular benefits is the Regional Extended phase. Additional weeks of benefit entitlement are determined by the regional unemployment rate (see UIRGEWKS). Cut-points represent the lower bound of class intervals (the lowest possible unemployment rate is coded as -1.0). The vectors UIRGEMIN and UIRGEWKS must always have 17 elements corresponding exactly to each other.

This parameter applies only if UIEIOPT is set to 1 (Before December 1995 reform implemented in 1997).

UIRGERATE Benefit rate for regional extended phase (UI only)

DESCRIPTION

Benefit rate as a proportion of weekly insurable earnings. This parameter is not used if the flag UIEFFFLAG is set to 0.

This parameter applies only if UIEIOPT is set to 1 (Before December 1995 reform implemented in 1997).

UIRGEWKS   Weeks Regional Extended entitlement [UIRGEMIN] (UI only)

DESCRIPTION

The third phase of regular benefits is the Regional Extended phase. Maximum additional weeks of benefit entitlement (UIRGEWKS) are determined by the regional unemployment rate (UIRGEMIN). Cut-points represent the lower bound of class intervals (the lowest possible unemployment rate is coded as -1.0). These two vectors must always have 17 elements corresponding exactly to each other.

This parameter applies only if UIEIOPT is set to 1 (Before December 1995 reform implemented in 1997).

UIRGNMIN   Regional unemployment rate (UI only)

DESCRIPTION

The UIRGNWKS parameter represents the number weeks of insurable employment in the
qualifying period that are required for regular benefits in relation to the unemployment rate
of UI economic regions.

Eligibility is finally determined by comparing weeks of insurable employment in the
qualifying period (UIRGNWKS) to the level required in relation to local (UI Economic
Region) unemployment rates. Cut points for unemployment rates are given as lower bounds
(the minimum possible unemployment rate is coded as -1.0). The vectors UIRGNMIN and
UIRGNWKS must always have 5 elements corresponding exactly to each other.

This parameter applies only if UIEIOPT is set to 1 (Before December 1995 reform
implemented in 1997).

UIRPTFLAG Repeater requirements flag (UI only)

DESCRIPTION

This flag determines whether UI repeater rules are applied (value 1) in testing eligibility or not applied (value 0).

This parameter applies only if UIEIOPT is set to 1 (Before December 1995 reform implemented in 1997).

UITARGET   UI/EI target for the number of cases

DESCRIPTION

Users can increase or decrease the number of Unemployment/Employment Insurace (UI) by increasing or decreasing UITARGET.

Interval between 0.5 and 0.95 allows for a maximum increase of 3% in the number of UI recipients. Interval between 0.05 and 0.5 allows for a maximum decrease of 3% in the number of UI recipients. Individuals are selected and get UI history when iduirank/1000 is lower than UITARGET.

See iduipred, iduirank.

UITARGYRMAX   Maximum insurable earnings for target year

DESCRIPTION

The maximum weekly earnings insurable under the provisions of the UI program for the
target year. The value defined by the UI ACT is updated annually in relation to a moving
average of earnings determined from Revenue Canada data.

This parameter applies to UI and EI programs.

UITRNBNFCT   UI training benefit per week adjustment factor (EI and EI)

DESCRIPTION

This parameter allows the user to increase the dollar amount of training benefits for all
recipients of training benefits by up to twice the actual amount. The actual training benefit
(uctrnbr) is multiplied by the factor UITRNBNFCT plus one(1). For example, setting
UITRNWKFCT to one will result in the amount of training benefits to be multiplied by 2; a
factor of .5 would result in benefits being multiplied by 1.5.

This parameter applies to UI and EI programs.

UITRNWKFCT   UI training benefit weeks adjustment factor (UI and EI)

DESCRIPTION

This parameter allows the user to increase the claim duration of training benefits for all recipients of training benefits by up to twice the actual number of weeks on training. The actual training weeks (uctrnwk) are multiplied by the factor UITRNWKFCT plus one (1). For example, setting UITRNWKFCT to one will result in the number of weeks of training benefits to be multiplied by 2; a factor of .5 would result in weeks being multiplied by 1.5.

This parameter applies to UI and EI programs.

UIWAITWKS Minimum waiting period all claims (UI and EI)

DESCRIPTION

This parameter determines the minimum interval between the last week worked and the first week of UI benefits.

This parameter applies to UI and EI programs.

ba03.mpr:	2	--	Copied from ba02.mpr

DESCRIPTION

This represents the proportion of weeks worked in the past year which were worked in the past 26 weeks. It is used to calculate the minimum divisor rule (UIEIDIV) and is only in effect when UIEIOPT is equal to 2 and UIEIDIVOPT is equal to 2 or 3.

It is set up as a lookup table with the proportions in the left most column, and probability distribution (0-100) in the middle column.   A random number is called in the program, and the proportion of weeks worked in the past 26 weeks is then derived.

If the parameter is set to one, then it is assumed that all the weeks happened immediately prior to the receipt of EI.

This parameter applies only if UIEIOPT is set to 2 (December 1995 reform implemented in 1997).

UPDATEINT   Interval between screen updates (hhlds)

DESCRIPTION

The UPDATEINT parameter controls how often SPSM will update its progress display
during the simulation phase. Specifically, it specifies the number of households to simulate
between updates of the SPSM progress indicator. If UPDATEINT is set to 0, an appropriate
default value will be assigned to UPDATEINT. If UPDATEINT is set to a low value,
considerable time may be spent updating the display in the Windows version of SPSM.

The default value for UPDATEINT is 1000.

UVAR   User statements [string]

DESCRIPTION

The UVAR control parameter contains a list (string) of SPSM statements that create and
assign the user variables. See the *User's Guide* for details.

UVARFLAG   Activate UVAR parameter for expressions

DESCRIPTION

This control parameter, when set to 1, activates the UVAR parameter of the user variable
facility. The User Variable Facility allows the creation of new user-defined variables, whose

values are created through SPSM statements. See the *User's Guide* for details.

VAMTOPT   N.S. alternative minimum tax option (1=none, 2=% fed, 3=fed adjusted net income)

DESCRIPTION

When Nova Scotia tax on taxable income is calculated (VTXFLG = 1), there are three options as to how to calculate the provincial minimum tax.

When VAMTOPT is set to 1, then no provincial alternative minimum tax is calculated.

When VAMTOPT is set to 2, then a percentage (VAMTPCTF) of the additional federal tax due to the minimum tax is added to the basic provincial tax (imbpt).

When VAMTOPT is set to 3, the income used in the provincial tax calculation is replaced by the net income used for alternative tax purposes (imamtinc) for people who triggered the federal minimum tax. Then the VAMTTX rate, usually set to the smallest non-zero tax rate, is applied in order to get the provincial tax before the non-refundable tax credits.

VARALG   Name of variant algorithm [string]

DESCRIPTION

This control parameter is automatically generated by SPSM, and records the overall name of the tax/transfer algorithm used to generate variant results.

VARDESC   Description of variant parameters [string]

DESCRIPTION

This control parameter is automatically generated by SPSM, and is simply a copy of the MPRDESC parameter of the variant. The value will appear in the page header of the output table file.

VARMETH   Method of creating variant variables

DESCRIPTION

This parameter specifies one of three methods for producing variant results. Valid values are:

0.   No variant results will be calculated
2.   Results will be calculated using the standard algorithm with tax/transfer parameters as specified in the INPVARMPR file.
3.   Results will be calculated using the alternate algorithm with tax/transfer parameters specified in the INPVARMPR file.

The default value for VARMETH is 2.

VAXM N.S. Age Amount

DESCRIPTION

This is the maximum value of the Nova Scotia age non-refundable tax credit before any
reductions are applied. The parameter is only used when a provincial tax on taxable income
is calculated (VTXFLG = 1).

VAXPI   N.S. Age Amount phase in rate for 1994 and beyond

DESCRIPTION

This value is used to scale the amount of the reduction which will be applied to the provincial age tax credit. The parameter is only used when the Nova Scotia provincial tax on taxable income is calculated (VTXFLG = 1).

See also impatxc, VAXM, VAXRR, and VAXTD.

VAXRR　　N.S. Age Amount credit reduction rate

DESCRIPTION

This parameter is the proportion of net income above a given threshold (VAXTD) which will be deducted from the provincial non-refundable age tax credit amount (VAXM). The parameter is only used when the Nova Scotia provincial tax on taxable income is calculated (VTXFLG = 1).

See also impatxc, VAXTD, VAXPI.

VCBBAS1   NS child benefit for first child

DESCRIPTION

This is the amount of Nova Scotia Child Benefit received for the first child. The benefit is turned on by the flag VCBFLG, and families whose net income is less than VCBTD are eligible. They receive VCBBAS1 for their first child, VCBBAS2 for their second child, and VCBBAS3 for their third and each additional child. The benefit is assigned to the mother if present.

VCGTC   N.S. Caregiver Tax Credit

DESCRIPTION

VCGTC multiplied by VPNTCR is the maximum amount of the Nova Scotia Caregiver Tax
Credit (impcgtc). The parameter is only used when the provincial tax on taxable income is
calculated (VTXFLG = 1).

For more explanation see VCGTCFLG.

VCGTCFLG   N.S. Caregiver Tax Credit activation flag

DESCRIPTION

The calculation of the Nova Scotia Caregiver Tax Credit (impcgtc) is activated by the flag VCGTCFLG.

The Caregiver Tax Credit (impcgtc) provides additional tax assistance to individuals who provide in-home care for relatives. Eligible recipients include individuals residing with and providing in-home care for a parent or grandparent over 65 years of age, or for an infirm dependent relative.

This variable is the sum of modelled Caregiver Tax Credits for all dependants other than spouse. (Line 315 and Schedule 12 in the General Tax Guide)

The base level of the credit is VCGTC. Based on the results of a study pertaining to the presence of elderly parents within the economic family, a take-up rate VCGTCTC was determined. The take up rate is based on the age of a potential parent, assigned to individuals with idefrh=3, according to SCF data. Users have access to a take-up rate VCGTCTK based on employment income to select the appropriate number of beneficiaries.

The benefit, impcgtc, is reduced for each dollar of net income, iminet, in excess of VCGTCTD.

This non-refundable tax credit is only calculated when the provincial tax on taxable income is calculated (VTXFLG = 1).

VCGTCTC   N.S. Caregiver tax credit take-up rate by age of elderly [age,rate]

DESCRIPTION

This is the first take-up rate used in the calculation of Nova Scotia's impcgtc. It selects an individual with idefrh = 3 and assign him/her as a parent according to observed probability in SCF. The probability is also based on idage.

The parameter is only used when the provincial tax on taxable income is calculated (VTXFLG = 1).

VDACB   NS Direct assistance benefit for couples

DESCRIPTION

This parameter is the amount of Direct Assistance (iminsda) a family with income less than VDACI would receive.

Beginning in 2000, the Nova Scotia Direct Assistance will only be granted to families with

children when VDAFWC is activated.

See also VDACB.

VDAFWC   NS Direct assistance benefit for families with children flag

DESCRIPTION

When this parameter is set to 1, the Nova Scotia Direct Assistance Benefit is only granted to families with children. This amendment to the Direct Assistance Program was announced in the Nova Scotia 2000 Budget.   When this flag is activated, the benefit is targeted to low-income working families whose income is below VDASI for lone parent families and VDACI for couples with children. The maximum benefit per family is VDACB.

VDASI — NS Direct assistance maximum income for singles

DESCRIPTION

This parameter is the maximum income which an individual can earn and still qualify for
Nova Scotia Direct Assistance (iminsda).

Beginning in 2000, the Nova Scotia Direct Assistance benefit will only be granted to families
with children.

See also VDACB.

DESCRIPTION

This parameter is used in the calculation of the Nova Scotia Home Ownership Savings Plan Tax Credit. The tax credit rate (column 3) is looked up according to the filer's qualifying adjusted income (column 1). This table is used for individuals who are married or living in a common-law relationship.

VLVCMAX   Maximum N.S. labour-sponsored funds tax credit allowed

DESCRIPTION

This is the maximum value for the Nova Scotia labour sponsored funds tax credit (implvctc).
The credit is derived as a proportion VLVCRT of the cost of the funds bought (idlabtxg) up
to a maximum value VLVCMAX.

VMAXDX   N.S. Maximum Disability deduction/amount

DESCRIPTION

This value represents the maximum Nova Scotia non-refundable disability tax credit. It is
given to all individuals with a positive value for imputed Disability Deduction (imdisex).
The parameter is only used when the provincial tax on taxable income is calculated
(VTXFLG = 1).

ba03.mpr:	6140.00	0.0%	Grown from ba02.mpr using NONE=1.0000

DESCRIPTION

This parameter represents the provincial married exemption turndown when Nova Scotia tax is calculated as a tax on taxable income. It is only used when VTXFLG is set to 1. The reduction is calculated as the dependant's net income less the turndown VMXMT.

VPHOPT   Nova Scotia pharmacare premium option (1=GIS, 2=income)

DESCRIPTION

When this parameter is set to 1, the Pharmacare tax credit is available to all seniors age 65
and over who are in receipt of GIS. When it is set to 2, the credit is available to all seniors
but is reduced when family income is greater than VPHTD for singles and VPHTDC for
couples. The refundable tax credit was introduced in the 1995 Nova Scotia budget, and was
modified in 1996.

Changes were made to the Nova Scotia Pharmacare program in 1999. The premium is
waived for seniors on Guaranteed Income Supplement and may be reduced for other seniors
with low-income. The refundable tax credit was also eliminated.

VPHPREM   Nova Scotia pharmacare premium

DESCRIPTION

This parameter gives the amount of the Nova Scotia Pharmacare premium. The premium is an annual head tax on all seniors age 65 and over. The premium was introduced in the 1995 Nova Scotia budget.

Changes were made to the Nova Scotia Pharmacare program in 1999. The premium is waived for seniors on Guaranteed Income Supplement and may be reduced for other seniors with low-income. The refundable tax credit was also eliminated.

VPHRR   Nova Scotia pharmacare tax credit reduction rate

DESCRIPTION

This parameter gives the amount of the Nova Scotia Pharmacare premium tax credit reduction rate. This is the proportion of income (imgisinc) above the turndown (VPHTD or VPHTDC) which will be subtracted from the Maximum Pharmacare Tax Credit (VPHTC) to determine the allowable amount of the tax credit. The refundable tax credit was introduced in the 1995 Nova Scotia budget.

Changes were made to the Nova Scotia Pharmacare program in 1999. The premium is waived for seniors on Guaranteed Income Supplement and may be reduced for other seniors with low-income. The refundable tax credit was also eliminated.

VPHTD   Nova Scotia pharmacare tax credit turndown

DESCRIPTION

When VPHOPT is set to 1, this parameter gives the amount of the Nova Scotia Pharmacare premium tax credit turndown. When VPHOPT is set to 2, this is the turndown for singles (for couples it is VPHTDC). The turndown represents the level of income above which the

Nova Scotia Pharmacare refundable tax credit begins to be reduced. The income used is imgisinc when VPHOPT is set to 1, and family income (imitot + imisa + imigis + imispa) otherwise. The refundable tax credit was introduced in the 1995 Nova Scotia budget.

Changes were made to the Nova Scotia Pharmacare program in 1999. The premium is waived for seniors on Guaranteed Income Supplement and may be reduced for other seniors with low-income. The refundable tax credit was also eliminated.

VPHTDC   Nova Scotia pharmacare tax credit turndown for couples

DESCRIPTION

When VPHOPT is set to 2, this is the turndown for couple (for singles it is VPHTD). The turndown represents the level of income above which the Nova Scotia Pharmacare refundable tax credit begins to be reduced. The income used is imitot + imisa + imigis + imispa.

Changes were made to the Nova Scotia Pharmacare program in 1999. The premium is waived for seniors on Guaranteed Income Supplement and may be reduced for other seniors with low-income. The refundable tax credit was also eliminated.

VPNTCR   N.S. provincial non-refundable tax credit rate

DESCRIPTION

This single parameter sets the tax credit rate for all of the non-refundable tax credits in Nova
Scotia. Each tax credit is calculated separately and summed for a total credit. The parameter
is only used when a provincial tax on taxable income is calculated (VTXFLG = 1).

VPTC   Nova Scotia political contribution table [total donations,donation allowed]

DESCRIPTION

This table contains the figures necessary to calculate the Nova Scotia Political Contribution
Tax Credit. The first column represents the dollar amount of total Nova Scotia political
contributions to which the corresponding percentages of the third column are applied to
calculate the total Allowable Nova Scotia Political Contribution Tax Credit. Only the first
and third columns of the table need to be specified.

VPTX   N.S. tax table [taxable income,basic provincial tax]

DESCRIPTION

This table represents the Nova Scotia tax curve used when calculating the tax on taxable income (VTXFLG = 1). The first column represents Taxable Income, the second represents the amount of Basic Provincial Tax payable at that level of taxable income, the third column represents the marginal tax rate for the interval between this and the next value in the table.

Only the first and third columns of the tax table need be specified. The second column is computed by the standard algorithm.

VTREM   Nova Scotia tax reduction equivalent to spouse amount

DESCRIPTION

This parameter gives the maximum amount of the equivalent to married Nova Scotia tax
reduction. Only the head of a single parent family may apply. A child being claimed for this
amount may not also be claimed for the child amount. This total family tax reduction
amount is then subject to a family income test.

VTRRR   Nova Scotia tax reduction family income reduction rate

DESCRIPTION

This parameter gives the amount of the Nova Scotia tax reduction reduction rate. This is the
proportion of family income (iminet) above the turndown (VTRTD) which will be subtracted
from the Maximum tax reduction amount to determine the allowable amount of the tax
reduction.

WGTFLAG   Read weight file

DESCRIPTION

This parameter is usually left at 1. If de-activated, the weight file specified in the parameter

INPWGT (if any) will not be read, and all weights will instead be set to the value 1.0. This facility can be used to produce unweighted tabulations of SPSD, and is also useful if `hypothetical households' generated using the bldspd utility are being used instead of the supplied SPSD.

WGTTOT   Sum of weights on tax file

DESCRIPTION

This control parameter specifies the total sum of weights on the input weight file. This value is generated by SPSM automatically and is reproduced here for informational purposes.

WSCF   CPP/QPP contribution rate on employment earnings

DESCRIPTION

In the calculation of CPP contributions, this is the rate applied to earnings from employment.

WSCM   Ratio of self-employed to employed contribution fraction

DESCRIPTION

The ratio of the CPP/QPP contribution rate on earnings from self-employment to the rate on earnings from employment. This is used in calculating the amount payable on earnings from self-employment.

CROSS REFERENCE

Function   **Description**

txinet   Compute net income

XTCOLS   X-tab desired print width

DESCRIPTION

This control parameter, when activated by XTFLAG, specifies the width desired for table
reports. It is used to improve the appearance of tables, but does not guarantee that the table
will fit within the bounds specified. Please see the *User's Guide* for more information.

The default value for XTCOLS is 132.

XTDBLFLAG X-tab double precision activation flag

DESCRIPTION

This control parameter, when set to 1 and activated by XTFLAG, specifies that calculations
for table reports will be performed with double precision, otherwise single precision will be
used. Please see the *User's Guide* for more information.

The default value for XTDBLFLAG is 1.

XTFLAG   X-tab facility activation flag

DESCRIPTION

This control parameter activates the SPSM cross tabulation facility. The cross-tabulation
facility allows the user to generate multidimensional tables of his or her own design. Please
see the *User's Guide* for more information.

XTLINES   X-tab desired lines per page

DESCRIPTION

This control parameter, when activated by XTFLAG, specifies the number of lines per page available on the user's output device. It is used to pack tables onto pages efficiently, but cannot be used to split tables with many lines across pages in a sensibly formatted fashion. Please see the *User's Guide* for more information.

The default value for XTLINES is 66.

XTSPEC   X-tab specification [string]

DESCRIPTION

This control parameter, when activated by XTFLAG, specifies the tables requested by the user. As the syntax of table specification is rather complicated, please see the *User's Guide* for more information.

YCXM   Dependent child exemption

DESCRIPTION

If the parameter PEROPT is set to 1 (for personal exemptions), each wholly dependent child under the age of 18 may be claimed for an exemption of this amount, subject to reductions based on the child's net income.

YCXMT   Dependent child exemption/amount turndown level

DESCRIPTION

The level of net income above which the dependant exemption begins to be reduced for
dependants under the age of 18. This parameter is used only if PEROPT is set to 1 (for
personal exemptions).

ba03.mpr:	0.00	--	Grown from ba02.mpr using CPI=1.018

DESCRIPTION

Interest and dividend income exclusive of carrying charges, and, optionally, taxable capital gains (depending upon the setting of the parameter CGIFLAG) are eligible to be claimed for the Interest and Dividend Income Deduction. This parameter determines the maximum possible deduction. If YINDL is set to 0, the value of the deduction is zero.
