

AltaLIS is responsible for the distribution of several digital mapping datasets, including Base Features that are maintained by the Government of Alberta, to the private sector. Base Features is made up of several topographic themes that cover Alberta, and is a seamless GIS spatial database product to which other natural resource and land management information can be related.

Green and White Areas are one of several GeoAdministrative layers maintained within the Base Feature dataset. GeoAdministrative boundaries are land areas that have explicitly defined boundaries, established by legislation or by an agency to manage or administer land use.

The positional **accuracy** is dependant upon the various sources used for creation. See the 1:20000 Base Feature products for more detail. The information contained within this data set is a mapping representation only and is not an official definition of these boundaries. AltaLIS cannot provide technical support for this free layer, but updates will be posted as they are received.

The following information has been compiled to support this boundary file:

Layer Name: BF_GREEN_WHITE_POLYGON

Abstract: This layer contains polygon representation of the delineation between Green and White areas of the province of Alberta. Green Area delineation is primarily the unsettled portion of the province defined as areas of forest lands not available for agricultural development other than grazing. The White Area delineation is primarily the lands allocated to agricultural use, settlements and other human activities.

Date Created: 2000 03 31

Date Currency: 2005 11 01

Last Date Modified: 2005 11 15

Completeness Report: The Green White Area has been captured for the province. Wood Buffalo National Park, Jasper National Park, Banff National Park, Waterton National Park and Elk Island National Park are not considered to be part of either the Green or White Areas.
