About DMTI Spatial

DMTI Spatial™ Inc. is Canada's leading Location Intelligence provider. We enable users to understand their customers, optimize resources, realize opportunities, maximize profitability and make more informed decisions through accurate products and innovative thinking.

DMTI Spatial publishes precision built street map, rail and routing data (CanMap®), a detailed water layer, and innovative geocoding and address management software (GeoPinpoint™). In addition, DMTI Spatial publishes a full range of positionally accurate geospatial data products including: enhanced points of interest (EPOI), census data and boundaries, postal geography, topographic maps, and US mapping data. As part of a complete business geographic solution, DMTI Spatial™ offers a wide range of GIS services, consulting, and software training.

Established in 1994, DMTI Spatial is committed to setting the standard within the GIS industry for precision built geo-spatial data and address management services.

At DMTI Spatial, we believe that our true strength comes from working closely with our customers and providing innovative solutions to meet their strategic business objectives. As Canada's premier spatial solutions provider we pride ourselves with having worked with North America's leading organizations to support their mission critical applications.

DMTI Spatial works with large and small organizations representative of a wide variety of industries:

- Agriculture
- Banking/Finance
- Consulting
- Education
- Emergency Services
- Engineering
- Environmental
- Forestry
- Government
- Health
- High Technology
- Insurance
- Manufacturing
- Media
- Mining
- Real Estate
- Retail
- Telecommunications
- Transportation
- Utilities

We are a member of the ESRI Canada Business Partner Program, and winner of the 2001 ESRI Worldwide New Business Partner of the Year Award and the 2005 ESRI Foundation Partner of the Year Award. We are a strategic business partner of MapInfo and winner of the Markham Board of Trade 2000 Award for Entrepreneurship and Innovation. Recipient of The Association of Canadian Map Libraries and Archives (ACMLA) 2002 Certificate of Appreciation.

Really Smart Spatial Solutions™

Through the application of its products and services, DMTI Spatial™ has been involved with projects such as: location-based services, logistics planning, emergency dispatch, facilities management, data management, customer care, address management, land base development in support of network planning, and marketing/demographic analysis applications.

DMTI Spatial™ can provide all of the components necessary for the acquisition, implementation, operation and maintenance of a successful GIS system within companies of all sizes. Through its product and service offering, DMTI Spatial™ can provide users with 5 key components:

1. Accurate, detailed, and compatible data
2. Comprehensive maintenance program
3. GIS software
4. Consulting and services
5. Software training

DMTI Spatial™ Product & Service Portfolio

DMTI Spatial's product & service offering includes:

CanMap® - Digital Map Data for Canada

- CanMap® Streetfiles
- CanMap® RouteLogistics
- CanMap® Rail
- CanMap® Major Roads and Highways
- CanMap® Parks & Recreation
- CanMap® Water

Satellite Imagery

- Satellite StreetView™

Municipal Amalgamations

- CanMap® Municipality Amalgamation File (MAF)

Business & Recreational Points of Interest

- Enhanced Points Of Interest (EPOI)

GeoPinpoint™ Suite

- Canada's Geocoding Solution
- Modular Architecture
- Windows Standalone Desktop Version
- UNIX, Java Wrapper, ActiveX (DLL Version)

Topographic Data and Base Maps

- Canadian Atlas Map Bundle (CAMB)
- Populated Placenames
- National Topographic Data Base (NTDB)
- 30 & 90m Digital Elevation Models (DEM)
- Clutter Data

Postal Geography - Platinum Postal Code^{OM*} Suite

- Six-Digit Postal Code File (LDU Boundary)
- Enhanced Postal Code File (MEP)
- Forward Sortation Areas (FSA) Boundary File

1996 Census Boundaries & Demographic Data

- Enumeration Area (EA)
- Census Subdivision (CSD)
- Census Division (CD)
- Census Metropolitan Area/Census Agglomeration (CMA/CA)
- Census Tract (CT)
- Federal Electoral Districts (FED)

2001/6 Census Boundaries

- Dissemination Area (DA)
- Census Subdivision (CSD)
- Census Division (CD)
- Census Metropolitan Area/Census Agglomeration (CMA/CA)
- Census Tract (CT)
- Federal Electoral Districts (FED)

GIS Software

- Contour Modeling and Display
- Demographic Profiling and Lifestyle Targeting
- Geocoding and Mapping Software
- Routing and Logistics

Consulting and Services

- Address Management Solutions
- Application Development
- Database Marketing
- Data Conversion and Creation
- Database Scrubbing
- Geocoding Services
- GIS Consulting
- Technical Support

*Postal code is an official mark of Canada Post Corporation

Technical Support, Error Reporting & Product Enhancement Services

DMTI Spatial is committed to building the best products possible for our customers. By using our data every day in your mission critical application you are our best source for product refinement. Please let us know if you have an enhancement request or found an error in any of our products so that we can make the correction for the next release.

This is your opportunity to provide feedback directly to the DMTI Spatial Product Development Team. Please be as specific as possible so that we can improve our products quickly and accurately. To submit an error or request technical assistance please visit: <http://www.dmtispatial.com/en/Resources/TechSupport.aspx>

If you have an idea for a new product, or an enhancement request for an existing product, please e-mail: pm@dmtdispatial.com

About CanMap® Neighbourhood and Community Boundaries

Layer Properties

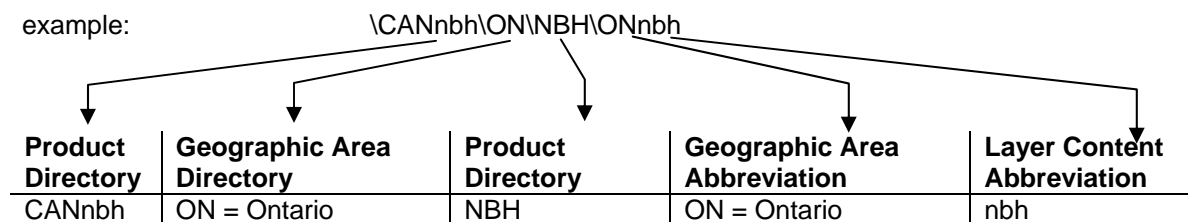

Property	Description
Coverage	This file contains 3654 unique Neighbourhood Boundaries and 2936 unique Community Boundaries. Presently Neighbourhood Boundaries are only available in urban areas and Community Boundaries are available in both urban and rural areas. Neighbourhood and Community Boundaries will be continually added to the product as sources become available.
Currency	May 15, 2009
Level of Accuracy	Neighbourhood boundaries data accuracy range from: <ul style="list-style-type: none"> Digitized municipal sourced neighbourhood boundaries Digitized neighbourhood boundaries created based on text descriptions Communities boundaries data accuracy range from: <ul style="list-style-type: none"> Communities will reference the MAF product in urban areas. In rural areas, communities will be new boundaries created using a modeled approach.
Projection	All layers are displayed as unprojected Longitude-Latitude
Datum	All layers are in NAD83 datum
Format	ESRI and MapInfo ¹

Layer Naming Conventions

The Neighbourhood Boundary File is organized into the following directory structure and uses the following directory and file naming conventions:

Geographic Area Abbreviation + Layer Content Abbreviation = Layer Name

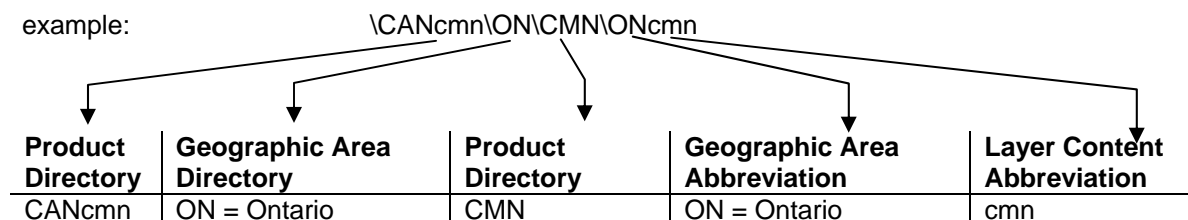

example:

The Community Boundary File is organized into the following directory structure and uses the following directory and file naming conventions:

Geographic Area Abbreviation + Layer Content Abbreviation = Layer Name

example:

¹ Custom formats available upon request. Refer to [Appendix A: ESRI File Extensions](#) and [Appendix B: MapInfo File Extensions](#) for more information regarding file extensions.

About CanMap[®] Neighbourhood and Community Boundaries (*cont'd*)

Layer Contents

The Communities Boundary File (CMN) is comprised of the following layer:

Layer Name	Description	Feature Type
AREAcmn ²	Communities (CMN) Boundaries	Polygon

Definition of Community:

A geographically defined area identified in part by a group of interacting people living in a common location. In addition to a common location, the community may be re-enforced by similarities shared within a location that include shared cultural, ethnic, or moral characteristics.

The Neighbourhood Boundary File (NBH) is comprised of the following layer:

Layer Name	Description	Feature Type
AREAnbh ³	Neighbourhood (NBH) Boundaries	Polygon

Definition of Neighbourhood:

A geographically localized area within a larger city, town or suburb. Neighbourhoods are often social communities with considerable face-to-face interaction among members. *Neighbourhoods* can be used to refer to the small group of houses with similar housing types and market values. *Neighbourhoods* can also describe an area surrounding a local institution patronized by residents, such as a church, school, or social agency. The concept of neighborhood includes both geographic (place-oriented) and social (people-oriented) components.

² Where *AREA* refers to a DMTI Spatial Standard Geographic Areas

³ Where *AREA* refers to a DMTI Spatial Standard Geographic Areas

Data Dictionary

Community Boundaries (CMN)

Layer Location

\CMN\AREAcmn

Layer Structure

Field Name	Field Type	Field Size	Description
COMM_ID	Decimal	11,0	Unique ID assigned to each Communities boundary
NAME	Character	70	City/Communities name
ALIAS	Character	70	City/Communities alias (if available)
CPC_NAME	Character	70	Canada Post Corporation community name (Probably same as city/Communities name)
MAF	Character	70	Municipal Amalgamation name
MAF_ID	Decimal	9,0	UniqueID assigned to each Municipal Amalgamation boundary
PROV	Character	2	Provincial/Territorial Abbreviation
COUNTRY	Character	3	Country Abbreviation
LONGITUDE	Float		X coordinate (boundary centroid)
LATITUDE	Float		Y coordinate (boundary centroid)
PREC_CODE	Decimal	1,0	Code indicating the positional accuracy or precision of the polygon feature

Neighbourhood Boundaries (NBH)

Layer Location

\\NBH\AREAnbh

Layer Structure

Field Name	Field Type	Field Size	Description
NBHD_ID	Decimal	11,0	Unique ID assigned to every Neighbourhood boundary
NAME	Character	70	Neighbourhood name
ALIAS	Character	70	Neighbourhood alias
CPC_NAME	Character	70	Canada Post community name
MAF	Character	70	Municipal Amalgamation name
MAF_ID	Decimal	9,0	UniqueID assigned to each Municipal Amalgamation boundary
PROV	Character	2	Provincial/Territorial Abbreviation
COUNTRY	Character	3	Country Abbreviation
LONGITUDE	Float		X coordinate (boundary centroid)
LATITUDE	Float		Y coordinate (boundary centroid)
PREC_CODE	Decimal	1,0	Code indicating the positional accuracy or precision of the polygon feature
CONF_CODE	Decimal	1,0	Code that corresponds to the confidence of the provided source
SRC_CODE	Character	20	Code that corresponds to source of boundary

Communities and Neighbourhood Boundaries Look up Tables

Precision Code Look Up Table

Communities Boundaries

PRECISION CODE	DESCRIPTION
1	Communities that reference the MAF product in urban areas.
2	Communities created using a modeled approach in rural areas.

Neighbourhood Boundaries

PRECISION CODE	DESCRIPTION
1	Boundary created for urban areas (digitized from source)
2	Boundary created for urban areas (using a variety of existing DMTI products)

Confidence Code (Neighbourhood Only) Look Up Table

Confidence Code	Description
1	Digitized Boundaries
2	Modeled Boundaries

Source Code (Neighbourhood Only) Look Up Table

Source Code	Description
1	Municipal Sources
2	Text Descriptions
3	Real Estate Agent
4	Modeled from PPN point data
5	Property Developments

Appendix A: File Extensions

ESRI® File Extensions

Refer to the following table for descriptions of ESRI® file extensions. All file extensions are not available for all DMTI products.

File Extension	File Description
*.shp	Part of standard ESRI® Shapefile
*.shx	Part of standard ESRI® Shapefile
*.dbf	Part of standard ESRI® Shapefile
*.sbn	Part of Spatial Index
*.sbx	Part of Spatial Index
*.lyr	Layer Properties
*.prj	Datum and Projection Properties

MapInfo® Professional File Extensions

Refer to the following table for descriptions of MapInfo file extensions.

File Extension	File Description
*.dat	Attribute Data
*.id	Graphic Index
*.ind	Attribute Index
*.map	Graphic Data
*.tab	Tab File

Appendix B: Provincial and Territorial Abbreviations

The provincial/territorial names and abbreviations reflect those in effect on January 1, 2001 with the exception of the name change of the province of Newfoundland and Labrador (previously Newfoundland), which came into effect on December 6, 2001. Newfoundland and Labrador is recognized by the alpha code NL (formerly NF). There were no changes to the abbreviation for Newfoundland and Labrador.

On April 1, 1999 the Northwest Territories was divided into two territories to create Nunavut Territory. On December 18, 2000, Canada Post has introduced a new alpha code (NU) for Nunavut.

Province/Territory (English)	Province/Territory (French)	Abbreviation ⁴
Alberta	Alberta	AB
British Columbia	Colombie-Britannique	BC
Manitoba	Manitoba	MB
New Brunswick	Nouveau-Brunswick	NB
Newfoundland and Labrador	Terre-Neuve-et-Labrador	NL
Nova Scotia	Nouvelle-Écosse	NS
Northwest Territories	Territoires du Nord-Ouest	NT
Nunavut	Nunavut	NU
Ontario	Ontario	ON
Prince Edward Island	Île-du-Prince-Édouard	PE
Québec	Québec	QC
Saskatchewan	Saskatchewan	SK
Yukon	Yukon	YT

⁴ Source: Canada Post Corporation, The Canadian Addressing Guide, October 2002

Appendix C: ISO 19115:2003 Compliant Metadata

Metadata Notification

As of May 15th 2005, DMTI Spatial data products have metadata that are ISO 19115:2003 compliant.

This product now includes structured metadata files as provided in XML and/or HTM format. These metadata files reside with the graphic or database files to which they are associated. It is recommended that users review and customize the metadata as per their specific needs.

This latest addition to the CanMap[®] line of products is another enhancement that will benefit our users and increase overall product satisfaction.

Appendix D: Neighbourhood and Community Boundary FAQ

Why can I not find the Neighbourhood or Community name I am looking for?

The Neighbourhood and Communities boundaries have been created based on currently available sources. As we continue to find more sources, additional Neighbourhood and Community boundaries will be added to subsequent releases. Please feel free to use our Technical Support portal (<http://www.dmtispatial.com/helpdesk/index.aspx>) to let us know what boundaries you are interested in seeing.

Why are some of the Neighbourhood or Community boundaries not as I expected?

Each of the neighbourhood boundaries have been created using a variety of sources. These boundaries were only altered to adhere to the current data fabric of the DMTI Spatial data to have them nest together. Boundaries can be modified in subsequent releases through the identification of new sources and/or dialog with persons who are familiar with these areas. Some community boundaries were modeled using the DMTI populated place name (PPN) product and were designed specifically to contain the area's street network density to represent these areas. Since some of these communities are modeled they may be inaccurately depicted. As sources are identified for each community, the modeled will be removed and replaced with the boundary from the source.

Why is there empty space between Neighbourhood and Community boundaries?

Neighbourhood and Community Boundaries are not continuous and thus do not cover all areas of Canada. As more boundaries are added to the product, the amount of empty space will decrease.

Why are there no neighbourhoods in rural areas?

Neighbourhood boundaries have mostly been created for urban areas mainly due to sourcing. Currently, it seems that sourcing for neighbourhoods seems to be mostly available for urban areas. Most rural communities are too small to have neighbourhoods or do not provide public sources. Neighbourhoods may be created for rural areas in the future, if sourcing can be obtained.

Some sources indicated that the city of Toronto has 140 Neighbourhoods while others have 317 - why?

DMTI Spatial has identified two neighbourhood boundary sources for Toronto. One has 140 neighbourhood boundaries while the other has 317 neighbourhood boundaries. We have decided to include the source with 317 with the product as this provides in our opinion the best view of Toronto and its granular neighbourhoods.

What is the coverage of neighbourhoods for Canada?

This product includes neighbourhoods for the top 25 Census Metropolitan Areas (CMA) and most of the highest populated Census Subdivisions (CSD) across Canada.

Does this product nest with other DMTI products?

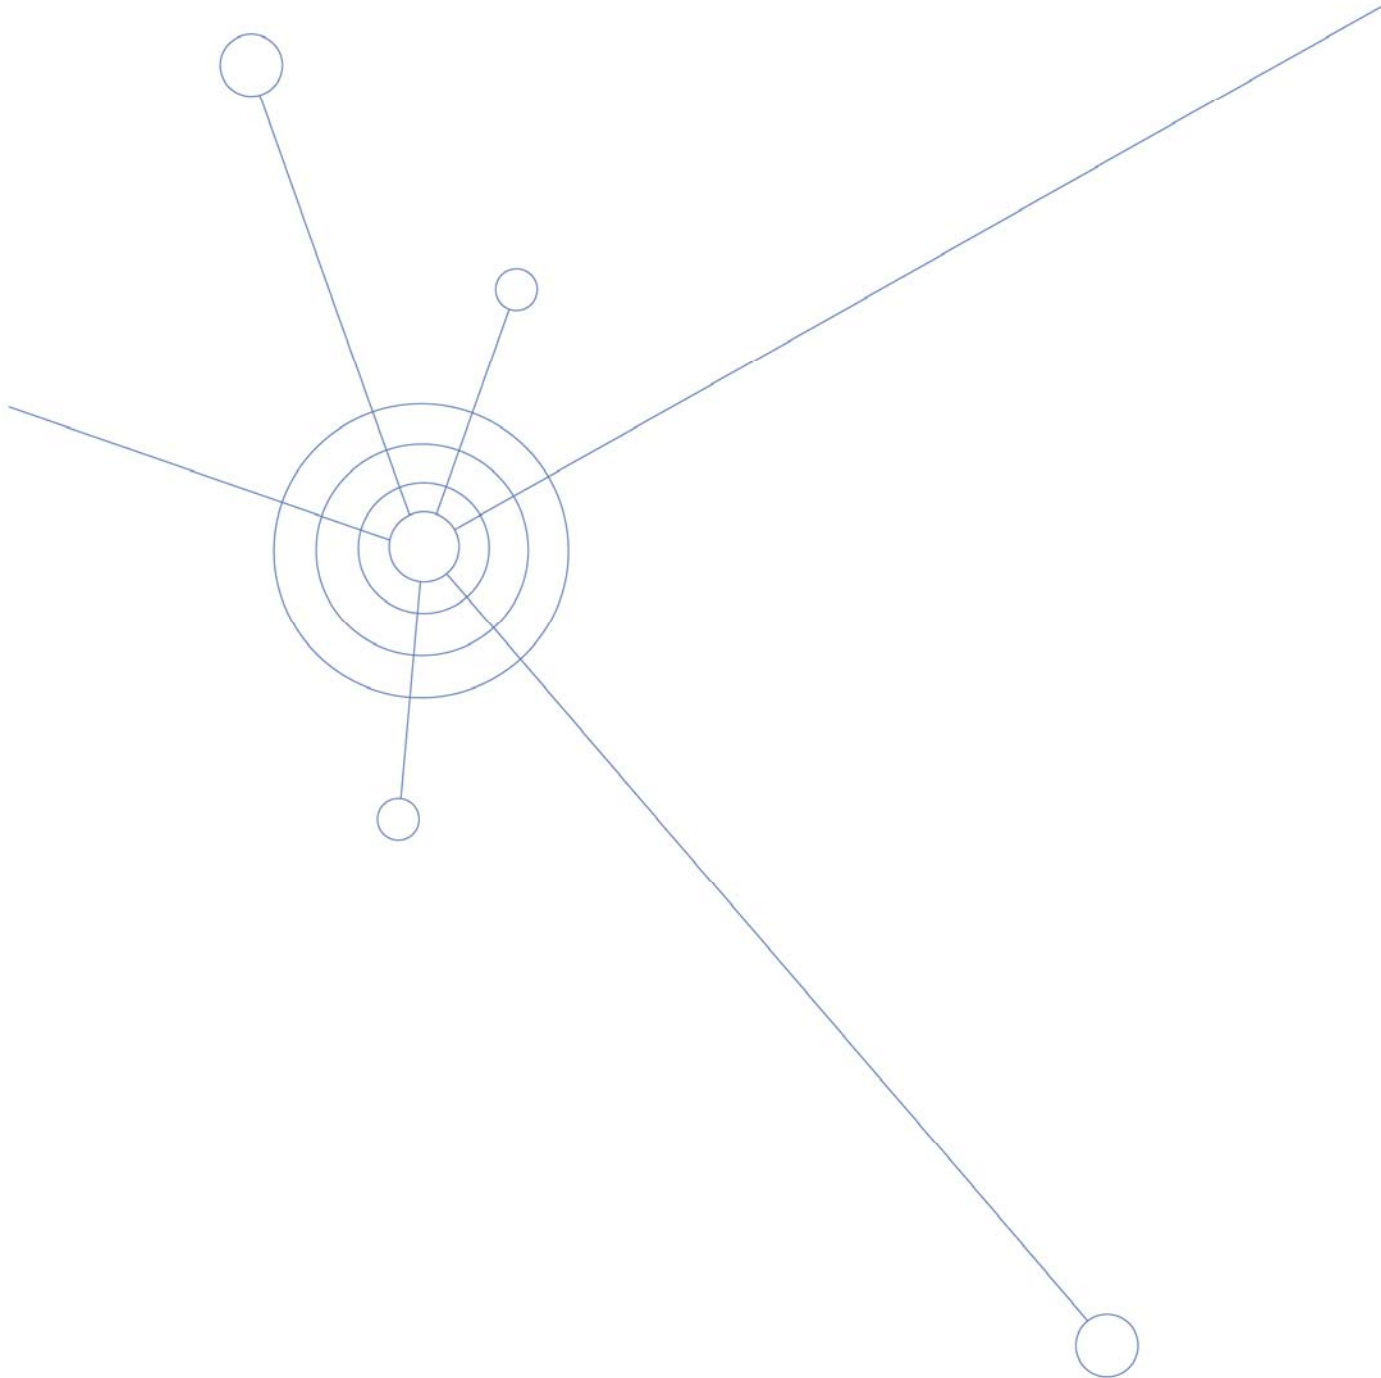

The neighbourhood boundaries were specifically designed to align with DMTI products. Due to the modeled nature of the community boundaries, these do not nest with existing DMTI products but rather represent the area based on street network density.

Why are some of the neighbourhood names attributed with the value “To Be Determined (TBD)”?

Several of the sources we received, contained neighbourhood boundaries that did not have naming associated to them. In order to keep these polygons unique for our users, we have decided to give them all unique TBD codes for (To Be Determined – e.g., TBD1). When names are acquired for these areas, the names will be updated appropriately.

Why do Neighbourhoods have letters or numbers for their name or within their name?

Several of the sources we have received, contained neighbourhood boundaries that included only letters (e.g. Secteur A) or numbers for names (e.g. 1) or had lettering or numbering (e.g., BA-01) within the name. Since the boundaries are based on a source associated with neighbourhood information, we have decided to keep the naming to match the source. When the proper names are identified we will update the names accordingly.

About DMTI Spatial Inc

DMTI Spatial (DMTI) has been providing industry leading location intelligence solutions for more than a decade to Global 2000 companies and government agencies. DMTI's world-class Location Hub™ platform uniquely identifies, validates and maintains a universe of location-based data. DMTI is the creator of the CanMap suite of geospatial data products, including CanMap® Streets and RouteLogistics, the gold standard for location data in Canada. DMTI also provides professional services and software tools bringing full solutions to the marketplace.
